VOL. LXX NEW YORK, THURSDAY, JANUARY 5, 1911 No. 3240

Survey of the World

News from the Capital

On Tuesday of this week, it was expected, copies of the testimony in the Lorimer case would be available. Opposition to the report of the majority of the Committee on Privileges and Elections, "whitewashing" Senator Lorimer, has been growing, and a number of Republicans not classed as insurgents promise to make a vigorous protest against the Illinois Senator's "vindication." The case will probably consume considerable of the Senate's time, for the members who signed the majority report will undoubtedly take the floor to defend it; and only eight weeks of the session remain.——Gifford Pinchot, the former forester, and Amos Pinchot, his brother, have prepared a brief in which the validity of the Cunningham claims in Alaska is once more challenged, and have submitted their brief to the President. They assert that "no resort to a court" and no rehearing is necessary, "and the claims should be canceled by the President forthwith." They allege that "the whole of the case against the claimants has not been presented." One part of the "suppressed" evidence is a letter from John W. Dudley, register of the Land Office at Juneau, Alaska, to Cunningham, dated April 19, 1907, urging the latter to eliminate a part of an affidavit he had made. On January 2, a reply to the Pinchot brief was submitted by Falcon Joslin, president of the Tanana Valley Railroad Company of Alaska. Mr. Joslin ridicules the Pinchots' valuations of the claims at $25,000,000, asserting that the price of $10 per acre fixed by Congress for the sale of coal lands in the public domain in Alaska is high enough. Concluding, he says:

"We, the people of Alaska, think that the illegal orders of President Roosevelt and other orders that have followed abrogating the coal land law and withdrawing the lands from entry should be wiped out, and that honest men should be permitted to acquire titles to these much needed coal lands in order that they may be opened and worked for the benefit of the Territory. . . . Mr. Pinchot . . . should be no longer permitted to strangle the growth of the great Territory of Alaska."

The States

It was sixteen years since the New York State government was in the hands of the Democratic party, when, on January 1, at noon, John Alden Dix was inaugurated as Governor, in the presence of 5,000 persons. The principal candidates for the Senatorship—Messrs. Shepard, Sheehan, Gerard, Cohalan and Cram—were all present. The possibility of the Sheehan-Shepard contest jeopardizing party harmony suggests that the Governor's influence may be cast in favor of Seymour Van Santvoord, of Troy, as a more "available" candidate.——State Comptroller Clark Williams, in his annual report to the New York Legislature, declares that a direct tax on real estate should be annually imposed, from now on, to meet the deficit in the State revenues. He points out that in 1910 the Legislature passed appropriations aggregating $42,975,450. while the revenues were but $37,905,876. He says that it was never intended that the canal and highway bond interest and sinking fund contributions each year should be paid out of indirect tax revenues, but rather should be raised by a direct tax, and he estimates that these bond requirements for 1911 will amount to $4,500,000; for 1912, $6,200,000; for 1913, $7,330,000; and for 1914, $8,450,000. The demands of the State departments and institutions for appropriations for 1911 aggregate $50,614,-

283. Last year's appropriations amounted to $42,975,450, while the actual expenditures for 1909 were $38,332,015. In his inaugural address Governor Dix declares:

"Frankly, we have reached a point in our State where, for a long time past, we have been living beyond our means. The pressing duty of the hour is a measure of reform and retrenchment which will reverse this condition and restore to us the healthy and normal position where we shall have something more than a largely fictitious surplus."

——The New Jersey Senatorial contest continues without abatement, but there are no distinctly new developments. Dr. Wilson has hinted at collusion between the Democratic and Republican machines in his State, intimating that the defeated Republicans are working for the election of Smith, the Democratic boss, over James E. Martine, the Union County Democrat, Dr. Wilson's candidate.——One of the problems of the Great and General Court of Massachusetts, which begins its session on January 4, is the naming of Senator Lodge's successor. Mr. Lodge has represented his State in the Federal Senate since 1893, and it is almost a decade since there was a Senatorial contest in Massachusetts. Who the Democratic candidate to oppose Senator Lodge shall be is not yet definitely determined.——In Ohio the Senatorship to succeed Senator Dick seems to lie between Lieut.-Gov.-elect Atlee Pomerene and State Chairman E. W. Hanley, Democrats. The former demands a joint House-and-Senate caucus, the caucus to be open to the public and the balloting by roll-call. The rival candidates have been touring the State in joint debate. The debates have been richer in personalities than in logic, however. Candidate Pomerene is a lawyer, and a Princeton graduate. Mr. Hanley is the "self-made" business-man, and the "leader" of the Dayton Democracy. But the outside world has heard more of Adams County vote-selling than of the Senatorial canvass in the last fortnight. A sixth of the voting population of that county has been disenfranchised as a result of Judge Blair's investigation. Here is a news report of the manner in which Judge Blair conducts the case:

He knows a large part of the voters of the county by their first names and when they come into court the scene is rather a social one. The judge sits on one side of a plain table, the indicted man on the other.

"How about it, John; are you guilty?" asked the judge.

"I reckon I am, judge," is the usual reply.

"All right, John, I'll have to fine you $10 and you can't vote any more for five years. I'll just put a six months' workhouse sentence on top of that, but I won't enforce it as long as you behave."

"All right, judge. You've got the goods on me."

A Chicago newspaper cynically remarks: "At the next general election in Ohio it will not be necessary to sit up late to receive the returns from Adams County." It is charged that at least nine other counties in Southern Ohio are equally corrupt. Columbus hears that there are "boodle" counties to the north as well. It is also stated that the buying and selling of votes has been going on in Adams County for more than thirty years. The judge who is hearing these cases has known for years what was going on. He says that, when acting as a politician, he tried by agreement to do away with the traffic in votes, but that he was not supported by public sentiment. He adds:

"I myself have seen men standing on the auction-block. I saw a farmer worth $40,000 stand on a soap-box, in front of the Court House, in West Union, and auction off his vote."

The investigation may last two or three months. The average price of a vote at the last election was $8.——Governor Harmon, in his message to the Ohio Legislature, urges retrenchment. Speaking of the Federal income tax amendment, he says:

"At the last session I transmitted the proposed amendment to the Federal Constitution authorizing the levy of a tax on incomes and recommended its adoption, but no action was taken.

"I repeat that recommendation and urge prompt action. Without such a tax the expenses of the Federal Government, which now amount to a billion dollars per year, cannot be fairly distributed. They are now collected by tariff and other taxes on consumption and the enormous invested wealth of the country escapes. A few States have undertaken to tax incomes, but, as I am advised with little success."

News of the Cities

Meeting at Harrisburg, the League of Cities of the Third Class of Pennsylvania have voted against recommendation of a law providing a

commission form of government for such municipalities. A motion that the Legislature name a commission to ascertain the best form of government for cities of the third class was, however, unanimously carried. A week later, the so-called commission form of government was adopted by Spokane, Wash. Many women were registered, but only about two-fifths of them voted.——Mayor Mahool, of Baltimore, after reading the opinion of City Solicitor Poe declaring it constitutional, signed the segregation ordinance.——The petition for the recall of Mayor Gill, of Seattle, was found, on December 22, to contain more than enough votes (11,443) to insure the recall election.——For three months Commissioner Waldo and Chief Croker, of the New York Fire Department, have been perfecting a project which Hugh Bonner often talked about —the establishment of a "fire college." Practical work in machine shops, lectures on explosives by well-known chemists, talks and demonstrations by electrical engineers on the problems of the highly electrified railroads, the handling of skyscraper fires, a better understanding of the high pressure system, and lessons in the scaling of walls, jumping into life nets and the handling of tools—these subjects and others of a practical nature will be drilled into the force. "Above all things," Commissioner Waldo says, "the instructors, all men of experience, will be practical in the teaching." There will be four schools—officers', engineers', probationary firemen's and a school for companies. The college stands ready to receive pupils from the fire departments of other cities.——The conviction of two Italian kidnappers, Maria Rappa and Stanislao Patenza, and their sentence to serve indeterminate terms whose minimum is twenty-five years and whose maximum is forty-nine years and ten months, has more importance than has ordinary court news. This Brooklyn kidnapping case had received much attention, not from the press alone, but from the public, including the Italian population of New York, representatives of which had conferred at the City Club, New York, in regard to breaking up the so-called "Black Hand."

The Railroads

Judge Robert S. Lovett, president of the Union Pacific and Southern Pacific railroads, as a witness before the Railway Securities Commission, has exprest himself as in favor of Government regulation rather than State. As to the legality of Congress regulating railroad rates, Judge Lovett said he was not prepared to give an opinion. He favors the issue of stock without par value. In his opinion, Government regulation should, if attempted, aim at establishing a uniformity of rates in all States. Congress should have the exclusive power to fix rates, otherwise he would object to Federal regulation at all. The Government is not interested, he says, as to whether bonds were good or bad; only as to whether the railroad received proper consideration for its securities. Walter D. Hines, general counsel of the Atchison, Topeka & Santa Fé Railway, declared before the commission his belief that Congress has the power to regulate the operation of railroads engaged in interstate commerce. State regulation was inadequate, he continued, for the reason that some States regulated too much and others not enough. Witness did not entertain the slightest doubt as to the constitutionality of Government regulation of railroads.——Representative Rainey, of Illinois, has introduced a resolution providing for the appointment of a committee of five members of the House, "for the purpose of investigating the railroad expenses incurred by Theodore Roosevelt while President of the United States." The committee is to report what transportation expenses were incurred by Mr. Roosevelt and what part of them he paid, if any. Mr. Rainey says in part:

> "There are 45,000 or 50,000 stockholders in that company. It has been charged that transportation to the value of at least $100,000 was thus furnished to Theodore Roosevelt by this company. If the Government is responsible an appropriation ought to be made to pay these bills. If Mr. Roosevelt is responsible for the unpaid bills he ought to pay them. Congress should have the facts in order to take such action as the situation may demand."

——Within the next ten years the Pennsylvania Railroad will spend six million dollars in enlarging and modernizing Broad Street Station, Philadelphia.

That city is now busily agitating for a new 1,700-foot dry dock at the Philadelphia Navy Yard, for which purpose $100,000 will be demanded of Congress at the present session.——About 1,000 Lehigh Valley Railroad engineers receive an increase in wages as the result of a conference between a committee representing the employees and General Manager J. A. Maguire, held at South Bethlehem, Pa. The new wage scale went into effect on January 1, and the average increase in wages will be 6 per cent. The work-day will remain at ten hours.——An agreement for an international commerce commission to regulate railroad traffic between the United States and Canada has been prepared and will soon become operative. This results from the series of conferences held by Martin A. Knapp, chairman of the Interstate Commerce Commission, and J. P. Mabee, chairman of the Board of Railroad Commissioners of Canada. The basis of their agreement will be converted into the form of a treaty arrangement between the United States and Great Britain, providing for the regulation of railroads operating between the two countries. The jurisdiction of the international commission will probably be extended to telegraph, telephone and express companies. The agreement bearing on common carriers does not apply to water transportation companies operating from port to port without rail connections.

Prosecution of Trusts

In Chicago, last week, the Government asked that the civil suits against the great packing companies, or what is commonly called the Beef Trust, be dismissed, and they were laid aside. This was done in order that the way might be cleared for a prompt and vigorous prosecution of the criminal suits against the officers of the same companies. Attorney General Wickersham desires that jail sentences be imposed in these suits in case of conviction.—— Pleas for clemency have been presented in behalf of several of the companies or persons recently indicted in the Bathtub Trust case. It is understood that they were of no avail and that the Government will make no compromise. Thirty-seven persons and 14 corporations are accused in the indictments.——Arguments upon the pending appeals in the important Standard Oil and Tobacco Trust cases will be made in the Supreme Court this week.——It is said that the $700,000 offered by the Sugar Trust on account of drawback frauds at the refinery in Brooklyn may not be accepted, because the Government has evidence to warrant a demand for more. Similar frauds, greater than these, it is said, have been discovered at San Francisco and New Orleans.——On the 29th ult., a final payment of $80,000 to Richard Parr, as a reward for his detection of the Sugar Trust weighing frauds, was made by the Treasury Department. Some months ago he received $20,000.

Aviation Triumphs and Disasters

This year, which marks a new era in the history of man's conquest of the air, was brought to a sad close by the death of the daring and successful aviators, John B. Moisant and Archibald E. Hoxsey, on December 31, one at New Orleans and the other at Los Angeles. Neither disaster seems to have been due to breakage of the machines, but both were caused by failure to cope with adverse air currents. Moisant's fall occurred shortly after he had started up to win for America the Michelin prize for length flight. He was using a 50 horse-power Bleriot monoplane, and having made two preliminary rounds of the new course that had been selected for this contest, he started to descend from a hight of two or three hundred feet, attempting to alight with the wind instead of in the safer and more usual way, in the face of the wind. He had shut off the motor and glided sharply down to within 50 feet of the ground when a sudden gust of wind from behind caught the tail of the machine, touching it vertically and throwing out the aviator. He struck the ground on his head and his neck was broken. John B. Moisant was about thirty-five years old and of French-Canadian descent. He was born in Chicago and had with his brothers led an adventurous life as a soldier of fortune in Central America. After the fall of Zelaya he went into aviation, distinguishing himself first by his flight

from Paris to London with a passenger. At the Belmont Park meet he secured for America the $10,000 Ryan prize by beating the English aviator Grahame-White by 42 seconds in the flight over New York City and around the Statue of Liberty, in a machine which he had bought for the purpose a few minutes before.——Hoxsey was preparing to take the air for an altitude record of 12,000 feet when he received the news of Moisant's accident. This did not deter him from making the attempt and he passed out of sight in a series of long spirals, soaring for the second time during the Los Angeles meet over Mount Wilson, the highest peak in the vicinity, but after reaching a hight of 7,142 feet, as shown by the reading of his barograph, he started to descend, gliding down rapidly in the spiral dips which had been characteristic of his style of flight. At 530 feet he lost control of his machine and it fell almost straight down, crushing the aviator. Hoxsey had lately gained at Los Angeles the world's championship for high flight by a record of 11,474 feet, and the day before his death he had made a new American record for endurance by a continuous flight of three hours and seventeen minutes. Hoxey and Johnstone were the first flyers trained by the Wright brothers when they were forced to enter the exhibition field, in order to maintain the prestige of the biplane in opposition to European monoplanes.—— The Michelin trophy for 1910 was won by Maurice Tabuteau, who, on December 30, at Chalons, flew a distance of 365 miles in seven hours and forty-eight minutes, with a Farman biplane. On the conclusion of his flight his aeroplane was found to be covered with a coat of ice weighing 90 pounds.——So far thirty-six persons have lost their lives in the development of the art of flight, beginning with Lieutenant Selfridge, who fell with Orville Wright in 1908; in 1909, there were four victims, and in 1910, thirty-one.

University Notes

The findings of Morris Llewellyn Cooke, a member of the American Society of Mechanical Engineers, as to the use made of their equipment by American universities have been published in a bulletin of the Carnegie Foundation. His report inquires by what authority large sums are expended on research work by so-called teaching institutions, and complains of the lack of co-operation between departments and professors, such as would tend to keep the rooms occupied as much as possible; also of the extremes to which the committee system is carried.——In presenting the University of Chicago with $10,000,000, completing the $35,000,000 endowment promised the university when he founded it in 1889, John D. Rockefeller has severed his official relations with the institution, as have his personal representatives on the board of trustees. Mr. Rockefeller informs the trustees that they need look to him for no more. Mr. Rockefeller specifically requests that the sum of $1,500,000 or more be used "for the erection and furnishing of a university chapel . . . to be the central and dominant feature of the university group."——Friends of Johns Hopkins University, at Baltimore, have been exerting themselves to raise a large fund in order to secure the $250,000 offered by the General Education Board on condition that three times that sum was raised by outside subscription. The amount was duly raised, and a hundred thousand dollars to spare; but only two days before the expiration of the offer, January 1. The housing of the university institution at Homewood, in the suburbs of Baltimore, is one part of the program.—— A gift exceeding $1,500,000 in amount has been made to the Presbyterian Hospital of New York City and an alliance effected between that hospital, the College of Physicians and Surgeons, and the medical department of Columbia University. Edward S. Harkness, of New York City, offered part of the money himself and presented $1,300,000 on behalf of an anonymous donor, presumably a member of the Harkness family. With the new gift at its disposal, the university will now be better able to go ahead with plans for the new buildings on Morningside Heights, New York City. Aside from its educational affiliation with Columbia, the hospital will preserve its own identity.——The vice-chancellor of Oxford University has announced that a lectureship on the history and institutions

of the United States has been established in Oxford to be held by American scholars. An appointment to the lectureship will be made soon, and the first series of lectures will be delivered in the summer term of 1911.——Sixty per cent. of all the States of the Union have now made provision for some form of industrial education. Twenty per cent. support technical high schools; thirty-seven per cent. have added manual training to the public school curriculum; twenty-three per cent. offer domestic science courses; thirty-nine per cent. are teaching practical agriculture.

The Philippine Islands

Upon the receipt of secret information, Major General Duvall, commanding in the Philippines, on the 27th ult. caused military agents and police to search the houses of several Japanese in Manila for explosives. Press dispatches say the search was futile and that it excited resentment in the Japanese colony. It is reported that a Japanese was arrested on the same day at Corregidor, where he had made maps and sketches of the fortifications. Attorney General Villamor, now in Washington, says that Japanese have made complete maps of the fortifications at Manila. Two who were arrested in September had maps and photographs. They were released because there was no law under which they could be prosecuted. There is a movement at Washington for the enactment of a law to cover such cases.——It is shown in the annual report of Brigadier General Edwards, chief of the War Department's Bureau of Insular Affairs, that the postal savings banks established four years ago in the Philippines have been successful. The addition of forty-two banks last year made the total number 293, and the number of depositors increased from 4,927 to 8,547, nearly two-thirds Filipinos. General Edwards recommends that the interest rate be increased from 2½ to 3 per cent. It is also recommended that the limit for bonded debt be raised from $5,000,000 to $10,000,000. Mainly on account of free trade with the United States, the imports were increased by $9,275,233, to $37,067,630, and the exports by $8,870,606, to $39,864,169. In Luzon, 400 miles of additional railroad track are under contract. The new line across Panay, from Iloilo to Capiz, was opened in August. It is now the rule that wherever an American quits the civil service, his place is given, so far as this can be done with due regard to efficiency, to a Filipino.

Central and South America

Gen. Juan J. Estrada was elected President of Nicaragua for a term of two years, on the 31st ult., by the unanimous vote of Congress. In his inaugural address he lauded the Government and the people of the United States. On the following day President Taft authorized formal recognition of the new constitutional government of the republic, and said, in a message to President Estrada:

"I congratulate you upon your assumption of the Presidency by popular mandate, unanimously exprest thru the Assembly recently elected, and I assure you, and thru you the Government and people of Nicaragua, of the sincere sympathy and friendship of the Government and people of the United States in the work of regeneration, which we hope will be successful."

The new President has issued a decree granting amnesty to all political exiles. ——It was understood that the attack of the revolutionists upon the Davila Government in Honduras should begin on January 1, but there was fighting two days earlier on the Nicaraguan frontier, where about 2,000 insurgents, a majority of them exiles, set out for Tegucigalpa, the capital. Another party of exiles crossed the boundary from Salvador and defeated an opposing Government force. It was expected that Puerto Cortez would be attacked by the gunboat "Hornet," and it was reported on the 2d that ex-President Manuel Bonilla and Gen. Lee Christmas had landed there from this gunboat. Many expect that a majority of Davila's soldiers will join the revolutionists, and the prediction is made that if Bonilla is successful a loan of $12,000,000 will be negotiated at New York upon conditions involving some supervision of Honduran affairs by the United States.——William Barber, of Kentucky, foreman of laborers engaged in building bridges near Puerto Cortez, says he was confined in jail and brutally whipped there because he refused to leave his

work and bury a pauper when directed to do so by the Puerto Cortéz police.——Conflicting reports are published about the reception in Colombia of Señor Mendoza, sent by the President of Panama to negotiate for a resumption of friendly relations. One story is that he was received cordially and that a commission was appointed to promote reconciliation. Another is that his mission was a complete failure, because he found public sentiment in Colombia still greatly embittered against Panama.——There is danger of war between Peru and Ecuador. It was averted last spring by the mediation of the United States, Brazil and Argentina. But the two countries are still in a warlike mood. On the 30th ult. a note of mediation was addressed to them by the three Powers named above, advising that the boundary dispute be submitted to the Hague tribunal for settlement. It is expected at Lima that Ecuador will reject this proposition.

Mexico's Revolutionists

The situation in Mexico was changed but little during last week. On the 29th ult. General Navarro drove the revolutionists from the cañon at Mal Paso, and regained possession of the railroad. The revolutionary movement is substantially confined to the mountainous districts of Western Chihuahua and a small area in the northeastern part of that State. Last week there was some disturbance in Tabasco and the State of Vera Cruz, but it appears to have been caused by raids of outlaws from the hills. In Chihuahua the movement is a protest against the State Government (controlled by certain rich families) as well as against the Diaz Government. Many exaggerated reports have been published, but the number of those killed in all the engagements which have thus far taken place probably does not exceed 400. The revolutionists have suffered for lack of a strong leader, but it will not be easy to drive them from the mountainous districts, where their greatest activity is shown.——In the Mexican capital, last week, at a bull fight attended by the officers of the Japanese naval squadron, these visitors were applauded enthusiastically, and the applause was followed by the cry "Down with the Americans!"——Hayti and Santo Domingo have renewed the old quarrel about a tract of land occupied by the former and claimed by the latter. This tract is affected by concessions recently granted by Hayti to Americans. Santo Domingo is building a railroad which crosses the land in question. On the 26th ult., Hayti used troops to stop the work. Whereupon Santo Domingo sent troops to the place, and a gunboat loaded with supplies. As both republics now favor a settlement of the dispute by commissions, hostilities will be averted, unless the troops lined up on each side of the boundary should begin to fight.——In Cuba, Señor Sanchez, counsel for General Guerra, has protested to the court against a ruling which, he says, was designed to stifle inquiry concerning persons who assisted Police Captain Perez (who attempted to assassinate Guerra) to escape from the island, and also concerning high Government officers who are implicated.

A German Hero Fund

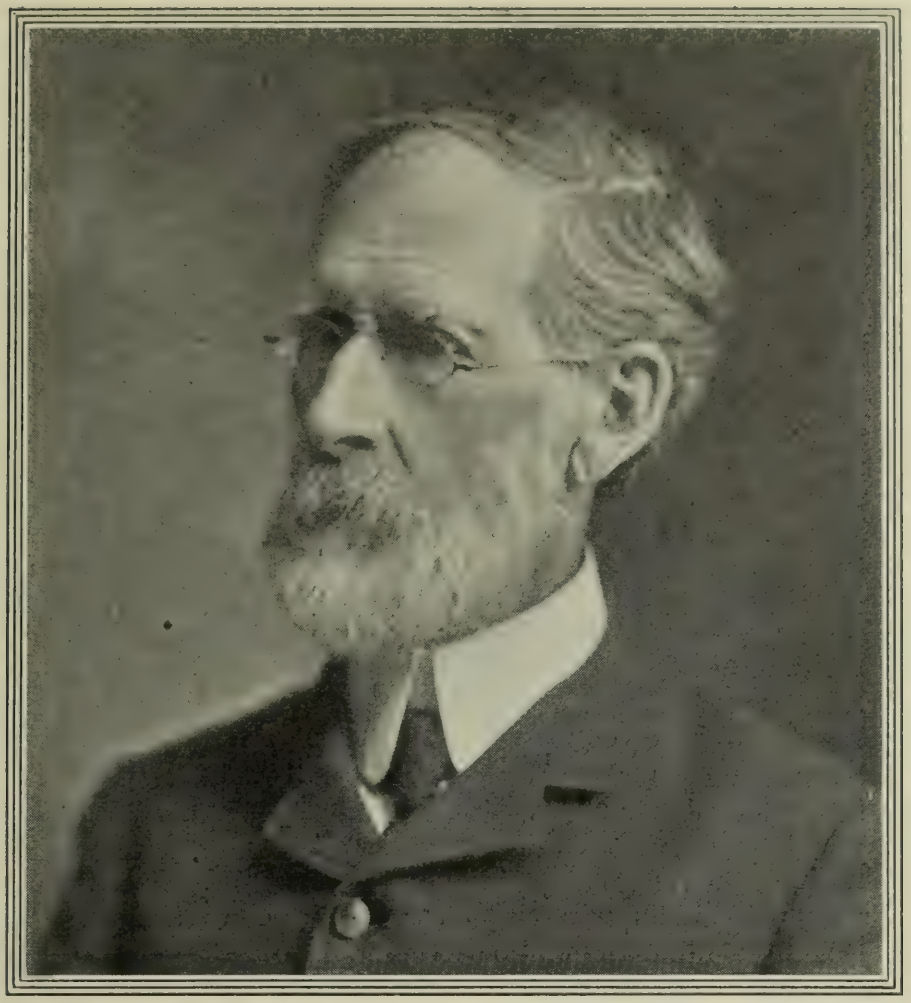
Andrew Carnegie has given $1,250,000 as a Hero Fund in Germany, for the purpose of honoring and rewarding acts of valor and self-sacrifice in times of peace. In his letter to the Kaiser Mr. Carnegie praises him for his peaceful reign and alludes to the debt which America owes to Germany for "one of the most valuable of its assets," its 20,000,000 citizens of German birth or ancestry. He adds:

"We live in an heroic age. Industrialism develops the heroes of peace. Scarcely a day passes without acts of heroism being revealed to one or other of the Hero Funds already established. In cases of mine accidents the volunteers for rescue work who risk their lives by descending the pit invariably exceed the number required. Such are the heroes of civization."

In reply to Mr. Carnegie the Emperor William says:

"In your letter of the 22d of September last you communicated to me your magnanimous decision to establish for Germany a fund of $1,250,000 for the amelioration of distress caused within the German Empire and its waters by death or disablement of heroes in attempting to save human life. This further proof of your world-renowned philanthropy and magnanimity has given me very great pleasure, and I consider your aim in this case to be particularly well chosen. I desire to express to you, also, in the name of the German people, my warmest thanks."

Mr. Carnegie has given altogether



$8,500,000 for this purpose; $5,000,000 to the United States, $1,250,000 to Great Britain and $1,000,000 to France.

Unrest in Portugal

Disquieting rumors come by way of Madrid and Paris in regard to the condition of Portugal. The Republicans control with difficulty the insurgent forces they have evoked. The Provisional Government, having no established support, can exist only so long as the people generally are satisfied with it, and it has not yet succeeded in satisfying any class. The army and navy which accomplished the revolution are disappointed; the officers because they have not received promotion, the rank and file because they have not received prize money. They realize that they can unmake the government they have made, and threaten a counter-revolution. The successful mutiny of the Brazilian navy at Rio de Janeiro increases their tendency toward insubordination. The anti-clerical measures of the Government, and especially the new divorce law declaring marriage a civil contract and dissoluble by mutual consent, has bitterly offended the Catholic population. The aristocracy and wealthy classes have emigrated in large numbers, as during the French Revolution, and this, of course, injures business and causes hard times. The withdrawal of funds from Portuguese banks, to be deposited in Paris or elsewhere, has produced a stringency in the money market, and the Government, in order to relieve it, has issued paper currency far in excess of the amount justified by its gold reserve. An epidemic of strikes followed the establishment of the republic. To satisfy tenants who complained of oppression by their landlords the Provisional Government promulgated a rent law which is causing a great deal of trouble. Legislation of this description, while it pleases the proletariat, alienates the middle class, which has formed the main strength of the republican movement. The Government, in its attempt to prevent the spread of disaffection, is becoming more severe in its repressive measures. The new press law gives judicial, administrative and police authorities the right to prevent the sale of newspapers which, in their opinion, contain "provocative or contemptuous language." The censorship of foreign news is stringently maintained. Two new decrees were issued the last of December directed against both conspiracy and rumors of conspiracy. One faction of the revolutionists were eager for revenge for abuses of power under the monarchy, and, contrary to the wishes of the Government, instituted proceedings in the courts against ex-Premier Franco and other leaders in the dictatorial regime which brought about the assassination of King Carlos. The judges declared that these offenses came under the proclamation of general amnesty and ordered the prisoners released. The press clamored for the removal of the judges and the Government complied so far as to appoint them to positions in Goa, India, at the same salary.

Spanish Affairs

Premier Canalejas, on January 1, presented to the King the names of his reorganized cabinet and the program of his proposed legislation and secured the royal approval to both. The only changes in the cabinet are the Ministers of Public Instruction, Public Works and the Interior. The legislative program includes obligatory military service, making it more difficult for the rich to get exemption, a progressive education policy, new laws on labor unions and a better government for the Canary Islands. ——King Alfonso starts, January 5, for a visit to Melilla, the scene of the recent Moroccan war. He will be accompanied by Señor Canalejas and the Ministers of War and Marine. On November 22 the Sultan of Morocco signed the agreement with Spain, and his diplomatic agent who negotiated the affair at Madrid has just returned to Tangier with the documents. According to its provisions the territory held by Spain about Melilla is slightly expanded and Morocco promises to indemnify Spain for the expenses of the fighting against the Moorish tribesmen there.——Barcelona continues to be disturbed by strikes, but General Weyler is still successful in preventing any serious disorder. The striking stevedores and carters have been joined by 1,100 dock laborers. Shipping is interrupted and factories are likely to have to close for lack of coal.

The New Year In: An Idyll

BY E. P. POWELL

[We are glad to give Mr. Powell the leading place in THE INDEPENDENT as we pass from the old year to the new. One of the oldest and best loved of our writers, he is more than Agricultural, Correspondent and Editor; he is purveyor of social sunshine and spiritual ozone. He brings us hope and faith and love, never lost even when rain drops from the clouds. We let our readers give him their sympathy, for his dearest companion left him but a month ago, to walk in fields fairer than Clinton or Sorrento. Born in 1832, long may his eyes undismayed look upward and forward, and long may his pen distil courage and wisdom.—EDITOR.]

IT is 9 o'clock, and the house folk have all gone to their rooms. I am sitting before the big fireplace in my library, where the pine knots are fast becoming ashes. Why not? Yes, why not see the Old Year out and the New Year in? I will pile more knots on the embers, and a big stick full of pitch, and, leaning back in my Morris chair, will see how the two years are mortised together. Why should I not help to look after these things, for I have had nearly eighty of these years, and every one of them chock full of gifts and goodness? I will have nothing to do with the doleful dolts, who count their troubles and see only what is missing. Yes, every year has been a gift worthy of a God. One thing at least I cannot be, and that is an atheist.

I have a good deal of sympathy with the old Anchorets, who could give up the world, but who could never give up God. Nor does it trouble me tonight that I shall not see Him tinkering at the joints of the years. He is in all things, and I have yet to find a more axiomatic truth than that of Paul, where he tells us that there is "one God thru all and interpenetrating all." I do not quite see

how it is that people have so generally lost the capacity for seeing God. Well, at some time your eyes will be opened, and then you can hardly see anything else. It takes but little acquaintance with a man to illumine afterward all that he writes or does. Bayard Taylor read to me a few pages of his "Deukalion" in the manuscript, and I shall always hear him reading when I open his pages. So Emerson became a part of my life, because at one time he sat on my sofa and opened his heart softly.

Pull off your shoes and draw closer, my friend. Stretch your feet out until they lie quite on the hearth and the heat is all that you can endure. On the mantel over your head, and in easy reach, are both apples and oranges; Northern Spys from New York and Rubys from the grove just outside. This is a wonderful age, when, in the most ordinary sort of life, one may bring together the ends of the world. Pare both, and with a pocket knife pull apart the sections. I do not like silver knives for these apples; a bit of iron flavor carries me back better to my boyhood, and as for the oranges, do as you please, only use this newspaper for a napkin. It is the best thing you will get out of it. The smell of roses from a vase of Jubilee and Marechal Neil mingles with the odor of pine, and both of them are full of ozone. They make for health as well as good cheer. I cannot despise one of my senses. The nose helps me wonderfully and serves as a sort of guide thru the world.

Have you any idea how many years are locked together in one of these pine knots? I believe that in some of them there are over two hundred. A tree has a happy way of submitting to all sorts of accidents, but it keeps score of them all. I am putting on the blaze a one-hundred-year-old scar, cut deep into the very heart wood. Different trees, like different folk, vary in power to carry a bruise —and some are hopelessly marred by a scratch. Early in life I learned there were two sides to everything, and I resolved that I would see always the bright side; I would stand as close as I could to God, and get his angle of vision. I am not sorry that that resolution came early in life, for the more I see of the world, the more I am sure there is sunshine enough to go around—if we do not cover ourselves with some sort of sunshade. After all and thru it all, to make life worth the while, what we must have to prevent mildews, and make for health and growth, is soul-shine.

There is something in the burning of these pine knots, full of pitch, that is peculiarly delightful. They flame out all over at once; a hundred jets and flamelets surrounding the whole stick, and these leap up together to make a big, orange-colored blaze, that fills the whole chimney. There is a ripple of fun in the whole of it, from start to finish. Little flames crack their fingers, and jump around and play jimcracks, *exactly* as they did when I was a boy. Carbon and oxygen? Pooh! It's just fire. Mode of motion? Pish! It's just heat. I wish I had Roosevelt here, just to hear him pronounce the word "delighted"; that is the one thing we want in this world, and it is a well-made-up word.

We used to call it merely history, but Darwin came in to make all things over. Nowadays we cannot see a tree grow or a bean crack its cotyledons and lift itself up into the world without thinking of purpose. I am a Darwinian thru and thru, for I am sure of a great and steady gain all down thru these years, for rightness. The only trouble with our age is its intensity. We are losing, or have lost, the sensation of peace. Back to the land! That is well enough if you do not bring back with yourself a lot of ambitions that fill even the woods with insomnia and unrest.

Flare up, fire! blaze red, blaze yellow! Warm my soles for me, here in the State of eternal flowers. Those chips and knots were growing when General Jackson led his troops thru the swamps, and they were saplings at least when he fairly stole the State from the Spaniards. You and I have seen a lot of history. Ten years ago our young century started out with a magnificent heritage; and it is the queerest experience one has who has lived a little while, to see how quickly this world gets filled up with children. I met a New York schoolboy the other day who had never heard of Henry Ward Beecher, and I can find you col-

lege boys who never heard of David Swing or Robert Collier, and who have never read a page of Whittier.

Twenty years ago we were just entering the big quarrel between labor and capital, and now the whole world is full of the roar. Thirty years ago we had only a dozen millionaires, but now you find one around every corner. Forty years ago we were winding up the greatest rebellion in history. Fifty years ago Abraham Lincoln was just called of God. Then it was that a great crash of the Federal Union was threatened, and the fife and drum were our music (just half a hundred years ago, and the healing is not yet quite complete). "Ah, yes," said Emerson, "but the worst of it is that embitterment which will follow the war. It will be harder to get rid of."

But back of the war, when the whole land was a schoolhouse, and every one was being made a moral hero or a moral coward—ah! but that was a time to live. There were John Browns in the woods and Garrisons were chipped out of human life by the great Architect. There was not a man in those days who was afraid of the word *duty*. It did not make so much difference whether one had been baptized with water, for he was pretty sure to get a baptism of fire if he lived to maturity. There was that great temperance struggle that began with Lyman Beecher, and it shook the whole land till the demijohns and wine glasses fell off the sideboards of American homes forever and aye. Then was the first tackle between slave labor and free labor, and before the end of it every man in America was lined up. It was something indeed to be born under Old Hickory, and to have lived thru the days that could beget Abraham Lincoln.

Poke the fire up and lay on more knots, for truly the year is in no haste to leave us. Sometimes I get a letter from a total stranger, who in some way has become a very ardent friend. He has perhaps seen a bit of my writing that has won his heart. What a fine thing if we could just get these appreciatives together, and instead of letter-writing and incense-burning, just toast our heels together around this cosy fire. Possibly nothing could be worse. Blessed be Nature for the way she has of mixing us up. I asked a judge one day what led to most matrimonial tangles, and he answered, "Propinquity."

That is a grand blaze that we have, and it is bringing out all the secrets of Nature. Carbon and nitrogen they were, but now the sticks are fast becoming food for my orange trees. They will furnish a little potash at least, after warming my blood, and helping me write an article for THE INDEPENDENT. Evolution is such a demonstrable fact, science has got thru questioning it. We not only look backward with intense satisfaction, but we look forward with the same trust. Yes! I am sure that my boys will on the whole live a better life than I. They will have less dyspepsia, less worry about heaven and hell, and they will have a more sweetly abiding world-love.

What would I wish my great-grandson to be; how would I have him differ from "we 'uns"? In the first place I would like to have him thoroly healthy, a sort of Theodore Roosevelt fellow—only perhaps not quite so noisy. I want him to have fiber and muscle, only I do not wish him to get it thru football; rather thru productive labor. I hope that before he comes work will have its honest place in the world, as finer than all the games that were ever invented. I should like that his circulation be clean, with no tobacco smoke in his lungs, and not too much beef in his blood.

I would like to have him respectful of old people. He might call me Dad, but not Old Man; for it is a lout indeed who cannot be a gentleman at home. I want him to read, but not above ten books in a year; and I do not care whether he can spell *opodeldoc* or not. I want him to have his religion in his breath and his hands, and not so much in a creed. I want him trained to do things and to see thru things; no blindness like that of being in a world full of God and yet hankering after heaven.

If he should happen to be a girl I would want her to be just as healthy and life-full as the best boy, only not ungentle. A woman needs more capacity and tact than a man; a sort of ten-sidedness, with a gift to cook and to coo and to be cheerful. It is curious how many ideals pass across the stage during a

long life. There was the French and embroidery girl, the young lady of the middle of the last century; I think it was the Civil War that helped us get rid of her, and with so many boys on the battlefield we had to industrialize the other sex. Now they refuse to vacate the offices and the shops, and they are holding their own.

I suppose that he or she is sure to be here some day, and he will have his say; only nothing is more sure than that into his making go my tastes, with my habits and hopes and failures. This is a sort of responsibility that is far beyond all others. I should hate to have him a self-indulgent fellow, with no great gifts or pride out of the common; and then again I should hate to feel that my immortality would consist in being repeated, piecemeal, in a lot of hereafter boys and girls, over whom I could hold no rod of correction.

Smoke from that big pine stick is puffing out into the room; it is not like the smoke from maple wood or hickory, and a little of it is not so bad. The flames have licked out the pitch and are now lazily eating up the stick. Yes, that is it; I want the fellow when he comes to have lots of pitch in him, that is *life*. That is the only one thing worth the while—lifefulness. I do not believe in disease or in sickness or in death. Why should one be worn out with eighty temperate years? And yet I confess that I keep a sharp lookout around every corner, lest old age be hid there, or in the darkness. Life is called a comedy by some, by others a tragedy; to me it is a poem. It is the one great fact, while death is only transformation. I do not deny science, but to me chemistry and biology do not end in analysis. "Old Greek," as we used reverently to call Prof. Edward North, of Hamilton College, said: "I see them in their laboratories cutting cats into pieces; but I never yet have found one of them that could put a cat together." They all stop with death; the big truth is life. Every one should live a strong and a full, well-rounded life.

While we have waited and watched, the moon, clear in a crystalline sky, has gone on overhead, tracing its beautiful shadows over roof and lawns, and now it is looking down into Lake Lucy, where it has found another moon, while all around the lake shadows hang downward to fringe the twin moon below. That is the way of it. No one thing in this world is alone; it has its mate, whether bird or tree or human being. I do not know why it is we so much like to find people who agree with us, yet we do. It is in the nature of things, for are there not sexes even among the strawberries?

Yet every one likes to feel that he is a little ahead of his neighbors. It is a tender point, common alike to sages and fools. I will skip it. Really, the chief trouble in the world has not been from congested population, but from a congestion of minds; too much thinking alike and believing together. Let us encourage more aloofness. However, a twin moon in the water and a chosen friend, that is all right. You and I at least will not part until we have fairly seen the New Year in.

As the fire burns low the moon looks in at the window. It is a queer world, this of Florida. The sky comes closer and is more intimate than where the hills are high. I saw the eclipse the other night as if it were in our back yard. If Professor Saunders had been manipulating his lantern slides, the stars could not have been more a part of our natural life. And yet one of these nights, far away from the crowds, undisturbed by bells and village clocks and factory whistles, belongs strangely to the infinite. The telephone only has reached us, with its clatter about other folks' affairs.

The fire has burned low. The Old Year has gone. Let the dead past bury its own dead. The New Year has taken possession of the clock of time. All hail the duties and the possibilities of the coming twelve months! Yet I do not see anything new about it. It is already fringed at the edges with inherited aches and unsolved problems. Tariff tatters trip us at the outset, and somewhere down among the months a parcels post is surely hidden. War is to be fought out of our social system, and Christianity vitalized as a working force. O 1911! do your duty!

SORRENTO, FLA.

The Moral Purpose of Japan in Korea

BY DR. J. H. DE FOREST

Representative of The Independent in Japan.

THE annexation is a fact, the greatest political fact of Eastern politics in recent years. By it, the Empire of Japan has increased its territory by one-half and has become a continental Power. The eyes of the political, religious and commercial world are turned toward this fact that arouses a multitude of questions. What does it mean for the Koreans, for international relations, for Christianity, and for the open door? Are such books as "The Passing of Korea," "The Tragedy of Korea," with their vivid presentation of the brutal wrongs and political treachery of Japan to be the final word? Or are they, with their lack of proper perspective and consequently biased interpretation of facts, to be regarded as a picture of the wrongs that always in one form or another come conspicuously to the front when a strong nation takes possession of a backward one?

The great, persistent political necessity of the East has been for decades that a strong Power assume authority over this unstable peninsula. The continuous moral failure of the Government, the ages of oppression of the people by a corrupt officialdom, and the consequent inability to stand as a nation with international responsibility, made Korea a peril to the peace not only of the East, but of the world. There were but two Powers with any shadow of excuse for undertaking the reform of Korea—Japan and Russia. Something, therefore, had to happen. If Japan had not assumed the protectorate Russia would have. And that the protectorate should end in annexation is a political necessity, provided the protected nation has been given a fair chance to reform and to rise to responsibility, but has failed.

It is too late now to nourish useless suspicions against Japan, and to emphasize the brutalities that a number of Japanese have committed in the last few years. Now that the peaceful annexation is a recognized fact, the thing to do is to inquire seriously whether there is anything of a moral purpose in the Japanese Government's annexation of Korea.

A month in Korea would not entitle me to write on this subject were there not a background of thirty-six years residence in Japan, with a wide acquaintance among civilians, educators and military men. There are certain lines of morality in which Japanese are defective, but they are strong in other lines, especially in what we may call public morality as contrasted with private. In what concerns the welfare of the state, in administration for the benefit of the people, the moral purpose of the Government is very marked. And it is on this larger line that I venture to write.

Take the Residency-General. The moral purpose of Japan may be inferred from the fact that she sent her ablest statesman, the late Prince Ito, to pave the way for some kind of Korean independence. There were jingoes in Japan who strongly urged early annexation, but Ito resisted it with all his might. I believe he meant to give Korea a recognized place among independent nations, but any one who has followed the record with unbiased mind can easily see the ceaselessly discouraging conditions he encountered. Not only were the corrupt officials, the debased currency and the wide ignorance and oppression of the people to be reformed, but it was impossible to find capable Koreans who cared to make more than a pastime of reform. The few who were sincere and able had no wide spirit of public morality to back them. Even under the sympathetic and inspiring leadership of the great Ito, tho he never confessed it, it was more and more apparent that the independence of Korea was a moral impossibility.

In other words, there was no ethical basis on which to develop a righteous Government. A contrast with Japan will show what I mean. I have asked again and again eminent Japanese officials here, civil and military, and missionaries of long residence, and a few Koreans, Has

there been a real moral life of the Korean nation during the five hundred years of the reign of this last dynasty? Has Korea a line of moral prophets such as Japan had during the Shogunate, men like Nakae Toju, Kumazawa Banzan, Ito Jinsai, Yokoi Shonan, Ninomiya Sontoku? Westerners often wonder at the unusual power of the Japanese to make such rapid and all round progress as they have made during the last half century, and mistakenly think it is because of her imitative and adaptive powers. The only fact that really explains her phenomenal progress is the width and depth of her public morality during hundreds of years. This basis of national life was developed by men of splendid moral powers, who themselves lived as they taught, and who cared for men more than for things. They were thoughtful, serious, brave, and scholarly. The influential classes and even the common people read their works, and drank in to a large extent that practical public morality whose essence is contained in the one word *Chu,* Loyalty. Had not this line of sincere lovers of righteousness existed, there could be no such nation as the Japan of today.

Unfortunately, the universal reply to my questions above is a decided negative. There has been in this land no line of moral prophets, and therefore no moral ideas to inspire the upper classes to do unselfish things for the state and the public good. They have produced no trace of moral literature for the uplifting of the people. I found scores of my Japanese friends here, some high in office, and a few of them were my old pupils. They are as frank with me as my Yale classmates would be. Many of them have been here several years. And not one of them has ever heard of any moral literature of Korean production. One General said to me: "They have the same Chinese classics that we have, the same fine Confucian ethics, and many Koreans are men of high moral character on narrow personal lines such as pertain to the permanency of the family; but the political ethics which we have always emphasized they have wholly overlooked, so far as practice goes. They can pass splendid examinations in all branches of Confucian ethics, public as well as private, but they practise only one side of them." The Resident-General himself, Viscount Terauchi, told me the same thing: "The reason of the moral failure here on such a large scale is not that the officials do not know, for they are well versed in political ethics, but they simply don't try to put in practice what they know. Instead of that they have for ages ground down the people so that large numbers of them were always on the verge of starvation."

I have yet to meet the missionary who knows of any Korean literature of high ethical value. "There is practically no literature in the Korean language," one told me. And a Korean instructor of Chinese classics in a mission school seemed surprised at my inquiry, but after thinking he replied they had only annals, stories and poems. No writers have exposed the political corruption and inefficiency of Korean officials more frankly than the missionaries, whose love for Korea is devoted, but whose love for truth has compelled them to make it public. Of their splendid work and its limitations I shall write in another paper.

At last Korea is annexed to a Government and people with a moral life of their own and a purpose to apply it in successful reforms. Of course there are motives at work other than the purpose to give Korea political morality. But the Government apparently sees that unless a moral upbuilding takes place, the whole work will prove a failure. And so the best men are being sent here to take charge of the work. Viscount Terauchi has raised the moral tone of the Korean capital by bringing his family with him, and by absolutely refusing to have anything to do with the geisha, of which too many Japanese officials are altogether too fond. The second in authority, the Administrative Superintendent, Mr. Yamagata, is like his superior. And the effect of this is an example of a most valuable combination of personal and public morality, of clean family life with rare administrative gifts—something Korea has not known for centuries. To lose sight of this is to be liable to misjudge Japan.

Another department that will help to cultivate the spirit of civic righteousness is the work of the courts and the intro-

duction of the civil, criminal and commercial codes. Fifty years ago Japan's courts were places of torture and of no little injustice, and yet the spirit of righteousness, such as it was, saved them from perpetual miscarriage of justice. Many of their judges were as impartial and upright as those of the West. I have spent many an hour reading the judicial decisions of the famous Judge Ooka, of Shogunate times. These and other judicial decisions form quite a body of literature, which was a help in strengthening civic righteousness, and was a good preparation for the adoption of Western codes. But Korea has no such literature. Undoubtedly there were sincere and worthy judges here and there, but their secret seems to have perished with them. So that the one Korean department that all writers agree in characterizing as very bad is that of the courts.

WATANABE NOBORN,
Chief Justice of Korea.

Judge Watanabe, the head of the Judicial Department of Korea, told me that the majority of civil cases pertained to the ownership of lands. For Korea has never had any proper system of surveying and registering real estate. It is along this line that the Japanese have been most severely criticised, as having seized lands and in conjunction with rascally Koreans secured fraudulent papers of ownership. The War Department also has been accused of taking possession of large tracts of land, rudely driving out whole villages without any remuneration. So I asked the Chief of Staff about it, who said that in war times such things had to be done, but the army had as soon as possible settled for all it had taken, with the exception of one small place only. One of my acquaintances is a civil engineer on the Korean railway, and he told me all the ground of the road was regularly bought, and whenever it was necessary to disturb villages or graveyards, the local head men were always consulted and even more than fair prices were paid rather than incur the ill will of the people. He said that the Koreans were amazed that the Government didn't take what it wanted without pay, such being their traditional ideas of government.

In seven years all the peninsula will have been surveyed, properties registered and taxes made uniform. What a blessing this will be to the people, and what a lesson in that large branch of practical ethics that has hitherto been neglected!

Then, as to individual instances of injustice and contempt, the strictest instructions have gone out from the strictest disciplinarian Japan has, Viscount

Terauchi, that Koreans are not to be insulted, much less to be defrauded. Swaggering soldiers can no longer browbeat Koreans or disregard the property

DR. M. ICHIHARA,
Governor of the Bank of Korea.

of foreigners. One comparatively insignificant infringement of a foreigner's grounds by two soldiers resulted in several days' confinement for them and a caution to their immediate officer. From Fusan to Antoken, the entire length of the peninsula, I neither saw nor heard of any instance of abuse of Koreans by Japanese. On the contrary, I heard of repeated kindnesses and saw everywhere the normal social life of people who regard each other with respect. The vast mass of the Japanese in Korea are orderly, law-abiding subjects. It is the comparatively few adventurers of rough and worthless character who have so widely discredited Japan.

Social morality depends to a marked degree on another branch of government service, a just financial system. A debased currency, with quantities of unreliable paper money, affects the moral life of every family thruout the land. It makes possible cunning and dishonesty on a large scale among those who have the innings, and on a small scale among the poorer classes. It is hard to estimate the moral damage that suspected and debased money does to an entire people. The old Emperor himself was a prime factor in weakening the moral nature of his people. Years ago his Russian financial adviser urged him to give up his private mint and paper money, on the ground that the people were vitally affected by his system of finance, and that therefore there should be only one mint for the whole nation. This supremely selfish or supremely ignorant ruler replied: "You go ahead and build a mint for the people, and I'll keep mine for myself."

China is famous—or infamous, rather—for her unendurable methods in finance. It has been for years one of the most urgent demands of foreign Powers that China should establish an honest currency and put a stop to the irresponsible paper money that brings sorrow to the common people and frustrates a healthy world commerce. China could greatly advance the moral life of her millions by a righteous system of national finance. And this is what Japan has done for Korea, made it possible for her people to be honest, to trust each other because they can trust the Government's money. To give ten millions of people a basis for righteous dealings with one another and with the world is a moral achievement of no mean order. When I went to the Bank of Korea and met my old friend, M. Ichihara, a Ph. D. of Yale, at the head of Korean finances, I knew at once that the great mercantile houses of Seoul, as well as the humble burden bearers of the streets and the peasants beyond the mountains, were absolutely at rest in their thoughts about the value of their nickels and their ten-yen bills. If you add to this that for the first time an honest system of weights and measures has taken the place of the untrustworthy Korean one, it will be plain that Japan has given Korea a basis of commercial honesty that cannot fail to affect the people for good.

Education also gives a clue to the moral benefit coming to the people. I visited six public and private schools in

Seoul and found among the teachers several of my former acquaintances who talked with perfect freedom about their work. The one thing that impressed me most was their sympathetic attitude toward their pupils. The schools are mainly of recent origin, but there seemed to be no gap between the Korean and Japanese teachers and their students. Of course, the language question is decidedly prominent, and fortunately for both sides the two languages are so similar that pupils become proficient in a year.

In primary schools the teaching is done in Korean, but in the upper schools after the first year studies are carried on in Japanese. It was a pleasure to hear students recite in their new national language and to see their eagerness to acquire it. I heard one class learning to song "Kimi ga yo!" the national hymn of prayer for the permanence of the Imperial line. Thus the entire literature of Japan, ancient and modern, with its wealth of modern translations, will be open for the first time to Korean youths. It is a rapid entrance to world knowledge.

One of the first sights that astonished me all the way to the Yalu River was the barren hills and mountains. Arriving late in the evening at Seoul I saw nothing of its surroundings, until the next morning revealed the pitiable sight of those steep hills towering abruptly a thousand feet. Devoid of life they looked as if they had been scalded and blistered and peeled, and had died in agony. Yet my foreign friends exclaimed with radiant faces, "Aren't they beautiful!"

To me the desolate mountains of this entire peninsula told of the oppression and wrongs done to the people by selfish Emperors and grasping officialdom. The palace grounds, enclosed in a wall three miles long, had beautiful groves and enchanting scenery in valleys and on hills. But that his people had been left in ignorance of forestry until the trees were gone, until the very roots of trees had been dug up, until the grass was exhausted for fuel and the very turf uptorn for its tiny roots, until the soil was washed off from the mountain ranges, leaving only vast stretches of desolate slopes all over this once beautiful and fertile peninsula—what cared the Emperor and his lazy court and his squeezing officials!

But a new life is coming to these wronged hills and a new hope to the tillers of the soil. Some 5,000,000 trees are already planted in and around Seoul, so said two of the Japanese foresters, my old friends. Millions of sprouts are being given freely to any who will plant them under Japanese direction.

Scientific agriculture for the first time is being given the people. As General Terauchi said: "One of my first duties will be to see that the peasants are so taught agriculture that they will be sure of enough to eat the whole year around instead of starving half the time." Model farms are opened and delicious fruits, such as Koreans never before saw, are beginning to appear in the markets. I visited the famous ginseng farms, the best in the world, that had so long been one large source of revenue for the Emperor. The product had run down badly on account of a parasitic disease which the Koreans ignorantly said was the punishment of heaven. But under Japanese management the disease is cured, and the delicate plants are thriving, bringing $42 a pound, while that produced in New York State, I am told, is worth only $10.

Whatever faults and abuses Japan is responsible for, the blessings she is giving Korea, of safe society, of justice, of knowledge, of commerce, of agriculture, of roads, of healthful conditions, are the beginning of a new life for the people, provided they will take them peacefully. Already the fruits are widely apparent, as a missionary said: "They dress better, eat better, and do better than ever before." And the Government that can bring about these changes must be given the credit of having a moral purpose on a large scale.

SEOUL, KOREA.

Three English Universities I.—The University of London

BY EDWIN E. SLOSSON, Ph. D.

[This article, by the author of the series on "Great American Universities," which we published last year, will be followed in THE INDEPENDENT on February 2 by an article on Manchester University and on March 2 by one on Oxford University.—EDITOR.]

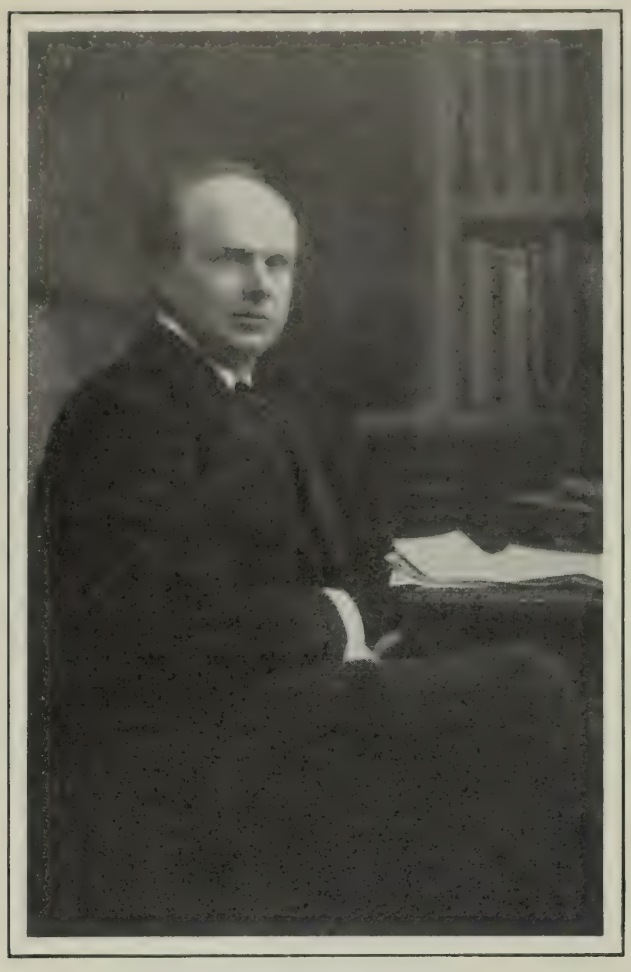
THE City of London has a population of 27,000, and it is decreasing. But the city for which the University of London provides higher education has a population of 8,500,000, and it is increasing. The University of London has a legal radius of 30 miles from its central building. Its territory is therefore about 2,800 square miles, but rapid transit brings within its reach a larger area in southeastern England, where there are no rival institutions, so that 10,000,000 is a low estimate for the present tributary population, and within a generation it is likely to be 15,000,000; a population which, on account of the literary, political, industrial and financial importance of London, requires higher and more extensive educational facilities than the same number elsewhere. This is the duty imposed upon the university, or, rather, the opportunity opened to it.

The University of London has awakened to a realization of both its duties and its opportunities. Last year, in visiting fourteen of the larger American universities, I found each of them regarded itself at the time as in a transition state, "at the most critical period in the history of the institution" was the customary phrase, tho usually there was no disturbance of the academic calm perceptible to a stranger. But there is no doubt about London University. It is developing so rapidly that merely to watch it makes an American head swim. I am writing as fast as I can for fear that what I have found out about it will be out of date before I can get it down on paper. It is perhaps easier to say what London University will be than what it is. Prophecy is, here, safer than description.

The transformation process is what we call in America a merger proposition. It is familiar to us in financial affairs, but we have hardly begun to apply it to educational. Suppose somebody should propose to unite into one great "University of New York," Columbia University, Pratt Institute of Technology in Brooklyn, the College of the City of New York, Normal College for Women, Stevens Institute of Technology in Hoboken, Rand School of Social Science, New York University, Cooper Union, Adelphi College of Brooklyn, Union Theological Seminary, the General Theological Seminary, the Jewish Theological Seminary, Fordham University, Trades School for Girls, Briarcliff School for Girls, Carnegie Station for Experimental Evolution at Cold Spring Harbor, Rockefeller Institute for Medical Research, half a dozen medical and law schools, and a score of other institutions for teaching and investigation in and about the City of New York. Suppose these institutions were asked to turn over their property to the board of trustees of the new University of New York, to unite their faculties, adopt uniform examinations and the like. Two queries naturally arise from such a supposition: first, which of these institutions would be the most indignant at this proposal, and second, what sort of names would they unite in calling the man who made it?

The problem which the University of London is now trying to solve is similar to this, but more difficult, because of the complexity of the vested interests and vested traditions involved. Fortunately, the institutions concerned are comparatively small and young. University College, out of which the University of London grew, is not much more than half the age of Columbia. There is

something of the vigor, hopefulness and belligerency of youth manifest in the way the problem is being attacked. To recognize the existence of the problem, to have confidence in the possibility of its solution, and especially to have so many plans for it presented, are encouraging signs. The matter is now being threshed out before a Royal Commission of investigation. Several hundred pages of recommendations and evidence have already been taken, the great, tall pages of the British blue books—well worth reading by American educators.* When I recall certain legislative investigations of State universities, I am more than ever imprest with British thoroness and frankness.



There are now some sixty institutions connected in some way with London University and many others that ought to come in. Some of these have been rivals for half a century, struggling with each other for prestige, students, donations and grants. They have grown up in the haphazard and unpremeditated way characteristic of the Anglo-Saxon race on both sides of the Atlantic.

The nucleus around which the London University has crystallized is University College. This was founded in 1825 by private subscription, at the suggestion of the poet Campbell. It was intended to provide a liberal and non-sectarian education for the people of London who were excluded from Oxford and Cambridge or unable to go there. But these ancient universities, instead of welcoming the new institution as an ally in their common fight against the ignorance of the world, opposed its progress at every step with all the power of their political and social influence. The Established Church, not content with calling the Dissenters ignorant and uncultured, was determined that they should remain so. It was not until 1871 that Parliament forced open the doors of the old universities to those who were unconvinced of the truth of the Thirty-nine Articles. The attitude of Oxford and Cambridge

CENTRAL BUILDING OF THE UNIVERSITY OF LONDON
At South Kensington, containing the administrative offices, examination rooms and physiological laboratory.

T. GREGORY FOSTER
Provost of University College, London.

during this period and indeed later was incongruous enough to have struck even a British sense of humor. They asserted their monopoly of education on the ground that they were national universities, but whenever the question of admitting Non-Conformists arose they claimed to be the seminaries of the Church. On account of their opposition it was ten years before London University was allowed to grant degrees and twenty-eight years before its graduates in medicine were admitted to practice on an equality with those of Oxford and Cambridge. London University, however, prospered in spite of its enemies and opened up new fields in education. In 1878 all degrees, honors and prizes were made accessible to women on equal terms with men. The sciences were here for the first time put on an equality with older studies. Oxford and Cambridge do not yet grant degrees to women and they still maintain the monopoly of the classics.

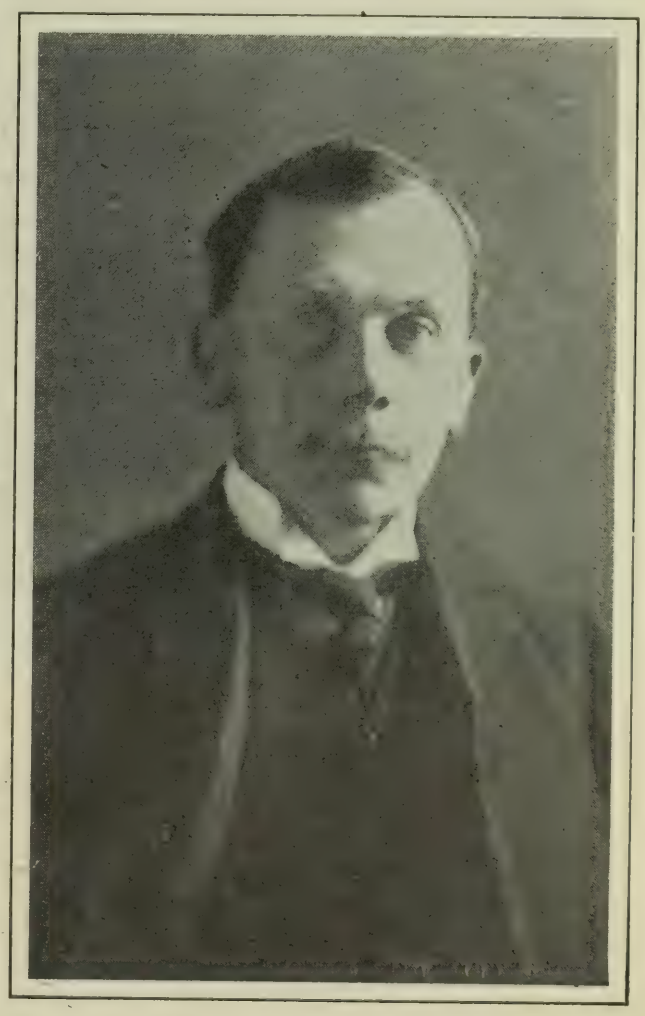
University College is situated on Gower street, not far from the British Museum, the most familiar quarter of London to the American tourist. It is distinguished from most London buildings by an open square fronting on the street. The main building reminds one of an American State House or of the Roman Pantheon: whichever one is more familiar with. Underneath the dome are the Flaxman sculptures ,and in an adjoining lobby the Flaxman drawings are on exhibition. On the right is the new Physiological Laboratory, a large and handsome structure, admirably designed for modern methods of instruction and research.

The classrooms of University College are in general much better lighted and furnished than those of Oxford. But the site is too small and the buildings quite inadequate to the expanding needs of the institution.

I was particularly anxious to see the private laboratory of Sir William Ramsay, whence has come the series of startling discoveries which have added a column of unpredicted and unprecedented elements to the periodic table. I anticipated some difficulty in this, for I knew how jealously some professors in my own country guarded from profane eyes the secrecy of their sanctums, and how hard it was for them to find a spare moment to bestow upon a stranger. But Professor Ramsay was different. No formalities were necessary. In fact, he has no *private* laboratory. I found him in a little basement room cluttered up with apparatus, and, as soon as he had finished rubbing the rod for charging his electroscope to test the radio-activity of a filter paper faintly soiled with precipitate, he was ready to talk with me as cordially and unhurriedly as tho he had nothing more important to do.

If an American university president in search of an instructor should approach one of our nascent Ph. D.'s—one, say, whose sole contribution to science consisted in the record of two failures to devise a new method of separating arsenic from antimony — and should offer him accommodations such as these, the position would be rejected with scorn.

"I must have," the youth would say, "a private laboratory sufficiently large so my apparatus may be set up perma-



nently, and I cannot be bothered with cubs running in all the time and interrupting my researches." He probably would get the facilities he demanded, and he probably would not be heard of afterward.

If American scientists improved their opportunities as well as American millionaires, this country would rank higher in the scientific world. As it is, our university buildings are more imposing than their occupants. When I saw these inconvenient and overcrowded rooms, the big spectroscope hung overhead to get it out of the way, and the liquid air machine in an abandoned lavatory, I was tempted to brag a bit about some of our magnificent new laboratories. But I did not. I thought of the sort of work which has come out of this basement: the discovery of argon, for which Lord Rayleigh and Professor Ramsay received the Nobel Prize; the extraction of helium from minerals, the new, strange and secret gases that followed in their train, and, more recently, the announcement of the transmutation of metals, concerning which chemists are still skeptical, altho they are shy about expressing their incredulity, for incredulity in regard to Professor Ramsay's former announcements has proved unjustified.

In the past eight years the chemical department of University College has produced 216 papers of original investigation. The average number of research students in this department is thirty-three. If an American institution had a department with half the needs and a quarter the merit of the chemical laboratory of University College, millionaires would be competing for a chance to endow it. But University College actually has to advertise for benefactors, at the rate of two columns a day in the *Times*, to raise a fund of $370,000 for a chemistry building. And it has not been raised yet. English millionaires will have to hurry or Mr. Carnegie will get ahead of them, as he did by building the chemical laboratory in Manchester University.

I found the chemists of University College ready to admit the desirability of more room, but when I mentioned the enforced mingling of students of various grades and aims as one of the disadvantages of their present quarters, they refused to admit it. It was a positive advantage and a mutual benefit, they claimed, to have research students working in the same laboratory with those taking the routine courses. Nor could they see any impropriety in allowing elementary students to run to Sir William Ramsay or Prof. Norman Collie with their petty worries at all hours of the day. I hardly dare mention this now that the efficiency expert of the Carnegie Foundation has so strongly condemned the mixing of undergraduate work, and Princeton University is spending millions to secure the complete isolation of the graduate department.

Sir William Ramsay does not regard it as beneath his dignity or as a waste of time to teach large elementary classes in chemistry, and the Provost of University College, T. Gregory Foster, still guides students thru the mysteries of Beowulf in spite of the pressure of executive duties. Another strange thing is that there is no gulf fixed between faculty

HENRY A. MIERS
Principal of the University of London.

SIR WILLIAM RAMSAY,

Professor of Chemistry, University College, London. From a photograph taken in his laboratory for THE INDEPENDENT by Elliott & Fry, London.

and students, as in many American universities. When lunch time comes they resort to a common restaurant in one of the college rooms, taking any seats that come handy, and ordering from the same bill of fare, the Provost perhaps, or professors, at the same table with engineering, classical and medical students, or self-supporting men and women who get away from their work a few hours a week for university studies. This is disconcertingly democratic to one familiar with the caste system in some of our universities, where Greek will not eat

with barbarian, nor Junior with Sophomore, where the faculty holds aloof, and girls are not allowed at all.

In its atmosphere University College is, in fact, like our Western State universities, the State universities as they used to be. All departments except engineering and anatomy are co-educational, and young men and women associate in class, laboratory, library and society, in the same normal and unconscious way as in our Western universities. There is a Union for men and another for women, each with its club-rooms, in the college buildings, and there are separate athletic and religious societies, but the literary and departmental societies are mostly open to all students. Student activities and social life do not, however, engross so much time as in America.

Before leaving University College I must mention one other department of research, because we have nothing like it in American universities; that is, the Laboratory of National Eugenics, founded by Sir Francis Galton and managed by Prof. Karl Pearson. In this laboratory a group of young men and women are working at the problem of human heredity and the causes of racial improvement and deterioration, using, perhaps too exclusively, the statistical method. No question is more important than this of whether human evolution is working forward or backward, for it makes little difference what form of governmental, industrial, educational and social system we bequeath to posterity if posterity is degenerate. And there is no better time to take up the question than now, when means have been discovered for its investigation in a scientific way. Perhaps the reason why no American university has taken it up is not because of lack of enterprise, but because of a feeling that it would be regarded as "improper." Curiously enough, some people resent any discussion of human heredity because they regard it as an attack upon the marriage system, unwarrantably assuming that no improvement of the human race is possible without the overthrow of that system.

University College being founded by Liberals and Nonconformists, it was thought necessary to balance it at once by an institution of opposite tendencies, lest London should be led astray, morally and politically. King's College was founded in 1829, under the patronage of the Duke of Wellington, "for the purpose of giving instruction in the various branches of Literature and Science and the doctrines and duties of Christianity as the same are inculcated by the United Church of England and Ireland." The two institutions were called respectively the "Whig College" and the "Tory College," and because of their rivalry the University of London was not identified with either, but became an examining body, granting degrees to the students educated in these colleges or elsewhere.

King's College is now larger than University College and even more cramped for room. It occupies one wing of Somerset House, the Government revenue building. Its entrance, on the Strand, is hard to find, being a single archway, quite obscured by shops devoted to the sale of hats, photographs, railroad tickets and aërated bread. Inside there is a narrow court, leading to the Thames Embankment, and on the left the college rooms; a labyrinth of narrow passages, stairways, basements and sub-basements, attics and super-attics, metallurgy, pharmacy, psychology, theology, linguistics and engineering, all jumbled up together. There is a beautiful little chapel; otherwise everything is plain and strictly utilitarian. There is nothing of the marble magnificence of the medical buildings of Harvard, the mechanical engineering building of Pennsylvania, or the mining building of California, any one of which could come near housing the whole of King's College. But in England one must learn not to judge things by their looks. Probably the Englishman visiting our universities would need the same warning, tho in a different sense. King's College finds room not only to carry on the usual collegiate and professional courses, but to give a large amount of evening work and to do research in pure and applied science. The names of the Wheatstone Physical Laboratory and the Siemens Electrical Engineering Laboratory are evidence of that. The curriculum is astonishingly varied. What American university offers courses in

Assyrian, Chinese, Russian, Turkish, Zulu and Hausa?

The women of King's College are in a separate institution, at a distance, something like Radcliffe and Barnard. Here work in Home Science and Economics is given in addition to the course in arts and science.

The central offices of the University of London are at South Kensington, between the Museum and Albert Hall. No American university can boast of so imposing a building. It is spacious and stately, original in architectural design without being eccentric. It is, however, not very well adapted for its purpose, being, in fact, erected for a very different purpose: for the Imperial Institute. This was to be a permanent exhibit of the resources of the British Empire and the center of its commercial interests, a sort of perpetual Colonial and Indies Exposition. But the plan did not succeed and most of the building is now used for the administrative offices and examination rooms of the University of London. Here is housed the Library of Economic Literature, of 40,000 volumes, presented to the university by the Goldsmiths' Company, practically complete on the history of English economic thought and very full on French and American. In the same building is the Physiological Laboratory, under Dr. A. D. Waller, devoted to research in toxicology, pharmacology and physiological chemistry. There are now thirty-seven investigators working in this laboratory, some of whom have come from other British or foreign universities, to do research work here, but they are all under obligations to give, if called upon, eight lectures on their specialties in some of the schools of the universities. A Psychological Laboratory, the first of the kind in London, has recently been established here, under Miss Beatrice Edgell.

To enumerate all of the teaching and research departments of the University of London would require more space than I have at my disposal. A list of the schools of the university will be found in the accompanying table, with their attendance, but besides these thirty institutions, with their ten thousand students, there are thirty-one other institutions, with 22,759 students, more or less closely affiliated with the university; that is, they have certain teachers, 239 in all, who have been "recognized" by the university, and students attending approved

COURT OF SOMERSET HOUSE
King's College is housed in the building on the left.

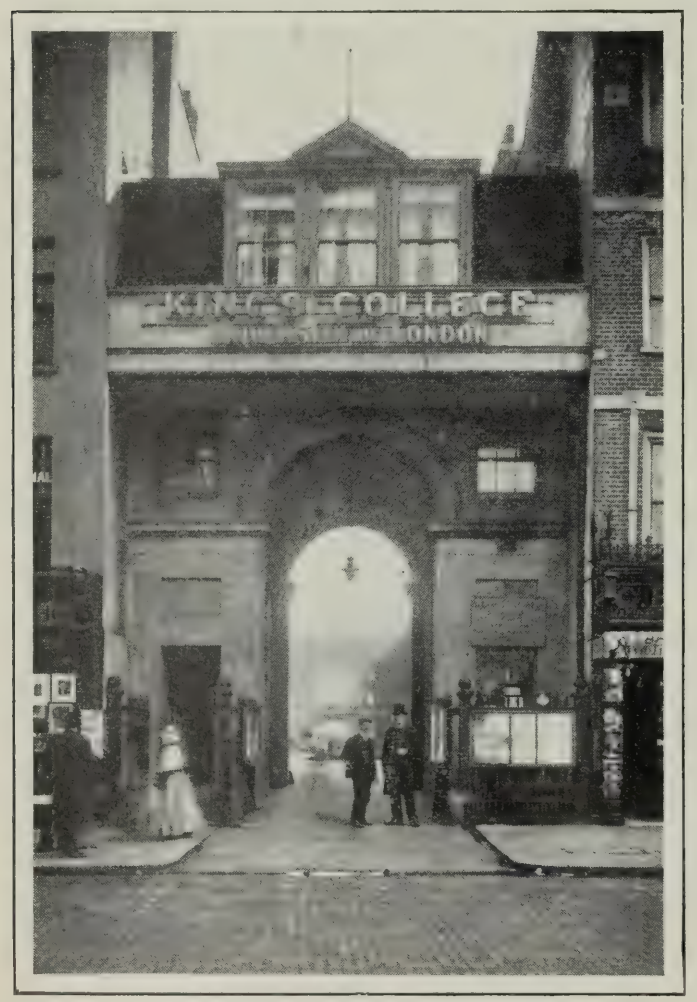
courses of these teachers may be admitted to present themselves for university degrees as Internal students.

Some idea of the extent and character of the work done under the auspices of the University of London may be gathered from a glance at the following list of the successful candidates for degrees in one year:

DEGREES CONFERRED BY THE UNIVERSITY OF LONDON, 1908

	Internal Students.	External Students.	Total.
B. A.	80	174	254
B. Sc.	107	149	256
B. Med. & Surg.	111	26	137
B. Sc. (Engineering)	56	29	85
B. Sc (Economics)	3	5	8
B. Laws	1	14	15
B. Divinity	4	15	19
M. A.	11	15	26
D. Lit.		3	3
D. Sc.	9	4	13

Besides these, there are a few degrees and diplomas given in music, agriculture, pedagogy, etc. In the year 1909-10 the University of London examined 12,820 candidates for matriculation and degrees, of whom 6,837 passed, and 1,104 degrees and diplomas were conferred.* The number of internal students was 4,205. Altogether the university, in the seventy-one years of its existence, has examined 227,996 students, of whom 119,890 were successful. Among the candidates for the B. A. the women outnumber the men by about 50 per cent. In science and medicine the women constitute about one-third; in economics, about one-tenth, while in engineering, law and divinity there are almost none. The proportion failing on examination is smaller among the women than among the men, as is also the case in American universities. Most of the schools of London University are co-educational, except the theological and medical. There are three separate colleges of arts and science and one of medicine for women.



Until recently the University of London proper was not a teaching, but merely an examining university. University College and King's College were theoretically no more to it than the many other schools which gave approved courses to Internal students. But five years ago University College decided on a bold move. It turned over all its property, valued at $2,500,000, to the University of London, and became incorporated with it. Two years ago King's College followed its example.

The University of London is now

*Report of the Principal, Dr. H. A. Miers, Presentation Day, November 28, 1910.

anxious to incorporate the other schools of the University, especially the Imperial College, which is suspected of being ambitious to become an independent and rival university, or even of aspiring to a higher rank, that of the University of the British Empire, relegating the University of London to the position of a local and municipal institution. The Imperial College of Science and Technology is located in South Kensington, near the central building of the University, and it is composed of the Royal College of Science, the Royal School of Mines, and the City and Guilds College, all devoted to science, pure and applied, chiefly engineering. The research laboratory is named after Huxley, who was the first dean of the College of Science, and for forty years connected with it. The reluctance of this and other technological schools to incorporation with the older colleges is psychologically similar to the aversion of the Massachusetts Institute of Technology to union with Harvard; primarily a desire to work out their own methods of practical education unhampered by academic traditions.

To be sure, an educational institution rarely fulfils the promise of its youth in the matter of originality. The attraction of atavism is too much for it. If an institution should be founded in America today for the purpose of teaching the children of the Submerged Tenth how to cobble shoes and lay bricks, the chances are that in another generation it would be granting doctorates for studies of Etruscan inscriptions, and its students would be notorious for the luxury of their clubhouses. In England the same tendency shows itself. It would be hard to find in America a more surprising metamorphosis than that of East London College, which started in a Utopian romance, Besant's "All Sorts and Conditions of Men." If the People's Palace had been kept between book covers it would have remained forever an inspiring ideal, an iridescent dream. But somebody was ill advised enough to put it into stone and mortar, and it perished. The "people" did not flock to it with joy and pride. They had no use for it as a recreative and artistic center. But they took advantage of its courses in bookkeeping and shorthand, chipping off the toes of the statuary as they went into the classrooms. So the institution developed into a trades school, and became more conventional, and added advanced work, and dropped off the lower, till now it is a regular school of the university, an East London copy of University College; and the People's Palace is abandoned.

KING'S COLLEGE.
Entrance from the Strand.

Many of the other polytechnics founded from philanthropic and charitable motives show the same aspirations. The question is what to do with them. If they are let in too soon they lower the standard of the university. If they are kept out too long they become its rivals. Witness Germany. In or out they are a menace to the established order. No way has been discovered to make them "keep their place." The only thing to do seems to be to let them rise and start new ones. There is always room at the bottom in education.

The medical schools of London are in a transition stage, out of which our medical schools have mostly risen. They are small and connected with particular hospitals. The members of the instructional staff do not devote their whole time to the work of the school, but are usually practising physicians and surgeons, who keep up a connection with the school because of the prestige and patronage which it brings The medical schools have from the start been the most discontented members of the whole "Happy Family" of London University, and they are the farthest now from any desire to form a closer union.

The theological schools, on the other hand, get along very peaceably, perhaps because they have agreed to disagree on certain points. They have found it is easy to agree on many others, even on examinations. King's College is Church of England; Hackney College is Congregational; Regent's Park College is Baptist; Wesleyan College is Methodist; Jews' College is Hebrew.

CHAPEL
King's College, London.

One other branch of the University I must mention. I should like to devote a whole article to it. That is the London School of Economics and Political Science. It is situated on the other side of the Strand from King's College. Americans will find it easily when I say it is close to the building that is not the original of Dickens's "Old Curiosity Shop." The aim of the school is to give commercial and political training of university grade. There are special courses for railroad employees, army officers, librarians, etc., and much of the work is done in the evening. We have no institution just like it in the United States, altho we need a gross of them right now. It neglects neither research work on the one hand nor occupational training on the other, and it gives a great variety of courses. We should have difficulty in matching them all, even nominally, anywhere in the United States, especially the work in geography, which is highly developed in the London school. Our nearest analogs are probably the departments of history, social sciences and commerce in Harvard, Columbia, Pennsylvania and Wisconsin, but of these only one, Wisconsin, is like the London School in admitting women, and only one, Pennsylvania, resembles it in the extent of its evening courses.

The school has only been running about ten years, but it has a building of its own and needs another. It has a library of 80,000 volumes, differing from most British libraries in that it is properly classified and cataloged. On municipal affairs it is said to be the richest in the world. The governing body and faculty are drawn from both the academic and the business worlds, and represent all diversities of political and economic opinion. Yet they work together in more freedom and harmony than would be possible in most of our universities. Recently, however, this harmony was disturbed by the three General Managers of leading English railways, who simultaneously resigned their positions on the Board of Gov-

UNIVERSITY COLLEGE, LONDON.

ernors out of resentment at Mr. Sidney Webb, Chairman of the Governors, for criticising in a public speech the railroads for not paying higher wages and the courts for their decision against the trades unions in the Osborne case. Fortunately this action is not likely to check the freedom of speech which has hitherto characterized the school. It was largely thru the initiative of Mr. Webb and other Fabian socialists that the School of Economics was started, and there is no complaint that they have been unduly partisan in their instruction or management.

The University of London, tho the largest of British universities, is not what we would call a large university. In the number of regular students or of degrees granted to them it would rank about fifteenth in the list of American universities. But the University of London differs from our institutions most decidedly in that it extends its privileges to the still larger class of External Students who are only in part instructed in its schools. The University grants degrees to many whom it does not instruct and instructs many to whom it does not grant degrees. The former class is absent from American universities and the latter class is kept to a minimum. An American university somehow regards it as disgraceful to have to report a considerable proportion of its students as "Special," "Irregular" or "Not Candidates for Degrees," partly because inferior colleges have used this method of padding their rolls, partly because the feeling still prevails that the only way to get an education is to stay in one place for four years and go to classes every day. No one of our city universities, such as those in New York, Chicago, Philadelphia and Boston, is doing as much for the people of its community as does London University in its affiliated schools. Our colleges mostly ignore all those outside the regular rank and file of young men who have enlisted "for four years or until the war is over," as we used to draft them into the army. Most of our universities think it beneath their dignity to have anything to do with evening classes, technical work or commercial courses. This opinion is also represented in some of the faculties of the University of London, as is shown in the evidence taken by the Royal Commission now sitting. On the other hand

Mr. Sidney Webb comes to the defense of the "irregulars" in his usual energetic style:

"Among the evening students there is much of the best, the most advanced and the highest university work, compared with which the daily round of the common passman is intellectually contemptible.

'It is really ludicrous to imagine that a youth of 19 or 20, fresh from school, with no real knowledge of the economic or social facts of life, proves a better student of economics or pedagogy than a man actually engaged in the very work merely because the former is free to go to lectures all day. In all these cases the professional day work of the evening student may not be unfairly compared with the laboratory practice in which the student of physical science spends such interminable hours. The practical daily work of such students in economic and political administration or in pedagogy is, however, in some respects actually superior to any laboratory practice in that what is handled is real life and not artificially selected material.

"It is a very different thing to lecture on banking at the London School of Economics to an audience of bank clerks and managers from lecturing on banking at Oxford or Cambridge to an audience of unfledged undergraduates."

Because of this conflict of ideals and diversity of methods London University is an interesting institution to study. The questions of centralization and decentralization, of autocratic versus democratic administration, of technical and research work, of residential or non-residential life, of day or evening study, of External or Internal students, of classical and scientific training, of examinations as a test of knowledge and cramming as a mode of education, are just now being fought out, not between independent institutions, as with us, but between different institutions that are nominally at least members of the same university.

The University of London is mainly dependent upon examination fees for its existence, and the expenses of the examinations consume half of this income. Until its reorganization by a Royal Commission ten years ago examining was almost its only function. The students got their knowledge where and how they would. The University was in the position of a public gauger who measures and marks but does not fill the pints and quarts that are brought to him.

Under this system cramming became a fine art and successful coaches were as renowned as at Harvard. It not infrequently happened that candidates who had been prepared entirely by crammers, perhaps even by correspondence, carried off the honors from those who had taken the regular college course. This is susceptible of two interpretations: either that classroom work is not efficient or that examinations are not reliable tests. The scientific men on the faculties generally are skeptical of the value of examinations. Sir William Ramsay, as the result of his experience as an External Examiner for five years, states that the passing or failure of half the candidates is a matter of chance.

The scientific men are also skeptical

LONDON SCHOOL OF ECONOMICS.

of the value of the lecture as a means of imparting information. The Principal of the University of London, Dr. H. A. Miers, who is a mineralogist, holds that the system is a survival of the days before the invention of printing and that lectures, except those of very learned or original men, are of no value in the modern university.*

But the lecture and examination have been for so long the mainstay of the English educational system that such protests can have little effect. The University of London has imperial as well as local functions to fulfil; for example, it is proposed to have it endorse the diplomas of the new Hong Kong University. As it is the only degree-giving body in the metropolitan area it cannot become merely co-extensive with its teaching colleges. It must also graduate those who have studied elsewhere, the External students. But the External and Internal divisions of the University are so divergent in their ideals and interest that it is difficult to keep them together and working in harmony. The present law permits separate examinations for External and Internal students, but provides that the degrees "shall represent as far as possible the same standard of knowledge and attainment." Even this ostensible equality seems to be impracticable, and the Academic Council recommends to the Royal Commission "that an exact correspondence between the tests no longer be enforced." In England, as in the United States, discussion in university circles is largely concerned with the question of the exact meaning of letters that are meaningless.

Another cause of friction in the University of London is the variation in the tuition fees. For a year's work in engineering one of the schools of the university charges $50 and another $250. A course which will cost $25 a term at one can be obtained from another for $2.50. The equivalence is merely nominal, for the various institutions differ even more widely in their equipment, standards and staff than they do in their charges, and these two variables bear no functional relation to one another. The subways have brought distant institutions into competition and the well to do public goes shopping for its education in the cheaper markets of East London.

*Dr. Miers, in an oration on "The Revival of Learning," delivered to the students last year, gives a striking illustration of the dangers of the lecture system which I quote because it also serves as a simple, reliable and inexpensive test of the possession of an English accent, quite as good as the orphan-often pun which puzzled America in the "Pirates of Penzance." Read the paragraph aloud. If the listener laughs within thirty seconds you have acquired a pronunciation that will pass muster as British anywhere in this country. If there is no such reaction on the part of the listeners you will have to go back to England next summer for another course in phonetics.

"It is very difficult for a teacher to put himself into the state of mind of even one pupil; it is impossible for him to understand those of a whole class. He cannot even realize how what seems to him a simple and straightforward expression may be misunderstood in an almost incredible manner. This was brought home to me once very vividly when I had been describing to my students how the form of a crystal may be altered by dissolving various materials in the solution from which it grows: and I gave as an example common salt. There is a substance called urea which has a remarkable effect upon it, and I stated that salt grows in one shape out of a pure solution, but, if you first put urea into the solution, it grows in a different shape. The next day a not too intelligent pupil came to me with a puzzled expression, and said: 'About the salt solution, I have been thinking: why will not your finger do as well?' If he had possessed a spark of humour I should have suspected him; but the question was quite innocent."

Some assistance to able and needy students is provided in the way of scholarships and prizes by the London County Council and the national treasury, but there is no attempt made in England to offer free higher education to all who want it, as is done in all of our Western States and some of our Eastern cities. In fact, that would not be regarded as desirable if possible. The Rev. Arthur C. Headlam, Principal of King's College, says on this point:

"Under present circumstances I do not see that you would gain anything by allowing a great many people to get their education without paying properly for it. It is very bad for them. They do not think nearly so much about it as if they have to pay for it.

"Really I do not think it is a good thing to have such cheap education that you encourage a good many people to go thru a university education which would break down their old habits of thought when they are not intellectually fit for it, and therefore it seems to me very much better to have your fees fixed at a reasonable rate and then have very considerable facilities in the way of scholarships and bursaries."

The dangers of free or cheap university education are not apparent to American eyes. Nor is it apparent why there is such a demand for uniformity and centralization. Columbia University and the College of the City of New York are on the same street and only a few blocks apart. A year at the former costs two or three hundred dollars, apart from personal expenses, while at the latter everything is free, even textbooks and paper. Yet they do not interfere with each other much and both are prosperous, one with seven and the other with four thousand students. Why should there not be a half a dozen independent degree-granting universities in London, provided they are kept up to a fair standard of requirements and instruction?

By a curious coincidence King's College in New York City, which was founded some eighty years before its London namesake, developed into the University of the State of New York, which became, like the University of London, an examining corporation. The examinations set by the Regents of the University of the State of New York are accepted for matriculation by all the colleges of the State, among them King's, now Columbia College, but, unlike London, the higher examinations and the conferring of degrees are in the hands of the colleges. This system, however, is peculiar to New York, and has not commended itself to any of the other States.

To an outsider there is something in the attitude assumed by the older colleges of the University of London toward the polytechnics and other London institutions ambitious to develop higher work that reminds one unpleasantly of the attitude of Oxford and Cambridge toward London and Manchester when these were struggling to rise.

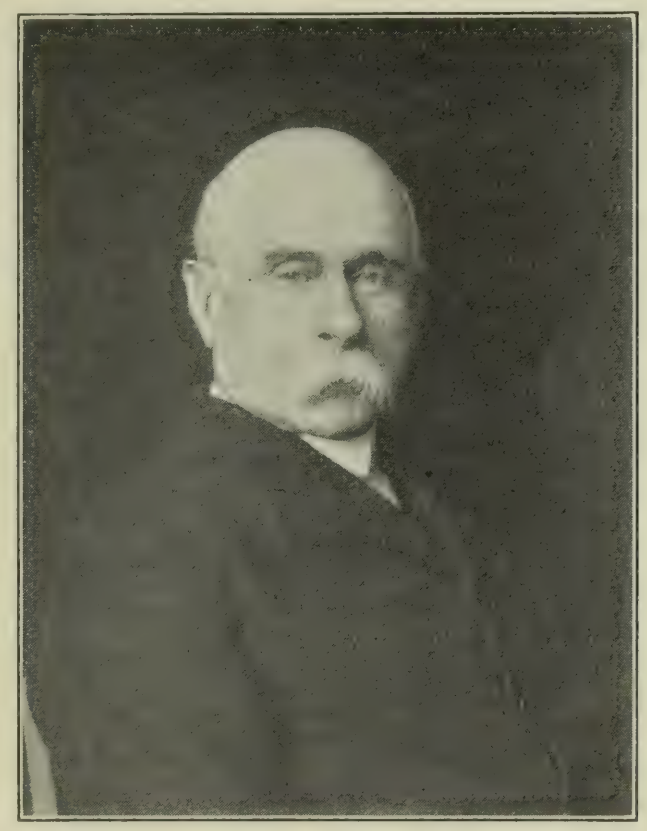
But it is easy to see the need of greater system and co-ordination of some sort, not because so much of the work is duplicated, but because so little of the field is covered. London has been drawing to itself for centuries people of intelligence from the surrounding country and the dominions beyond the seas. It would be fair to assume therefore that its population would be at least as desirous of higher education as one of our rural Western States, say, Kansas. But if London sent as large a proportion of its population to college as Kansas, the University of London would now have some 60,000 students. The University has therefore a wide field for expansion in its present lines, besides which much needs to be done in new lines, especially in professional and technical training and in research.

The importance of London University to English education lies not so much in its achievements, great tho these be, as in the possibilities it has disclosed. It was the first university in England to admit Nonconformists, the first to grant degrees to women, the first to create a scientific faculty, the first to accept a modern language as a substitute for Greek, the first to require an examination in English for matriculation. It has an opportunity to score as many "Firsts" in the twentieth century as in the nineteenth, and I think it likely that it will. For it shows courage and ambition in working under great disadvantages with small resources at a task of unequaled magnitude.

New York City.

The Most Critical Episode in the Civil War

BY CHARLES FRANCIS ADAMS, LL.D.



[The following article is the substance of a paper just read before the New York Genealogical and Biographical Society. It is of exceptional interest and historical importance, as it is based on the diary of Mr. Adams's father, the United States Minister to England during the Civil War, and on new material hitherto unsifted. Mr. Adams is a distinguished member of the distinguished Adams family of Massachusetts, has himself published much on American history, and is the president of the Massachusetts Historical Society.—EDITOR.]

THE events I am about to refer to and the singular complications I now propose to unravel all occurred in a very narrow interval of time—the forty days between September 14 and October 23, 1862. To those, like our guest of the occasion [Mr. John Bigelow], then living and actively concerned in the course of affairs—and what American was not then actively concerned?—the general situation in the autumn of 1862 does not need to be recalled. The memory of it abides and will always be vivid. It all happened, however, close on half a century ago, and an entire generation and half of another have since passed across the stage. To the average listener or reader of the day, therefore, the crisis of 1862 is as much matter of history and hearsay as was the crisis of June, 1815, at Waterloo, to those who listened to the guns of Antietam. To make what I am about to narrate intelligible to those younger by a generation than Mr. Bigelow—that is to any one who has not yet attained the grand climacteric—it is necessary briefly to recall the leading facts of the situation at the time in question. Suffice it to say it was the very darkest and most disheartening period of our Civil War. The cause of the Union, very doubtful at home, was in Europe pronounced desperate, where not set down as practically lost. McClellan's campaign, somewhat vaingloriously entered upon in May, had in July closed in admitted failure. General Lee had then assumed command of the Confederate forces about Richmond, upon which four Union armies were converging; and, as the result of a series of strategic movements as notable as any recorded in the annals of warfare, in less than sixty days there was not a Federal soldier in Virginia, while a Confederate army north of the Potomac was pressing on the defenses of Washington. In the West our arms had not yet recovered from the narrowly averted disaster of Shiloh. Volunteering had wholly stopped; recruiting was slow and costly; the premium on gold was large and rapidly rising; a Congressional election, the outcome of which admitted of grave doubt, was immediately impending. Such being the situation at home, the outlook abroad was ominous—could not in fact well have been more so. France, supposed to be our natural as well as traditional ally, was committed to the Mexican expedition. Anxiously looking for news of yet other Confederate successes, the Emperor was exerting every art of diplomacy as well as all possible outside and indirect pressure to induce Great Britain to join in a recognition of the Confederacy as the first step toward a direct armed intervention, and the consequent breaking of the blockade. The great Lancashire cotton famine, necessarily incident to the blockade and confidently relied on thruout the Confederacy to compel intervention in its behalf, was at its hight. If gold at home stood at a premium of 50, cotton in Liverpool stood at one of 300. The looms were idle, and a long and a sustained wail of famine and pitiable agony went up from the most crowded districts of Great Britain. Whether all of us Americans then realized it or not, the hour of crisis was on us; and the issue was in fact to be settled, not on the banks of the Potomac, as was generally assumed, but in Downing Street, London.

The ball opened on the 14th of September. Up to that time the British ministry—a strong combination of men of

marked force and ability with Lord Palmerston and Earl Russell its guiding spirits—had, as respects the American troubles, maintained a policy of observation and non-interference. The Prince Consort had died six months before, in the closing days of 1861, and the Queen, a victim of melancholia to the extent that grave fears were entertained as to her sanity, was at Gotha in Germany, having left England early in September. Earl Russell, the Secretary of Foreign Affairs, was in attendance upon her. Then it was that the Premier, Lord Palmerston, wrote from his home at Broadlands (September 14) a brief but very significant note to his colleague, Earl Russell, in which he made reference to the wretched outcome of the Pope, or Second Bull Run, campaign before Washington, the tidings of which had just come to hand. In this note he raised the question:

"Whether the time had not come for us to consider whether, in such a state of things, England and France might not address the contending parties and recommend an arrangement upon the basis of separation."

DR. CHARLES FRANCIS ADAMS.

This suggestion strongly commended itself to the Foreign Secretary, who replied on the 17th that he was of the same mind as the Premier:

"I agree with you that the time is come for offering mediation to the United States Government, with a view to the recognition of the independence of the Confederates. I agree further that, in case of failure, we ought ourselves to recognize the Southern States as an independent State. For the purpose of taking so important a step, I think we must have a meeting of the Cabinet. The 23d or 30th would suit me for the meeting."

To this very emphatic acquiescence in his views, Lord Palmerston six days later, on the 23d, wrote back:

"Your plan of proceedings . . . seems to be excellent. . . . As to the time of making the offer [of mediation] if France and Russia agree—and France, we know, is quite ready, and only waiting for our concurrence—events may be taking place which might render it desirable that the offer should be made before the middle of October."

Lord Russell now left Gotha and returned to London, Lord Granville relieving him in attendance on the Queen. The next two weeks were utilized by the Foreign Secretary in the preparation of an elaborate, tho confidential, Cabinet circular in direct furtherance of the deferred mediation program. In the Cabinet circular the question was plainly put, whether in the light of what had taken place in America, and the condition of distress prevailing thruout the manufacturing districts of England and France, it was not the duty of Europe "to ask both parties, in the most friendly and conciliatory terms, to agree to a suspension of arms for the purpose of weighing calmly the advantages of peace"—and so forth and so on, in the usual cant of the philanthropic, but interested, neutral. This confidential memorandum was sent forth on or about the 13th of October. The meeting of the Cabinet was fixt for the 23d. The crisis for America was plainly imminent. Mr. Adams was much alive to it, but very conscious of his own impotence to affect results. He wrote:

"The suspense is becoming more and more painful. I do not think since the beginning of the war I have felt so profoundly anxious for the safety of the country."

And again, a few days later:

"We are still left in suspense. I hope more than I dare express. For a fortnight my mind has been running so strongly on all this night and day that it seems almost to threaten my life."

Just then it was that Mr. Gladstone further complicated the situation by that famous Newcastle speech in which, amid the cheers of his audience, he declared that Jefferson Davis had "made a nation" and went on to express his belief that the independence of the Confederacy and the consequent dissolution of the American Union were "as certain as any event yet future and contingent can be."

Well might Mr. Adams write in his diary, after reading the apparently wanton, unless deeply significant, utterance of Mr. Gladstone:

"If he [the Chancellor of the Exchequer] be any exponent at all of the views of the Cabinet, then is my term likely to be very short; for the animus as respects Mr. Davis and the recognition of the rebel cause is very apparent. . . . The meditation on these things sensibly depressed my spirits. We are now passing thru the very crisis of our fate."

A few weeks only after Lord Russell drafted his Cabinet circular just referred to, Mr. Gladstone exprest himself in language most emphatic as to

"the heavy responsibility you [Americans of the North] incur in persevering with this destructive and hopeless war at the cost of such dangers and evils to yourselves, to say nothing of your adversaries, or of an amount of misery inflicted upon Europe such as no other civil war in the history of man has ever brought upon those beyond its immediate range."

The writer then went on thus to set forth the wickedness of any further continuance of our efforts toward a reestablishment of the Union:

"The impossibility of success in a war of conquest of itself suffices to make it unjust. When that impossibility is reasonably proved, all the horror, all the bloodshed, all the evil passions, all the dangers to liberty and order, with which such a war abounds, come to lie at the door of the party which refuses to hold its hand and let its neighbor be. You know that in the opinion of Europe that impossibility has [in the present case] been proved."

Returning to Mr. Gladstone's speech at Newcastle-on-Tyne. It is here referred to only in its connection with the Palmerston-Russell program of September-October, 1862, involving a recognition of the Confederacy and the cessation of hostilities. Of that proposed action the Chancellor of the Exchequer was advised. He had been consulted concerning it, and in his Newcastle speech he merely foreshadowed a coming event. It was so understood by the public; and, being so understood, the Chancellor of the Exchequer had, so to speak, unwittingly let the cat out of the ministerial bag. The Newcastle speech was on the 7th of October; on the 13th the Foreign Secretary sent out his confidential memorandum to the members of the Cabinet; on the 23d the meeting of the Cabinet was to take place. That meeting never did take place.

Why it did not take place, a mystery to Mr. Adams at the time, and a continuing mystery to his death, has only of late years come to light; largely thru the biographies of Mr. Gladstone and Lord Granville, prepared respectively by Lord Morley and Lord Fitzmaurice. One of the secrets of the interior Cabinet—known to several but disclosed by none—it was revealed only thru the careful collocation of scattered and disconnected letters, documents and statements, which, taken separately, would have quite escaped the notice of the general investigator.

I have quoted the diary statements of Mr. Adams:

"We are now passing through the very crisis of our fate." "For a fortnight my mind has been running so strongly on all this night and day that it seems almost to threaten my life."

A man of habitually restrained utterance, such language in the case of Mr. Adams was significant; but he had justification for its use. Weeks before, apprehending just such an emergency as was now impending, he had written home asking for specific instructions for his guidance if what he apprehended should occur. Those instructions he had in due time received; they were explicit. To make my narrative intelligible to all, and fully to set forth the extreme character of the crisis then forestalled, I must quote these instructions at some length. Even at the interval of half a century they will bear reading; for, carrying the standard entrusted to him high and with a firm hand, the Secretary bore himself in a way of which his country had cause to be proud. The paper read in part as follows:

"If the British Government shall in any way approach you directly or indirectly with propositions which assume or contemplate an appeal to the President on the subject of our internal affairs, whether it seem to imply a purpose to dictate, or to mediate, or to advise, or even to solicit or persuade, you will answer that you are forbidden to debate, to hear, or

in any way receive, entertain, or transmit any communication of the kind. You will make the same answer whether the proposition comes from the British Government alone or from that government in combination with any other Power.

"If you are asked an opinion what reception the President would give to such a proposition, if made here, you will reply that you are not instructed, but you have no reason for supposing that it would be entertained.

"If contrary to our expectations the British Government, either alone or in combination with any other government, should acknowledge the insurgents, while you are remaining without further instructions from this Government concerning that event, you will immediately suspend the exercise of your functions, and give notice of that suspension to Earl Russell and to this department. . . . I have now in behalf of the United States and by the authority of their Chief Executive Magistrate performed an important duty. Its possible consequences have been weighed, and its solemnity is therefore felt and freely acknowledged. This duty has brought us to meet and confront the danger of a war with Great Britain and other states allied with the insurgents who are in arms for the overthrow of the American Union. You will perceive that we have approached the contemplation of that crisis with the caution which great reluctance has inspired. But I trust that you will also have perceived that the crisis has not appalled us."

It was with these ringing instructions before him that Mr. Adams, with such fortitude as he could command, now awaited the outcome he was powerless in any material way to affect. The special Cabinet meeting was called for the 23d of October; to all outward appearances and in all human probability that was the fateful day; the ordeal must then be faced. The program for it was arranged. The day came, and passed. Upon it nothing happened. The wholly unexpected had again occurred!

What had happened? Why was the carefully prepared program, so world-momentous and far-reaching, suddenly, quietly abandoned? It is indeed a very curious story; in diplomatic annals scarce any more so. Some years ago, in discussing this then unsolved riddle, I ventured the surmise that "the whole course of events may not impossibly have turned on the individual attitude of the widow of Prince Albert." The surmise was erroneous. The Queen had nothing to do with that particular sequence of events. There is no evidence that she in any way concerned herself in it. On the contrary, in so far as she was not absorbed by her widow's grief, her mind was intent on other things much nearer home. The solution of the mystery, sought elsewhere, is found in Lord Granville's correspondence. It was, it will be remembered—for dates in this connection are all-important—the 23d of October that had been assigned for the special Cabinet meeting, and sixteen days before, on the 7th of that month, Mr. Gladstone delivered that famous Newcastle speech in which he declared that Jefferson Davis had "made a nation," and that the independence of the Confederacy and dissolution of the American Union were as certain "as any event yet future and contingent could be." That speech, a marvel of indiscretion—or, as Mr. Gladstone himself subsequently exprest it, "a mistake of incredible grossness"—tho at the moment it caused in the mind of Mr. Adams deep despair, in reality saved the situation. It was for the Union a large cash prize drawn in fortune's lottery.

Speaking for himself—"playing off his own bat," as Lord Palmerston would have exprest it—Mr. Gladstone had foreshadowed a ministerial policy. The utterance was inspired; in venturing on it Mr. Gladstone unquestionably supposed, as he had good cause to, that he spoke the minds of both Lord Palmerston and Lord Russell. The principle of the so-called collectivity of the British Cabinet is somewhat discussed by Lord Edmond Fitzmaurice, in his "Life of Lord Granville," and the point clearly made that ministers are in no wise free to put forward each "his own views at large public meetings and elsewhere." This Mr. Gladstone had now done. Moreover, it was notorious in ministerial circles that the Prime Minister and the Chancellor of the Exchequer were not in general harmony. On the contrary, Lord Palmerston disliked and habitually thwarted Mr. Gladstone, and Mr. Gladstone instinctively distrusted Lord Palmerston. A year before, the two had been "in violent antagonism" on financial questions. Granville wrote:

"For two months Gladstone has been on half-cock of resignation. . . . Palmerston has tried him hard once or twice by speeches and Cabinet minutes, and says that the only way to deal with him is to bully him a little, and Palmerston appears to be in the right."

This had occurred two years before. A species of Cabinet *modus vivendi* was then arrived at, and had since been more or less observed; but the two men were by nature antagonistic. They instinctively disliked each other. Gladstone was plainly the coming man; but Palmerston, so to speak, held the fort, nor did he propose to vacate it in Gladstone's favor. It was a case of armed Cabinet observation. Under these circumstances the Chancellor of the Exchequer had in the autumn of 1862 entered upon what proved to be a sort of triumphal progress thru the Northern counties. It amounted to a popular ovation; and, not unnaturally, his colleagues, especially his chief, took cognizance of it. Then came the Newcastle indiscretion. As a member of the Government, Mr. Gladstone had distinctly committed an offense against official propriety. Apparently it did not take the Premier long to make up his mind that the offender must be disciplined, and that severely; so he proceeded at once to intimate to Sir George Cornewall Lewis, Gladstone's parliamentary rival as the coming man, that if he (Lewis) did not take this function on himself it must devolve on the head of the Cabinet in person. On the 14th of October, therefore, Sir George Lewis, speaking at Hereford as the unrecognized mouthpiece of the Premier, very pointedly controverted the position taken by his colleague one week before at Newcastle. The hand of the Premier was on the Cabinet lever. The blind goddess had intervened for the preservation of the American Union!

The Cabinet meeting called for the 23d, the outcome of which had been settled in advance by the concurrence of the Premier, the Foreign Secretary and the Chancellor of the Exchequer—Palmerston, Russell and Gladstone—was for the nonce necessarily postponed, and never afterward notified. Mr. Gladstone had been "called down"—had received a distinct intimation that he was neither the Ministry nor yet its accredited mouthpiece; and explanations were in order. None the less, as the secret working of the springs and wires which brought about the final result are now made apparent, the magnitude and imminence of the danger at that juncture threatening the cause of the Union are revealed.

Perhaps the most curious feature of the episode is, however, that Mr. Adams was at the moment altogether wrong in his understanding of the influences at work. He thought Palmerston the evil genius of the situation, and the source of hostile machinations; in his belief, Earl Russell was, on the whole, America's friend. In reality it was, as we now know, the other way. At the critical moment Russell, disregarding Gladstone's indiscreet disclosures, was disposed to go forward in the policy of recognition and intervention; it was Palmerston who hesitated and called a halt. The Premier was not disposed to forego the opportunity of disciplining an indiscreet colleague whom he thoroly disliked, even tho by so doing the recognition of the Confederacy was postponed. In the event, that postponement proved final. Then and there the die had unknowingly been cast. Nearly three years later, when the Confederacy was in its death agony, Lee mournfully confest that he had never believed it could in the long run make good its independence "unless foreign Powers should directly or indirectly assist it in so doing."

I will now close this paper, novel and interesting, I know, but, I fear, far too long for the occasion, by reading an extract from Mr. Adams's private diary—a portion of his entry under that momentous date, October 23, 1862:

"At half-past two o'clock drove to the Foreign Office to keep the appointment made by Lord Russell for three. I found in the antechamber quite a number of the corps, however, apparently assigned for the same hour. Among them Count Bernstorff, who has just returned, Baron Brunnow, Count Flahault, M. Musurius and the Spanish and Danish ministers at a later moment. Of course there was a long delay and desultory conversation. The only thing worth noting was that Baron Brunnow, on coming down from his interview, took me aside and reminded me of a conversation we had had some time ago in the same chamber, in which he had exprest a belief of the intention of this Government to maintain its position with us. He remembered I had exprest doubts, but he had proved right. He still thought that the same disposition continued to prevail. I said I was glad to hear him say so. As to the past I could only say that I then thought I had reason for my doubts. Some time or other I would tell him, but at present I could not. He said he remembered I had said so before and he had made a note of it. It was half-past four before I had my audience. . . . I then took advantage of an allusion made by Lord Russell

to Lord Lyons, then the British minister at Washington to introduce my real object in the interview. I exprest the hope that he might be going out for a long stay. I had indeed been made of late quite fearful that it would be otherwise. If I had entirely trusted to the construction given by the public to a late speech I should have begun to think of packing my carpet bag and trunks. His Lordship at once embraced the allusion, and whilst endeavoring to excuse Mr. Gladstone, in fact admitted that his act had been regretted by Lord Palmerston and the other Cabinet officers. Still he could not disavow the sentiments of Mr. Gladstone so far as he understood them, which was not that ascribed to him by the public. Mr. G. was himself willing to disclaim that. He had written to that effect to Lord Palmerston. I replied that I had no intention to ask a disavowal, nor did I seek even to impute to Mr. Gladstone the construction of his language adopted by others. At the same time I saw its mischievous effects in aggravating the evil of the growing alienation of the two countries. Mr. Gladstone's speech would be published everywhere in America. It would therefore be regarded as an official exposition, and as such would aggravate the irritation already much too great. On the other hand, it formed a nucleus here around which all those adverse to peace with us would concentrate. Lord Lyons had called on me in the morning and we had joined in regretting the change going on here for the worse. Much as I had been disposed to friendly relations I was beginning to despair. His Lordship admitted the change in a degree, but he thought there was still a majority in any ordinary meeting well inclined. I said that it might be so now, but two more speeches like that of Mr. Gladstone would dissipate it all. His Lordship said that the policy of the Government was to adhere to a strict neutrality, and to leave this struggle to settle itself. But he could not tell what a month would bring forth. I asked him if I was to understand that policy as not now to be changed. He said yes. I answered that my errand was then finished. And I took my leave."

BOSTON, MASS.

A Bird Without a Mate

BY SARAH PIATT

I SHUT my eyes on all things fair to see,
I shut my eyes on all things else, ah me!

But first I throw my window wide, and so,
"Good-night, my Soul—my poor sad Soul, now go."

I whisper with a voice ear hath not heard;
Then into space I loose the Mateless Bird:

The Mateless Bird, the Bird forlorn, forlorn,
That will not build a nest here in the thorn;

That will not warm a brood nor rest one night
In any moon, on any snow-stilled height. . . .

It takes the wind and flies. It leaves me deep
In all the warm forgetfulness of sleep.

Among what ashes of spent worlds to flit,
Among what fire-scarred angels of the Pit;

Into what shroud-pale kingdoms of the dead
Its shadow follows it—I have not said.

I only know—the night is sweet and long—
That in the leaves, at dawn, Christ hears a song:

A song that makes Him homesick for the earth,
His baby-playthings, His young mother's hearth:

A song that makes Him thirst, by streams divine,
To drink once more the wells of Palestine.

I listen with Him; then reach out and take
My Soul into my breast again, and wake. . . .

Its wings are wet and heavy. Can it be
With rain, or with the salt-mists of the sea?

The scents of palms and lilies, such as grow
In God's own Garden, cling to them, I know.

I long to breathe them with this mortal breath;
I long, and dare not breathe them—they are death. . . .

My Soul—my poor sad Soul—one night, when I
Shut my blind eyes to sleep, and let you fly,

I shall not wake again to take you through
My window—shall I? Then, what will you do?

My Soul—my poor sad Soul—if I could know!
My Soul, my poor sad Soul—where will you go?

NORTH BEND, OHIO.

The Servant Problem

BY INEZ A. GODMAN

IT has been more than ten years since I experimented with the servant problem by working "Ten Weeks in a Kitchen" [THE INDEPENDENT, October 17, 1901]. I have waited, watched and investigated; and am persuaded that the problem is one of *money*.

It thus resolves itself:

Eighty hours of skilled labor=$6 and board for seven days. Which is impossible of solution.

Counting board at $5 per week, we have a rate of about 14 cents an hour, which simply cannot be in the present order of progress. The twelve-year-old boy who rakes my lawn and does chores gets 15 cents an hour.

The work of an average household of from four to six persons requires at least eighty hours a week, and to expect one person to carry it all for $11 is unreasonable.

The striking shirtwaist workers raise piteous pleas and weary hands for sympathy while receiving from $9 to $14 per week for sixty hours of work. They have my sympathy, for they work among nerve-racking surroundings, but their wages and hours are far better than those of domestic service.

The service obtained from housework-ers is surprisingly good considering the conditions, but maids are scarce and will be scarcer unless we reform our way of thinking.

It is a part of my business in life to help other people bring up their children. My mother undertook the business and it has fallen to my hands. Between us we have borrowed something less than a score of youngsters from humble, unpromising surroundings, given them opportunities and training, and started them in life. Now, circumstances have so arranged that the majority of these youngsters have been boys—and negro boys. Perhaps, therefore, it is not surprising that two out of every three proved gifted in the art of cooking; it seems a racial endowment.

One lad of twelve years made such fine bread that he served the neighbors as well as ourselves (upper-ten neighbors, too); another's biscuits and griddle cakes made him a reputation at fourteen, while a third spread joy around him with his pastry. All of them gave evidence of unusual gifts in the culinary line, all of them were home-loving boys who liked the work, yet I fitted them for other things.

My friends have lifted up their hands in amazement and protest. "How can you?" demands one. "It is wicked to spoil so promising a house-worker. Do you not realize that every good house-worker is a home-maker? Is not the upbuilding of the home one of the noblest of vocations? Train that boy another year and pass him on to me. You know how my home is troubled and my time taken from my children by incompetent servants. Prepare him for me and I will praise you forever. My children will rise up and call you blessed. Besides, I will look out for his welfare and give him good wages."

"Will you?" said I. "How much?"

She hesitated. "$3 a week to start."

"That is good for a sixteen-year-old boy; but what further?"

"Why, when he carries my work well I will make it $4, tho" (her lip drew a little) "I suppose he will not wash any."

"No, he will not do washing; but if he does well he should carry your other work by the time he is eighteen. What after that? Is it to be $4 indefinitely?

She looked surprised. "I never *have* paid more. It will mean $6 a week at that if I hire the washing done."

"Four dollars a week and board," said I. "How is he to marry?"

"Marry!"

"Exactly. Marry! Did you think I was raising a profligate?"

She looked dumbfounded and left the room.

You see, we think wrong upon this question.

Let the man of the household consider his wife's clerk in the same light as his own. Let the wife so arrange that the maid has sixty-five hours a week and *no more*. Whatever is over let the wife carry herself or hire done—remembering that when the hours are over the maid should be free, not expected to remain in the house to answer 'phone or door bell.

I have seen lately an experiment which promises something. Two maids—one Irish and one American—joined forces and means for a little home of their own. One was cook and one housemaid in a prosperous city household. After much planning and consultation they told their mistress that if she wished to retain them she must raise their wages and allow them to arrange their own hours.

She balked and became angry. The Irish maid followed suit, but the American kept her temper and brought the conversation into reason. Here are their demands:

$5 per week each.

Permission to sleep out.

No work on Thursdays or Sundays after 3 p. m.

They were compelled to yield the Thursday. It could not be arranged for both to be absent, but the other demands were granted. They found rooms with difficulty. Low-priced apartments are not prepared in the residence districts.

Two fourth-floor rooms, with bare necessities of furniture, more than a mile from work, cost $3 a week.

No. 1 rose early and went to work.

No. 2 took her choice of a morning nap or a bath, with leisurely dressing, arriving at work in time to serve breakfast.

Both worked steadily until 1 o'clock, then No. 1 went home.

No. 2 cleared away luncheon, dressed herself tidily for callers and the front door, and did such work as the afternoon allowed, ironing, preparing of vegetables, etc.

No. 1 returned at 5, both prepared dinner, then No. 2 went home and No. 1 remained until 10 o'clock. Each gave a twelve-hour day and each took a week's turn at being No. 1.

It reads like a hard program, does it not? Yet there are thousands of domestic servants whose days are less easy, and our maids had gained several desirable points.

1st. The pleasure of leisure in the morning a part of the time.

2. The use of a bathroom.

3d. A place to receive their friends thru the front door.

More than all, the freedom to plan the work themselves. They soon found that with care Thursday might sometimes be made a free day for one of them, and what joy that brought! *A whole free day*—one of the magnets that draw girls to factories and stores. At first their apartment was bare and dreary; cold in winter and hot in summer; but before the end of the year boxes, cretonne and scrim had brought coziness, and a little box stove brought winter comfort. Their mistress made a few contributions at housecleaning, and friends added little nick-nacks.

At the beginning of the new year they asked 25 cents a week advance. The housekeeper refused, but her husband said tersely: "The request is proper, Alice. Five per cent. advance each year should be given without asking."

The half dollar thus gained went to the landlady for another tiny room, giving each a bedroom and joint use of a parlor. Before long friction arose over the use of this room for company. The Irish girl lost her temper and left. The American sought another partner and went thru troublous days until one was found, but her mistress gave herself little concern—it was up to Mary. Mary's present partner has been with her two years. They have rules about the use of the parlor and are laying up for endowment insurances. Mary's wages are now $7 and Kate's $5.50. One year the mistress said that she simply could not afford a raise; the maids knew that there was foundation for the statement and continued at the old rate. The housekeeper has little household care. When one maid is ill the other carries, and once when Mary had to go to the hospital Kate flew to the intelligence office and hired a substitute till Mary could return. The lady's business sense is still somewhat undeveloped and she always frets

over the yearly raise. Her husband has to steady her.

"Make your cut in some other place, Alice. Your business is well run. Don't upset the comfort of our home. Every year's advance binds your maids closer to you. When Mary's wages reach $10 you will have her where she will not leave, and when age brings reduction she must submit. Women of forty do not find positions easily."

Let us not be frightened at the wages. I truly believe that a capable housework should receive the highest salary paid to woman, and those of us who cannot afford the rate must manage otherwise.

I have several friends who have lost their maids thru inability to pay the wages demanded. They have all found that the saving in bills is sufficient to pay a woman for two days of laundry work and cleaning. So they have the maids' wages to the good and happy homes besides. I feel sure that the homes are happier than those where affairs are complicated by many servants, and I think they are happier than those where the kitchens are entirely eliminated.

New Haven, Conn.

Tomorrow

BY EDNA DEAN PROCTOR

"Tomorrow! O the glorious Tomorrow!"
The soul forever cries;
"Balm it will bring for every hurt and sorrow
In the fair land that lies

"Just yonder, hidden from our earthly vision,
But waiting, waiting there
With fullest compensations, joys elysian,
Nor blight of dole or care.

"Today on shore and sea the tempest rages,
The wild winds never cease;
Tomorrow!—Ah! the thought of it assuages
The storm till all is peace;

"And lo! a rainbow spans the misty highlands
And lights the forest gloom,
The foaming sea, the far-off, lonely islands,
With its celestial bloom."

No idle dream, but prophecy eternal,
This rapture of the soul—
This grand outreaching for the life supernal
Tho whelming billows roll!

It doth not yet appear what worlds benigner
Within God's eons bide,
But, oh, forever, days will dawn diviner,
And we be satisfied!

Framingham, Mass.

Literature

American Men of Science

It is a curious difference between science and literature that the former is taught in an impersonal way while the latter is closely associated with biography. How far this difference of method is inherent in the nature of the subject may be questioned. At any rate it is safe to say that it has been carried too far on both sides, that the study of literature has been too largely concerned with the lives and habits of authors and that the sciences in attempting to eliminate the personal element have made themselves unnecessarily unattractive and remote. Science could probably assimilate something of the "humanities" without interfering with its logical development. It certainly would make more of an appeal to the aspiring and courageous heart of youth if its struggles and heroes were made known, instead of being presented as a fixt and complete code of laws, having no history, apparently created out of nothing.

But the material for such biographical study of science, even if thought desirable, has been lacking. Consequently the seventeen biographical sketches in the volume entitled *Leading American Men of Science** have a clear field, whether they "fill a long felt want" or not. This volume differs from its predecessors in Holt's "Leading Americans" series in that it has almost as many authors as chapters. The soldiers, the novelists and the essayists are each treated by a single author, but no one had the courage to attempt to describe achievements in so many diverse branches of science. Accordingly, each scientist was assigned to an author who was familiar with the particular science, usually, in the case of the modern men, to a friend of the subject of the sketch, and sometimes as well known. In fact, one of them, Simon Newcomb, figures in a double role, as author and subject, for he died soon after writing the life of our unappreciated pioneer in electricity, Joseph Henry, and his own life, by Marcus Benjamin, appears in the volume. Mr. Benjamin also writes the life of the paleontologist, Cope, while that of his rival, Marsh, is contributed by his close friend, George Bird Grinnell, of *Forest and Stream*. Witmer Stone gives us the two early ornithologists, Audubon and Wilson. The fascinating figure of Agassiz is depicted by C. F. Holder, who has another zoölogist, Baird. The life of Benjamin Silliman, the pioneer chemist of Yale, is written by the late Daniel C. Gilman, first president of Johns Hopkins. Its present president, Ira Remsen, writes of his colleague, the brilliant and erratic physicist, Rowland. Professor Wilder, of Cornell, contributes the sketch of the anatomist, Wyman; Professor Coulter, of Chicago, that of Asa Gray, botanist, of Harvard. The most romantic character in the volume, Rumford, and the most unromantic, Gibbs, fall to the lot of Edwin E. Slosson. The editor of the book, President Jordan, of Stanford, contributes a preface as well as the life of Goode, the zoölogist. The zoölogist, Brooks, of Johns Hopkins, by E. A. Andrews, and the geologist, Dana, of Yale, by W. N. Rice, complete the list—a creditable list for the first century of American Science.

According to Professor Cattell we are not keeping up our stock of "Leading American Scientists," and he lays the dearth of talent partly to our faulty methods of training. But to correct these methods we need—not more pedagogical theorizing, we have too much of that now—but more knowledge of the conditions under which budding genius flourishes and brings forth fruit. Professor Ostwald, of Leipzig, when he began his study of the educational problem, found that he needed this data, so he had to write a volume of biographies, "Grosse Männer," to get an inductive basis to go on. The present volume may be regarded as another contribution to the same subject.

It is a good book for the open shelves of college and public libraries; even for school libraries, somewhat above the

*Leading American Men of Science. By Various Authors. New York: Henry Holt & Co. $1.75.

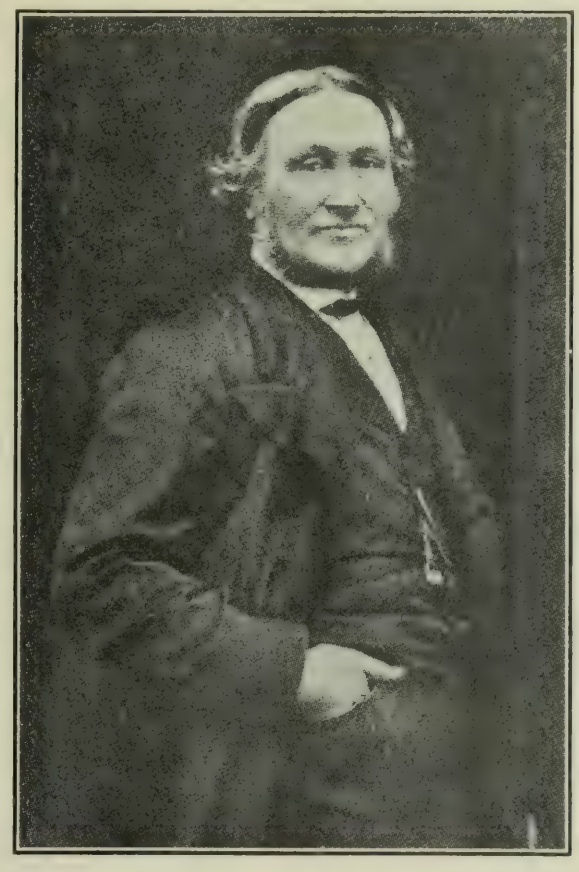
heads of the pupils tho it be. It will do them good to stand on tiptoe and reach up, for they are getting stoop-shouldered and near-sighted bending down over much of the literature provided for them. We do not want all of our young people to become soldiers, politicians and authors, so it is well to give them a chance to find out early that there are other forms of greatness, quite as useful to mankind, and affording quite as great scope for energy and ability.

Alexander Macmillan

It would be difficult to find a book whose pages were more crowded with the figures of men and women who constituted the really good society of England than are those of Mr. Charles Graves's *Life and Letters of Alexander Macmillan.** The good society amid which the Macmillans lived and moved was not composed of titled aristocracy: lay figures, many of them, bearing territorial names constant in each generation, the new wearer of the title being only distinguished from his predecessors by number. It was composed of the men and women whose names will go down to posterity as the living voice of the nineteenth century in England—the poets, prophets, scientists, historians and novelists who made illustrious the Victorian age of English literature. Gladstone and John Morley—now Viscount Morley of Blackburn—were among his correspondents. Robert Browning, Lord Tennyson, Thomas Hughes, George Eliot, Matthew Arnold, Seeley and Shorthouse were all on a footing with Macmillan far removed from that of mere business connection. Friendly intercourse, kindly encouragement, pecuniary aid, helpful suggestions and continual stimulus were all forthcoming for the fortunate author who had made Alexander Macmillan his friend and publisher. It is even open to doubt whether Kingsley's novels or Green's "Short History" would have seen the light had it not been for the publisher who was so good a friend in fat times and lean: and in hours of stress and of discouragement.

Alexander Macmillan was born at Irvine in 1818 and died in 1896. In his biography Mr. Graves relates briefly but sympathetically the story of Macmillan's early poverty and struggles—of the days when he walked about the streets of Glasgow looking for any sort of employment, and when he accepted with deepest joy an ushership in a school with the munificent salary of 12 pounds a year, on which he actually lived for nine months. The real story of the Macmillans begins, however, in 1843, when Alexander joined his brother Daniel in London, and opened a small bookshop at 57 Aldersgate street. The following year they moved to Cambridge, and founded the publishing firm of Macmillan & Co.

Perhaps the most striking characteristic of Alexander Macmillan, as portrayed in Mr. Graves's pages, is his humanness. In every dealing with every author with whom he came in contact, Alexander Macmillan was first of all the man, and only afterward the business man. The great success of the Macmillan business was built up on a firmer foundation than the mere making of money. Altho Alexander Macmillan did not feel it necessary to endorse all the opinions contained in books published by him, he consistently refused to publish books which he considered harmful. "I think your representation of Tennyson hideously unfair," he wrote to a young author in rejecting a manuscript, "but I am quite sure it will make your book sell well in the proper quarter." "If I were to advise," he continued, "according to what seems to me noble, honest, true and of good report, in higher regions than any of the 'isms' afford, I would say, abuse nothing, write against nothing except immorality, unholiness, forgetfulness of God in practical life and thought."



As is perhaps inevitable in a volume consisting chiefly of letters, there is some lack of sequence in Mr. Graves's pages. One subject follows another with very little to link the matter together. The general story of Alexander Macmillan's life and of the progress of the publishing business is given only in briefest outline, and most of the letters are presented without introduction. The book is in consequence somewhat difficult reading.

*Life and Letters of Alexander Macmillan. *By Charles L. Graves.* New York: The Macmillan Company. Pp. vii, 418. $3.50.

It is a book that may be dipped into here and there, but that cannot be skimmed. It is, however, a book that repays reading from cover to cover, and anything short of a complete reading must result in the omission of something of value, something that would shed light on either Alexander Macmillan himself or on some one worth knowing in English literature, science or politics.

Music

THE publication of the final volume of the new *Grove's Dictionary*[1] completes a careful, conscientious and able revision of a standard and monumental work and provides for all who seek enlightenment on musical history, musical biography, or musical theory a cyclopedia in English that is really without a serious rival in any language. The original work of Sir George Grove was ten years in publishing, 1879 to 1889. The revision has been six years in issuing from the press, the first volume having appeared in 1904, and considerably longer than that in preparation; and has expanded the original four volumes to five. The intelligence and zeal of its originator have been fairly matched by the erudition, editorial acumen and skill of Mr. Fuller Maitland, the musical editor of the London *Times*, who has had the assistance of many of the ablest specialists in the history and theory of music, and in its revised shape the work is more valuable than ever. The final volume covers the ground from "Tablature" to "Zwischenspiel" and contains also an appendix of 70 pages giving many new biographies (the omission of some of which, at least, from their regular places in the alphabetical arrangement of the other volumes certainly piques curiosity), a record of deaths of musical celebrities that have occurred since the earlier volumes were printed, and numerous corrections of mistakes in those volumes. Unfortunately not all of these corrections are correct. By a curious oversight the mistaken statement that the American composer, Edward Alexander MacDowell, died on "January 24, 1907," is repeated from the fourth volume. THE INDEPENDENT for October 15, 1908, in its review of that volume, called attention to this mistake. MacDowell died on January 23, 1908.

ALEXANDER MACMILLAN.

American buyers of the work will be disappointed at the comparatively scant treatment accorded to American musical topics. Not even among the briefer notices of the Appendix has room been found for any mention of such American musicians as H F. Gilbert, Goldbeck, Rubin Goldmark, Henry K. Hadley, H. H. Huss, Reginald de Koven, Harry Rowe Shelley, Leopold Stokovski. Furthermore, what famous musicians from over sea have done in America is for the most part ignored. When a famous singer or instrumentalist has left Europe for these shores he too frequently has passed beyond the ken of the *Dictionary's* editor. One looks in vain for any record of the brilliant achievements in America of such artists as Lilli Lehmann, Jean de Reszké, Ernestine Schumann-Heink, Marcella Sembrich, Fritz Kreisler, I. J. Paderewski, and Eugene Ysaye—to name only a few. Such

[1] GROVE'S DICTIONARY OF MUSIC AND MUSICIANS. *Edited by J. A. Fuller Maitland, M.A., F.S.A.* Volume V, T to Z and Appendix. New York: The Macmillan Company. $5.

American topics as were deemed worthy of special notice were entrusted to Messrs. Henry Edward Krehbiel and Richard Aldrich, eminent critics of New York, who have supplied admirable articles on such subjects as American chamber music organizations, American orchestras, American musical libraries, etc., and biographies of some American composers. The biographical department thruout might have been considerably improved by submitting to these American contributors the articles dealing with such artists as have made not unimportant parts of their careers in America.

However, with all its shortcomings both of commission and of omission, the new *Grove* is a wonderfully successful work and an absolute *sine quâ non* for every musical library.

For most readers, probably, the basis of musical pleasure remains just as evasive of explanation as it was before Mr. Gehring published his book.[2] This is not to say that his little treatise is without merit. It is indeed filled with interesting and suggestive matter, some of it ingeniously original. He analyzes music into several factors, such as power of tone, form (as including both sequence of harmony and the essential principle of melody), association, symbolization, and tonal and mental parallelism, each of which has its part in the giving of pleasure; he analyzes in detail the varied kinds of effects produced by these factors, and considers many theories propounded by many writers on esthetics who have attacked the problem. But he does not throw any light on how or why these things, and not others, conduce to musical pleasure. Since every one of the contributing factors shades off into the unknown, his conclusion is that it is

> "small wonder that the prob'em of musical enjoyment should baffle all attempts at explanation. . . . So impenetrable does the subject seem as to nourish the suspicion that we may be dealing with some of the deeper aspects of psychical existence, and that an adequate solution might throw light on many hidden aspects of mind and emotion."

Mr. George P. Upton, the veteran musical commentator of Chicago, whose handbooks on the "standard" operas, symphonies, oratorios, and so on, have found such a ready market (selling by scores of thousands of copies), has now added to his list a compilation of 108 biographies[3] of "the composers whose works are most familiar in the concert-room," condensed to the fewest possible words necessary "to convey some idea of the characteristics of the composers' music and of the composers themselves; also to acquaint the reader with the total number of compositions in each case and with the number of those which remain standard." Inasmuch as the book is intended primarily for Chicago consumption it includes Frederick Stock, the promising young conductor of the Theodore Thomas Orchestra, but excludes many equally promising men who are equally busy in other parts of the world —even such as Mahler, Reger, Ravel, von Hausegger, Weingartner, Delius, Josef Suk, Paul Dukas, and our own Victor Herbert.

A satisfactory life of Liszt in English is yet to be written. (If Mr. James Huneker ever completes his Biography, projected nearly a decade ago, it should prove a thing the world has long been waiting for.) De Beaufort's brief sketch[4] now reprinted after a lapse of twenty-three years, is fragmentary and inadequate and a bit old-fashioned; yet this record of the salient facts of the life of a great musician and a noble soul is better than none. Furthermore the little book was worth reprinting now if only for preserving between covers the reminiscences of Liszt in Rome which Mme. Helbig (née the Princess Schahawskoi) contributed to the New York *Sun* a year ago, and which are altogether delightful.

Mrs. Rogers, long known to concert goers as "Clara Doria," who has made a reputation as a composer and writer on musical theory as well as a singer, has produced a useful little book[5] by describing the methods of voice culture which she has found in her own

[2] THE BASIS OF MUSICAL PLEASURE. Together with a Consideration of the Opera Problem and the Expression of Emotions in Music. *By Albert Gehring.* New York: G. P. Putnam's Sons. $1.50.

[3] STANDARD MUSICAL BIOGRAPHIES. A Handbook Setting Forth the Lives, Works and Characteristics of Representative Composers. *By George P. Upton.* Chicago: A. C. McClurg & Co. $1.75.

[4] FRANZ LISZT. The Story of His Life. *By Raphael Ledos de Beaufort.* To which are added Franz Liszt in Rome, by Nadine Helbig; a Summary of His Compositions, and a list of his noted pupils. Boston: Oliver Ditson Company. $1.25.

[5] MY VOICE AND I; OR, THE RELATION OF THE SINGER TO THE SONG. *By Clara Kathleen Rogers (Clara Doria).* Chicago: A. C. McClurg & Co. $1.50.

experience to be best, and by throwing light on the principles which underlie the true art of singing; hoping thus, she says, to prevent students from wasting their time and talent in pursuing a wrong road, and to induce them to cultivate their musical sense, and to rely on it, instead of upon false and artificial systems that have become conventional. She gives sound advice in an attractive and interesting way.

Hawthorne's Country. By Helen A. Clarke. New York: The Baker & Taylor Company. $2.50.

Nathaniel Hawthorne remains, as he is likely to do for some time to come, our most spiritually gifted author, and the one who best knew the word magic by which we enter into his world of imagination with its silver half lights and purple shadows. Like a familiar landscape seen by moonlight, his art makes of the work-a-day world a mysterious place, and under his spell quite ordinary people are transformed into beings of elfin beauty or into eldrich and evil sprites. So that we associate the New England towns which his shy and reticent spirit haunted, rather than lived in, more with the characters of his books than with their actual inhabitants, and even in Rome, with its myriad associations, we look for Hilda's Tower and Miriam's Rock with an unreasonable assurance of their reality and historicity. An author so identified with his landscapes rewards the illustrator. *Hawthorne's Country* is a richly illustrated volume, text and pictures concerning themselves with the various towns and houses associated with Hawthorne. Salem, Concord, Brunswick, Rome, Boston and Liverpool were the principal places of his abode, and these and others touched by the passing of his genius are described in leisurely fashion by Helen A. Clarke, who has the grace to picture many of them in Hawthorne's own words, which have lost none of their freshness and beauty in the years since we first read them. The best of New England is in the book; its rural beauty, industry, pride and probity, and the exhaustless charm of a poetic imagination of the first order.

THE OLD MANSE
From "Hawthorne's County."

In Unfamiliar England. By Thomas D. Murphy. Boston: L. C. Page & Co. $3.

We heartily endorse what Mr. Murphy says in the preface of his book: "It may seem that there is little excuse for a

"UNFAMILIAR ENGLAND."
L. C. Page & Co.

new book on English travel. . . . But in my illustrations I have an excuse for my venture. . . . I believe that few books of travel can justly claim a higher rank in this particular." There are sixteen illustrations in color, reproduced from original paintings by eminent British artists, and forty-eight duogravures from photographs. Without exception these illustrations are unusually good. The text is the account of a 7,000-mile journey by motor car thru Great Britain and Ireland. The author has been happily successful in avoiding well-known places commonly visited by tourists in England and Scotland, and in thus justifying his title he has produced a book that does not conflict with other books on this much-written-about and familiar country. Mr. Murphy has a peculiar facility in picking up quaint bits of gossip, which greatly enhance the interest of his altogether pleasing book.

The Married Life of the Frederic Carrolls. By Jesse Lynch Williams. New York: Charles Scribner's Sons. $1.50.

Mr. Jesse Lynch Williams writes of married life as tho he were looking into the home thru a lighted window, not as tho he sat at the fireside. The clever observer attitude lends itself easily to a mild cynicism, and the reader gets a bird's-eye view of marriage in America among fairly well-to-do professional people that is superficially true, and certainly entertaining. Of course the Carrolls did not think themselves well-to-do, but they were measuring themselves against the millionaires who bought Fred's pictures. Much is made of their financial straits and a sordid little tragedy nearly develops; the Frederic Carrolls are often a little bitter against an unappreciative age. But people who live in twenty-five-thousand-dollar country houses, with sixteen rooms and plenty of baths, a formal garden and other pleasant accessories, should not throw stones at the rest of us. The story begins with the waning of the honeymoon. In an English country house, rented for the season, where it had rained for a month, the enforced idleness, seclusion and constant companionship had got on the nerves of the honeymooning pair. They find themselves "bored to death" and face with horror another bankrupt marriage. It is all very natural, very young, very lightly told. Their friends, their dinners and diners, sympathetic or critical; their house building, with its woe and its triumph; their ups and downs in income and in affection, make the substance of the book. They skate over thin ice at times, but they do not break thru. The serpent-woman creeps into their garden of marriage, but she glides out again harmlessly after Molly Carroll has discovered the way to exorcise her.

"The reason so many men and women think they would have been happier married to the other one is because they never married the other one."

Sometimes the best cure for an infatuation is to see the enchantress constantly, as in a camping trip to the North Woods, and Molly is as wise as a serpent, altho not one herself. Mr. Williams caustically remarks that the captive pair would not mind the cage so much if the door were left open, but that is a superficial judgment. The mere fact of a legal ceremony neither makes nor unmakes a marriage. Tolstoy's greatest novel shows how the looser bonds of a free union may gall and fetter. Anna Karenina and Vronsky quickly tired of each other, too. It is rather childish to blame the institution of marriage for the fickleness of human kind. And the creator of the Frederic Carrolls falls into this puerility, altho he does see that each wedded pair must make their wedding into a true marriage for themselves, working out salvation with fear, trembling and humor.

Collected Verse of Rudyard Kipling. With Illustrations by W. Heath Robinson. 8vo, pp. xvi, 391. New York: Doubleday, Page & Co. $3.50.

The publishers have given us a most desirable and sumptuous edition of the collected poems of the best known and most popular of living English poets. It includes the "Barrack Room Ballads," "Departmental Ditties," "The Seven Seas," "The Five Nations" and "Collected Verse"; indeed, all his published poems except those that have appeared recently or scattered thru the volumes of short tales. The type is large, the paper thick, and the seventeen illustrations, colored and plain, add much attractiveness to the volume. It is of no use for the critics to berate the rough art of Kipling. It is rough, but it is powerful. It presents rude soldier life rudely, but with a background of feeling which is true and noble. What does one want finer than the dedication of the "Barrack Room Ballads" to his brother-in-law Balestier:

"Beyond the path of the outmost sun thru utter darkness hurled,"

or "Pharaoh and the Sergeant," or "The Ballad of East and West," or "Recessional," or "Gunga Din"? Every boy, every man and woman, ought to pick out and learn those he loves best, and skip a few.

Comrades of the Trails. By G. E. Theodore Roberts. Boston: L. C. Page & Co. $1.50.

All lovers of forest and stream who have a touch of gypsy imagination will like *Comrades of the Trails,* by G. E. Theodore Roberts. A wholesome young Englishman hunting and trapping in the great Northern forests of America, and a "good Injun" guide with the reassuring name of Sober Sam, have many adventures and an exciting winter in the country about Two-Fox Pond. In the woods, which we think of as silent, especially in winter, when hushed with the deep snow, we are wont to fancy life as eventless and monotonous. It is never so to Mr. Roberts or his readers. There are plenty of interesting people in the book, albeit they are furry folk, and make dangerous neighbors, some of them. Each trail exquisitely etched in the snow has a story for the woodsman, and the life of adventure and constant hardship has rich compensation in health, vigor and the delight of outdoor beauty. Mr. Roberts has the art of making us feel the charm of the woods, and the attraction of primitive housekeeping in a "shack" backed against a clump of cedar trees.

Theology and Human Problems. A Comparative Study of Absolute Idealism and Pragmatism as Interpreters of Religion. The Taylor Lectures for 1909-10. By Eugene William Lyman, D. D., Professor of Christian Theology in Bangor Theological Seminary. New York: Charles Scribner's Sons. $1.

A Valid Religion for the Times. A Study of the Central Truths of Spiritual Religion. By Parley P. Womer, With a Foreword by Washington Gladden. New York: Broadway Publishing Co. $1.

These two books are welcome additions to the growing list of popular expositions of the Christian faith in the light of modern knowledge. They are written by young men as essays toward a rational ground for religious belief and Christian effort, and both seek to be practical. Professor Lyman devotes the most interesting part of his volume to

"COMRADES OF THE TRAILS."
An illustration from the new book by Theodore Roberts.

the question of the best philosophical method of approach to theological problems, and decides in favor of the pragmatic. His criticism of absolute idealism and Ritschlianism is very suggestive, and his contention that the newer system, if such it may be called, gives a firmer basis for Christian theology, is not without support. The book deserves special commendation because of its clear and expressive English style. The author is one of the first in the field to show the value and tendency of pragmatism in its application to Christian theology, and while some of his conclusions are not very well sustained, his effort will appeal to many. Mr. Womer approaches his subject from the standpoint of the advocate, and presents his arguments for the substance of faith in the "spirit of sweet reasonableness." He tries to gather up the great essentials of religion and present them, not in the conventional theological language or dogmatic form, but in the terms of daily experience and need. This is a book for the earnest but busy man of affairs who seeks some guidance in his Christian thought and activity, while Dr. Lyman's volume will appeal strongly to every thoughtful student and minister.

The Dethronement of a City Boss. By John J. Hamilton. New York: Funk & Wagnalls Co. $1.20.

Mr. Hamilton's *Dethronement of a City Boss* is a well arranged and lucid exposition of the Des Moines plan of city government, and should have a wide reading, for the majority of city voters are determined on the dethronement of the city boss, and the Des Moines system for the accomplishment of that purpose is winning wide acceptance. Popularly, but incorrectly, the plan is dubbed the commission form of city government. But its success depends on several other features besides the abolition of boards of aldermen and the establishment of a small ruling commission. Most important of these features, as expounded by the author, are: (1) Easy nomination of candidates for municipal office by petition. Any voter can be named for mayor or commissioner by the simple, cheap expedient of twenty-five other voters filing a petition. Thus the control of nominations by national parties or by machine rings is prevented and independent nominations are encouraged. (2) A first election sifts out the numerous candidates. The voters do what the bosses have claimed credit and compassion for doing; they squelch the ambitions of cranks, self-seekers and busybodies. (3) Upon the ballot at the final election, which has no party emblems, only two names for each office appear and only ten altogether. This is "the short ballot," which enables every voter, with a minimum of investigation and without party guidance, to make his own judgment. (4) Strict laws are enforced against fraudulent voting, bribery, or lavish expenditure by candidates.. (5) The charter embodies the referendum, initiative and recall. Indeed, its outstanding characteristic is that it has avoided the dangers of bureaucracy inherent in the commission plan by a strong infusion of radical democracy.

The Empty House, and other stories. By Elizabeth Stuart Phelps. Illustrated, 16mo, pp. 326. Boston: Houghton, Mifflin Co. $1.25.

There are nine stories in this volume, the last of over thirty volumes from a writer who for strength, fervor, imagination, purpose and genius is surpassed by no other woman writer of her country and generation. Among the volumes to her credit are, among stories, "Avis," "The Madonna of the Tubs," "A Singular Life" and "Doctor Zay"; of religious books are "The Gates Ajar" and "The Story of Jesus Christ," and "The Struggle for Immortality"; to which may be added two volumes of poems. The present volume is a collection of Mrs. Ward's magazine stories of family life, in which the erring husband, wife or son returns to restore the broken home, so that the sun returns after the rain. Yet there is lightness and humor balancing the intensity of the sentiment and style. It is well worth while to gather these fugitive stories and preserve them for the reader who has for so many years learned to value the writings of one who is now of the elder generation, and whose purposeful seriousness has never been harsh, and whose merrier mood has never been frivolous.

ROSA BONHEUR: PAINTED BY AUGUSTE BONHEUR.
From the biography published by D. Appleton & Co.

Recollections of Alexander H. Stephens. [Illustrated.] Edited by Myrta Lockett Avary. New York: Doubleday, Page & Co. $2.50.

This is the prison diary of Mr. Stephens, Vice-President of the Southern Confederacy, written between May 27 and October 26, 1865, with an introduction and a concluding chapter by the editor. Stephens was arrested at his Georgia home on May 11th and was then taken to Fort Warren, in Boston Harbor, where he was held for six months. His diary records his capture and transportation north, his daily life in the prison, his conversations, his readings, and his efforts for release. Here and there are also comments on public affairs and characterizations of prominent men. Prison graft was then, as it probably always has been, a flourishing custom, for the prisoner was wofully swindled in his purchases from a visiting sutler. Tho ill a good part of the time, the prisoner bore his confinement bravely. His three petitions for release

are couched in manly terms. He argues the matter, and does not beg. Here and elsewhere he recites the fact that he was a Union man up to the outbreak of the war, deploring and even denouncing secession; but that when his State went out he felt in duty bound to follow. The volume will give an intimate view of Stephens which no other work supplies.

Adventures in Friendship. By David Grayson. New York: Doubleday, Page & Co. $1.20.

One looks about for adjectives to describe such books as Mr. Grayson's *Adventures in Friendship,* which follows his "Adventures in Contentment" of last year, and vainly seeks for one delicate and tender enough. "Wholesome" and "genial" come to hand, but they suggest something more robust and rollicking than these gentle stories of a country life that needs no "uplift." These chapters from a good man's life have the fragrance of pine woods after a rain, the keen tingle of a frosty morning when the low sun is shining far to the south and the sky has the blue of steel instead of that of forget-me-nots. A word from the Scotch preacher's heart goes straight to ours. "He went about thinking that, after all, he didn't know much, and that therefore he must be kind," describes the good man so perfectly that we know him at once and forever. David calls him "that accomplished spreader of burdens." No words could better describe the man who helps people by showing them how and when to help others. We see the farmhouse, with its quiet and order; the spreading fields; the open road that runs by like a river, carrying many friends of David's and ours, also, since he has talked of them to us, as we talk of our intimates to each other; we get the sense of peace, of content, of ripe experience, of human sympathy, of a nature rich and responsive to the best in its neighborhood; of a country life that is not narrow or dull; that is full of palpitating interest, and of friendships which have stood the test of years.

ONE "ADVENTURE IN FRIENDSHIP."

"Friendship is like happiness. She flies pursuit, she is shy and wild, and timid, and will be best wooed by indirection. Quite unexpectedly, sometimes, as we pass in the open road, she puts her hand in ours, like a child."

And we feel that we, too, have had an adventure in friendship, and are richer by a new friend.

Literary Notes

....*Some of God's Ministries* is the title of a recent importation by the Scribners; being a volume of sermons by Dr. W. M. MacGregor, of Edinburgh, the second in the series "The Scholar as Preacher" ($1.75).

....In the New Hudson Shakespeare series *A Midsummer Night's Dream* makes its appearance, with introduction and notes revised by Dr. E. C. Black (Glascow) and Prof. M. G. Daniell. An excellent school edition (Ginn).

....A recent volume of the Crown Theological Library contains translations of two essays of Dr. Adolf Harnack, "Monasticism: Its Ideals and History" and "The Confessions of St. Augustine" (New York: G. P. Putnam's Sons).

....In the "Contemporary Science Series," imported by Charles Scribner's Sons ($1.50) the latest volume to appear is Dr. M. Fishberg's *The Jews: A Study of Race and Environment.* An encyclopedic volume, illustrated, and supplied with bibliography and index.

....Theodore Stanton in his *Reminiscences of Rosa Bonheur* (Appleton; $3) gives some interesting information on the Saint Simon socialists with whom Rosa Bonheur's father was associated and shows their close relation to the American woman's rights movement and the Brook Farm experiment.

....*How It Flies* is the title given to the story of man's endeavors to conquer the air and the inventions thru which he has succeeded in his ambition, as it is told by Richard Ferris, B. S., C. E. The volume aims at simplicity in language and is issued to meet the popular demand for such a work (Thomas Nelson & Son; $1.20).

....The little book on *Natural Philosophy* in which Professor Ostwald lays down the fundamental principles of his energy theory as opposed to the prevailing mechanistic conceptions, is now accessible to the English reader thru the translation of Thomas Seltzer (Holt. $1.). In the forthcoming article in THE INDEPENDENT on Ostwald's philosophy this work will be discussed at some length.

....Dr. Samuel McComb, co-author of "Religion and Medicine," now publishes thru Dodd, Mead & Co. *Christianity and the Modern Mind:* an examination of vital subjects such as are suggested in some of the chapter headings: "The Intellect in Religion"; "Religion and Miracle"; "The New Belief in Prayer"; "Immortality and Science"; "The New Conception of Missions" ($1.50).

....Messrs. Funk & Wagnalls, who keep one or two large encyclopedias constantly in publication, have just issued Volume VII of the *New Schaft-Herzog Encyclopedia of Religious Knowledge.* It carries the work thru "Moralities," and covers such important topics as "Lord's Supper," "Luther," "Lutherans," "Melanchthon," "Mary," "Mithraism" and "Missions." Twelve volumes will complete this admirable series.

....Giorgio Bartoli, an Italian Jesuit who reecntly left the orden and the Roman Catholic Church, sets forth the convictions which led him to change his faith in *The Primitive Church and the Primacy of Rome* (New York: George H. Doran Co.). He is not a modernist and does not accept the results of the higher criticism, but attacks the Roman system more from the point of view of the older evangelicalism.

....Next to Joan of Arc perhaps Teresa of Spain is the most interesting woman of the Middle Ages. A few years ago Dr. Alexander Whyte, of Edinburgh, wrote an interesting sketch of her career, and now another Protestant, Helen Hester Colvill, puts forth a worthy biography of the Spanish Saint (New York: E. P. Dutton & Co. $2.50). It is a work of painstaking care and discerning judgment, written with sympathy and affection.

....Emily James Putnam—Mrs. G. H. Putnam—vivaciously sketches a series of portraits of *The Lady*: the lady in different ages and under all governments (Sturgis & Walton Co. $2.50). Telling us what was expected of the gentlewoman in times ancient, medieval, renascent, Georgian, and ante-bellum, she succeeds in imparting, besides many personalia, much illuminative information respecting the successive civilizations. Her book is generously illustrated.

....A posthumous novel by Tolstoy is to be issued in the spring. Particulars are not vouchsafed as to its date of composition. The hero is a young officer of the guard, of fashion and family. After becoming engaged, he learns that his intended bride has been the mistress of another. In his grief and disillusionment, the young man resigns from the army, and enters a monastery. But he does not find peace, in spite of the reputation for holiness which he gains in time; and the climax of the story is bloody and horrific.

....The Scribners make a handsome volume of William Adams Brown's character sketch of *Morris Ketchum Jesup,* which is preceded by a striking frontispiece-portrait. Successive chapters describe "The Man We Knew"; his ancestry, boyhood, and schooling; his philanthropy; his churchmanship and citizenship; his services to the arts and sciences and to education; the discovery of the North Pole, etc. This is in all senses of the word a well-made book (even to the index), and one which the friends of Mr. Jesup will most certainly welcome.

....Elinor Glyn's latest offering, *His Hour* (D. Appleton; $1.50), fairly bristles with great names. The frontispiece is a prince's miniature, and there are half a dozen appelative magnificencies to every page thruout, the novel being dedicated to Her Imperial Highness, The Grand Duchess Vladimir of Russia. The titled hero is "handsome as a god." Morally, he takes after some of the gods without Christian equivalents in the Calendar of Saints. At the climax (p. 253) his splendid eyes blaze "with the passion of a wild beast."

....The Captain of Police of San Francisco, Thomas S. Duke, issues in a volume that runs

to over 560 pages *Celebrated Criminal Cases of America* (San Francisco: James H. Barry Company, $3). The cases are treated as narrative, without too much of verbiage or legal lore.

....Esperanto is not the limit of simplicity and regularity in the field of international languages. Ido is as much easier than Esperanto to learn as Esperanto is easier than, say, German or Chinese: at least that is the impression one would gather from its advocates. Any one who has a reasonably wide vocabulary of Latin derivation can read it at sight. Its development is in the hands of an international committee, which is devoting more attention to perfecting the language than to its propaganda. Literature on the subject of Ido may be had free on application to William J. Phoebus, 768 East Nineteenth Street, Brooklyn, New York.

....Dr. S. M. Crothers has found his way into the hearts of the American public, or at least that part of the public which reads essays. A year or more ago he wrote a condensed memoir of Holmes, and it is an open secret that he is himself the successor of the "little doctor" in more ways than one. His latest book, *Among Friends*, consists in part, if not altogether, of papers contributed to the *Atlantic Monthly*. To name them is to recall some of our best light reading during the year just closed: "The Hundred Worst Books," "The Convention of Books," "In Praise of Politicians," "The Colonel in the Theological Seminary," etc. (Houghton, Mifflin; $1.25.)

....Mrs. Hugh Fraser's account of *A Diplomatist's Wife in Many Lands* (Dodd, Mead & Co.; $6) contains, among other interesting anecdotes, one with regard to her brother, the late Marion Crawford. It concerns his first novel: "Mr. Isaacs." He wrote it in a few weeks, she assures us, and sent it to the Macmillans:

"and then forgot all about the manuscript, for three months had passed and no notice was taken of it. This, I am glad to say, was his only experience of the 'weary, weary waiting on the everlasting road' which is the heaviest trial of a literary career. Years afterward, when, as Henry James remarked to me, Marion was 'meat and drink and lodging to publishers,' he was shown a letter from Mr. John Morley (now Lord Morley), who had been a reader for the firm in question. Mr. Morley's appreciation of the novel-reading public was hardly justified by events. He classed 'Mr. Isaacs' as a work which would never be popular; it would not 'pay well,' but he advocated its production, saying that it was original and well written, and would do the respected publishing house no harm. Marion himself always said that the instant success of 'Mr. Isaacs' was a piece of stupendous luck."

We had always supposed that Lord Morley was a better "guesser," as publishers' reader, than his rival, George Meredith, of whom similar anecdotes have gone the rounds.

....August Strindberg is known, to those of us who do know him, for a playwright who prides himself upon the unpleasantness of his themes, and upon the fact that he extracts therefrom the maximum of unpleasantness. *Mother Love*, a play in one act, in the English version by Francis J. Ziegler, seems to be a characteristic performance. *The Creditor*, "A Tragic Comedy," translated by the same hand, is a second example of the Swede's perversion. Both these volumes are issued by Brown Brothers, Philadelphia; and we have their word for it that *The Creditor* is now the most popular of Strindberg's plays on the German stage. Another play, this time of Biblical, or rather apocryphal, subject matter, is the *Judith* of Martin Schütze (Holt; $1.25). This drama in blank verse has dignity, and, at times, power; yet we question whether it embodies the essential elements of theatrical success. From Charles H. Sergel & Co. (Chicago) comes a new edition of Björnson's dramatic trilogy, *Sigurd Slembe*, translated from the Norwegian by Dr. William Morton Payne. Here is, as the translator wrote, twenty-two years ago, "probably the noblest production of a literature"—a literature with which, by the way, we are better acquainted now than in 1888—a fact which we may attribute, in part, to Dr. Payne himself.

Pebbles

WITH the death of Tolstoy, Russia's excuse for existence appears to have disappeared.—*Brooklyn Times.*

LITTLE BESSIE—Mamma, how'll I know when I'm naughty?

Mother—Your conscience will tell you, dear.

Little Bessie—I don't care about what it tells me—will it tell you?—*Harper's Weekly.*

"Do you think a secret ballot promotes honesty in elections?"

"Can't say that it does," replied the painfully practical politician. "The secrecy of it tempts too many men whom you have paid to vote for you to go back on their words."—*Washington Star.*

"How is the new filing system? Success?" asked the agent of the merchant to whom he had sold a "system" a few days before.

"Great!" said the merchant.

"Good!" said the agent, rubbing his hands. "And how is business?"

"Business?" echoed the merchant. "Oh, we have stopped business to attend to the filing system."—*San Francisco Star.*

"I WANT to get two pounds of tripe," said the lady, entering the shop, relates an exchange.

"Sorry, ma'am," replied the keeper, "but we haven't any tripe today."

"No tripe? Why, it's in season."

"No, ma'am, there's no tripe being shot just now."

"No tripe being shot! Why, what are you talking about?"

"I—I should say, ma'am, that tne Fisheries Commission won't allow tripe to be caught now."

"Are you crazy, man? I don't want fish! I want tripe!"

"Well, what in thunder is tripe, ma'am?"

"Why—why, I don't know just what it is; but if you haven't got any I'll try some other place."—*New Orleans Picayune.*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

What We Are Trying to Do

It was the custom of the ancient Hebrews to usher in the new year by the blowing of horns. The custom still prevails in annual reports of societies and corporations and in the January numbers of the periodicals. We wish, therefore, to take advantage of the season, its spirit of kindly indulgence, to blow our own horn a little. We would not infringe upon the advertising pages, but make it clear to our readers what we are trying to do, what we want to do, and then they can fairly judge in how far we succeed, and will not blame us for not doing something else and quite different. Our old subscribers may not need this, but we have enlarged the circle of our readers by 25 per cent. during the past year, and among these new acquaintances there may be some who have been brought into the circle under a mistaken impression of the character of the magazine. If such there be, it is only fair to disillusionize them at the start and not let them continue to take The Independent year after year on the supposition that it is, like many of its esteemed contemporaries, composed of detective stories, historical romances and pretty pictures.

The Independent is a dynamic weekly. It exists for the purpose of recording current events and of directing the current of events. It was founded not to make money, but to make history. It has made both. Many of the things it worked for in the days of 1848 have been accomplished, but its reformatory zeal has not slackened, altho it is directed in other and more diversified channels. It has no particular cause to advance, no single remedy which it recommends as a cure for all the ills that flesh is heir to. It is not the organ of any party, person, church, society, corporation, cause or publishing house. It aims to call attention to and encourage practical progress in all its forms. It has little liking for mere fault-finding and iconoclasm, but favors constructive reforms.

The purpose of The Independent is not to amuse, nor merely to instruct, but to inspire and incite to action. Every editorial, not excepting this one, is written with a view of suggesting to the reader something he can do, and helping him to do it. We try not to make this hortatory motive unpleasantly conspicuous, but it accounts for some of our omissions, for example, obituaries, crimes, scandal and accidents. We rarely print obituaries, not from any aversion to the idea of death, but because the poorest time to talk about a man is the day of his death. Any time before that criticism or praise might have some effect upon his future work or influence. Any time after that, if worth while, his character and achievements can be more justly appraised. We prefer to discuss only living people and living issues. A murder or a fire or a divorce or an explosion or an automobile accident may be tremendously important to those concerned in it and may be tremendously interesting to those who are not, but if there is nothing to be done about it, it does not come within our province. Great catastrophes and preventable casualties require attention, but the perpetual contemplation of suffering and misfortune by people in the attitude of passive spectators is injurious to character.

The Independent aims to be of service to thinkers and doers. It is a maga-

zine of ammunition for men on the firing line. We publish illustrations, not pictures. If we put in pictures merely because they are pretty or unique, THE INDEPENDENT could be made more attractive to casual purchasers, but it would not maintain its hold upon its habitual readers, who depend upon it. It would not have kept its place in certain families for a half century, even in the lean years when the book-money was cut to the bone. The names on our subscription list that we are proudest of are those of lonely ranchmen, of isolated school teachers, of foreign consuls and missionaries, the one-magazine families which have found THE INDEPENDENT the most satisfactory medium for keeping in touch with the world.

THE INDEPENDENT is divided into three parts, having distinct functions, corresponding to the divisions of court procedure. There is first the "Survey of the World," pledged, like the witnesses, to tell the truth and nothing but the truth, and as much of it as can be compressed into not over eight pages, without comment or bias or rhetorical embellishment. Then, in the contributors' section, the questions before the court of the American people are discussed by experts and argued from various standpoints by the ablest advocates we can find. This is where we are most apt to offend our readers and lose our subscribers, because they assume that the views to which we give space must be ours, whereas we merely mean they are worth calling to the attention of the public. Lastly, in the editorial department, we assume a judicial attitude and sum up the evidence of the witnesses and weigh the arguments of opposing counsel. Then the case is ready to be submitted to the jury empaneled on our subscription list, on whom, after all, rests the responsibility for the decision and for the action that should result from every decision.

On account of its scope and character THE INDEPENDENT is being taken in schools which are using periodicals for class work or side reading. In Newark, for example, the interesting experiment was tried of putting a box of magazines from the public library into a class of fourteen-year-old girls in a German quarter of the city. After a few weeks the pupils were asked, without coaching or warning, to write a letter about the periodicals they had been reading. Here is one of them:

Morton Street School.
Newark, N. J., November 21, 1910.

MR. J. COTTON DANA,
Public Librarian,

Dear Sir:—Since the second week of October we have been receivers of various magazines, the purpose of which I believe is to get us better acquainted with the things that are constantly occurring thruout the world.

Altho I find all periodicals intensely interesting, there are two which I prefer above all, namely, THE INDEPENDENT and *Life*.

I like them because one shows the serious side of life and the other the reverse.

Being fond of reading current events, I always find pleasure in THE INDEPENDENT. And what I especially like in this magazine is the excellent editorials. Then *Life*. One grows weary of reading serious matters only and longs for a change. *Life* furnishes all that can brighten up one's feeling, and I can say that it always puts me in a better humor.

I intend to be a diligent reader of all magazines as they come in, for they teach me much, and I hope that every graduating class in the city, next term, shall have the similar pleasure.

Respectfully,
ROSE B. MENKES (8a).

We admire the choice. Miss Rose has made a good complementary combination. *Life* and THE INDEPENDENT differ somewhat in their literary style, also in their editorial policy on certain questions, especially vivisection and woman suffrage. But particularly we are glad to see that Miss Rose has learned how to discriminate between magazines. She will not be of those who will buy any periodical from a newsstand if it has a red cover. She has discovered that THE INDEPENDENT has a serious purpose and that it is devoted to current events and their editorial discussion, and if she continues, as we hope she will, to like that sort of thing, she knows where she can find it. Now, if everybody in the United States knew as much as that our circulation would be larger than it is, tho doubtless never so large as that of magazines of the lighter side, like our rival, in this case our team-mate, *Life*. We want THE INDEPENDENT to reach all those who have use for it, therefore we shall try in 1911 to make it of use to all who have it.

The New Annus Mirabilis

Do our readers fully apprehend the fact of immense importance that they have seen the past year the prelude and promise of what is to be this year the opening of a great new era of industrial, social and political progress? The past year has proved that men may gain the conquest of the air, as they previously had learned to rule the earth and the sea. With this year they will begin, not as an experiment, but as a matter of business and pleasure, to travel as birds travel, spurning the ground, no longer creeping and crawling like snails glued to earth, but free as the eagles to soar above all obstructions of mountains or sandy deserts or wastes of frost, masters of the three elements, earth, sea and sky, possessed of a new and marvelous faculty that seems almost spiritual. It will make a mighty change in human conditions, but will it lift us nearer Heaven?

If we fail to catch the full consequence of this new human power, let us recall what it meant to the world when our fathers began to use steam for transit. That was an epoch in civilization the world over. For us it made one great nation possible. Otherwise we could not have been united, for, as Daniel Webster said of the future inhabitants of Oregon, their Congressmen could not reach Washington until the session had ended. We now live on our railroads and steamships. They bring us our food. They unify our people, for they weld us with iron links. The world is all one, because all the world is accessible to all.

Again, think what it has meant to the world that time has been annihilated by the telegraph and telephone. That opened up another, and scarcely less important era in civilization. An instant brings us close together, for we no longer have to take account of the passage of time. We can talk with our neighbor a thousand miles away as if he were by our side. Both time and distance have ceased to be. And now all these wonders are commonplaces to us which would have been miracles to statesmen and philosophers of less than a century ago.

In a less degree the automobile has revolutionized the conditions of society, for discovery and invention have so followed each other that each has seemed to leave no room for further advance. But with all these new victories over Nature, she seemed to have held back one from us, that art which the mother robin has no difficulty in teaching her brood, the conquest of the sky. We have longed for it, have dreamed of it, have labored for it, but had almost despaired of it, until the year of grace 1910 wrenched the secret from her. We then learned that we *could* fly. This year we *will* fly. The aeroplane will be as familiar as the automobile, at first the plaything of wealth, but then the common carrier of all who will go. It is now assured. All that remains is to perfect the details. Already it is as safe as the chauffeur's machine.

It will revolutionize travel. It will provide swifter carriage for commerce or for pleasure. It will be the pleasantest, easiest, quietest way of travel, free from dust, jar and racking noise. It will find no obstructions. It gives us all the sky for a road, with no labor of leveling hills or tunneling mountains. The airman will choose his own route, make his own street, pass as he pleases, and slowly and safely glide to the ground whenever and wherever he may choose. He has gained a new faculty, a new sense, a new mastery over Nature. He now really rules the world. It is great to have come to this long-desired epoch, to see the new era begin.

Will it end war? Will it make the possibilities of war so terrible that no nation will dare to make war? Can a hundred aeroplanes drop tons of explosives over a city or on a fleet? Are warships to be obsolete? Or will nations agree not to use the new weapon against each other? Will it not be easier and surer if they will agree no more to fight?

Will it teach nations no more to build jealous walls of tariff to obstruct each other's comfort and wealth? It will be impossible to limit the use of the new airship to carry merchandise, for profit will drive men to drop their wares where they will, and where they cannot be seen. What is a custom house to those whose port of entry is anywhere?

So the conquest of the air in this wonderful new year opens a new page—a new volume—in the world's history. We

believe it will make for good, for it will compact the world with a closer civilization. It creates propinquity, and propinquity begets love rather than hate.

The Meetings at St. Louis

INASMUCH as the economists and the historians gave up the sessions of their annual meeting a year ago to a noteworthy celebration of the twenty-fifth anniversary of the founding of their respective associations, it was naturally desired to make the meetings this year somewhat more academic in character. With this thought in mind it was on the whole a wise decision of the economists not to meet with the historians at Indianapolis, since that would have again emphasized the social feature. The cordiality of feeling that has always subsisted between the two associations can always be relied on to create "a good time," the value of which is fully recognized, but, of course, it is not the only value which it is the duty of these learned societies to promote.

The economists chose to assemble at St. Louis, and with them met also the American Society for Labor Legislation, the American Sociological Society, the American Statistical Association and the American Political Science Association. The sessions began with the presidential addresses of Prof. Edmund J. James before the American Association and Woodrow Wilson before the American Political Science Association, on Tuesday evening, and closed with a discussion in an attempt to define Socialism by the Economic Association, on Friday afternoon. Between these two sessions were sandwiched papers and discussions on nearly every phase of social science and its applications by men of power and knowledge, whose vital grasp of current questions of the big sort was fine to see, and showed little trace of that detachment from the world of realities which, in former days, was too often associated with the personality of the scholar. Very pleasant social events, too, were found place for, for the most part after the evening sessions, in which the people of St. Louis showed their characteristic and gracious aptitude for fine hospitality.

It is impossible to comment on any large proportion of the papers and discussions. The presidential addresses, as was fitting, were of special significance. All who had the good fortune to hear Woodrow Wilson were agreed that he had never revealed the qualities of his mind and his dignified personality to better advantage than on this occasion. His topic, "The Law and the Facts," was happily chosen, and it was so handled as to present an ideal at once high and sanely practical of the development of law, including the principles of constitutional interpretation, of which we hear so much just now. The truth was well driven home that law is a product and a form, not a creative power. That power lies in the facts and in the ability of the human mind to see and to interpret them. Dr. Wilson in his teaching has always insisted that interpretation calls not only for science, but also, and even more urgently, for the insight which comes only of imagination and sympathy. His plea for the study of literature as essential to the training of lawyer and publicist made a peroration of the impressive sort, which older men in the field of political science associate with a type of public speaking that great and effective men once made familiar to American audiences, and which the American public needs again today.

President James made a strong plea for a national policy of universal education, in which he did not shrink from contrasting the expenditures of the nation on accounts of war and preparations for war with its contribution toward the preparation of the people, generation by generation, for worthy and effective living. Professor Giddings, as president of the American Sociological Society, spoke on Wednesday evening "On the Relation of Social Theory to Social Policy," and urged that the overshadowing question of public policy is that of the possibility of preventing war. Of this address the New York *Evening Post* says editorially:

> "Professor Giddings brought out with much force the responsibility of leaders in public life for the formation of opinion about war. He insisted that such prominent individuals are real social causes. From them comes an initiative which shapes the sentiments that sway the masses. . . . It has been the pleasant custom to depict wars as fated, since they

are the inevitable collisions of rival principles or competing civilizations or what not. Against all this Professor Giddings uttered a timely protest."

Great interest was awakened by the discussion before the Sociological Society on "The Church and the Rural Community," led by Rev. Dr. Warren H. Wilson, superintendent of the Department of Church and Country Life of the Presbyterian Board of Home Missions. Of this discussion we may have more to say some other time. All in all, the St. Louis meetings of these associations must be counted among the most successful and effective in their history.

Senatorial Candidates

At the beginning of the campaign which preceded the recent election the Democratic party commended itself to a host of independent voters by the nomination of good men for prominent State offices. Everywhere it was said that the party had put its best foot forward in naming such men as Dr. Wilson in New Jersey, Judge Baldwin in Connecticut, Mr. Dix in New York, and Governor Harmon in Ohio. Following the election of these and other fine candidates, it was pointed out that the party's good judgment had opened for it the door of opportunity with respect to the Presidential contest in 1912. That was true, but in the minds of many who stand on the border line in politics, the party is still on trial. It is to be judged mainly by its State administrations, its course in Congress and its selection of Senators.

Victory at the polls and the election of Democratic legislatures have now given encouragement to an element by reason of which the party has suffered in the past. This is seen in the contests which are preceding the Senatorial elections, notably in New York and New Jersey. In the first of these States the leading candidate for the seat soon to be vacated by Mr. Depew is William F. Sheehan, a shrewd politician who has thus far had the support of Charles F. Murphy, the Tammany boss. It is admitted that Murphy controls a majority of the Democratic members of the new Legislature, and it is asserted that he is committed to the support of Sheehan by the terms of a secret compact made before the election. The foremost opponent of Sheehan is Edward M. Shepard, a man of exceptional ability, admirably qualified to represent his party, his State and the people in the Senate. To thoughtful and honest men familiar with the records and qualifications of Mr. Sheehan and Mr. Shepard it seems almost incredible that a rehabilitated party, on its good behavior and stimulated by hope of victory in 1912, should fail to select the latter and should prefer the former. To the public, the candidacy of Mr. Sheehan was unexpected. It may safely be said, we think, that Mr. Dix could not have been elected Governor if the voters of New York had been told that his election was to be followed by the nomination of Mr. Sheehan to succeed Senator Depew. Tammany influence controlled the convention in which Mr. Dix was named. He thinks it is not his duty to express publicly his preference concerning Senatorial candidates. But if he is convinced, as we think he must be, that his party would suffer discredit, and that his State would be inadequately and improperly represented by Mr. Sheehan, he ought to say so. His silent acquiescence in the selection of Mr. Sheehan will generally be regarded as evidence that he is bound by the support given to him by Tammany and its boss in the State convention to make no protest against any course which that boss may now take.

Dr. Wilson's strenuous and probably successful opposition to the candidacy of ex-Senator James Smith, Jr., in New Jersey, has attracted attention and been commended thruout the country. This opposition ought not to have been needed. Mr. Smith's record while he was a Senator, especially his action with respect to the Wilson tariff bill, and particularly his course concerning the duties in which the Sugar Trust was interested, should be sufficient to kill his candidacy. But, like Mr. Sheehan, he is a skilful politician and has the support of powerful interests which are not those of the general public. In New Jersey, unfortunately, the opposing candidate, Mr. Martine, who relies mainly upon the votes cast at an inconclusive primary at which preferences were exprest, has not all the qualifications which should characterize a Sen-

ator. What New Jersey needs in the Senate is a man like Dr. Wilson, or Dr. Wilson himself.

While the party's leading candidacies for the Senate elsewhere leave something to be desired, there are no other examples which so clearly indicate a tendency toward political suicide as the probable success of Mr. Sheehan in New York and the persistent and powerful movement for Mr. Smith in New Jersey. Democratic leaders elsewhere who long for victory in 1912 should exert their influence to prevent the nomination of either of these men, who should be opposed also in the interest of the people, without regard to parties.

The Historians at Indianapolis

The American Historical Association held its twenty-sixth annual conference at Indianapolis during the closing week of the year. The economists and political scientists who usually gather with the historians had this year tried the experiment of meeting separately, at St. Louis; nevertheless, the Indianapolis assembly was about 300 strong, and fairly representative of all sections, altho of course the delegations from the Middle West were the largest. As usual, the place of meeting materially influenced the composition of the program; Western problems, and Southern or border-State questions having more or less to do with the Ohio River, occupied large space in the calendar of both general sessions and sectional conferences. President Turner's annual address, a virile paper, which well deserved its enthusiastic reception, was entitled "Social Forces in American History," and, as might be expected, struck a firm Western note. Referring to the fact that the frontier line in the census reports, depicting the westward march of the nation, disappeared twenty years ago, the speaker declared that "today we must add that the age of competition of individuals for the unpossessed resources of the nation is nearing its end." The palpable effect of these two last decades of transition is the invasion of the old pioneer democratic order.

"An understanding of the rise and progress of the forces that have made the United States what it is, demands that we should rework our history from the new points of view afforded by the present."

Sketching in bold lines the elements of this formidable task, Professor Turner urged the historians to take advantage of every viewpoint—those of the economist, political scientist, psychologist, sociologist, geographer, and students of literature, art and religion. All these have contributions to make to the equipment of the historian, particularly of the historian of American society, with its vast spaces, geographic influences, variety of nationalities and races, and extraordinary industrial growth under the conditions of freedom.

The Western topics discussed in conferences, ranged all the way from Verendrye's discoveries among the Mandan Indians to American intervention in West Florida; and incidentally a "boom" was started for a celebration at Pittsburgh, in 1911, of the first century of steamboating on the Ohio River. Attempts were also made to amalgamate the Ohio Valley and Mississippi Valley Historical associations, but these got no further than reference to a joint committee of those bodies.

Perhaps the most popular of the general sessions were those devoted to discussions of Southern questions. A morning was given to the presentation of papers from the Northern point of view, in which Professor Fish showed that to economic and geographical reasons was largely attributable the decision of the Ohio Valley to stay by the Union. Professor Corwin convinced many that the Dred Scott decision was based on false conceptions of law, and was forced as a political expedient. Dr. McLaughlin's studies led him to declare unhesitatingly that the so-called right of secession had no basis of constitutional law. In the morning given up to Southern views, Professor Dodd gave conclusive evidence that Douglas came within an ace of capturing the Northwest vote in 1860. Other interesting studies were made by Professors Thomas, Boyd and Gerson; but the notable feature of the session, from the popular point of view, was a charmingly told narrative by ex-President Angell of a horseback tour which he took thru the South in 1850.

There were the usual conferences on the teaching of history both in colleges and secondary schools (with evidences of a gradual approach to more systematic methods, and consequently greater success), also on European, medieval and ancient history, and the work of State and local historical societies. The introduction of a new section, on diplomatic history, was generally hailed as a welcome innovation. At this first meeting, there was a profitable consideration of our diplomatic relations with the Latin-American republics; but it was shown, especially by Mr. Joseph H. Sears, of New York, that much improvement has yet to be made before these relations can be considered satisfactory either to ourselves or to our southward neighbors. The conference of archivists was interesting and practical, and many useful hints for better methods and broader views were contributed by delegates of the association to last summer's International Conference of Archivists and Librarians at Brussels.

The business meeting of the association, held on Friday afternoon, brought into view the many and very interesting activities of this strong and growing body, which now comprises nearly three thousand members in all sections of the United States. The reports of the committees or commissions on the American historical review, public archives, historical manuscripts, historical sites, and the like, all exhibited a wide range of interest, each effectively and unselfishly administered by selected bodies of members.

Prof. William M. Sloane, of Columbia University, was chosen as the next president, and the meeting for 1911 will probably be held at Buffalo.

Wages and Freight Rates

It will be noticed that the wage controversy between the railroad engineers in the West and the employing companies was settled, on the 24th ult., by the mediation of a Federal officer, Mr. Neill, Commissioner of Labor, who drafted the plan or proposition which both sides accepted. He was acting as mediator under the provisions of the Erdman act, and he would have been accompanied by the chairman of the Interstate Commerce Commission if the chairmanship had not been temporarily vacant, owing to the promotion of Mr. Knapp to the Court of Commerce. The increase thus granted will amount to about $4,000,000 a year, and it probably foreshadows a similar response to the demands of 75,000 trainmen, who ask that 15 per cent. be added to their pay. We direct attention to the fact that in this case, as in other railroad wage disputes during the past year, a Federal officer was in a sense indirectly responsible for the addition to the companies' expenses. In the preceding instances, one of the mediators who procured a settlement by arbitration or otherwise was the chairman of the commission whose duty it is to give judgment as to the higher freight charges which are defended by the companies upon the ground that they are needed to compensate for the increase of wages. It seems to us, as we said some time ago, that no member of the Interstate Commerce Commission should take part in negotiations affecting important questions as to which he will afterward be required to act as a judge.

Reckless Airmanship

Two of the best known airmen, who have great records in flight, fell to the ground and were killed last week, Moisant and Hoxsey. It is nothing more than was to be expected. When there is an automobile race we expect one or two to be killed. They take risks. They go at such a speed that it is not easy to keep the safe track. The least swerving may kill them. So with the airmen. They do not go safely, but in these exhibitions are trying to do startling "stunts," difficult curves, extraordinary hights, or anything that will please the groundlings and win applause. Life is risked for a cheer. Orville Wright told both his two famous airmen that they were likely to be killed if they took such risks, but they liked the hazard, and now both are dead. These forty men thus far killed the world over are no more reason for condemning the airship than the hundreds of deaths by the automobile is any reason for discarding that necessary vehicle of civilization. Both have come to stay and to be domesticated down into common and safe every-day use. Even then some will be killed by accident or carelessness, just as

every season makes widows at Gloucester that we may have fish to eat, or in the Adirondacks this last fall fifteen hunters were shot for deers.

A Larger House of Representatives

The House of Representatives now has 391 members. It is expected that the new apportionment will add 44, making a total of 435, because this is the least number that will not reduce the representation of any State. Of the sixteen members of the Census Committee, which will prepare and report an apportionment bill, eleven are from States that would lose one or two Representatives if the present number, 391, should be retained. No Representative desires to see his State lose a seat in the House. That seat might be his own. It is evident that the committee's bill will provide for a House of not less than 435 members. The States which would lose something in a House of 391 have 149 votes. In a House of 435 the largest gains would be six for New York and four for Pennsylvania. It is unfortunate that the number of Representatives must be increased. Efficiency would be promoted by retaining the present number or slightly reducing it.

Enlarging the Monroe Doctrine

James L. Slayden, of Texas, one of the most consistent peace advocates in Congress and a trustee of the new $10,000,000 Carnegie Peace Fund, is very much interested in having the Administration act on the following resolution which he introduced at the recent Trans-Mississippi Commercial Congress and which the Congress passed unanimously:

"Whereas, In the opinion of the Trans-Mississippi Commercial Congress, now in convention, the peace and the commercial development of the American continent would be more certainly and speedily secured if the various, South, Central and North American Governments were reasonably assured against the forced permanent loss of territory, as a consequence of war, or otherwise; therefore be it

"Resolved, That the President and the Secretary of State of the United States be requested to enter into negotiations for the making of a treaty that will forever quiet the territorial titles of the various American States; and, be it further

"Resolved, That this Congress heartily endorses the idea of the arbitration of all international disputes and their settlement, if necessary, in the great peace court of the world at The Hague."

This is a very interesting suggestion. It is practically a plan to enlarge the Monroe Doctrine. By this great doctrine the United States guarantees the sovereignty and territorial integrity of all the Latin-American States from European aggression. It does not guarantee them from aggression on its own part or on each other's part. The proposition that the Latin-American States should adhere to the Monroe Doctrine was introduced at the Pan-American Congress at Buenos Ayres last summer, but no action was taken. But even had the proposition been accepted, it would not have gone far enough. Mr. Slayden's suggestion should be considered by our State Department, for it is probably one of the stages we have got to pass thru before the dawn of universal peace.

Collegiate Cacophony

President Lowell, of Harvard, has been attacked by the press, more or less facetiously, for his denunciation of college men's musical taste—he says they seem to appreciate nothing but rag-time and "organized" cheering at athletic meetings. Some of the Harvard president's critic seem to think that an American folk-music may be developed if college yells are carefully enough nurtured and noted. Others consider his criticism of organized cheering, much of whose enthusiasm is, notoriously, "pumped up," to be "sissy." But if President Lowell is the first prominent educator to brand this kind of performance—dependent as it is upon rehearsals, megaphones, and the election of natty "cheer-leaders"—as futile and puerile, and sometimes (as at baseball games) actually unsportsmanlike, he is by no means the first college man to feel the truth of these accusations. "Big Bill" Edwards is, to be sure, quoted as having said, apropos of the Cambridge man's strictures: "At Princeton a good rooter deserves just as much credit as a good player."

"They also serve who only sit and howl."

Yet it is precisely because President Lowell is himself an ex-athlete that his criticism of college cheering has special point. For here is a teacher who is also a well set-up man, healthy in mind and

body, sympathetic in his attitude toward student athletics, who would rather see students neither brawny enough for football nor quick enough for baseball, playing tennis, or rowing on the River Charles, than sitting in serried ranks, to chant (it may be at a game with Dartmouth or Amherst):

"Three cheers for Hah-vard,
And DOWN WITH *YALE!*"

Discoveries at Samaria

We trust that the excavations carried on for three years at Samaria by Harvard University, made possible by special gifts by Mr Schiff, will be continued for some years longer. Samaria was the capital of the Kingdom of Israel, founded by Omri, and its first strong king was Ahab, who had his bouts with the prophet Elijah. The promising remains found this last summer, now reported by Professor Reisner, are of Ahab's time, and, if yet not large, are more numerous in the way of written texts than all others yet found in Palestine of the period of the kings. They are, to be sure, mostly short, written on ostraka, or fragments of pottery, used to make memoranda accompanying offerings of oil or wine. They are valuable for the many Israelite names on them, which are often identical with biblical names. An example is the following docket: "In the tenth year. From Abiezer. From Shemariah. For Asa." Or this: "From Abiezer. For Asa, Abimelek and Baalah. From Elnathan." The names illustrate the biblical account of the prevalence of the worship of Baal during Ahab's reign, as several of them have the name of the god in combination, as Baalah, Baalmeoni, Abibaal and Baalzamar. The name of Jehovah appears often in combination, as in Abijah, Shemariah and Joash. The work thus far has only begun the excavation of Ahab's palace, and it is a good gambling chance that much more valuable records may yet be found of the period before the Assyrian overthrow of the city.

The facts which Charles Francis Adams gives our readers regarding the recognition of the Southern States which England was ready to make during the War of the Rebellion are most interesting. While Mr. Adams was delivering his address before the New York Genealogical and Biographical Society, seated on the platform listening to him was Hon. John Bigelow, of this city, who was Minister to France when Mr. Adams's father was Minister to England. Mr. Bigelow has recently celebrated his ninety-third anniversary, and was the guest of honor when Mr. Adams spoke. Mr. Bigelow's advanced age did not prevent him from making a most vigorous speech at the close of Mr. Adams's address, and Joseph H. Choate, our recent Ambassador to England, also spoke. The gathering and addresses were so remarkable that we have asked from Mr. Adams permission to publish his address.

Now that an aeroplane has remained in the air for eight hours, covered a distance of nearly 500 miles, and attained a speed of more than a mile a minute, and gone higher than two miles above the ground, the problem of human flight may be regarded as solved. The rest is a matter of perfecting the machine, of securing safety, economy, efficiency, convenience, etc. There is no longer any room for skepticism as to ultimate result. No other invention of such a revolutionary character has been so rapidly developed. Mr. Grahame-White says it is safer than the automobile.

A published account of the Government's preparations for its suit against the electrical companies, under the Sherman act, says that the associated manufacturers of incandescent lamps, protected by a tariff duty of 65 per cent., sell abroad for 10 cents lamps for which they require American buyers to pay 18 cents. If this be true, they are entitled to no protective duty whatever.

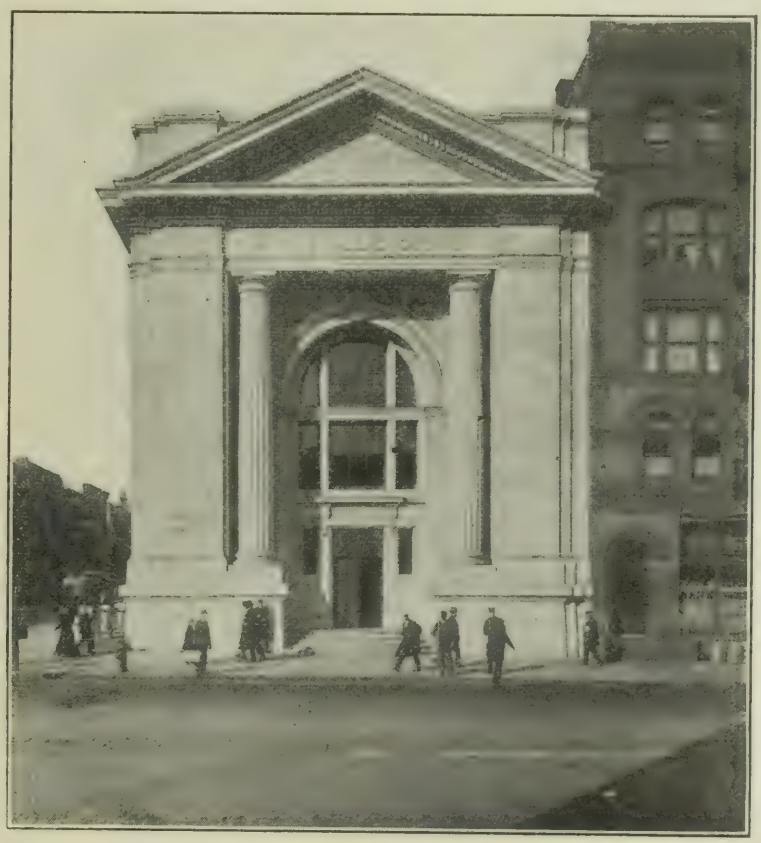
The postal savings bank system inaugurated on Tuesday has been earnestly advocated by THE INDEPENDENT and its features discust at length. We welcome the accomplished fact. The beginning is a small one, but the English system, which had even humbler beginnings half a century ago, has today almost eight hundred million dollars of deposits, with nearly ten million depositors.

Financial

Robin and His Banks

THE wrecking of the Northern Bank of New York should have been prevented. New York has very good banking laws. Their excellence is due largely to Governor Hughes's commission and the labors of Banking Superintendent Williams, who now holds another office. Enforcement of them, accompanied by intelligent and effective official supervision, should make it impossible for a rascally speculator like Robin, or Robinovitch, to use unchecked the methods which landed Charles W. Morse in the penitentiary. Robin controlled the Northern Bank, was president of a savings bank, and was deeply interested in speculative real estate companies and other outside concerns of an unstable character, for the handling of which he needed large sums of money. He robbed the banks for the support of these outside speculative projects. The people of New York have suffered greatly within the last three years by reason of the operations of such scoundrels, whose methods—the shifting of securities, kiting of checks, manipulation of the funds of a "chain" of financial institutions—have become familiar to the public and to the State's Bank Department. But Robin was not disturbed until it was too late to save innocent depositors and shareholders from serious inconvenience or loss.

His associations and training should have excited suspicion long ago in the Banking Department and ought to have suggested the necessity of subjecting his operations to the severest scrutiny. He was a graduate of the Morse school and had been the trusted ally of a coterie of speculative bankers whose names all who suffered on account of the panic of 1907 have reason to remember. Such inspection as his history should have suggested not only would have brought to light his financial juggling, but also would have shown that some of those to whom he gave responsible positions were incompetent men or willing tools.



He has been indicted and he should be prosecuted mercilessly. There has been far too much crooked banking of his kind in New York, and (if Morse's case be excepted) scarcely any punishment for it. The influence of the honest bankers of the city should be exerted, first, to keep such men as Robin out of the banks, and, second, to procure their exemplary punishment if they get into the banks and rob depositors.

The Chemical National Bank

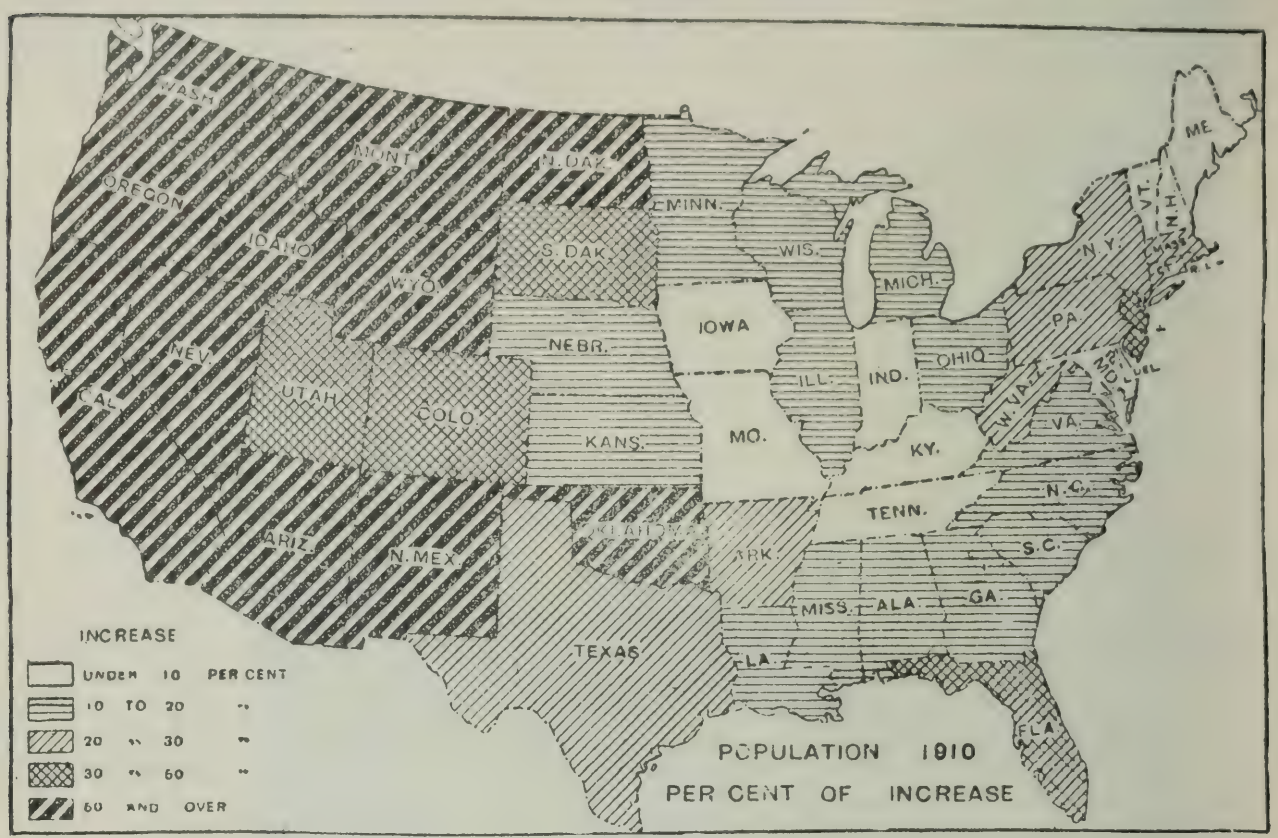
JOSEPH B. MARTINDALE, vice president, was last week elected president of the Chemical National Bank of New York in place of William H. Porter, who becomes a partner in the banking house of J. P. Morgan & Co. Mr. Martindale was born in Brooklyn July 10, 1862. He attended private schools and public schools in Brooklyn, and later spent two years at the Medina (N. Y.) Academy, entering the employ of the Chemical National Bank as a junior clerk in May, 1878. He was appointed assistant cashier in December, 1902. In January, 1907, he was elected a director and vice president of the institution. The only other change was the election as vice president of Herbert K. Twitchell who, during the past four years, has been assistant cashier. Mr. Twitchell was born in Weybridge, Vt., November 25, 1865. After securing an academical education at the local academy, he spent six years at Hartford, Conn., in the Travelers' Insurance Company, the Charter Oak National Bank, and the Hartford National Bank, coming to New York in October of 1889 to occupy a clerical position in the Chase National Bank. He was made assistant cashier of that institution in January, 1900, and resigned to become assistant cashier of the Chemical National Bank in January of 1907. The same directors continue, namely, Frederick W. Stevens, W. Emlen Roosevelt, Augustus D. Juilliard, George G. De Witt, Robert Walton Goelet, Henry P.

Davison, William H. Porter, and Joseph B. Martindale. The capital stock of the bank is $3,000,000; the surplus $5,000,000, and the undivided profits over $1,577,000. The deposits, as shown by the last statement, are $31,757,915.60, and the total assets are $41,678,618.16.

The Chemical Bank when organized in 1823 was known as the New York Chemical Manufacturing Company. The following year an act was passed amending the charter and granting to the company banking privileges. The capital at that time was one half million dollars, and the surplus nothing. In 1829 the surplus had grown to $4,000. P. B. Melick was the first president. The second president, John Mason, was elected in 1833, and he was succeeded in 1839 by Isaac Jones. When the charter expired in 1844, the State refused to renew it, and so the New York Chemical Manufacturing Company was reorganized as a free bank, "The Chemical Bank," with a capital of $300,000, the money being raised in one day by Peter Goelet and Cornelius Van Schaick Roosevelt—the grandfather of Theodore Roosevelt. John Q. Jones became president in 1844, and George G. Williams in 1878. The Chemical was the one bank in the United States that did not suspend specie payments during the panic of 1857. Leading men a generation ago were depositors of the Chemical, including A. T. Stewart, Commodore Vanderbilt, James Lenox and James Gordon Bennett. After Mr. Williams's death, Mr. Porter became president. The history of the Chemical Bank has been most honorable, and its growth has been intimately connected with the growth of the city of New York.

WEST SIDE BANK.

New Bank Building



Of the many bank buildings erected in New York in recent years, the newest one is that of the West Side Bank, at the corner of Eighth avenue and Thirty-fourth street. This bank was organized in 1869 with a capital of $200,000. While its capital remains the same, its surplus has grown to $1,000,000. The total deposits are nearly $5,250,000, and the total resources over $6,880,000. The president, Christian F. Tietjen, who was born in New York in 1847, entered the service of the bank twenty years ago as second vice-president, and in 1892 was elected president. The other officers are Francis L. Leland, Charles Rohe and Theodore M. Bertine, vice-presidents, and Walter Westervelt, cashier.

The oldest savings bank on Long Island and the third oldest savings bank in the State is the Brooklyn Savings Bank, organized in 1827, of which Bryan H. Smith is president and Edwin P. Maynard, comptroller.

....According to the *Railway Age-Gazette,* the number of miles of railroad in the United States was increased in 1910 by 4,122, against 3,748 in 1909.

....Alaska's gold output in 1910 was about $16,360,000, against $20,371,000 in 1909. The output since 1880 has been $179,000,000.

Insurance

The Increase in Our Population

THE movement of population in the United States should be carefully studied by the life insurance agent. It is evident that more new business will be written in a State like Oklahoma, which showed an increase in population of over 100 per cent. in ten years, than in Iowa, which showed an actual loss in the same period. The accompanying map shows graphically the tendency of increase in population in the United States. At a glance one can see the average growth in the East, the small gain in the Middle West, and the enormous increase in the Far West. Many an agent, in entering his profession, can choose his own field. It has often been said that he can do better by leaving his home and going to a new community. Here, instead of relying on talking insurance to his friends, ultimate success will depend on his own ability. To the life insurance agent the actual numerical increase is also an important subject for study. The States showing the greatest increase from 1900 to 1910 are:

New York	1,844,720
Pennsylvania	1,362,996
California	892,496
Oklahoma	866,764
Texas	847,832
Illinois	817,041
New Jersey	633,498
Washington	623,887

From these figures it would seem that a life insurance agent working in Maine or New Hampshire, whose business was not showing a favorable increase, might well take into consideration applying for a new territory in Oklahoma or California.

LIFE insurance also follows the flag, as indicated by the organization of the Insular Life Insurance Company, of Manila, Philippine Islands, with a capital of $500,000.

THE preliminary reports indicate that the six largest life insurance companies all increased their writings during 1910. The companies, subject to final complete statements, stand in the following order:

New York Life	$160,000,000
Metropolitan Life	150,000,000
Prudential Life	137,000,000
Mutual Life	122,000,000
Northwestern Mutual	120,000,000
Equitable Life	115,000,000

The Independent

VOL. LXX NEW YORK, THURSDAY, JANUARY 12, 1911 No. 3241

Survey of the World

In Congress

The death of Stephen B. Elkins, Republican Senator from West Virginia, on January 4, means that that State will be represented in the Senate by two Democrats. The Democratic minority in the chamber will be increased by nine new members who will replace Republicans retiring on March 4; or by eleven, should Messrs. Carter, of Montana, and Lodge, of Massachusetts, fail of election.—— The settlement of the Lorimer case has been deferred owing to the adjournment of the Senate out of respect to the late Senator Elkins. The storm will break this week. The Democrats are lining up against the Illinois Senator. Even among Senators expected to vote for Lorimer's vindication there is a strong feeling that he should clear the situation by resigning. Meantime the declared opposition within the Republican membership has grown to formidable proportions; while from Springfield, Ill., comes news that State Senator Daniel W. Holtslaw, who confest to taking a bribe of $2,500 for his vote for Lorimer, has been expelled from the Legislature.—— On January 5 the President sent to Congress the report of the board of army engineers, appointed by him last June, to examine various reclamation projects upon which the Government had begun work, and to advise which of them deserved a share of the $20,000,000 of certificates of indebtedness authorized in that work by act of Congress. The board recommends and the President approves the following allotment:

Salt River, Ariz., $95,000; Yuma, Ariz. and Cal., $1,200,000; Grand Valley, Cal., $1,000,000; Uncompahgre, Col., $1,500,000; Payette-Boise, Idaho, $2,000,000; Milk River, Mon., $1,000,000; North Platte, Wyo. and Neb., $2,000,000; Truckee and Carson, Nev., $1,193,000; Rio Grande, N. M., Tex. and Mexico, $4,500,000; Umatilla, Ore., $325,000; Klamath, Ore., and Cal., $600,000; Strawberry Valley, Utah, $2,272,000; Sunnyside, Yakima, Wash., $1,250,000; Tieton, Yakima, Wash., $665,000. Total, $20,000,000.

——The reapportionment bill to which we referred editorially last week was introduced in the House of Representatives on January 6 by Mr. Crumpacker, of Indiana, chairman of the Committee on the Census. It calls for a House membership of 433, excluding Arizona and New Mexico, and is so framed that States which have lost population during the last decade will not have their representation in the House reduced. The bill is tentative, being introduced that it might be immediately referred back to the Census Committee, which will probably take definite action this week. Director Durand, of the Census Bureau; Chief Statistician Hill, of the Division of Population, and Professor Wilcox, of Cornell University, will appear before the committee in support of their various plans. Mr. Crumpacker considered the introduction of a bill fixing the membership at 391, which would involve the loss of thirteen seats to States which decreased in population during the last ten years. He seems, however, to have recognized the uselessness of urging such a measure upon Congress, many members of the Census Committee representing States whose delegations would be reduced thereby.

Peonage, Postage, Peary and Panama

The efforts of the Federal Government to have the Alabama "labor contract" law declared unconstitutional proved successful when the Supreme Court of the United States rendered a decision last week declaring that the law was invalid, reducing hundreds

of negroes to a state of peonage. In refusing, on January 6, the application for the pardon of W. S. Harlan, manager of a large lumber company operating in Florida and Alabama, President Taft exprest his belief that fines are an insufficient punishment for wealthy men and that imprisonment is demanded where violation of a criminal statute is proven. Harlan was convicted of violation of the peonage law and sentenced to pay a fine of $5,000 and to be imprisoned for eighteen months. The case involved the use of force in preventing the desertion of foreign-born laborers brought to Savannah from New York, and from Savannah to the lumber camps of Harlan's company.——On January 3 the postal savings bank system was inaugurated, with one depository named for each State. Brunswick, where the experimental postal savings bank for Georgia was opened, reports that on the opening day several deposits of $100 each, the limit for one month for one depositor, were made, and foreign-born residents of Port Arthur, the Texas depository, made immediate use of the new institution. Less favorable reports were made from Western States.——Commander Peary, the Arctic explorer, who refused to appear before the House Committee on Naval Affairs at the last session of Congress, appeared as a witness before that body last Saturday to present proofs in substantiation of his claim to having reached the North Pole. The hearing was supposed to be merely before a sub-committee of five members, but the full committee and as many visitors as could crowd into the committee room were on hand and heard Mr. Peary begin his story, which he is expected to complete this week. The bill introduced by Representative Bates, of Pennsylvania, at the last session, proposing to retire Mr. Peary with the rank and pay of a Rear-Admiral, is likely to be favorably reported at the conclusion. Mr. Bates has read to the committee two letters received from the Royal Geographical Society of London, stating that the society's council has carefully examined the explorer's records and has unanimously determined that he reached the Pole.——On January 3 the Supreme Court, in an opinion by Chief Justice White, unanimously concurred in, upheld the action of the Circuit Court below in quashing the indictment of the New York *World* for criminal libel. This is the case of former President Roosevelt against the newspapers that printed charges involving, besides himself, his brother-in-law, Charles P. Taft, and others, alleging enormous profits by a syndicate in the purchase of Panama Canal rights.

Other Washington Notes

In a letter to President Taft, former Senator Foraker, of Ohio, makes his contribution to the controversy over the fortification of the Panama Canal. He states that, as a member of the Senate, he personally suggested to Secretary of State Hay the change in the first Hay-Pauncefote treaty resulting in the adoption of the convention now in force. Among these changes was the omission of the provision against fortification.——Negotiations for a reciprocity treaty between the United States and Canada have been resumed, the Canadian Ministers of Finance and Customs (Messrs. Fielding and Paterson) representing their Government at Washington, the United States negotiators being Chandler P. Anderson, counsellor of the State Department, and Charles M. Pepper, a commercial expert of the Bureau of Trade Relations. The conferences are likely to last several weeks.

The New Jersey Imbroglio

Governor-elect Wilson, at a large mass meeting held in Jersey City on January 5, aroused enthusiasm in his championship of Mr. Martine as the choice of the Democratic primaries for Senator. Incidentally, he denied that there was a "split in the party," asking, "Does the Democratic party consist of a little group of gentlemen in Essex County?" and answering his own question thus:

"The Democratic party does not consist of any portion of any organization. It consists of the men who vote the Democratic ticket, and organizations are only instruments—instruments to serve the people or to take the consequences.

"Do you know what is true of the special interests at this moment? They have all their baggage packed, and they are ready to strike camp overnight, provided they think it profitable to come over to the Democratic party—

to come over, bag and baggage, and take possession of the Democratic party. I pray we may never wake up some fine morning and find them on our side!"

Mr. Smith's reply to Dr. Wilson's speech is of interest only in its denial of the Governor-elect's charge that he has conferred, in Philadelphia and New York City, with Republican machine leaders from New Jersey towns, Messrs. Kuehnle and Baird. He also taunts Dr. Wilson with not having named his (Smith's) "spokesman," alleged to have given Mr. Smith's pledge that he would not be a Senatorial candidate. The Republican members of the New Jersey Legislature have voted to support unanimously the candidate selected by the caucus of January 10.

An Atlantic Steamship Combination

In New York, on the 4th, the Government brought suit against nearly all of the Transatlantic steamship companies, under the Sherman Anti-Trust law, alleging that they are parties to an unlawful combination, having conspired by an agreement known as the Atlantic Conference (made in London nearly three years ago) to control the steerage passenger business by means of an allotment of traffic, by fines for excess of the allotted percentage, and by attacks upon competitors. The thirteen defendant companies and agents or officers are:

Cunard Steamship Company, Charles P. Sumner; Hamburg-American, Emil L. Boas; International Mercantile Marine, Philip A. S. Franklin and John Lee; North German Lloyd, Gustav H. Schwab, Herman L. von Post, and Gustav H. Schwab, Jr.; Allan, Bryce J. Allan; Anchor Line, William Coverly; International Navigation; Canadian Pacific; British and North Atlantic Navigation; Holland-American Line, Adrian Gips; Red Star Line; White Star Line; Russian-American Line, Max Straus.

The court is asked to declare the agreement an unlawful one, to enjoin the companies from bringing ships into any American port so long as it is in force, and to enjoin them from making any similar agreement. It is alleged by the Government that the agreement affects 90 per cent. of the steerage business, amounting to $50,000,000 a year; that the fine imposed for exceeding the allotment is $20 per passenger; that competition is attacked and suppressed by means of "fighting ships," sent to the ports of competitors, where they take passengers at very low rates, and that in this way one Russian company was driven out of business, while another was forced to enter the combination. The manager of a company now resisting attack asserts that four companies have been compelled to retire, and that the agreeing companies are assisted by the railroads, which give them rebates or commissions. At the agreeing companies' foreign offices it is said that the suit was welcomed or even instigated by the defendants, who desired that the law should be tested, believing that the courts would say it was not applicable to their business. But the Government does not admit that the suit is a friendly one. In the House, at Washington, Mr. Humphrey has introduced a bill forbidding the thirteen companies to enter or clear a ship in any of our ports, under penalty of a fine of $200 for each passenger, and a forfeiture of all merchandise carried. This bill also directs the Postmaster-General to cancel all contracts with these companies for carrying the mails.

The Islands

In Cuba, General Loynaz del Castillo, now Minister to Mexico, announces his candidacy for the office of Vice-President, with that of General Eusebio Hernandez for the Presidency. Vice-President Zayas also gives notice that he is a candidate for the highest place. General Guerra, recently commander of the army, will support him. General Loynaz del Castillo says that if President Gomez seeks a renomination, this will cause civil war and intervention by the United States. Señor Ferrara, Speaker of the House and a friend of President Gomez, says to the public that the President will not accept a renomination. But the Administration newspapers publish arguments in favor of giving Gomez another term.——Salvador, the leader of bandits in Luzon, who was captured in July, has been sentenced to death. His criminal record includes fifty murders. ——In Manila, two American and six Filipino detectives have been arrested because they accepted bribes for the protection of gamblers.——It is expected that there will soon be a peaceable settlement

of the controversy between Hayti and Santo Domingo. General Firmin, returning from Europe, has arrived at a port of Santo Domingo. Because it was suspected that he intended to cause a revolution in Hayti, he was excluded from that country. He says he is loyal to Hayti's President.——The Washington Government objects to Hayti's plans for giving control of the country's finances to a new bank in which German influence will be dominant. It insists upon representation for United States interests, and is paying some attention to Hayti's negotiations for a foreign loan.

Mexico and Central America

The revolutionists in the northwestern provinces of Mexico have retreated to the mountains, and on the 7th General Navarro easily took possession of Guerrero, which had been their headquarters. A mayor placed in office there by them had caused the former mayor to be put to death. It is expected that they will carry on guerrilla warfare for some time to come. A majority of those who live in the mountains are in sympathy with them, and the Federal troops, coming up from the south, suffer from the cold. Madero's brother says that the Diaz Government is about to give Japan a naval supply station at a port on the Pacific Coast, near the Isthmus of Tehuantepec.——Incorrect reports as to the progress of the revolutionists in Honduras have been published. Bonilla captured the island of Ruatan last week, and will use it as a base for an attack upon Puerto Cortez and Ceiba. It is alleged that he has been aided by President Cabrera, of Guatemala, who dislikes President Davila, a protégé of his old foe, Zelaya. This is denied by Americans having mining interests in Guatemala. There is much gossip about the negotiations of Honduras for a loan. President Davila said to his Congress, on the 5th, that at the invitation of our Government he had sent Señor Peredes to this country to treat with J. P. Morgan & Co. for a loan. Honduras's foreign debt is about $112,000,000. It is forty years old, and $85,000,000 of it is unpaid interest. The bonds are quoted at 12 cents on the dollar. It is denied at Washington that a financial protectorate, like the one in Santo Domingo, is contemplated; but our Government desires to prevent intervention in behalf of foreign bondholders. An agreement for the protection of the loaning syndicate may be made. The proposed loan will not exceed $15,000,000. Probably the syndicate will await the result of the revolutionary movement.——Costa Rica has made a contract for a refunding loan with M. C. Keith, of the United Fruit Company, as the head of a syndicate. She has been for ten years in default on her foreign debt of about $14,000,000. It is understood that the foreign bondholders have accepted the refunding plan, which involves the issue of $10,000,000 of new bonds thru a New York banking house. ——The new President of Nicaragua, in his message to Congress, proposes gradual disarmament, public improvements, the development of agriculture, a lower tariff and the negotiation of a foreign loan with the aid of the good offices of the United States Government.

Disturbances in Brazil

Severe censorship restricts the transmission of news from Brazil, but it is known that there have been alarming riots in Para, suppressed only by cavalry and machine guns, after the destruction of much property. The disturbance was due to popular disapproval of monopolistic concessions by the municipal government to favored persons. At last reports, the city was a military camp, with business at a standstill. Nictheroy, situated across the harbor from Rio de Janeiro, is under martial law, and troops hold the public buildings. This city is the capital of a state in which two Governors and two Legislatures claim office. A curious story was published on the 6th at Rio by the *Jornal do Commercio,* to the effect that forty-five of the leaders in the recent mutiny on the battleships have met with sudden and mysterious deaths. Joao Candido, the negro who led the revolt, and who had all intoxicating liquors thrown overboard, died in prison of gangrene, it is said; twenty-six other mutineers "died of sunstroke" while engaged in repairing the fortress on Cobras Island, and eighteen others were "suffocated" in their prison

cells on another island in Rio harbor. It will be recalled that all of these were forgiven by an amnesty act. It was said that they would be sent to states remote from the capital, to be employed in the construction of highways, but it appears that they were prisoners when they died. ——To a New York company, recently incorporated, Brazil has granted concessions for the development of an export trade in beef.——Answering the request of the United States and other mediating Powers, Peru has agreed that her boundary dispute with Ecuador shall be submitted to The Hague tribunal. No answer from Ecuador has been reported. ——By Government decree, 1 per cent. of Venezuela's receipts on imports has been set apart as a fund for sanitation.

London Anarchists

The English papers have furnished more sensational reading than any dime novel during the past three weeks as they told the chain of crime originating in a burglary and ending in a military siege in the heart of London. On the night of December 16 a policeman on his rounds discovered that a small jewelry shop in Houndsditch had been entered from an adjoining house. He called several other constables to his aid and entered the building, but the London police are armed only with clubs and they were no match for the three burglars, who opened fire on them with revolvers, killing one and mortally wounding two more, and inflicting slighter wounds on two others. One of the burglars was accidentally shot in the back, but was carried off by his two companions and a woman, to 59 Grove street, Whitechapel, where he died the same night. He was found to be a Polish Jew named Mourontzeff, alias Gardstein or Goldstein. The three murdered policemen were given the honor of a state funeral in St. Paul's, attended by members of the Cabinet, a personal representative of the King, and as many of the public as could get into the cathedral. The building from which the shop had been entered was found to be well stocked with firearms, ammunition and explosives, together with anarchistic books and leaflets. A reward of $2,000 was offered for the two anarchists, "Peter the Painter" and "Dutch Fritz," supposed to have killed the policemen. On Sunday, January 1, the body of Joseph Beron, a Frenchman, who had rented a room to some of the anarchists, was found murdered in Clapham Common with the letter "S" carved on each cheek. It is supposed that he was put to death by the group as a spy because he had given information to the authorities. On the night of January 2 the police surrounded a house on Sidney street, Stepney, East London, and removed all the inmates except the two men in the upper room, whom they were after. Even the woman, Gershon, staying with them was called out by the aid of a woman living below, who asked her to come down and help her take care of her sick husband. The authorities were unwilling to sacrifice the lives of more policemen in forcing an entrance, so they laid siege to the house, which was barricaded and defended by the two anarchists. The battle opened at dawn with the shooting of a detective sergeant on guard, and it continued until two o'clock in the afternoon. The two desperadoes had unlimited ammunition and fired at everybody in sight from various windows in front and rear without exposing themselves. Police continued to arrive until some 1,200 were on the ground. A double cordon kept back the vast crowd. Finally a detachment of Scots Guards from the Tower with a Maxim gun was sent for and stationed on both streets, while sharpshooters kept up a fire on the house from the roof and windows of the houses opposite. The Home Secretary, Winston Churchill, was on the scene engaged in directing operations. Windows and roofs from which the fight could be seen rented at a high rate to spectators. The press photographers exposed themselves more recklessly than the police. In the afternoon the house took fire and the two men were forced to the roof, where they continued to shoot until the building collapsed. Whether the fire resulted from an attempt of the police to smoke them out by burning straw, or whether it was started by the bullets or by the anarchists themselves, is not known. No attempt was made to put it out until the shots ceased. Of the two bodies found in the ruins one was identified as "Dutch Fritz," a locksmith from Libau, Russia. The other

was a Lithuanian terrorist, twenty-two years old, who escaped to England a year ago, using the name of Jacob Fogel. "Peter the Painter" is still at large. The affair is likely to have far-reaching consequences. If, as reported, the police have unearthed an extensive anarchistic plot, involving even the assassination of King George on the coronation day, it will doubtless cause England to abandon its policy of giving shelter to the political refugees of all nations. On all sides there is a demand for more rigid laws in regard to aliens. The Continental and American papers are inclined to ridicule the London police for inefficiency in handling a situation such as the police of every city meet in the way of duty. To have to call out the military and burn down a house in order to arrest two armed ruffians is not what has been expected of the London police force. The English people feel this keenly and the Opposition papers are making the most of the affair by turning the public resentment against Mr. Churchill, altho it is not known how far he was personally responsible for the tactics of the police.

Spain

Premier Canalejas is preparing to continue his reform legislation by bills regulating the monastic orders and providing for an extensive system of education. The Vatican has indirectly asked to be consulted in the framing of these measures, but Canalejas has refused the request.——King Alfonso, on the royal yacht "Giralda," reached Melilla in Morocco on the morning of January 7, and was greeted enthusiastically by a large crowd, including many of the tribesmen from the surrounding country. The festivities of the following day were marred by a severe storm, but in spite of this a field mass and a military review took place.——The Radical deputy Lerroux wherever he goes creates a storm center. At Bilbao he was greeted with vivas and songs by the Radicals and with hisses and insults from the Socialists. Handbills were distributed by the Socialists accusing Lerroux of betraying Ferrer to death and appropriating funds raised for the establishment of a republic. He is also charged with having taken for his own use the strike fund of the smelter workers. A meeting in the jai alai court at which Lerroux was to speak resulted in a fight between Radicals and Socialists, and was finally dispersed by the police. At Santander, Lerroux was more favorably received and had an opportunity of denying the charges brought against him by the Socialists. While Republican and Anti-clerical speeches were being made at this meeting, a rival banquet of the Carlists and Integrists was held, for the purpose of concentrating the Catholic opposition to the measures of Canalejas.

The Persian Situation

The difficulty between Great Britain and Persia is likely to come to a crisis during the present month. The British Government notified Persia that unless order was restored in the southern provinces and the trade routes opened and freed from danger it would be necessary for British officers to organize constabulary forces for the policing of that region. This period of probation will expire on January 14 and it is not likely that conditions will be thought satisfactory by the British Government by that time. The Persian Government, however, claims in its reply to the British note that the trade route from Bushire, on the Persian Gulf, to Shiraz had been patrolled and "is now perfectly secure"; that troops have been sent to Ispahan, and that if the British Government will allow a surtax of 10 per cent. on the southern import duties, further funds will be available for internal security. The English papers are giving a great deal of space to the disorders of Persia, particularly the importation of arms along the Persian Gulf. In this way the predatory bands in Arabia and Persia are furnished with the munitions of war, and what is still worse, the tribes on the northwestern frontier of India are supplied from the same source. The Afghans come in force as far as the Persian Gulf to receive the guns, and it has been found necessary to fortify the British consulate at Bandar Abbas in order to prevent its being attacked by these bands. Muscat, on the Gulf of Oman, has been the center of the gun-running traffic, but this port being under French protection, the English were powerless to interfere with it. Recently, however,

arms have been unloaded at the new port of Debai, on the Arabian coast, opposite the Persian port, Lingah. Here the British have a freer hand, owing to the treaties of 1820 and 1853. On the last of December, Admiral Slade landed a party at Debai to search for arms. A conflict ensued betwen the Arabs and the British, in which six British bluejackets were killed and nine were wounded. It will be exceedingly difficult to stop the gun-running because of the profits of the traffic and the national interests involved. It is calculated that at least 150,000 rifles, with corresponding stores of ammunition, have reached the tribesmen on the Indian frontier from the Persian Gulf. In 1908-09 85,820 rifles were landed at Muscat, of which 43,280 came from Belgium and 25,600 from Great Britain. Recently it has been discovered that large quantities of the arms and ammunition captured by the Japanese at Port Arthur, and valued at half a million dollars, had been shipped to Jibuti, in French Somaliland. Some of these were purchased by the Abyssinian Government, others will be transshipped to Muscat, but whether they find their way into the hands of the Abyssinians or Afghans, they are likely to be used against the English.

Foreign Notes

A violent earthquake occurred on the morning of January 4, in Russian Turkestan, and the town of Vyerny, capital of the Province of Semiryetchensk, was badly injured. Many buildings were destroyed and forty or more lives lost. The seismographs in Washington and other points in this country recorded longer vibrations than any since San Francisco and Valparaiso.——The ancient and independent principality of Morocco has now a constitutional government. In consequence of the recent agitation a proclamation to that effect was issued by Prince Albert on January 7. There will be a national council of twenty-one members elected every four years. There are only 1,500 citizens in Monaco out of the 19,000 inhabitants, and they own less than a tenth of the land value. The total area of the country is 375 acres. There are no taxes, for the revenues from the gambling house at Monte Carlo provide abundant revenue for the public purposes as well as for the oceanographic researches of the Prince. ——Rumors of attempts at counter revolution in Portugal continue to come but nothing definite has materialized. The Provisional Government is legislating by edict at a rapid rate in the endeavor to introduce all possible reforms before going out of office. The Minister of the Interior has announced the inauguration of a complete school system, from elementary to university courses, including a faculty of medicine at Lisbon. Food, clothing and books will be provided free to needy children in the primary departments. A weekly day of rest is to be made obligatory for all employees. The aged are to be pensioned and mothers are to receive aid and protection. The law in regard to the religious orders forbids the wearing of a distinctive dress and prohibits the Jesuits from re-entering the country for twenty years. The printing offices of three monarchistic papers which had renewed publication were wrecked by a mob.——In England the Government plan for State insurance against illness, drawn up by Mr. Lloyd-George, has been unofficially made public. All the working class population of the country below the income tax level of $800 a year will come under its provisions. The minimum amount of insurance will be $1.25 a week. Half the cost of the insurance will be met by the person insured, a quarter by the employer and a quarter by the State. The Government will co-operate with the mutual insurance societies.——The Italian Government is doing its best to suppress the organized outlawry. A band of Camorrists under the leadership of Enrico Alfano or Erricone is now at Viterbo, awaiting trial for the murder of one of their number in Naples four years ago because he was suspected of betraying them to the police. The evidence fills 14 volumes weighing 170 pounds. When these thirty-two Camorrists were brought to Viterbo in chains the soldiers and police who guarded them were received with cries of execration and there is great danger of an attempt at rescue. Erricone was arrested in New York in 1907 by Petrosino, who was later assassinated at Palermo.

Objections to the Parcels Post

BY ALLAN W. CLARK

[We have received many letters from our readers both indorsing and opposing our championship of the Parcels Post. The following article by the Editor of *The American Paint and Oil Dealer* seems to voice best the opposition. We answer it at length in our editorial columns.—EDITOR.]

IN a recent issue of THE INDEPENDENT I note your astonishing assumption that the retail dealers of America, outside the department stores, are not earnestly opposed to any extension of the domestic parcels post. Commenting on the statement that thru a general parcels post "the department stores would rob the country store of their trade," you say: "But the country stores have no organization that has made any complaint."

Exactly what constitutes a "country store" as compared with a department store is not to the point and probably would not be bickered about by you. You obviously believe, and practically declare, that (without any authority from these dealers) "they (the dealers) have been made a stalking horse by the express companies."

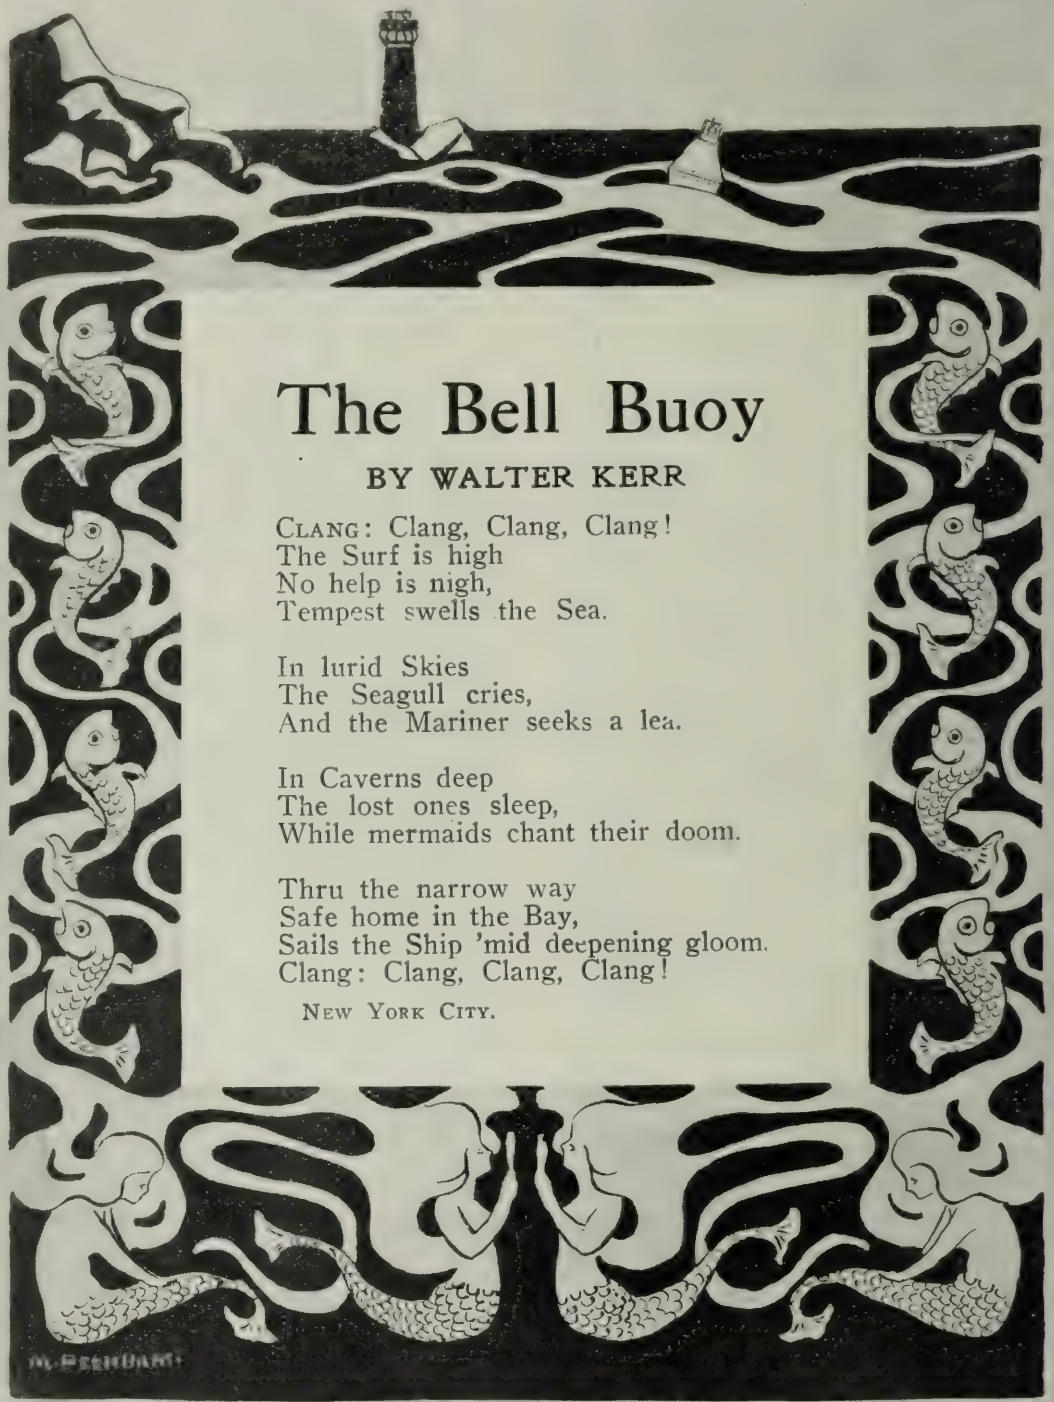
There are probably a hundred really national organizations of dealers, and several thousand State and local organizations—generally affiliated with some of these national bodies. These embrace practically every line of retail merchandising and the ramifications of various interests among them. The individual, due paying membership in some of these larger organizations, like the National Association of Retail Grocers, the National Retail Hardware Association and the National Association of Retail Druggists, is from 50,000 to more than 100,000 each. I have never heard of any association of retail dealers that is not on record against the extension of the domestic parcels post in any form, especially the R. F. D. "entering wedge"—*except* the organized department stores in one or two cities (such as "The Merchants' Association of New York"), who want this practical government subsidy for the benefit of their mail order departments and for cheaper local and suburban delivery.

I have mentioned only retailers' organizations, whose resolutions on this subject, during the convention season, crowd the pages of all the trade journals. Nevertheless, practically all the organizations of wholesalers and manufacturers, besides many local commercial and civic associations, are opposed to the parcels post, and, like the retailers, have been fighting it for years. Conspicuous among these is the Chicago Chamber of Commerce, the leading members of which, thru the "American League of Associations" (2008 Calumet avenue, Chicago), are pushing a national campaign "to assist the retail merchant and to co-operate with other associations in the protection and development of home trade, and (the italic emphasis is theirs), *specifically, this organization is now opposing the proposed parcels post legislation.*"

These dealers, jobbers, manufacturers and others interested in the maintenance and the improvement of the local stores and the local community, and who oppose any extension of the domestic parcels post, vie with its advocates in denunciation of the extortionate charges of the express companies. But they go further—their associations are fighting in many States to secure State regulation of express rates and classification; and they are making practical progress, with every prospect that their appeals for national regulation will be recognized by the Interstate Commerce Commission, which has just won its fight to regulate sleeping car charges. The opponents of parcels post want lower and equitable rates for the transportation of small packages of merchandise, but they believe that these rates, like those on the transportation of larger packages, should be investigated and regulated by the Interstate Commerce Commission, especially as various State railway boards have recently demonstrated the fact that the express companies are chiefly owned by the railroads and are merely vehicles to bring

into the coffers of the railroads larger profits than can be secured thru government regulated freight rates.

The business community also objects to any extension of the domestic governmental transportation of merchandise beyond the present four pound limit for exactly the same reason that the Socialist *Call* (New York), in its comment upon the strike of the express companies' employees, demands that the nation "assume control of the carrying business, as it should have done long ago." The business community is not ready for government ownership of the railroads. Now a general parcels post would necessitate the government ownership of the railroads, or an immense public deficit, or both. Without absolute government ownership, and the prohibition of all carrying by private concerns, large and small, the government would only get the long, the losing, haul; for on a flat charge, the same on a package from New York to Philadelphia as on one to a post office on a Montana stage route, the sum of the two equal charges must be enough to cover the cost of both journeys—and the hated express companies would get the short and profitable haul, on which they could charge to the limit of the postal rate. Indeed, in such a situation, probably the Postal Department would want express rates "revised upward," for the Williams measure (see Senate Document 542, second session, Sixty-first Congress) proposes to prevent the express companies from carrying certain printed matter at less than the present postal rates, and within the past month First Assistant Attorney General Kenyon has exprest his "concern" over their competition.



That any one can find an example for the United States in the parcels post systems over government owned railways in European countries, the largest of which is smaller than Texas, is incomprehensible to the average business man who is not asking for a government subsidy to arbitrarily annihilate distance and the natural local advantages of thousands of local business communities in order to increase the present $200,000,000 mail order business; and this in a nation that maintains a high tariff wall that may or may not "protect" the American manufacturer, farmer and workman, but the chief effect of which, so far as the distributor, the dealer, is concerned is to place him between the upper and nether millstones—the butt of criticism, the subject of Congressional inquiry on the high cost of living!

The mail order houses want a *general* parcels post; the general business community is opposed to it. Suppose that both are actuated by selfish reasons, one to gain an arbitrary advantage and the other to prevent it—where do the people come in, those besides the mail order men and the million retailers and their families?

Note this—A prominent advocate of parcels post recently said: "I have no thought of ever sending my suit case by mail. I favor the parcels post solely as a club against the express companies." And this: It is frequently predicted by the mail order advocates that their methods will ultimately control the distribution of goods through the nation, as the local dealer has "no excuse for existence."

I think THE INDEPENDENT thus might well note that the subject has a social and economic import of some moment in these days of diminishing rural population, of abandoned farms, of dead country churches and other rural social centers, including the crossroads store and the lodge or grange room above. Therefore let THE INDEPENDENT and THE INDEPENDENT'S readers please contemplate a community with no business institutions except the post office and the freight depot. The statement of Mr. George H. Maxwell, of the American Homecroft Society, that appears in the report of the hearing on parcels post before the House Committee on Post Office and Post Roads last April, pages 274-295, ably discusses the subject upon these considerations that will most appeal to you and your readers. And on page 189 will be found some interesting facts regarding the attitude of the average intelligent farmer, and the country press, on this question; tho perhaps you are aware that the country papers now refuse mail order advertising and that many farmers will not buy any advertised article except thru the local dealer.

ST. LOUIS, MO.

The Bell Buoy

BY WALTER KERR

CLANG: Clang, Clang, Clang!
The Surf is high
No help is nigh,
Tempest swells the Sea.

In lurid Skies
The Seagull cries,
And the Mariner seeks a lea.

In Caverns deep
The lost ones sleep,
While mermaids chant their doom.

Thru the narrow way
Safe home in the Bay,
Sails the Ship 'mid deepening gloom.
Clang: Clang, Clang, Clang!

NEW YORK CITY.

"Women, First—Please!"

BY MARION HARLAND

I COPY the words from an illuminated placard set in a conspicuous position in the station of an elevated railway in the city of Boston.

It was almost a shock to my preconceived ideas of the Bostonian attitude toward the Other Sex to see it there. So long ago that the marvelous memory of the grand life-warrior, Edward Everett Hale, could hardly have recalled it, the phrase "the feebler sex" became obsolete in the City of Cults. Woman came into her kingdom in that favored latitude early in what a New York editorial calls the "Revolt of the present day against the Ancient Cult of the Eternal Feminine."

An utterance which, I remarked in passing, smacks more of Boston than of New York.

The same editorial quoted the protest of a Massachusetts divine against the illuminated signs aforesaid:

"They are unbecoming and inefficient, because they put Boston women in a false light, making them seem weak, timid and unreasonably fussy."

This, I take it, is the definition, done into New England Twentieth Century English, of the "Ancient Cult of the Eternal Feminine." Through all the centuries which went before women, as a sex, were weak, timid and unreasonably fussy. Hence, we infer, the consideration showed wives, sisters, mothers and daughters by our masculine forbears. Hence the anachronistic illumined signs that halt the average man in the frantic race up railway stairs and along platforms during the rush hours of murky morn and hustling eve. We may wink tolerantly at the days of our forefathers' ignorance. They held to many beliefs and went through divers practices we have discarded as senseless superstitions. Edison would be burnt as a wizard, and scores of divines whose orthodoxy is unchallenged by contemporaries would be excommunicated and put to the torture were Winthrop and John Knox brought to life and restored to power for one day. But railway corporations are not fanatics or sentimentalists. They are made up of men of the times, elected to their positions because they are intelligent, practical and in opinion and purpose up to date; keen-eyed for the best interests of corporation and public. They meant to conserve these when they posted the courteous request to patrons. There was meaning—and plenty of it—behind the order. Let us try, in the very plain reasoning which follows, to analyze that meaning and to decide as to its value.

"WOMEN, FIRST—PLEASE!"

Readers who are endowed (or cursed) with an ever active sense of humor will acquit me of intentional flippancy when I confess that my first thought, at sight of the warning petition, was of a story told fifty years ago by Lewis Gaylord Clarke—a wit of the mid-nineteenth century—of a matter of fact man from the country who convulsed a dinner party and disconcerted a feminine advocate for women's rights by interpolating through a chink in her harangue upon the upward progress of her sex:

"Wimmen is bad climbers ginerally! Mostly on account of their clothes!"

He grazed the truth, if he did not hit it. In the thick of the revolt the new woman dignifies as a revolution succeeding her Declaration of Independence, the bald fact of her physical disabilities for the work and career to which Big Brother Man is called by nature and Providence has been, singularly enough, left out of sight. It is not strange that she should ignore them. Nor that, when they are thrust upon her attention, she should offset the remonstrance by boasting of athletic achievements and sustained power for work that taxes a man's strength. Our grandmothers were poor weaklings, she avows freely. They trampled down the commonest laws of health; they had no ambitions beyond housewifery, and no future when the children they had borne by the dozen (and buried by the half-dozen) were married and settled. They

were old women at fifty and rarely lived to three score and ten.

Thanks to intelligent practice of natural laws, we have gained ten years upon the average longevity of the human race in the past half-century. Our girls have their colleges, their gymnasiums, their races and ball games; they swim, run, walk, shoot and climb alongside of their brothers. A matron of forty-five is in her prime, and—this our New Woman advances in the proud consciousness that it cannot be gainsaid—there are no longer any old women!

That men should say little, and that tentatively, of the physical barriers to woman's attainment of perfect equality with them in every particular, is a baffling puzzle.

What are our students of physiology and the vast army of highly educated physicians about that they do not set pruriency and antiquated false "modesty" at defiance, and speak out the truth—if not "in love" for the noisy combatants—in mercy for humankind? They know—as every woman who reads this page knows—that there are reasons patent even to the ignorant adult why we cannot do men's work in men's way. Why, when those railway authorities warned "husky" pedestrians not to crush women in the close, disgraceful press for precedence and place upon the trains, they were wise and humane. A man, finding himself crowded in doorway or aisle, brings back his elbow with savage emphasis into the chest of the offender. The worst that can befall the latter, if he be of the same sex as the assailant. is a contusion that may annoy him for a few days. Have you never heard of women who suffered from cancers for months, and died of the mortal hurt, or purchased a few additional years of painful existence by submitting to the surgeon's knife? I could tell you of a dozen instances where a lighter blow produced effects as serious.

Said a young relative—a college boy—to me:

"I always give up my seat in the car to a gray haired woman. The girls who have been shopping or frolicking all day are as able to stand as I am."

I answered: "When you are older and wiser you may comprehend that in nine times out of ten the healthy woman of fifty is more able to stand and suffers less in the crowding and pushing than the girl of fifteen.

"An eminent physician who had made such matters a study said to me: 'When I want a woman for work that requires a cool head, a steady hand and staying power, I select one over forty-five years old.'

"Some day, my dear boy, you may comprehend the momentous truth that the mechanism of a woman's physique is as much like the pulleys and levers that move your big body as the works of my watch resemble those of a coffee mill.

"Some men never learn this. And women, nowadays—God pity and forgive them!—are ashamed of it and trying to forget it!"

What does a robust man know of the ache across the small of the back, and the awful faintness that pervades the whole body; the displacement of delicate organs that may never regain their balance; the hysterical choking that clutches at the throat and forces the tears to the eyes—in a word, the sheer physical agony that racks a woman while standing for half an hour—bracing herself in a swaying car or stage by clinging to a strap so far above her head that she must strain her spine and wrench her whole internal mechanism out of plumb in the effort to keep her feet?

The physiologist who knows his business will tell you that the attitude, thus prolonged, is a menace to the well being of any woman, however sound and healthy she may be.

If—as often happens—it be a young matron who thus clings and stretches and sways, the health of more than one may be endangered. In the age of our "rude forefathers" it was an admitted fact that men and women were not constructed after one and the same model. They did not talk of the "exquisite tripartite system of the Little Sister," but they acted upon the knowledge of it. Walter Raleigh was a type of a class when he bridged a puddle with his best cloak. It might be fatal to a delicate woman to wet her feet. Her cavalier trudged through wet fens and waded streams without a fear.

Sentimental Michelet slandered the sex while feigning compassionate appreciation when he affirmed: *"La femme est une malade."* She is, normally, no more of an invalid than an athlete. She is as capable of achievements for the good of mankind and the glory of God as her stalwart counterpart. For his counterpart she is—supplying, in the economy of nature, what he fails to contribute. She is his *alter ego,* not his replica.

From my window, as I write, I overlook a street a block or two distant, where all day long a procession of draught horses, broad of chest, powerful of haunch, drag loaded wagons of coal from the river wharf. If I lean thru the open sash, I have glimpses of carriages drawn by high stepping thoroughbreds, and parties of equestrians cantering along a fashionable drive. I walk frequently to the intersection of drive and business street to note with admiration the contrasted magnificent bulk and taut muscles of the draught horses and the spirited action and perfect grace of superb creatures with pedigrees as long as that of the oldest family in our democratic land. The wheels of trade would drive heavily without the draught horse, but he would make a sorry show upon the race course.

The "registered" racer would die in a week if set to the work of tugging tons of coal up the steep grade.

When I remark upon the lessening courtesy shown to women in public places, I am met, almost invariably, by the assertion that "they have themselves to blame for it. Women persist in occupying the same plane with men, and they must accept the treatment men give one another."

One blunt fellow added: "You can't eat your cake and have it too. We can't be expected to make drawing rooms of shops and offices. Women set the pace. We take them at their own valuation."

At the bottom of their hearts these very men recognize and, to a certain extent, respect the physical unlikeness and inferior strength of the co-laborers they declare are entitled to no more consideration than they pay to "other fellows." When the belligerent suffragets shrieked demands thru the skylight of the Houses of Parliament, the man whose speech they would interrupt begged his brother members "not to mind the mewing of those cats." When, some hours later, hundreds of the women thus insulted attacked the Premier in the open street, cuffed and pummelled him until the police got him away by main force and put him into a carriage, to be pursued thither by an irate suffraget who smashed the window to claw at his face; when a veteran was so roughly handled by the feminine revolutionists that he was confined to his bed for a week; when the windows of obnoxious statesmen were stoned, and the interfering police assailed violently—not a man of them all "struck back." The rioters were marched off to jail, carrying themselves like triumphant martyrs, voluble to the last.

Now and then, Hodge may beat his "woman" in a drunken fit. The ignorant yokel or the lazy churl may let his wife overwork herself by performing the tasks which should be his. As a rule of wide application, men instinctively feel that women are unfit for labor demanding mere brute strength, and refrain from personal violence under provocation that would make them fight men to the death.

The most thoughtful and humane of them know our unfitness to enter the arena where they are at home by virtue of a less complex and stouter makeup than can ever be ours. That they have not spoken out boldly long ago, going into the particulars of that disability, is due to the magnanimity which I have long maintained is rather a masculine than a feminine characteristic.

Of late there have been hints of an inclination to break down the conventional reserve on this head, which I have termed "singular," in view of the danger to the present generation of women and the graver risks to posterity.

A Harvard savant says plainly, yet courteously: "The danger of women becoming too mannish is imminent."

I use the second adverb advisedly. One smiles in seeing how he skirts the edge of thin ice. By inference, he does not deprecate a modicum of mannishness. To be "too" unwomanish would be—well, we will say, "inadvisable."

The president of the National Acad-

emy of Design has a strictly professional point of view. He recognizes with (artistic) regret that overtraining in physical exercises, designed expressly for the other sex, is "making our women manlike in figure."

A thoroly fine fellow, who has achieved distinction in his profession and won the esteem of all who know of his admirable qualities as man and citizen, will never outlive the ridicule cast upon him by an envious competitor who wrote and published that he was "one of the most ladylike of men." Yet our New Woman smiles contentedly when told that her training in college and field athletic exercises is lending to her a "manlike" air. She cultivates the contralto tones in her speaking voice, and has a slang vocabulary that puts her college-boy "pal" to shame.

How imminent is her peril of overdoing the effort to become mannish is illustrated so frequently in our sight as to make mothers uneasy when their girls "go in for" gymnastics. I could give enough instances of the reality of the danger to fill many pages. As briefly as may be, I will recount an incident that came directly to my notice a few years back.

Two orphan sisters, aged respectively fifteen and seventeen, were adopted by their bachelor uncle, a ranch owner at the Far West. Being a bachelor, he had well digested theories upon the education of girls. Being arbitrary and rich, he carried them into effect. "Girls and boys should be brought up in accordance with one and the same plan. Prejudice and custom make them to differ—nothing else." His nieces worked beside him in the field, for he took part with his laborers in every task. The girls learned to plow, to hoe, to plant and to reap. They broke colts, rode bucking bronchos and rounded up cattle, and this without regard to weather, for ten years. Then the uncle died and his heiresses came East to visit relatives. I was in a country house with the elder of the two long enough to get so well acquainted with her that she told me the whole odd story. She had parted with every feminine physical characteristic. The down that should have shaded her upper lip lightly was a short, thick mustache; there was a heavy coating of hair upon her arms; her voice was raucous, and her intonations were monotonous. She had the stride of a man. Her complexion was muddy and her skin opaque. She was narrow hipped and flat chested.

"Neither man nor woman!" she broke out passionately. "There is no place for me upon God's earth! The past ten years have been a rank sin against nature, and I am paying the penalty!"

I was glad when I heard, a few years later, that she was dead. A more unlovely existence it would be hard to imagine. And perhaps the worst feature in the tale was that she felt her irreparable loss.

"An extreme case?" I grant it. In this instance the landmarks set by Him Who created man and woman one were violently removed. The process that would ignore the sex question and deny the sex fact, in bringing the race to the highest degree of perfection, is working gradually along the same lines.

The passage I have just quoted has been warped out of meaning by much handling on the part of sticklers for the absolute equality of the sexes. And yet the purport is so obvious to the single eye one marvels that it should be overlooked. It might almost seem that the inspired penman, re-reading the lines, subjoined what would make yet more plain the idea of the dual, yet individual, entity.

"Man, and woman, made He *them.*"

Charles Lamb's devout desire that his ideal woman should, "like sweet Susan Winstanley, reverence her sex," recurs to me with mournful force in the "present day revolt." Ceasing to reverence her sex, girding at the holy limitations that ensure for her a sphere essentially and inalienably her own—what is the best a woman can hope for should she achieve forgetfulness of these limitations for herself and on the part of others? Simply and plainly, that she will become an indifferent copy of the man she apes.

If that sound brutally frank, I do not retract it, in the recollection of the girls who were brought up as their brothers would have been had they fallen into the hands of the bachelor with advanced ideas.

It is quite apart from my present purpose to expatiate upon the loss to man of the abolition of the "ancient Cult of the Eternal Feminine." I offer but one plea in support of the placard condemned by the Massachusetts divine. Eliminate "timid and unreasonably fussy" from the implied arraignment of Boston women, and cultivate your gentler, finer and chivalric impulses by regarding your fellow passengers upon the crowded thru Express of Life as the "weak" in physical force, whom it is your duty as a true man to guard.

"Women first! please!" All honor to the brave Board of Directors that, in this rushing, self-seeking age, sounds the same note with the heroic captain who holds back, with a loaded and cocked pistol, the maddened crew that would take possession of the lowered longboat.

"Women and children first!"

NEW YORK CITY.

Some Last Letters

BY LEO TOLSTOY

[Mr. Theodore Stanton sends us from Paris the following letters (some of them among the last written by Tolstoy), which he has received from the immediate circle of the great writer; and he has prefaced them with brief explanatory introductions.—EDITOR.]

THREE months ago A. V. Richter, having written a play called "The Coming of the Antichrist," whose subject approaches very closely the doctrines of Tolstoy—thou shalt not kill; return good for evil—sent it to the Russian writer, asking him to read it and to tell him what he thought of it from the ethical point of view. At the same time Richter requested Tolstoy to remove his doubt concerning the efforts for liberty in Russia. The play and the question touched Tolstoy in a tender spot, and he sent Richter this long letter:

Anton Vassilievitch:

I have read your play. It is very well written, but its central idea is not just, especially when expressed by Peter, a man who spreads himself out on a sofa and is engaged in teasing his cook. This same false idea shows itself in your last letter to me, and is found also in several of your other letters. This idea, or rather the wrong sentiment that it justifies, is at the base of all the crimes which are being daily committed. I refer to the opinion that men, provided or not provided with diplomas, as narrow minded as they are uncultivated, but possessing great assurance, conclude, one knows not why, that since they are so intelligent and worthy, they need not try to govern themselves, but that their vocation and sacred duty is to enlighten, organize and direct the lives of others. Some of them would accomplish this with the aid of the old government, others with that of the new one, while still others, like your Peter, would bring this about by offering this "ignorant and stupid people," this same people which, by its labor, feeds these good-for-nothings, the grand truths of Christianity which they imagine themselves overflowing with.

Every day I get letters from young school girls who ask me naïvely to whom they ought to do good by communicating their wisdom and their kindnesses. Should they immediately become school teachers, or should they go on studying in the universities—adding the final touch to their foolishness!—thus to save this unfortunate people? This same view is taken by all students, young men working for the ministry, and ignorant and immoral persons in general, whence the principal cause of all the horrors now taking place.

The condition *sine quâ non* of all good and all useful activity is humility. As soon as humility is lacking good becomes evil. The highest virtue is love; but love without humility, haughty love, is the negation of love. Liberty, fraternity, and, above all, equality are grand blessings when they are the consequences of a love springing from humility; but they are great misfortunes when they come from violence. Equality is good when a man fears lest he may become in some way superior to other men; equality is a curse when a man hates all those who are above him.

All that I have been writing here is in reply to the question in your letter, Why good men perished while defending the Russian constitution. All men are good; but you employ this qualification in the sense that those men whom you mention were doing a good work. But I cannot accept that view. The only good work for a man is to live for his soul, to live according to God, as those "stupid" peasants say, whom the students, scholars, professors and dentists so magnanimously desire to aid. The man who lives thus, whose principal aim is to increase in his own soul love for his neighbor and to free himself from his own vices and bad tendencies—and God knows that in each of us there are enough of these things if only we examine ourselves carefully—will not be

in such a hurry to enlighten others, either with the Socialist or Anarchist doctrines, nor with those of Christianity either. A man of this sort, by the very fact that he is trying to improve himself, will judge himself severely, and not be spreading himself out on a sofa, as does your Peter, while engaged in teasing his cook. In everything he will show activity—since life is movement—not with the aim of telling others how to act, but how not to act badly himself, since above all things it is bad to live without labor and to profit by the labor of others. In this instance, he will not make fun of his cook, but, seeing in her a human being, he will treat her with kindness and respect, will perhaps aid her in her work and will answer her questions in the most decent fashion possible.

I write you at length on this subject, because it is very dear to me. Every letter that I receive, every conversation that I hear, every newspaper or review article that I read—all are pervaded by the same foolish epidemic. At first only the men in the government were attacked by this disease, and imagined that they had been called to power for the sole happiness of the people, and consequently considered themselves as necessary beings. They were early attacked by the malady and were paid for their work. But today the disease seems to effect everybody. Boys and girls in the high school do not think a moment about the evil that is in them and how to make themselves worthy citizens. Their sole care is to know how best to educate the people. As regards adults, they take possession of the first place that offers itself. Whether they are fitted or not for the place which they want—this question does not even enter anybody's mind. This is the cause of all the evils from which we now suffer in Russia. The remedy will come only when men are awakened from this hypnotic epidemic, and will at last understand that the amelioration of the state of society can be brought about only by the amelioration of the individuals in this society, and that man can act with success only on himself.

* * * *

Professor Malinovsky, who had sent Tolstoy, a few weeks before, his book entitled "Blood Vengeance and the Death Penalty," received from the great writer this reply:

Joanniky Alexievitch:

Many thanks for your book. I have not had the time to read the whole of it attentively, but I have found much pleasure in even glancing thru it, for I immediately saw its grand importance in the work of delivering our society and our people from the terrible hypnotic state in which they now are. Your work, on account of the influence which the evidence of knowledge always has on the masses, and, chiefly, because of the indignation at evil with which it is plainly penetrated, will be, I am sure, an important factor in our deliverance. Such works, as I said playfully yesterday to my young friend, your fellow countryman and acquaintance, Boulgakov, accomplish what seemed to me impossible, and awaken in me a friendly feeling for commonly accepted knowledge. Could I have imagined fifty years ago that a half century later, here in our Russia, the gallows would become a normal state and that "learned and intellectual people" would strive to prove its utility? But as every evil unquestionably brings with it the good linked to it, the same thing will happen in this case. If we had not had these recent terrible years which have followed the revolution, we would not hear these vehement protests against capital punishment, these moral and religious arguments which so clearly prove its wrong and folly that it will be impossible, once abolished, ever to come back to it again; and, among these arguments, your work will be one of the first in importance. I hope and I feel sure that my view is the correct one.

* * * *

The next letter is dated February 11, 1910:

I have received your letters, and I will try, in so far as possible, to do what you desire, viz., to give you my opinion concerning a universal language, in general, and concerning Esperanto, in particular.

It is unquestionably true that there is now a tendency among men to form henceforth but one flock, with reason and love as the shepherd, and one of the first steps in that direction is making it possible for men to understand one another mutually. But if men are to understand one another at present all the different languages must be sunk into one language, which, if it ever happens, cannot take place for a long time to come; or a knowledge of all these tongues must be so widespread that not only every writing can be translated into all languages, but that men shall be sufficiently acquainted with these languages to be able to speak to any one of them; or we must all make choice of a language, the learning of which will be obligatory; or, finally, as is proposed by the inventors of Volapuk and of Esperanto, the people of all nations must accept a simplified international tongue which all will learn. This is the aim of the esperantists, and their plan, it seems to me, is the best and the most likely to be realized. Such is my response to your first question. Now for the second question.

Does Esperanto meet the exigencies of an international language? I cannot answer this question with a yes, because I am not competent to decide a matter of this kind. I can say, however, that Volapuk seemed to me complicated, while Esperanto, on the contrary, appears to me, as to every European, very simple. In fact, it is so easy to learn that when, six years ago, I received the Esperantist grammar and dictionary and some Esperanto articles, I learned in two hours, if not to write, at least to read easily in this language. Anyway, the time which every European would have to give to the study of this language would make such a slight demand on him, and the advantages would be so great—at least if all Christians studied it—that everybody should try it.

I have always held that no study is more Christian than that of learning languages, knowledge which renders possible the union and the communion of the largest number of persons. Often have I seen men learn to dislike one another simply because they did not possess the mechanical possibility of mutually understanding one another. Hence it is that the study and propagation of Esperanto is unquestionably a Christian work, which will aid in the establishment on earth of the kingdom of God, a work which is the principal and unique aim of human life.

* * * *

When the celebration of Tolstoy's eighty years was uppermost in literary circles in Russia, he received many letters in which he was blamed for accepting the proposed honors. One of these letters, which came from a certain princess, made quite an impression upon him. She wrote that such a celebration in honor of a man officially excommunicated by the Church would offend and pain all church goers. Much moved by this letter, Tolstoy wrote as follows to a common friend of his and the princess:

You can well believe, dear friend, that I long ago forgot all about my excommunication, and that I have quite ceased to feel any of the effects on my life of that act of evil minded people. So I never dreamt that a commotion, as unnecessary as it is painful to me, springing from this celebration, would awaken in certain quarters religious aversion and irritation, based, it would appear, on questions of faith. It may be that I do not share certain dogmatic and theological opinions which are to the fore at this moment, but men and, I must admit, orthodox beliefs are very near and dear to me.

If there is the least ground for what this lady writes me, I would be disposed to put an end immediately to all these celebrations, for it would be intensely disagreeable to me to be the center of any sort of angry discussion. I am greatly upset at the idea that these proposed fêtes may be pleasing to non-believers and displeasing to believers. I gave a tacit consent to all this because I thought to see in it a spirit of union, the coming together of a mass of men for one purpose, of course not with me really as the center, me with my decrepit body, which is slowly falling away; me, Leo Nicolaievitch, but a movement toward that ideal to which my soul and thoughts aspire. I was deeply touched by the possibility of this moral joy and this spirit of reconciliation among men. But if this is not so, I will have nothing to do with the celebrations and solemnities. I will give the whole thing up. I beg of you to say to everybody that my unique desire is to work for the peace of mankind, and to see about me a happiness which believes in the God of life. I want no discord, and I detest all commotion and emotion. I am going to send a letter to the lady who wrote me, and I beg you to ask Stakovitch to suspend all the preparations for the fêtes.

* * * *

Put on trial at Kharkov for having spread abroad the writings of Tolstoy, A. M. Bodiansky was condemned to prison for six months. Thereupon Tolstoy wrote him the following letter:

March 13, 1909.

Dear Alexander Mikhailovitch:

I have your letter to Goussiev, in which you so well express the best and only way of celebrating my jubilee, which would be very agreeable to me and would thoroughly satisfy me, namely, to throw me into prison for having written the works whose propagation have caused you six months' confinement, and on account of which so many other persons are incarcerated.

Some people would consider this proposal nonsensical, paradoxical, and yet it is the simple, sincere truth. The fact is nothing would give me more satisfaction and joy than to be thrown into prison—a good, true, real, stinking, cold prison, without any food. You have clearly expressed what I vaguely desire. During these last weeks I have felt so happy that I have often asked myself if there were not something which I desired; but I could find nothing. Yet now I cannot help wishing with all my soul that what you propose might be carried out, not as a pleasantry, but as an act which might, on the one hand, have a calming effect on all those to whom my works and their popularizing are not agreeable; and, on the other hand, to afford me in the decline of life and before my death a real joy and, at the same time, to deliver me from the enemy which I foresee is to be the celebration now being prepared for me. With a cordial grasp of the hand, LEO TOLSTOY.

* * * *

Some little time before his death, the suicide of young boys became very frequent in Russia. In one of his last letters to a friend, Tolstoy spoke as follows on this point:

The question, Has a man, in general, the right to kill himself? is badly stated. There is no right about it. If he can do it, he has the right to do it. I regard the possibility of killing one's self the safety valve of society. With this possibility, nobody has the right—the word is correctly used here—to say that life is insupportable to him. If it is impossible to live, then you can kill yourself, and that puts an end to all this talk about the insupportable burdens of life. As it is possible for a man to commit suicide, consequently he can, that is, he has the right to commit suicide, and he is ever using this right. Thus, he takes part in duels, war, debauchery of every kind, drinking, smoking, the opium habit, etc. Consequently, the only correct way to put the question is to ask, Is it reasonable, is it moral—what is reasonable and what is moral always agree—to commit suicide?

No, there is no reason in it. It is as senseless as it would be to cut off the new shoots of a plant that you wish to kill. The plant simply goes on growing, but abnormally.

You cannot destroy life. It stands outside of time and space. Death simply modifies its form; puts an end to its manifestation in this world. But if I put an end to this manifestation on earth, I do not know whether life in the other world will be more agreeable to me, and I deprive myself of the possibility of acquiring and obtaining for my "I" all that it is susceptible of getting in this world. Furthermore and principally, it is unreasonable to put an end to my life because life seems disagreeable to me. It is showing that I have a false conception of the aim of my life, whose end I consider my own pleasure, whereas its purpose is, on the one hand, personal perfectionment, and on the other, co-operation in the work which is accomplished by the vast universal life. Hence it is that suicide is immoral. Life is given man, as well as the possibility of living till death comes naturally, on condition that he serves the life of the world; whereas if suicide is admitted, man, after having enjoyed life so long as it is agreeable to him, declines to serve the world so soon as life becomes disagreeable to him, when, as is highly probable, this service really begins when life appears disagreeable to him. All work seems disagreeable at the beginning.

During thirty years there lived at the Optina Goustine, a paralyzed monk, stretched out on the ground, only able to use his left hand. The doctors said that he must be a terrible sufferer; but the monk made no complaints, and even while making the sign of the cross and gazing at the icons, he smiled and thanked God with joy for the bit of life which he still had. Thousands of persons went to see him at the monastery, and it is difficult to imagine all the benefit that the world derived from tnis man deprived of the possibility of any activity. Surely the monk did more good than thousands of men in robust health who imagine themselves serving the world in their various lines of work.

As long as there is life in a man, he can perfect himself and serve the world. But it is only by perfecting himself that he serves the world, and he can perfect himself only by serving the world.

* * * *

Before his death so many demands for money were addressed to Tolstoy that he wrote to a Moscow newspaper:

More than twenty years ago, for reasons personal to me, I gave up my belief in individual property, and handed over to my heirs, as if I were dead, the real estate which belonged to me. I also gave up all copyright in my books, so that everything which I have written since 1881 belongs to the public and not to me. Consequently, the only money I have to dispose of is that which I sometimes receive, chiefly from foreign countries, for those suffering from famine, and also little sums which certain persons send me to use as I see fit and which I distribute in my neighborhood to widows, orphans, those burnt out of house and home, etc. Yet, the distribution of these little sums and inexact reports circulated by the newspapers lead many people to address themselves to me more and more frequently for the purpose of obtaining pecuniary aid. The grounds given for these requests vary greatly. Some are very trivial, some are more serious and sometimes even touching. The more often, I am asked to advance money to help towards the completion of somebody's studies, so that a degree can be secured. The saddest of these requests is when I am asked to come to the help of a family in needy circumstances. As I cannot satisfy these demands, I try, in a brief letter, to explain the circumstances and to express regret, when, in many instances, I receive letters in reply full of reproaches. If I do not answer them, then come other letters finding fault with my silence. What wounds me the most about all this is not the reproaches heaped upon me, but the pained feelings of those who write these letters. Hence it is that I find it necessary to inform all those persons who need money not to turn to me for it because I really haven't anything to give. Of all persons in the world, I am the least in a position to meet these demands. In fact, if I act in this wise, that is to say, if I have given up all property, naturally I cannot be of pecuniary service to those persons who address themselves to me. I beg of you therefore to publish this letter.

* * * *

Tolstoy once received from a lady in Moscow, who belonged to the sect of Old-Believers, a letter full of menaces and abuse because of his religious ideas. This lady ended her letter with these words: "Yes, Leo Nicolaievitch, if I had the power, I would have you shot, because of your sacrilegious writings, and I would punish with death all those who share your views." Tolstoy replied:

December 16, 1909.

DEAR SISTER MARIA:—Do not be surprised that I address you in this way. After having read your letter, I felt in you, notwithstanding the difference in our respective beliefs, a soul very near to mine. Yet, in spite of the dissimilarity in our religious convictions, it is very clear to me that we are moving, both of us, towards the same end. Perhaps it is disagreeable to you to learn that a man whom you regard as a heretic and Godless, feels a sentiment of fraternity for you. To me, on the contrary, it is always a great source of joy to discover a bond of union with people having other beliefs, other religions. I then perceive that, in spite of all obstacles, in spite of all the walls which men raise up to separate themselves from one another, there is, nevertheless, a living God who unites us.

I would like to have a few words with you. You know the Evangel, you remember what Christ said to the lawyer who asked him

what was the great commandment in the law. Do you recall what Christ said to his disciples before he died on the cross about their loving one another; that they would be known as his disciples only if they loved one another? Hypocritical phariseeism has tried to disfigure the sense of these words, interpreting them in such a way that in this passage Christ commands his disciples only to love themselves. But fortunately elsewhere, in the Sermon on the Mount, Christ has said: "Love your enemies, etc." And yet you, a Christian woman who believe in Christ, the God; you, who are religious and good; you have found it possible to write these words: "Yes, Leo Nicolaievitch, if I had the power, I would have you shot, because of your sacrilegious writings and I would punish with death all those who share your views."

What does this mean? I know perfectly well that God who lives in your heart would never permit you to do this; but even the saying of such things is terrible. Did Christ ever punish anybody? He said that he who shall take up the sword will perish by the sword; that a tree is known by its fruits; that a good tree cannot bring forth bad fruit, and a bad tree cannot bring forth good fruit. Bad is that religion which, instead of uniting men as brothers, stirs up in their hearts hatred, anger, and the desire to do evil. Yet the members of a church, which ever one it may be, should believe that the meaning of religion is to live according to the law of Christ, for the love of God and men. Consequently, they should have no hostile feelings towards those who hold to other beliefs than their own. Otherwise, like a wide river, hatred is spread among men, among men who believe themselves faithful to Him who has said that we should learn from Him, for he is tender and humble of heart; of Him of whom the apostle has said: "A bruised reed shall he not break, and the smoking flax shall he not quench." Faith in dogmas and in rites do not bring us near to God; on the contrary, they separate us from Him. Those only attain God who would do his will; and his will is love. He who fulfills this law of God is united with him. Nobody has ever seen God, but if you love one another, then God is in you. God speaks directly to the heart, to the soul full of his love, and this is why, putting aside all other reasons, I believe true religion is no belief in the dogmas and the ceremonies of the Church. I believe in the law of Christ: that is, in love.

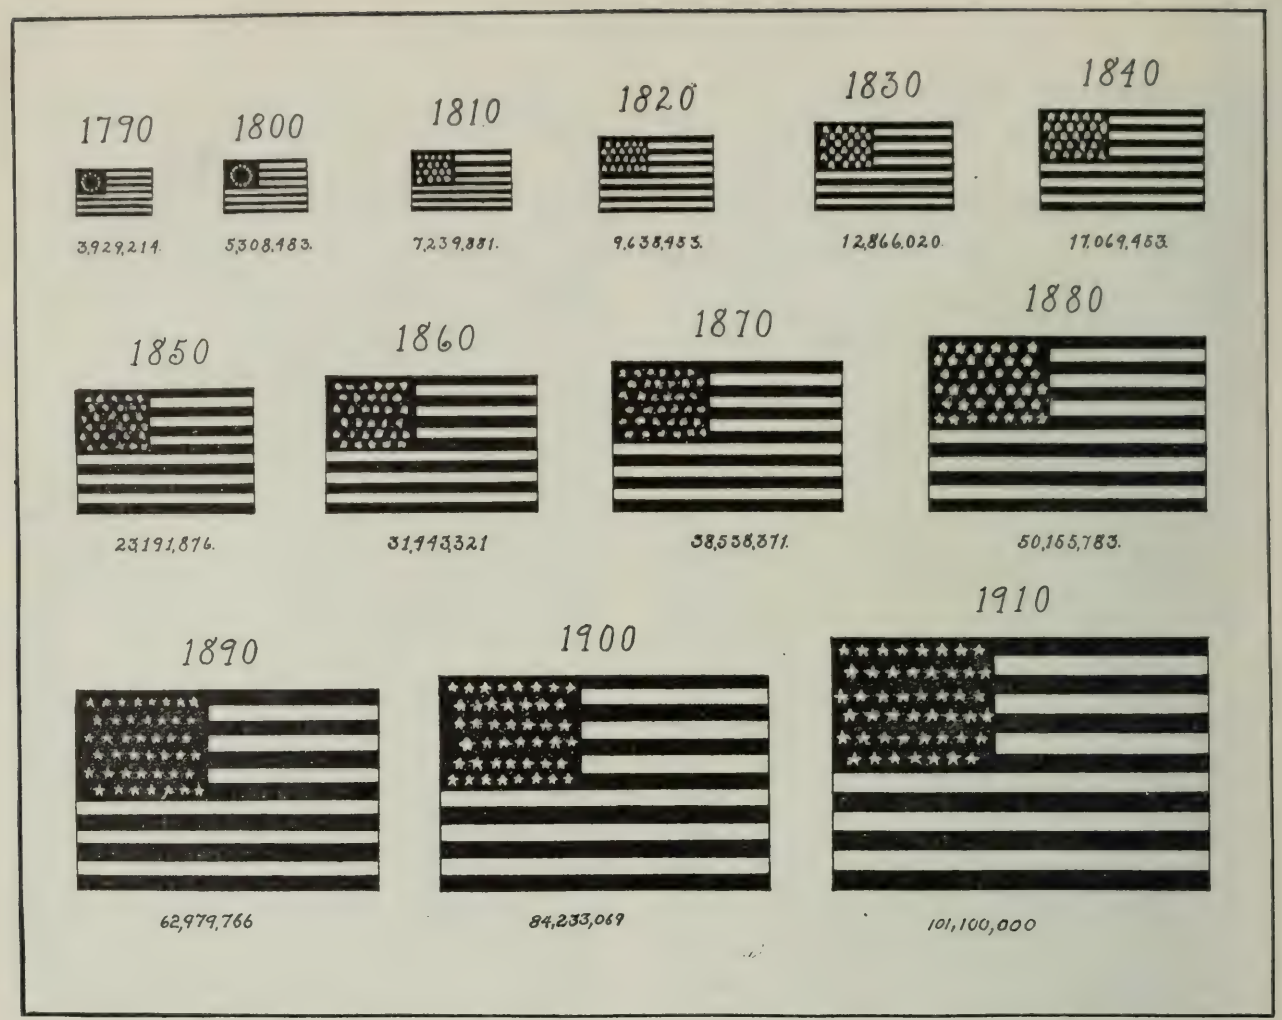
If my letter awakens in you a kindly feeling for me, I beg of you to write me to that effect, even though you send but a few lines. But if on the contrary, my letter causes you ill-feeling, then tear it up and pardon me. I fear, by the way, that the ill-feeling which you have for me has been awakened possibly by some frank remarks of mine concerning things which you hold sacred. If such is the case, I deeply regret not having known how to express myself without offending anybody. If I am right about this, I again ask you to pardon me.

Your brother,

L. N. Tolstoy.

The last letter called forth a reply, to which Tolstoy rejoined:

February 16, 1910.



Dear Sister Maria:—I have received your letter and I thank you for it, as it has given me great pleasure. I am happy to find you a person who is truly religious and who sincerely wishes to live according to the law of God. That we should live in conformity with the law of God is a point on which we both agree, and hence it is that a spiritual union is possible between us, because we are of one mind concerning the principal thing. It is only in details that we part company. I hold that man does what pleases God if he tries to teach right living, if he puts away evil and makes himself better. Whatever man does beyond this in an effort to please God is an error, false service, which simply turns him from the true aim of life. You cannot lead a good life all of a sudden. Even to make a small advance in this direction requires an effort and continual tension. Hence it is that a man should use all his strength in the effort to become better and not waste any of his forces in other directions. God has given to man all that he needs for his moral perfectionment. He has a conscience, which keeps us from doing evil. He has his reason, which makes it possible for him to distinguish good from bad. Christ has said that the kingdom is gained by effort, and according to the Christian doctrine, this kingdom is in us, not outside of us.

Another thing pleases me also in your letter. I refer to your humility when you speak of yourself. But when you speak of religion, your humility disappears. You seem to think that you and your spiritual directors alone know the truth, and that all others are damned. I do not hold this view concerning my religion. I do not think that I alone possess the truth while others walk in darkness. I have already attained my eightieth year and I am still trying to find the truth. Your directors have led you into the sin of pride. Every man has at the bottom of his soul something which he alone knows—his relations with his God; and one must never penetrate into this domain. One should not pry into this secret. We must never imagine that we can fathom the depths of the human mind hidden from our eyes.

What you tell me about your life interests me very much. May God aid you to carry out only his will; then he is with you, and if he is with you, all goes well. You write that you're sorry to have read very few of my works; but if they interest you, I will send them to you with pleasure. In the meanwhile, good-bye and excuses. Write me again. Your letters not only interest me, but are very useful to my soul.

L. N. Tolstoy,
Who takes a sincere interest in you.

This correspondent of Tolstoy, who at first wished his destruction, became one of his friends, and is today an ardent admirer of the great writer.

The Population Under the Flag

BY WILLIAM B. BAILEY

Assistant Professor of Political Economy in Yale University.

DOWN to 1880 the census figures relate to the contiguous territory of continental United States. At that census Alaska was enumerated, and in 1900 Hawaii, Porto Rico, the Philippine Islands, Guam and Samoa were included. Therefore in the censuses of 1900 and 1910 a considerable addition to the population came thru annexation of territory. If the population is limited to that of the States and Territories, the figures for 1890 would be 62,947,714; for 1900, 75,994,575, and for 1910, 91,972,266.

The rate of increase of the population of this country since 1790 has been:

1790 to 1800	35.1%
1800 to 1810	36.4%
1810 to 1820	33.1%
1820 to 1830	33.5%
1830 to 1840	32.7%
1840 to 1850	35.9%
1850 to 1860	35.6%
1860 to 1870	22.6%
1870 to 1880	30.1%
1880 to 1890	24.9%
1890 to 1900	20.7%
1900 to 1910	21.0%

Down to 1860 the rate of increase was practically constant, and the estimates of the probable future population made about the middle of the century were too high. President Lincoln, in his annual message to Congress in 1862, wrote:

"At the same ratios of increase which we have maintained, on an average, from our first national census of 1790 until that of 1860, we should in 1900 have a population of 103,208,415 (in 1910, 138,918,526). . . . Our country may be as populous as Europe now is at some point between 1920 and 1930—say about 1925."

His estimate for 1910 was excessive by over forty-five millions.

During the decade 1860-1870 the increase was apparently only 22.6 per cent., but this figure is too small, as the enumeration of the negroes in 1870 was defective by perhaps a million and a half. For the same reason the rate of increase from 1870 to 1880 should have been less than 30.1 per cent.

The tendency at present is for a retardation of the natural rate of increase. The decennial increase may never again reach 20 per cent.

King-Mackerel Fishing in Florida Waters

BY MAYN C. GARNETT

ON the 10th of February, 1900, the "Mermaid" came into Miami, Fla., and threw overboard 2,600 pounds of fish. There was no market for them, and they would not stand a run North without ice. Yet there were a railroad, a fish-house and several thousand citizens in that town at the time. Mackerel were being shipped by the thousands, paid for at the rate of 5 cents per pound, but because of a prejudice against the "king-fish" he was unsalable, useless.

The king-fish of the Florida reef is distinctly of the mackerel family and comes next in size and rank after the well known "Spanish," and is followed along the line by the cero. The king-fish runs from two to four feet in length and from five to twenty-five or thirty pounds, the "Spanish" mackerel seldom over six pounds, and the cero from twenty-five to forty. The difference is solely in the markings. The fish are identically the same shape and have almost identically the same habits. The Spanish mackerel having spots upon its sides is as much like a king-fish, save for these, as one pin is like another, and the cero is nothing but an enlarged king, rating between the albicore, which would probably come next with the bonita, the sizes running up to the tuna, or horse-mackerel, which latter goes as high as 600 pounds and is the largest of the mackerel family. Because of the slight difference in the size between the king and the Spanish, the king has been an outsider as far as food fish goes until very lately. Suddenly some one in Florida discovered that the king was really a much better fish than the Spanish and offered money for him. In 1903 he sold for five cents, in 1907 for ten and fifteen per fish, and this year he was ranging as high as twenty-two cents for weight less than twelve pounds, and retailing to the consumer from five to ten cents per pound. This made a remarkably good profit to the fish-handler, and all the boats of every company capable of getting king-fish were put into commission and sent out with orders to get nothing else.

But the king-fish is an outside fish entirely, differing from the Spanish in this respect, and therefore the fishermen were forced to take to hook and line. The banks upon which he is found are along the lower coast, usually not more than a few miles off shore, near the edge of the Florida or Gulf Stream, where the shelving bottom slopes off suddenly into from ten to twenty fathoms, the edge of the great cliff-like wall against which the warm current sweeps. The sea is always more or less rough along the edge of the stream in winter owing to the heavy northers, and it is upon the breath of the first real cool weather that the king comes in from somewhere in the ocean and schools upon the banks. He comes in countless millions and he is always hungry.

About the 1st of January, when the cold of a real norther sweeps over the torrid belt of the low peninsula, the fishermen are waiting, having been on the lookout for sporadic fish for several weeks. Some launch or sloop trolling along in the morning light will suddenly get a savage strike upon the line. A burst of foam astern and a large fish breaks water with the squid in his mouth. He is hauled in hand over hand without ceremony and in a few moments every boat is heading for the lucky one who has struck fish at last. Thru the school they go at top speed, squid out and two lines each towing at 150 feet astern. The fish will generally strike with great ferocity and for hours several hundred men will be as busy as possible hauling line. Then will come a sudden lull, the fish sink down to a depth too great for trolling and the launches and sailboats slow up, stop and either wait until they rise again or start the gentle art of "jigging." This consists of baiting the hook with

fish bait and letting it go to bottom. Then with savage jerks, with a full arm swing, the line is hove in. A good jigger will entice a fish almost every time to strike and the professional fisherman keeps at it until he has his fare.

A fish club is kept in each boat for killing, as the king is a savage fighter and does not give up when he comes alongside or inboard until he has been thoroly used up. Several blows with the butt of an oar—the usual club—and he goes gasping into the box, the hook is extracted and the line is again ready.

His very gameness is what has attracted the sportsman to this kind of fishing. There is no fish that will strike more savagely and none that will fight better than the king, except perhaps the amber-jack. The king when he is running well up in the twenties, as he does at the beginning of the season, offers the greatest possible sport to the fisherman who likes rapid action, for he gets it as fast as he can haul line.

With a large reel and tarpon line the sportsman has a busy time of it and he is getting good fish, fish that now are recognized as food. The law concerning passengers in gas-boats makes it undesirable to use the fish-boats for sport. Consequently there has been an increased demand for launches or auxiliaries which can go to sea for a day or two without danger.

The ordinary fisherman uses a launch of from twenty to thirty feet in length, and the engine must be heavy enough to ensure getting back against a strong breeze and current, to say nothing of the high, rolling sea that runs in the Stream. The tackle is cod-line with plenty of metal squid made of block tin and furnished usually by the fishing companies at five cents apiece. The leader is made of six feet of piano wire—for a king will bite anything else in two at one stroke—and two swivels are used, one at each end of the leader. The regular length of line is 150 feet, but many let their squid go farther astern. Crossing a man's lines is not good etiquet and results in vicious fights if persisted in. With this simple equipment the regular fisherman goes forth and loads his fare until three or four in the afternoon, when he starts in for the harbor to make sure of getting inside before dark. The fish are thrown either upon the dock of the company he fishes for or aboard the "fleet-boat" sent out to gather in the catch, and a tally is given for the prevailing rate, say twenty cents apiece.

Gasolene is allowed him and if the boat is his own property he gets one cent more per fish than if it belongs to the company. Many men camp near the grounds to be on hand in the early morning when to get to sea is imperative. These men discharge all their fish into the fleet-boat and do not come to town except once or twice a week for provisions. Liquor of a violent sort is in evidence at most of the camps, but there is very little fighting and upon the whole the camps are better behaved than many cow-camps in the West.

At twenty cents for each fish, a man can often do more than one hundred fish a day and get accordingly from twenty to twenty-five dollars for his day's work. This is good pay, even for a fisherman, but a fisherman earns all he makes and more besides. Many days there are no fish, if the weather is too rough, and sometimes the king is lazy and will not come up to the surface. Jigging is too strenuous for a large fare, and so the thing evens up in the end, and after three months, when the season ends, the fisherman is not by any means wealthy. He is sent back in the company's boats to the mackerel and other smaller fish, and if he has made enough to be a little independent it is well.

With the sportsman the rod and reel are usually accepted as necessary tools for any kind of fishing. But many men who use the reel in almost every other fishing take up the hand line in king-fishing and stick to it with amazing steadiness. The rapid hauling, the excitement of fish breaking water and going high in the air at each strike, the struggle to get the big fellow aboard after the line ends at the piano wire, and the fierce struggle of the dying fish to bite everything within reach of his jaws after he is in the boat, are too much for the man who has been taught to wear his quarry out at the end of a reel of line.

If he still sticks to the reel and will not recognize sport without it, he may get it fast enough for ordinary purposes.

With a large reel and cuttyhunk number two, he can do wonders if the launch is stopped at the strike. The sportsman calls out at the first whirl of line and as the fish breaks clear, as he usually does in the first rush, the engineman shuts off and the launch remains drifting until the man at the reel does the tiring. He will have strong hands if he does not get enough in a couple of hours' work when the fish are running large.

The bait used among those who can afford it is somewhat more varied than that used among the regular fishermen. There are days when no sort of bait seems able to tempt a king to strike. Spoons, squid and even live bait in the shape of mullet fail to do the trick. It is then useless to do anything save wait until the school starts action.

Many days Wilson spoons are used with great effect, and some fishermen who have them will use nothing else. Others will with equal persistency stick to their block-tin squid and others again will use a red and white rag upon the hook. Often there will be all kinds being used at the same time, and when there are the Wilson seems to have the edge upon all other kinds of bait, or lures. One thing is certain, the king will strike more often upon a metal lure than upon a fish bait, which seems strange when the perfect clearness of the sea is considered and objects can be seen as distinctly a few fathoms down as in the very air itself.

Six or seven miles an hour is the best speed to troll. Slower than that allows the metal to be discovered; faster makes it difficult for the fish to strike with any degree of accuracy and sureness. If he strikes and misses the chances are he will be badly torn by the hook and will not repeat the strike, causing the loss of that fish. If he gets the hook well down his gullet it will not tear out except under very adverse circumstances. If he is allowed to strike against the boat when being hauled inboard he will most likely tear the barb out, for he will exert great leverage with his tail. He must be hauled well off and as he struggles to get free swung clear and inboard at one and the same time.

In the season the weather is generally good in spite of the steady wind which blows upon the east coast of Florida. In the early dawn the boats are made ready and before seven they go picking their way seaward. Near Miami, where the largest catches are made, the bank is about ten miles from town and the launches go out from the new Government cut, thru which the tide runs with great force and rapidity. Turning northward the boats head off-shore and go as far as the House of Refuge, the first Government station north of Cape Florida. About three miles from the beach the grounds are found and the fish will strike anywhere from here out to twenty fathoms or five miles eastward. The bank is about two miles long.

The shifting of the grounds is not explained. Probably the growth upon the bottom affords food for certain fish upon which the king feeds, and for a time they school here. Hurricanes and other disturbances alter the feeding grounds and the fish change their schooling places. Formerly off Cape Florida the larger king and cero were plentiful, but now they are very scarce. Fishing has nothing whatever to do with their disappearance.

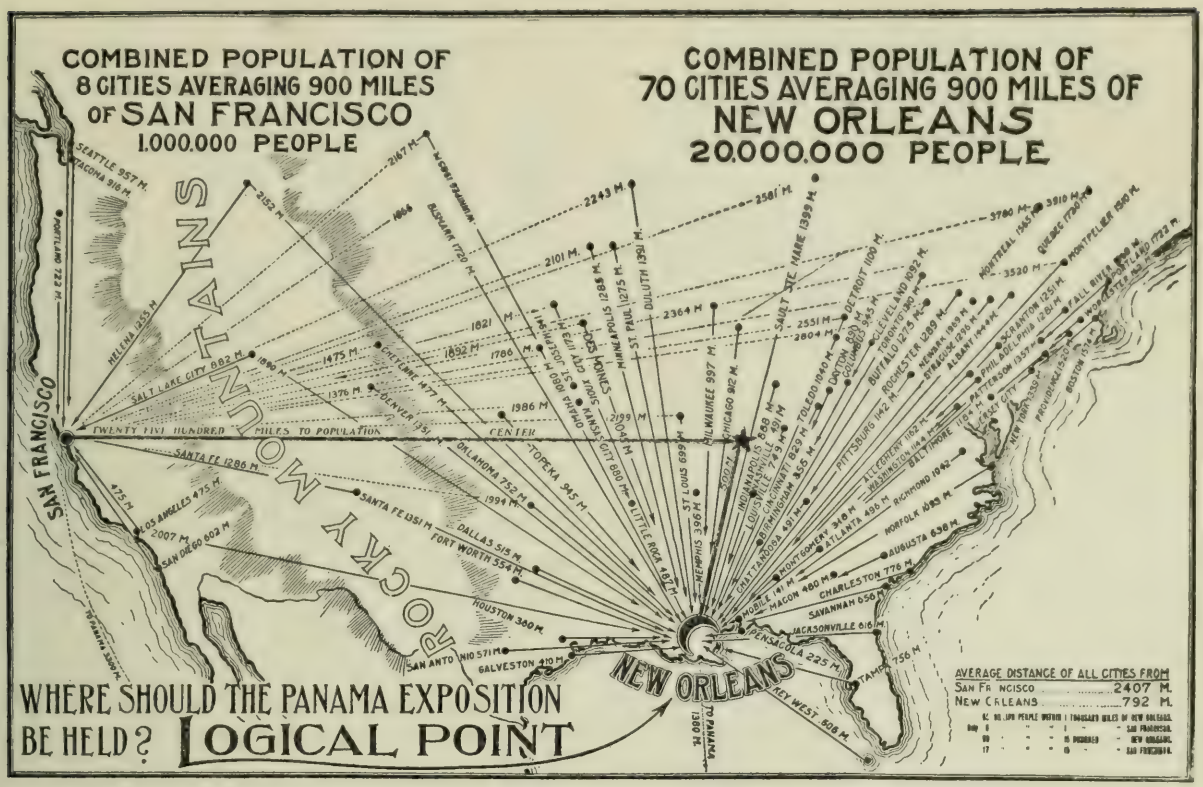
The sun will be shining strong long before the boats get upon the grounds and the best days are those immediately following northers when the wind has begun to slacken and swing eastward. The great rolling sea has ceased from combing and the small craft rise and sink, going up and down the long slopes and often out of sight of each other behind the hills of water when only a few hundred feet apart.

The sportsman follows the regulars and lets out his lines before getting into the fleet. His Wilson spoons will soon attract the fish and there will be a sudden splash astern, a violent pull and the fish is on. The king will often run up with the boat trying to throw the hook and sometimes the novice will think he has gotten off. But when the hull of the launch draws close the king shies off. With a whip and swish he starts to either one side or the other, refusing obstinately to get closer. Being gradually forced he will run in and dive beneath the keel, running from side to side, and the fisherman will have all he can do to keep him from fouling the wheel or rud-

der. When he comes up finally he must be swung out and forward until he is well off the side, bringing him inboard for the clubbing. A large king will land in a boat and bite at everything within reach, cutting shoes and gear, and he must be promptly hit over the head until stunned or killed.

The use of lines upon the hands in the salt sea-water creates sores, and as it is impossible to get the hook out of the fish's mouth without getting bitten or cut more or less, the hands of most good fishermen are always in a state of treatment for blood-poisoning. Sometimes the sores, getting the fish-slime into them, cripple the men for days, for the slime is very poisonous. A king, in spite of his small mackerel scales which make him seem almost scaleless, exudes a slime that makes even the negroes wear gloves in handling him.

By three or four in the afternoon the fleet-boats are ready to take the fares and the regular fishermen either discharge into them or start for the run home. The sportsmen follow and soon the sea from the banks to the cut is covered by a long procession of craft, all heading for home. The unwritten law of the sea is that you must not pass a rival in distress, no matter what. If a rival boat, a boat belonging to another company, breaks down, you must give her a line and tow her in. No man ever passes another at sea in distress even when the rivalry is hot, and no charge is ever asked for the tow. A strange principle of honor, this, when one thinks of the poor devils who are striving against heavy odds all the time. Anathema is the name of him who dares even suggest that he has burned up more gas than he should have towing a broken boat.



On the whole the life of the king-fisherman is healthy and not as hard as that of the Northern banker. He makes more money and is an independent fellow who works when he chooses and lays off when he wishes. He stands by his fellow fisherman in and out over the dangerous bar, at the cuts in the reef and upon the high rolling sea of the Gulf. He works together with his neighbor after a manner that has much to be admired. The industry has now become one that is recognized by all the fishing houses on the East Coast and every fisherman goes into it for the season. From about the first of the new year until the first warm weather in March the king fishing takes precedence over all other market fishing. The fish-houses pack the king in ice and get him in barrels upon the evening train that runs up the East Coast each night.

After the first warm week in March there will be a sudden dearth of fish. The countless schools disappear as quickly as they came and no man knows where they go. For the next month or two even the roughest negroes will be seen smoking good cigars and wearing good clothes. The whites also chirk up and after a short rest they all go back again into the routine of warmer months.

During the past winter the fish-houses handled everything in the way of king-fish they could get and asked for more. Only once did they cut the price and that was when the fish, toward the end of the season, ran small. Then, when a king was no larger than a Spanish mackerel, they made the price about the same or a little more than four cents a pound to the fisherman, or fifteen cents for all fish, large or small alike.

The sportsman coming in usually takes his fish to the city or hotel docks, where his prowess is photographed by some enterprising picture maker, who hangs the catch upon a frame and inveigles the hero to stand close alongside it. To the man who has never hauled half a ton of game fish a day the picture shows very well indeed.

JACKSONVILLE, FLA.

The Panama Exposition for New Orleans

BY EDWIN BOONE CRAIGHEAD, LL.D.

[In our issue of December 15 President Benjamin Ide Wheeler, of the University of California, told our readers why the proposed Panama Exposition should go to San Francisco. This week the distinguished president of Tulane University presents the claims of New Orleans. If pressed for an opinion now we should say that each seems to get the better of the argument and both cities deserve the Exposition. It is a case that appears to call for a judgment of Solomon.—EDITOR.]

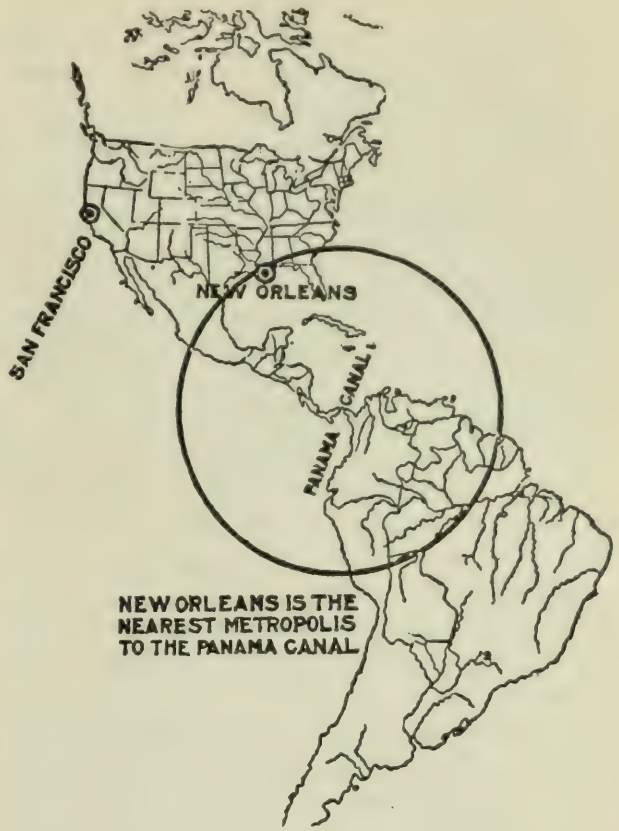
IT may be safely assumed that our Government will celebrate the opening of the Panama Canal. Failure to do so would be a national reproach. It would be construed as a confession to the world that we regard as a national blunder an enterprise which, when completed, will have cost many lives and the enormous sum of $500,000,000. Any such pusillanimous confession in the very hour of victorious consummation is unthinkable.

What then shall we celebrate? An event of untold significance for the future of Pan-America and the world; the accomplishment of the greatest material task ever undertaken on the globe; the most imperious assertion yet made good of man's lordship over all the earth; the fulfillment of the romantic dream of Columbus, grudged by nature four hundred years, with the promise and potence of commercial revolution still unimagined and unimaginable; yea, not merely an engineering, but a sanitary achievement of unique distinction and unparalleled importance.

And how shall such an event be celebrated—an event unique and transcendent, the like of which never was before and never can be again? By an exposition under auspices and direction of the United States of America, and representing the interests of all the people of our Union, an exposition to which the civilized world shall be invited, an exposition that shall not merely exhibit and illustrate the triumphs of commerce and industry, but shall set forth in still higher relief the things of the mind, the achievement of science, the creations of literature and art, the progress of humanity in

the nobler and immaterial elements of life; an international Exposition on a planetary scale, appealing to serious and high-minded men and women, not merely nor mainly to the idle rich or the ignorant masses; an Exposition dealing with world-problems of commerce, of sanitation, of arbitration, of law, of science, of education, of civilization; an Exposition concerned in first line with the great and high and holy things that impart glory and dignity to man.

Where, then, should and must such an Exposition be held? Of course, in some large city, and, if possible, in some such city easy of access to the people of the United States and at the same time within easy reach of the marvelous Canal itself—for it may be fairly assumed that large numbers of visitors to the Exposition would be unwilling to return home without having seen the wonder that the Exposition was designed to introduce and commemorate. Now, it happens that there is one and only one such city, perfectly fulfilling both these indispensable conditions. That city is New Orleans. A glance at the map should be enough to convince any one that such is the case, and that the Crescent City is the one and only logical point for the Panama Exposition. This fact is uncontested by any, save by San Francisco and its dependencies, and, that the pretensions of the Californian metropolis are idle may be shown clearly by the following comparisons: A citizen of San Francisco could come by rail to New Orleans, sail to Panama, return to New Orleans, spend a month at the Exposition, and then reach home by rail, in less time than it would take him to make the round trip by ship from San Francisco to Panama. A citizen of Boston or of New York could come to New Orleans by rail, go to Panama, and return to New Orleans, by water, and, after spending seventeen days at the Exposition, reach home in less time than would be required to go from New York to San Francisco via the Canal. Europeans desiring to see the Canal and an Exposition at San Francisco would find it advantageous first to set sail for New Orleans, then to visit the Canal, then to return to New Orleans, then to go by rail to San Francisco.



Consider also the relative distance of the two cities from the population center of our country. Within 500 miles of New Orleans live 17,500,000 people; within 1,000 miles 65,000,000; within 1,500 miles, 90,000,000. Within 500 miles of San Francisco live only 2,000,000 people; within 1,000 miles, only 6,500,000; within 1,500 miles, only 17,000,000 people. Within 900 miles of New Orleans are sixty-five cities, having a population of 20,000,000; within 900 miles of San Francisco there are only eight cities, and these have a combined population of only 1,000,000. *Most significant of all,* New Orleans is only 500 miles from the center of population, while San Francisco is distant 2,500 miles. Consider the *decisive* significance of this fact. To hold the Exposition at San Francisco would be to remove it on an average 2,000 extra miles from the visitor; to require him to travel 4,000 miles more than need be. To the great majority of our population, such a removal would be absolutely prohibitory. Comparatively few would think of traveling 5,000 miles to the Exposition; it would be like visiting London or Paris. The 4,000 miles of extra travel would cost at the lowest $75 extra for transportation, four or five times as much as the charges to and from New Orleans. If there were only 1,000,000 visitors, the lowest total extra cost to them would be $75,000,000. Such is the prodigious tax that would be imposed on our people by locating the Exposition on the Pacific.

To whom would this tax be paid? To the four or five trans-continental railroads that have so long held a nation fast in their iron grip, that for so many years opposed and checkmated the Panama enterprise by every device of human ingenuity: these gigantic corporations, already too strong and rich for either courts or Congress, would be still further strengthened and enriched with scores of millions. Is it strange that San Francisco offers to expend $17,000,000, on condition that her railroads be allowed to tax the people $100,000,000? Such an offer is a delusion and a snare. Add to this extra expense for mileage the extra cost of a week on the cars, and remember that time is money, at least with the

great majority who would visit the Exposition, and it becomes clear that to remove the Exposition so far would be to abolish it for the multitude whom it would benefit most, to make it a sectional and not a national affair. To the teeming millions east of the Mississippi an Exposition at San Francisco might as well be in Alaska or the Philippines.

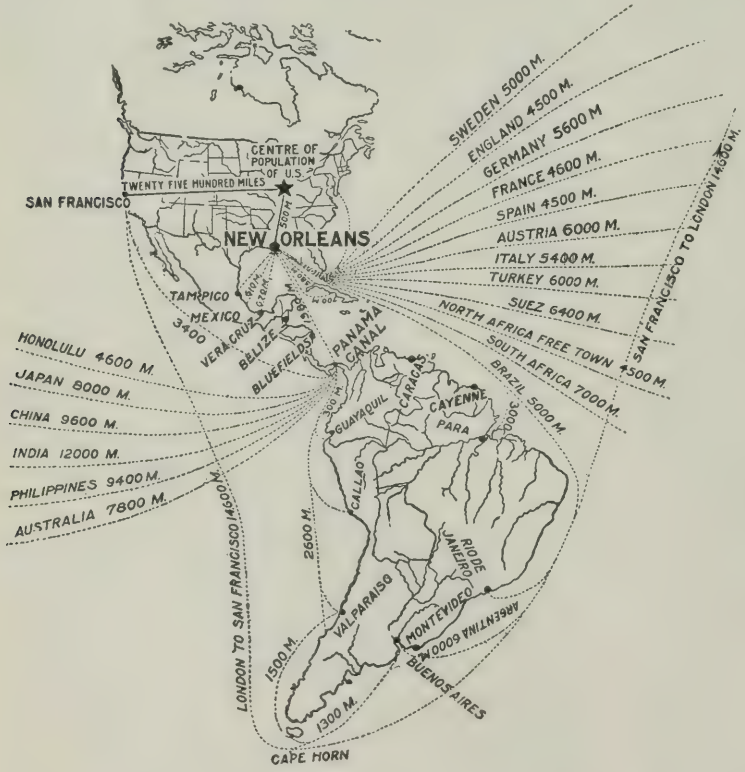
Moreover, the Canal stands in no intimate logical commercial or any other relation with San Francisco. It would be more rational to celebrate the Canal in New York or Boston than in San Francisco; they are nearer it than is San Francisco, which is nearly 3,500 miles away. From New York to Panama requires seven days; from San Francisco it requires twenty-one days. The late C. P. Huntington, the keen-eyed president of the Southern Pacific, most strenuously opposed the Canal, because he foresaw that it would turn the face of commerce toward the Gulf, would deflect the lines of trade toward the South, would mark the triumph of water over land transportation, would diminish the relative importance of San Francisco, and would make New Orleans the greatest emporium of the Western World (see *Overland Monthly*). San Francisco is a great and thriving and beautiful metropolis; in spite of their occasional clumsiness in padding the census we wish all these Pacific cities good only and always; but to maintain that the Canal stands in close relation with them, or gives them ground to hope or to boast, is surely at best grotesque.

Still further, New Orleans stands in the closest relation with the great system of inland waterways. Thirty States of our Union communicate with New Orleans by natural waterways; naturally the Mississippi exchanges the products of thirty States with the outlying world. If this immeasurable commerce has hitherto followed in the main the parallels of latitude, it is because artificial paths have been favored by legislation and private interests have supplied persistent stimulation to the development of overland traffic to the obstinate neglect of the standing invitation of nature. But the battle against Nature can never be finally won, and the 50,000,000 dwellers of the Mississippi Valley see daily more clearly that

THE CITY NEAREST PANAMA.

their inland waterways are at once their sword and their shield in the warfare of commerce, and that the development of these 14,000 miles of public highroads is the controlling factor in their material progress. Of all this incalculable waterborne international trade between the Mississippi Basin and Panama and South America and the world, New Orleans is the natural, the inevitable emporium. With all of it San Francisco stands in no friendly and immediate but rather in a remote and rival relation, as the representative of distant and alien and competitive interests. To celebrate the ini tial triumph of longitudinal inland-maritime transportation at San Francisco, the keystone in the arch of transcontinental overland transportation would be a parody of propriety and a mockery of common sense.

What this river and ocean trade may become, no man can foresee or estimate, but the earnest of its future is already impressive. New Orleans is the second or third exporting point in the United States. Her import of fruit, coffee and mahogany is the largest in America. The foreign trade of the Gulf Coast is already more than three times that of the



Pacific Coast and is advancing by leaps and bounds. The foreign trade of New Orleans alone is greater than that of the whole Pacific slope, and is sure to grow immensely larger in the very near future. Ten great vessels sail weekly from New Orleans to Latin-America, instead of the three small vessels with weekly sailings ten years ago.

Some skeptic from beyond the Sierras may seek to minimize the foregoing considerations, may scoff at New Orleans as only the Future Great, and may discount her present hopes by pointing to her past disappointments. But the student of economic history will rather wonder that the Crescent City has maintained her pace and her rank so well under conditions more adverse than ever embarrassed any other American city. For more than a hundred years New Orleans has faced heroically the direst disasters that Nature could array against her. Fever and flood and sword have leagued themselves for her destruction. The menace of the Mississippi has been always before her, the scourge of the tropics has decimated her population, and her streets have been the theater of wars between all nations, but most of all the long agony of Reconstruction convulsed her and left her for dead, insomuch that some said "she is dead." While her rivals ran on rejoicing in their strength, she herself was battling for life, smitten of God and afflicted. But even when overwhelmed by the most appalling calamities New Orleans has never for a moment lost heart or wavered in faith in her final destiny.

"In the fell clutch of Circumstance
She has not winced nor cried aloud;
Under the bludgeonings of Chance,
Her head is bloody, but unbowed."

What other city has known in equal degree the contrast of joy and sorrow, of riches and poverty, of victory and defeat?

There was a time—it was a quarter of a century before San Francisco had become even a trading post—when New Orleans was fighting for the control of the great and growing commerce of the Mississippi Valley. It was then that Jefferson made the prediction that New Orleans would one day become the largest city of the Union, the greatest emporium of the world. Then came the Erie Canal, and with it the marvelous rise of New York and the relative decline of Philadelphia and Charleston. But New Orleans, with her thousands of steamboats ploughing the waters of the Mississippi and her tributaries and bringing the products of the valley States to her spacious harbor, continued to grow in wealth and power. She would have maintained her relative importance, would have kept close on the heels of New York, yea, would have actually overtaken her but for three things:

THE FOREIGN DISTANCE MAP.

(1) The building of railways and especially of the great continental lines by the help of national subsidies of land. To realize what this means we have only to remember that our Government has granted to the Union Pacific and other transcontinental lines, in land subsidies, a domain vaster than the thirteen original States, a domain having now a money value of thousands of millions of dollars. It was the building of these trans-continental lines that brought about not only the premature and factitious development of the Far West, but

sealed, for generations to come, the destiny of New York as the metropolis of the Western World.

(2) The failure on the part of our Government either to promote the building of railways from North to South or to maintain and develop inland waterways cut from New Orleans the hope even of remaining the metropolis of the Mississippi Valley. And yet, she continued to make a gallant fight, continued to improve her harbor, to build steamboats, to clear the channel of the Mississippi and its tributaries, and had even begun to build railroads at her own expense.

THE WATERWAYS MAP.

(3) Then it was that an overwhelming disaster overtook her, sank her people into abject and hopeless poverty and cut down suddenly and apparently irretrievably the proud hope and ambition of a hundred years—I mean the Civil War and the still more direful disaster of Reconstruction. Added to the universal horror of the situation, her people and the people of lower Louisiana were compelled, unaided by the National Government, to continue the fight against fever and flood. Where in the history of this or of any other country can there be found a people of stouter fortitude, of sterner devotion to duty, of nobler faith in themselves and in the destiny of their city? Like Rome, Florence, Venice, Paris, London, New Orleans is interesting because it has a great and thrilling history.

Now, at length, New Orleans beholds the dawning of a better day. All her ancient enemies are vanquished finally and forever. She has fought to a finish and to splendid victory one of the greatest battles of civilization, the battle against yellow fever, and in so doing has made civilization in the tropics not a possibility but an assured fact, and all the world her debtor. Aided by the State of Louisiana, and in recent years by the National Government, she has tamed the river's tide and now sits serene behind her impregnable levees. Peace and good will walk her streets together, and the joy of life blooms richer in her homes than elsewhere on this Continent. She has turned her swamp lands into gardens. She has provided herself with a limitless supply of the purest water of any city in the world. She is fast completing, at a cost of $25,000,000, an underground sewerage system and thereby has greatly abated, where she has not extinguished, the nuisance of the mosquito. She has laid down hundreds of miles of the most perfect paving. Her great continuous St. Charles-Carrollton-Canal avenue is one of the longest and finest boulevards in the world, admirably fitted for driving and automobiling. Her street car system is everywhere known as one of the best on the Continent.

New Orleans cannot, indeed, like San Francisco, boast of 1,237 hotels and apartment houses expectant of occupancy in 1915. She has not made such ample provision so far in advance for countless throngs of visitors. Nor does she consider one caravansary to every 300 inhabitants a laudable ratio. It may still be well to have an occasional home and not quite to abolish the residence district. But in the matter of entertaining crowds, New Orleans has little to learn even from the largest cities. Her great hotels, the historic St. Charles, the Grunewald, the Monteleone, the De Soto, are skyscrapers and well-appointed, her restaurants are widely popular, her cuisine is famously excellent. Her experience in the entertainment of immense throngs is ample, and her skill therein is well attested. Great multitudes of visitors, as many as fifty or a hundred thousand, throng her streets at the Mardi Gras season and return home delighted. Tho some rare angels they may have en-

tertained unawares were perhaps fallen ones, the people of this city have abated no whit of their old and renowned hospitality.

But Congress and the world at large may properly ask whether climatic and hygienic considerations recommend New Orleans for the contemplated Exposition. The affirmative answer may be given with all possible emphasis. Not only are health conditions here at present eminently favorable, but for years they have been and continue to be steadily improving. Nowhere has the fight against the great white plague been more successfully conducted. The relative reduction in the mortality from tuberculosis has been greater in New Orleans than in any other large city. Two causes have long combined to augment our apparent death-rate. One is the presence here of an uncommonly large and efficient Charity Hospital, affiliated with Tulane University, to which flock for hundreds of miles all around a great number of sufferers from formidable maladies, and where 20 or 30 per cent. of the total deaths in the municipality occur. Many of these have only this casual connection with our city. The other cause is the fact that a fourth of our population is colored. It is well known that the mortality among the Afro-Americans is nearly or quite twice as high as among Caucasians, so that the actual death rate among the whites is only about four-fifths of the total rate of the city; if apparently twenty it is really only sixteen. When correction is made for these two disturbing factors, it appears that New Orleans is already well forward in the list of healthful cities and advancing toward the very first position.

And why not? For the general conditions of life are the most favorable. The climate is in the main balmy and pleasant and is often even invigorating. The summer is indeed long, but by no means necessarily disagreeable or enervating. The temperature is seldom excessive, rarely rising above ninety. The nights are nearly always cool and restful, and prostrations from heat are almost unknown. He who insists on aping the habits of Dr. Cook may suffer, but he who dresses rationally may pass the whole summer in New Orleans in health and comfort: yea more, he may devote every day from the first of June to the first of October to the severest mental labor and find himself at the end as fresh and vigorous as at the beginning. On the other hand, the climate from October to May inclusive is one of the most excellent to be found in America. There are occasional disagreeable days, but the typical feature is a flood of golden sunshine poured out over the greenest earth and the bluest sky, as at the balmiest spring-tide. The ordinary temperature ranges from forty to seventy-five with an average of about fifty, greatly favoring outdoor life and the general health of the people. In fact, the average number of ideal days in New Orleans, especially in the autumn, the late winter, and the spring, is very high; for weeks together the climatic conditions are as perfect as can be found in Naples or the Riviera, or even on the northern coast of Africa. I have put the question squarely to a highly intelligent and fair-minded couple long resident (about nine years) in New Orleans and an equal time near San Francisco, as to which climate was best suited for the Exposition. The one declared in favor of New Orleans, the other of San Francisco. We may affirm then with confidence that there are no hygienic or climatic reasons against but very many in favor of this ozone city as the proper site for the Panama Exposition.

It is a commonplace that New Orleans is an interesting city. It is notably unlike any other in the Union. Not so "splendidly built" as many, it presents new and old in striking combination. None need go to San Francisco to see skyscrapers, but the French and Spanish architecture of New Orleans has not its like elsewhere in this republic.

The Crescent City is not less historically than artistically interesting. Every one knows that Louisiana has the most romantic history of any State in the Union. Around Jackson Square and St. Louis Cathedral and the Cabildo and the Ursulines Convent—the oldest seminary for girls in America—and the Hotel Royal and the French Opera House and the battleground of Chalmette are woven the charm of story and the spell of legend. One almost feels as if threading

one's way thru some ancient capital of Europe.

New Orleans is furthermore a cosmopolitan city. Not only has it a considerable foreign population of Germans, Italians and others, but it has also a large original French and even Spanish element that has preserved its characteristics and traditions for two hundred years. Below Canal street the French language is spoken by the majority, and even above Canal street that beautiful tongue is used familiarly in the drawing rooms of elegant society. The speech of the Creole woman is unsurpassed if indeed equalled in music and charm by that of any of her sisters. At the French Opera House well trained and gifted troupes from Paris present in French during the whole season the masterpieces of operatic art. For thousands of visitors to the Exposition, this fact would have the highest significance.

Lastly, New Orleans is readily accessible from all parts of the world. Not only is she over 2,000 miles nearer the Canal than San Francisco and therefore at least that much nearer all points in South America, but she is many thousand miles nearer the great capitals of Europe. No World-Exposition can succeed without the co-operation of England, of France, of Germany, of Italy. Now San Francisco is, and will remain until the opening of the Exposition, from 14,600 to 15,500 miles away from the European centers of art and science, of industry and manufacture. New Orleans is only one-third as far away, she is 10,000 miles nearer than San Francisco, and even after the opening of the Canal she will still be 4,000 miles nearer. It would not be strange if exhibitors should hesitate to commit their precious wares to the chances of a sea voyage more than halfway round the globe, and thereby compromise the success of the Exposition.

But may there not be some other peculiar and convincing reasons why San Francisco should be the site of the Panama celebration? Her chosen advocates have not yet produced any that are even plausible; all are imaginary or worse. The main talking has thus far been done by money; the Pacificists promise to raise $17,000,000 and to ask no help from the National Government. As New Orleans cannot promise more than $10,000,000, it is argued that San Francisco would save the Government $7,000,000. We have already exposed this daring fallacy. The Government is the people; all its funds come from the people. When $7,000,000 is saved to the Government it is saved to the people. Very good! But in return the people are to be taxed some $70,000,000 or $80,000,000—possibly $200,000,000—in transportation expenses, which sum must also be taken from the dear people for transportation to San Francisco, to swell the coffers of trans-continental railways! To throw away $70,000,000 or more in order to save $7,000,000 seems questionable economy and doubtful good sense.

President Wheeler, of the University of California, surveying the subject from the lofty viewpoint of world-history and philosophy, contends in THE INDEPENDENT that the Exposition should be at San Francisco because San Francisco is the natural meeting point of two great civilizations of the world, the Occidental and the Oriental. As Faust exclaims, "I hear the message well, but faith it is that fails me." It may be questioned whether the Exposition, no matter where located, can seriously hasten the commingling of these two great civilizations. For at least a quarter of a century China and Japan have been open to Europeans, and during all this time the Orientals have mingled freely with the people of Europe and of America. Especially have Japanese students by the hundreds studied at the great universities of Europe and of America. Civilization and culture is a world-wide whisper, and the Canal can in no possible way make San Francisco more of a meeting-point for Orientalism and Occidentalism than it is today. Liverpool is more than 13,000 miles from China and Japan via the Panama Canal, and only about 11,000 via the Suez Canal. The European, in quest of a waterway to China and Japan, will continue to go via the Suez Canal. The New Yorker, the Chicagoan, seeking China, will go as heretofore by rail to the Pacific Slope and thence by steamer across the ocean. Should either Europeans or Americans seek the Orient by the Panama route, they would hardly stop at all at San Francisco, unless per-

chance that city were one of the special goals of the journey.

But granted that the coalescence of East and West is yet a desideratum, granted that the Exposition should be held at the place where "these two great forces in the world's history must be assimilated to each other," one may make bold to assert that San Francisco would be the worst place on the whole earth to attempt such an assimilation. For nowhere else have these two forces met in such sharp and irreconcilable opposition. For years, almost from its beginning as a city, San Francisco—so at least the Celestials think—has opprest and outraged the Chinese. What indignity has she not heaped upon the patient followers of Confucius, even to the shame of cutting off their pig-tails. Is it any wonder that the Chinese have sought protection in the Supreme Court of the United States?

Only a few years ago the conflict with the Japanese at San Francisco became so serious that sober-minded men thruout the nation began to fear grave international complications. And who does not know that the argument of Hobson and others for a big navy has been based almost wholly upon the belief that California and San Francisco are liable at almost any time to involve the nation in war with Japan? Upon battleships designed mainly for the protection of San Francisco and the Pacific Slope against invading Celestials, this Government has already spent scores of millions and millions more are still called for.

Indeed, if the Exposition were located at San Francisco, we could scarcely avoid conflict with Japan. The recent incident at Pasadena would be followed by others far more serious and complicated. San Francisco might finance the Exposition, but who would meet Hobson's call for more battleships? There is not, nor ever was, gold enough in the mines of California to build battleships sufficient to protect against these Orientals, should the war spirit in them continue to be fostered and fomented. Far better for us, heeding the Monroe Doctrine and avoiding dangerous complications with either Japan or China, to develop trade relations with Cuba, Mexico, Central and South America. This is what an Exposition at New Orleans would do.

President Wheeler represents the Western coast as "a mere hem of the continent," "separated by 1,200 miles of barrens," as indeed "a sort of backyard to the nation," that needs the Canal to unite it with the rest of our country! At this point, the great advocate might be left to make his peace with his own clients. But is it possible that California has not yet been united to the nation? To what purpose then has our Government granted in land subsidies to the Union Pacific and other trans-continental lines a domain vaster than the combined areas of all the States on the Pacific Coast? Nor is this all. It is these same continental railways that have made California prematurely the land of multi-millionaires. Truly a great and noble State, a realm of romance, inhabited by a people as bold and heroic and resourceful as may be found anywhere in the world. San Francisco is a beautiful and magnificent city, of which not Californians alone, but the citizens of the whole republic, may be proud. The nation, however, has long since discharged its full duty most generously in riveting the Far West into union and sympathy with the older civilization of the Mississippi Valley.

What, on the other hand, has our Government ever done to bring Louisiana and the Gulf States, the neglected part of the Union—I dare not use the preempted phrase, "the backyard of the nation"—into closer touch with the rest of the republic? How much has the Government given in money or in grants of land to promote the building of railways from North to South, from the Great Lakes to the Gulf? What is the Government now doing to develop our inland waterways, a work that should have been accomplished half a century ago? Must we wait another fifty years? Should the great transcontinental railways win another fight and make San Francisco the site of the Panama Exposition, it would mean the temporary, tho not the permanent, defeat, not of New Orleans alone, but of the whole South and the great Mississippi Valley; of all the region between the crest of the Sierras and the Allegheny Mountains.

New Orleans, La.

Literature

The Conflict of Color

Mr. Weale has already won an international reputation as a writer on affairs of the Far East, his long residence among Asiatics, especially among the Chinese, giving his views a basis of authority. His latest book, *The Conflict of Color,** deals with a subject more ambitious than any other that he has previously assailed. It concerns the whole world, and he states the problem as it is today in formation and as it will be in its infinitely more formidable aspects a century hence. The book is divided into separate parts: dealing in turn with the Yellow World, the Brown World and the Black World. In the introductory and concluding chapters are presented the elements of the eternal warfare between the whole world of color and the white race. Each of these divisions covers a subject so vast and so difficult that it would be more satisfactory if the entire space of a volume were given to it. But for the purpose of arousing popular interest in the problem this concentrated handling of the subject is, perhaps, adequate.

Briefly stated, the problem toward which Mr. Weale thinks we are tending is, How is the white race going to align itself when the color world outnumbers us many to one, as already they outnumber us two to one? That such a situation is fast materializing is indicated by the fact that while it takes eighty years for the white race to double in numbers, the yellow and brown double every sixty years and the black every forty. That there must ultimately be an "overspilling" of the colored races into the white world seems inevitable. Now, if Providence is on the side of the big battalions how is the white world going to face the problem? According to the author, Europe has already blundered in its approach toward Asia. The present alliance between England and Japan, he maintains, is a monumental example of stupid statesmanship, because in the articles of the treaty now in force England can command the support of Japan in the event of war in the Far East, and the text is such that England virtually confesses to her three hundred million subjects in Asia (India) that she "cannot protect them from European aggression save with the help of an Asiatic ally." This admission of weakness is an alleged handicap at the very outset. According to John Stuart Mill, "the government of a people by itself has a meaning and a reality—but such a thing as government of one people by another does not and cannot exist." It may appear to exist for a time, but in reality it is but a form of "provisional administration which must instinctively be looked upon as hateful, and which because it exists encourages men to dream of what they call liberty." As for fatherland loyalty it is at best "a figment of the brain; for the loyalty of aliens is largely a matter of political expediency, and the call of race and blood is supreme." England then is in a fair way to receive the opening attack in the event of a federation of Asia against Europe. Russia also has high stakes in Asia, and the United States will come in for her share of the conflict. In fact, this prophecy ventured by Mr. Weale is particularly daring because it states a time not far distant. He says: "In less than two decades America will cease to own the Philippines, and Japan will obtain the acknowledged hegemony of the Yellow World." This prophecy rests on a single contingency, namely, that the domination of Japan in the Far East continues to increase. The only way to block the yellow advance is for Europe speedily to secure the complete independence of China.

Mr. Weale fears no advance of yellow hordes from out of the East across the West sweeping like a great tidal wave across Europe; nor yet that the yellow man will swamp the markets of the world with his cheap products. But, he concludes:

*The Conflict of Color. *By B. L. Putnam Weale.* New York: The Macmillan Company. $2.

"What can very easily happen is that the federation of Eastern Asia and the yellow races will be finally arranged in such a manner as to exclude the white man and his commerce more completely than any one yet dreams. This is equivalent to saying that the entire economic situation thruout the world is already in very real danger of being radically altered—and the present balance of power entirely upset—from the mere fact that Asia, led by Japan, may step by step erect barriers so as not only to restrain the white man, but to adopt a politico-commercial retaliatory policy of the severest character. This is the policy which Japan has already instituted in Formosa and Korea with such conspicuous success; this is the policy which she is beginning in Manchuria. It is a hard and dangerous policy to fight, for it expresses itself in such pseudo European terms as tariffs, police, preferential treatment, shipping and industrial monopolies, and many ingenious devices which are covered by a specious phraseology borrowed from the West and invented by the West."

We have endeavored to convey a fair idea of the character and scope of the book, but have not left ourselves space for the many queries and criticisms which are aroused by its bold speculations and prophecies. We differ decidedly from his point of view and dislike his animus, but whether or not we share his conclusions and accept his suggestions, the book is one of this author's most important contributions to the literature of the Far East that has yet appeared.

Church History

The Rise of the Mediæval Church[1] and *The Development of Christianity*[2] do not cover quite the same period, but in so far as they do they supplement each other. Professor Flick lays more emphasis on the facts, giving abundance of details to show the steps in the development of the Medieval Church, culminating in the pontificate of Innocent III, while the late Professor Pfleiderer has used facts sparingly and only to indicate and illustrate the forces and additions by which the simple Christianity of the apostolic days has been transformed into the complex of dogma, ceremonial and establishment of today. Professor Flick undertakes to supply a college textbook that will give the student of Church history some such equipment as he finds at hand for his study in other history courses. The author's experience as a university instructor in the subject has revealed to him the need of such a work and prepared him to produce a book which is without question the best obtainable for the purpose of class work. It is largely free from dogmatic bias, scientific in character, judicial in tone, and provides the student with a good introduction to the sources and the literature of the subject. Nevertheless, the book is weakened both for general reading and academic work by its lack of vivid, vital presentation and accuracy of detail, two serious defects. The mere recital of occurrences or the description of movements which lead one into the other, and, marking the growth of a great institution, find justification in what precedes, may interest those who are looking to that history for the sanction or reversal of some present theory, form or activity, but it will not appeal to the student or reader who is seeking only for light on the persistent forces of life and history. Professor Flick has for the most part related his facts to the institution, but very little to the broad currents of human progress, and there is no deftness of touch in his style which quickens his procession of facts into a living struggle for supremacy. On the other hand, the author has often been led astray by a too careless examination of his sources and an evident desire to take a mediating course in his judgments. For example, Rom. 1:8 does not suggest in the least that "Paul gloried in having introduced Christianity into the great metropolis," for Paul did not. Nor is there evidence in Cyprian's Epistle 67 or elsewhere on which to base the assertion that Stephen "peremptorily ordered" the Spanish bishops reinstated. The leading passage in Tertullian given as authority for the fact that he denounced images in connection with worship refers to the use of masks in the *shows,* and the phrase, "from the time of 2d Peter until that of Clement (96)" conveys the erroneous impression that 2d Peter belongs to the first century.

[1] THE RISE OF THE MEDIAEVAL CHURCH, AND ITS INFLUENCE ON THE CIVILIZATION OF WESTERN EUROPE FROM THE FIRST TO THE THIRTEENTH CENTURY. *By Alexander Clarence Flick, Ph.D., Litt.D.,* Professor of European History in Syracuse University. New York: G. P. Putnam's Sons. $3.50.

[2] THE DEVELOPMENT OF CHRISTIANITY. *By Otto Pfleiderer, D.D.,* Professor at the University of Berlin. Translated from the German by *Daniel A. Huebsch, Ph.D.* New York: B. W. Huebsch. $1.50.

Such mistakes might easily have been avoided had the author given to verifying his sources and correcting his text the time and patience which have been devoted to the useless and cumbersome page and section references to modern books.

Professor Pfleiderer's book gives a brief but characteristically philosophical and luminous sketch of the evolution of those features in the life of the Church which have marked different phases of Christianity under the influence of natural causes and conditions. With true historical insight and the skill of a master the author brings forward and elucidates its development and indicates the presence and activity of modifying forces. His ripe scholarship seems to be no bar to simplicity of statement and clearness of outline. Even the bungling translation thru which these lectures are brought to English readers does not obscure their evident grasp of essentials and lively portrayal of the factors which have been wrought into the history.

Professor Flick's volume contains extended bibliographies and a good index, besides notes and references in abundance on almost every page. Both books are worthy the attention of every serious student of Church history.

Quantrill and the Border Wars. By William Elsey Connelley. Cedar Rapids, Iowa: The Torch Press. $3.50.

Little definite information regarding the guerrilla Quantrill has been accessible. What authentic knowledge has been published has been fragmentary, while the one work which pretends to give the bandit's life and exploits, that of Major John N. Edwards, is a mixture of bombast and absurd misinformation. The volume by W. E. Connelley is the result of years of painstaking research by the author and by a predecessor, W. W. Scott, who knew Quantrill in childhood and who intended to write the hero's life. Not many biographies are so replete with detail. Every ascertained movement of Quantrill's from his boyhood in Canal Dover, Ohio, to his death in Louisville, Ky., is related, and a multitude of citations of official records and of letters and statements attest the author's care for exactness. The glamor which certain writers have sought to shed about Quantrill fades utterly under this searching investigation. He is shown to have been, before the war, a spy, thief and murderer, and during the war a monster of cruelty and bloodthirstiness. He stole from his friends and protectors, and until he definitely threw in his lot with the Confederacy his thefts and murders were practised with an impartial hand upon both Missourians and Kansans. He was "the bloodiest man known to the annals of America," says the author, and the testimony marshaled leaves one in no doubt of the judgment. It is shown that, contrary to a statement sometimes made, Quantrill never had any relations with John Brown, and probably never saw him. Only once were the two men in Kansas at the same time—during a part of November, 1857—"and Quantrill was then a petty thief stealing provisions from his comrades at Tuscarora Lake." Quantrill's devotion to his mother is another myth which is rudely shattered. It is shown, on her own testimony, that tho she was poor and hard pressed with the care of a family, he never sent her a dollar. His plunder was enormous, but he preferred to spend it upon fallen women.

The Ethics of Jesus. By Henry Churchill King, D. D., LL. D., President of Oberlin College. New York: The Macmillan Company. $1.50.

To disentangle the ethics of Jesus from his teaching as a whole is no easy task, inasmuch as the subject is complicated by the nature of the sources. The most striking feature of this new volume by President King is the method of procedure which he has adopted. Rejecting the Gospel of John as a source and accepting critical results in regard to the Synoptics, he begins his investigation with a discussion of the ethical elements in Schmiedel's "foundation-pillar" passages. From these he passes to the "doubly attested sayings" of Professor Burkitt, thence to the teaching in "Q," Mark, Luke, and finally the Sermon on the Mount, thus examining in detail all of the ethical material of the first three Gospels. This method necessitates considerable repetition, and, combined with a rather plodding style, often makes dull

reading, but it has the double advantage of giving a cumulative effect to the author's conclusions, and evidencing a sincere desire to base all results upon a sure critical foundation. President King shows a large acquaintance with the best literature on the subject as well as a thoro first-hand study of all the material bearing directly on his theme. The book will yield its best only to the patient student of its pages.

Orchids for Everyone. By Charles H. Curtis, F. R. H. S. 4to pp. xi, 234. New York: E. P. Dutton & Co. $6.

The iris is called the poor man's orchid, and the Japanese iris, with its extraordinary wealth of color and petal, well deserves the name. Of our native orchids the most beautiful is the *Cypripedium spectabile,* equal to any of the greenhouse cypripediums. But the glories of the order belong to the dense forests of the tropics and to the hothouse. And the queens of the order are the lælias, odontoglossums, cattleyas, with their wonderful hybrids. The present volume describes a multitude of species and hybrids, tells how to cultivate them, and is enriched with over fifty splendid colored illustrations and over forty full-page half-tones. It is thus a most fascinating and instructive volume, and that it is trustworthy is assured by the fact that its author was formerly curator of the orchid collection of the Royal Gardens at Kew. It is the purpose of this book to guide and help those who can have more or less ambitious glass houses. Any greenhouse can raise cypripediums, with which the amateur should begin, and thus pass to those which require more care than do the fuchsias and roses. Most people with a small house and who attend to their own plants imagine that orchids are beyond their skill, but this is not the case, and it is a fact that now the best plants are getting more reasonable, as they are propagated and not torn from trees and rocks, and have more vitality, while those brought by collectors are very apt to die after a year. We strongly recommend this volume to lovers of the choicest flowers that Nature has produced, and the yet choicer ones which are the product of the hybridizer's art.

Literary Notes.

....Doubleday, Page & Co., now of Garden City, N. Y., have produced a *Garden and Farm Almanac* for a quarter which is a marvel of attractiveness and encyclopedism.

....From Scott, Foresman & Co. we receive a revised edition of the well known Manual of Physics by Professor Charles Riborg Mann and George Ransom Twiss, first published five years since.

....A valuable addition to Dante literature for beginners is made in the publication by Ginn & Co. of Francesco Flamini's *Introduction to the Study of the Divine Comedy,* in the translation by Freeman M. Josselyn ($1.25).

....Verses by or in memory of Louise Beecher Chancellor, under the title of the longest poem in the collection, *Transitus in Lucem,* make up a little volume, paper-bound, and illustrated with a portrait of the gentle poet, published by the Fairfield Co., Norwalk, Conn.

....Harvard University is the publisher of a *Guide to Reading in Social Ethics and Allied Subjects.* Members of the departments of philosophy, theology, pedagogy and economics collaborated in the compilation of this impressive list of books and articles selected and described for the use of general readers.

....A good series of bibliographies on such social problems as Immigration, Labor, Poverty and The Negro is published by R. H. Edwards, of Madison, Wis., under the title *Studies in American Social Conditions.* Each pamphlet contains a short discussion of its subject and suggestions for using the classified bibliography in group study (10 cents each).

....H. C. Minchin has completed and edited the *Life of Robert Browning* by W. Hall Griffin, now published, with thirty-seven valuable illustrations, by the Macmillan Company ($3.50). A cursory inspection of the long-awaited work fortifies the impression that this is one of the year's most important volumes of memoirs.

....Chapman's *Plays and Poems* are newly edited by Dr. Thomas Marc Parrott, of Princeton University. The first volume, *The Tragedies,* is now ready in a volume which runs to 730 pages (Dutton: $2 net). The editing seems to have been conscientiously undertaken, and the notes are wisely relegated to the book's back pages.

....The Macmillian Company has added to the series of English Classics for Schools a handy volume of *Selections from the Old Testament* (25 cents), wisely chosen from the prose portions and edited by Prof. Fred Newton Scott. The Introduction gives some account of Bible translation and the origin and value of the authorized version which is followed in the text and declared to be the "greatest prose masterpiece" in English literature. The explanatory notes are generally good, but too meager in many places to furnish the information necessary to a proper understanding of the text, and such misleading

ones as that on Judges, where the student is told that "twelve or thirteen personages" administered the affairs of Israel for "about four centuries," and that on Daniel, where Cyrus is said to have "captured" Babylon, should certainly be corrected.

....To the *Days with the Great Composers* series, published at fifty cents net by Hodder & Stoughton, are now added volumes on Mendelssohn, Beethoven and Schubert, the authors being George Sampson, and, for the second and third volumes, May Byron. These clearly printed books, with gayly colored illustrations, match *Days with the Great Writers.* In this earlier series the newcomers are Thackeray, Dickens and Stevenson, all described by Maurice Clare.

....Most modestly composed is Rebecca Paulding Meade's *Life of Hiram Paulding, Rear Admiral, U. S. N.,* published by the Baker & Taylor Company ($1.50). The tale is told, so far as possible, in the words of the commander himself, and is a story of long service under Decatur and Hull, and as a commanding officer. One of the interesting chapters describes Paulding's visit to Bolivar, and another South America in the fourth decade of the last century; a third, the William Walker incident.

....The distinctive feature of *Scottie and His Lady* is not that the book opens alliteratively—"Get out, you little pryin', pesterin' pup!"—but that the real hero is a dog. Dog heroes were not customary before Kipling paved the way for them and John Muir and others improved their position. In the present story, pleasantly told by Margaret Morse, and illustrated by Harold M. Brett, we are grateful for the tearless ending. Nor is that all—for the tale of the Scotch collie wags most amiably (Houghton, Mifflin; $1).

....In response to the demand for a cheaper edition of his *Secrets of the Vatican,* Douglas Sladen has brought his book out in a new dress, this time at $2.50. Professor Sladen is not a Roman Catholic, but his treatment of his subject has received the commendation of many of the faithful, as well as of the majority of his critics outside the Church of Rome. All the plates, plans and letterpress of the original edition are here used, and the appendix contains fresh information. The volume is singularly instructive (J. B. Lippincott).

....Another Björnson play, this time the *Lesson in Marriage,* in two acts, makes its appearance. The translator is Grace Isabel Colbron; the publisher, Brandu's (50 cents). We wish that we might add that the volume is attractive to the eye—which it is to the hand; but the typographical work (the book was made in Lancaster, Pa.) is distinctly unsuccessful. The little drama itself is worth having in the English language, and the translation seems to have been conscientiously done, tho the proofreading is defective.

....For those who know Percy MacKaye only as author of poetical dramas, his farce entitled *Anti-Matrimony* (Stokes. $1.25) comes as a surprise. The playwright's satire is leveled at a precious pair who make-believe at free love after a superficial reading of Ibsen, Sudermann and Nietzsche. They are so palpably artificial that even a New England parson and his young wife have only laughter to give them, trying in vain to be shocked. Wit, common sense and entire sanity are, however, all elements of a piece which, like some other farces, is weakest in dénouement. Miss Henrietta Crosmann and her company were the recent interpreters of Mr. MacKaye's refreshing bagatelle.

....The tastily bound little volume by Mr. Howard A. Bridgman, editor of "The Congregationalist," entitled *Real Religion* (Pilgrim Press; 75 cents), is better described by its sub-title, "Friendly talks to the average man on clean and useful living." There are forty or more short, racy, thoughtful "talks" on subjects suggested or illustrated by various incidents in real life or books read, and by remarks of individuals in the limelight or in the street. All are to the point, and in a fresh, brisk way carry home some helpful bit of advice.

....The latest light upon the nature and origin of the elements is thrown upon the subject in the volume signed by Sir William A. Tilden, whose academic honors and various distinctions it would take too much space to enumerate, and entitled *The Elements.* This recent addition to Harper's Library of Living Thought is based upon the author's Mendeléeff Memorial Lecture, delivered in October, 1909. A second contribution to the same series is Ernest A. Gardner's *Religion and Art in Ancient Greece,* which envisages the Greek religion mainly as it affected the art of sculpture; the use of images proving to be not merely "accessories of religious service, but . . . providing in themselves a channel of worship and inspiration."

....Several volumes of Romain Rolland's *Jean Christophe,* translated by Gilbert Canman, have recently been published by Henry Holt & Co. The translator tells us that M. Rolland says that he has always conceived of the life of his hero as a river—and that so far as the book has a plan, that is its plan. The river is explored as tho it were absolutely uncharted: that is all. The germ of *Jean Christophe* was conceived during M. Rolland's *wanderjahre:* for tho the French novelist is of native stock, he has traveled widely in Italy and Germany, and has come under the spell of Tolstoy, among other influences. His quest has been the heroic. The last words of his much-praised life of Beethoven are the last words of Beethoven himself: "La devise de tout âme héroïque. . . ."

....A biographer could scarcely ask for a more interesting subject than Blaise Pascal, mathematician, physicist, religious genius and controversialist, friend of the most interesting people of the world's most interesting city, and author of at least one of the world's immortal books. In a scholarly, impartial and discerning treatise, Viscount Cyres exhibits the relation of his scientific labors and

his active friendship with social leaders to his controversies with the Jesuits and his writings in defense of Christianity (*Pascal,* by Viscount Cyres. New York: E. P. Dutton & Co. $3 net). To all who imagine that Catholicism since the Reformation has continued without variation of religious doctrine, this book should be specially instructive; and students of the philosophy of religion will find it a helpful contribution to the problem of the nature of faith. Pascal was a modernist before his time; in his *Pensées* there is helpful doctrine for earnest minds of all faiths.

....The London *Mail* prints an interview with Maurice Maeterlinck that took place in Alfred Sutro's studio. "He is a man who never talks for effect," writes the interviewer. "In his sturdy Flemish features there is a solidity which disdains any kind of posing. Out of his sympathetic, kindly eyes there shines perfect sincerity. Like all true mystics he is straightforward and direct of speech. Talking of 'The Blue Bird' the playwright said with a sigh:

"'Yes, it is true that fifty-two companies are playing the piece in Russia. The newspapers speak of 'the Blue Bird' craze.' This Blue Bird of mine is just a fantasy, a fairy tale. We all seek happiness, do we not? Well, the Blue Bird is happiness—the bird that is never caught. Quite simple—a story for children—of all ages. Some people see mystic meanings in it, but I—I see none. It was a distraction, a holiday task.'"

....Bram Stoker is evidently a believer in Barnum's dictum that the people—or was it only the American people?—love to be humbugged. At least, he has written a thick volume with this title: *Famous Impostors* (Sturgis & Walton Co., $2); and in his preface he writes:

"The subject of imposture is always an interesting one, and impostors in one shape or another are likely to flourish as long as human nature remains what it is."

We took it for a display of purely British humor when we remarked his offering of a portrait of "Queen Elizabeth as a Young Woman" for frontispiece, but it seems a legend has it that the Virgin Queen of history was a changeling; and a male at that. Mr. Stoker's cases include examples of the faker's art as practised in many forms: by impersonators, pretenders and swindlers; by seekers after wealth, position, fame and simple adventure. The story of Perkin Warbeck carries us into English history, that of La Voisin into the France of the grand siècle. We have the Wandering Jew, and John Law, and the false Dauphins of France, and a variety of witches and magicians. A diverting volume for an idle evening, the stories being told with a certain rapidity, tho without distinction of style.

....Paris has a new literary sensation: has made a new discovery. It is a novel by a sewing-woman of the Latin Quarter, one Marguerite Audoux, whose income up to the present moment has been sixty cents a day "and meals." As sole diversions this person has cultivated the arts of reading and writing, and her novel, *Marie-Claire,* has just been published, being awarded the prize of the "Vie Heureuse," five thousand francs. The book is issued by Fasquelle, with a foreword by Octave Mirbeau. But Mlle. Audoux's earlier literary patron was the young novelist Charles Louis Philippe, who died a year ago, and who lunched at the same little creamery that the sempstress used. Philippe lent her books and gave her advice—and received it! It was Mirbeau, who interested himself in her *Marie-Claire,* and found her a publisher, who, besides writing his "Affaires sont les Affaires," and other noteworthy plays, lifted Maeterlinck out of obscurity some years since in proclaiming him "the Belgian Shakespeare." The new novel is described by competent critics as of "perfect taste, simplicity, depth, truth and novelty": a large order! In fact, the sempstress' novel is a triumph, not of unschooled genius, but of conscious art; for Mlle. Audoux has been an omnivorous reader from her twelfth year, and has, like de Maupassant, destroyed her earlier efforts and devoted years to polishing, perfecting, and simplifying her present work.

Pebbles.

"TELL me," said the newly rich lady, as they were discussing points of pronunciation, "do you say 'the Rhine' or 'the Rhone'? I hear it both ways."—*Christian Register.*

A LAWYER'S TOAST.

"Fee simple and the simple fee,
And all the fees in tail,
Are nothing when compared with thee,
Thou best of fees—fe-male."

—*The Caldron.*

"MADAM"—an Oklahoma census taker was speaking to her who answered his knock—"how many children over six and under twenty-one years of age have you?"

"Lemme see," she reflected. "Lemme see. Wal, sir, thar be two over six an' two under twenty-one."—*Everybody's.*

SHE had talked for ten minutes without a break.

"But what were you going to say, Regulus, when I interrupted you?" she asked.

"Bellatrix," said the young man, looking at his watch and grabbing his hat, "I was going to ask you to marry me, but I shall have to put that off until the next time. I have less than three minutes to catch the last train. Good night!"—*Chicago Tribune.*

IT was a certain thunderous preacher, of the class described by William H. Hayne lately in THE INDEPENDENT:

"One thumps the pulpit with each thunderous word
And beats the law of Sinai on a board,"

who once came to grief at family prayers. The morning hymn was "Rock of Ages," and he shouted safely thru the three first verses; but when he came to the next, "When I rise to worlds unknown," just as he reached the word "rise" he glanced down and saw it was "soar," and he made the combination, "When I *roar* to worlds unknown." The visitor who heard it reports it to us.

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Messages of the Governors

THE leading subject considered in the message of the Governor of New York is the need of economy. When one party gives way to another in a State Government, it is to be expected that the leading representative of the successful organization will criticise the shortcomings of those who have been dislodged. It must be admitted that Governor Dix's criticism of preceding Republican administrations is just. But expenditures should be reduced because they are excessive, and not in order that a direct tax may be avoided. The Governor thinks there are too many boards and commissions. He recommends that four of them be abolished and that two others be consolidated. New Governors in one or two other States also find that there are too many boards, and Governor Harmon (who was re-elected) asks that twenty boards, connected with as many State institutions, be replaced by only one, in the interest of efficiency and economy. Continuous exercise of power for a long time by one party is usually marked by an increase of the number of appointive salaried offices. Governor Dix says:

"Unnecessary boards and commissions should be abolished, useless employees removed, and every demand for appropriation carefully scrutinized to the end that the expenditures of the State be brought within our income. We have been creating too many offices. It is time for drastic reform and retrenchment."

Since his message was published the Governor has complained of the cost of the State's two Public Service Commissions. There has been shown no evidence that these commissions have been guilty of extravagance, and it is probable that a forced reduction of their expenditures would impair their efficiency.

Connecticut has no Public Utilities Commission. Governor Baldwin recommends that one be created by statute. In Massachusetts, Governor Foss would have a Public Utilities Board in which the present Railroad Commission, Gas and Electric Light Commission, and two other boards, should be merged. In New Hampshire, Governor Bass asks the Legislature to substitute for the present Railroad Commission a board empowered to regulate the service and capitalization of all public service corporations. Governor Marshall, of Indiana, suggests legislation forbidding the issue of stock by such corporations except for par value paid in, or the issue and sale of bonds at less than 95 per cent.

In almost all the messages the proposed income tax amendment is approved. Governor Dix asks the New York Legislature to vote for it. A similar request is made by the Governors of Maine, New Hampshire, Massachusetts, Ohio, Indiana and Michigan. In Connecticut, Governor Baldwin (recently Chief Justice of the State's highest court) expresses the opinion that the amendment, as now worded, would empower the Federal Government to tax the income derived from State securities and from the salaries or fees of all State officers. While he does not ask that the amendment be disapproved it is plain that he opposes it. Governor Harmon remarks that the imposition of a Federal income tax would tend to reduce tariff duties. The direct election of United States Senators is recommended by the Governors of New York, New Hampshire, Maine, Connecticut and Massachusetts. Governor Baldwin argues that the proposed change would serve the public interest by diverting from Legislatures a disturbing influence. Governor Foss

points out that the Democratic popular majority of 35,000 in Massachusetts indicates that the people, if they could decide the question, would not re-elect Senator Lodge. Governor Plaisted says that Maine should adopt the Oregon plan for the present. Governor Foss asks that nominations for all offices be made by direct primaries, and urges the passage of a constitutional amendment providing for the initiative, the referendum and the recall. He says:

"The people in all sections of the country have lost confidence in many of their public servants. The dictatorship by political bosses and by the representatives of special interests is hotly resented, for these men desire to control public servants and to direct legislation to their own ends. This usurpation of power can only be ended by the people taking into their own hands the direction and control of their Government.

"The first step is to abolish the boss and all his agencies; the caucaus, the nominating convention, and all political machinery which intervenes between the people and their Government. All candidates for public office, without exception, must be chosen by the people through the direct primary. To the direct primary must be joined the power of recall, so that any public servant who proves recreant to his trust may be immediately dismissed.

"Important as these steps are, it is of far greater importance that the people keep their power over legislation through the initiative and the referendum. Under the conditions which exist today, as I see them, these are the only true safeguards of representative government."

Governor Dix would have direct primaries thruout the State; Governor Plaisted would confine them to the nomination of candidates for Governor or Representative; Governor Marshall asks for the referendum, and Governor Osborne, of Michigan, recommends the adoption of the initiative, the referendum and the recall.

In several messages, notably in those of Governors Foss, Baldwin, Bass and Dix, argument is made in favor of legislation for the benefit of workingmen in the form of employers' liability statutes. Governor Harmon, making some reference to the sale of votes in Adams County, Ohio, says "no satisfactory or even creditable reason has ever been suggested" to account for the repeal of the Garfield corrupt practices law in 1902. All campaign contributions, he says, should be published both before and after election, but it would be better, he adds, "for the State to pay whatever expense is necessary to the holding of elections, and to forbid all private expenditure whatsoever in 'getting out the vote' on election day." Governor Dix recommends that the Legislature pass a resolution asking Congress for a general extension of the parcels post. In Connecticut, Governor Baldwin says that women who are assessed for taxes upon their property should be empowered to vote on all questions of municipal management at town meetings or at the meetings of any municipal corporation.

This brief summary shows that the messages (representing, as they do, the tendency of majorities) are decidedly in the direction of progressive legislation. It may be added that as a rule there is very little in them of a partisan character.

Mrs. Eddy's Resurrection

A MIRACLE is expected, is promised—or is it a myth that is to be created? Mrs. Eddy, who has died and is buried—for the physician has certified to her death, and guards have been put over the sepulcher, or receiving vault—is scheduled to rise again from the dead. To be sure there are doubting Thomases in the body of male disciples in Boston, but was is not to the women that Jesus first appeared, and is it not Mrs. Stetson who tells us that she expects that her honored leader will appear again on earth, and that she keeps a seat for her and hopes that she may have the faith to see the manifestation when it appears, very likely coming thru closed doors.

And why not? The whole expectation is patterned on the account of the resurrection of Jesus Christ. To be sure the third day has past without the manifestation, but it may be delayed. There must be time to clarify eyes to see it. The women are ready and they complain of the watch at the sepulcher. But when the resurrection comes the guards will be as dead men. And why should not Mrs. Stetson have the conclusive vision? She is a very able woman, was the First Reader of the First Church of Christian Science in this city, has faith to remove mountains, faith enough to understand and believe the doctrines of the Church

and its Book. The resurrection has been prepared for. We had heard the belief exprest by a tongue of intelligence and authority that Mrs. Eddy would not die, for there is no reason why death should not come to an end; it is an error that may pass away. And now, that Mrs. Eddy's resurrection is expected, it would not be strange if she did not appear. It is less a task to faith to believe she has been actually seen than it was to believe that she would be seen; for the mind is all ready to accept the manifestation. Not many will see her, not five hundred at once, but a select few of clarified vision, and they will tell the rest, and once seen she will retire from earth to guide her followers from the superior sphere. Then the myth can grow to any proportions, and we look for it with great anticipations.

Let it not be said that this is an age necessarily barren in myths. Why should it be? Of course, there are persons who are immune, but a multitude of people now as always are quite susceptible to them. They are imaginative and credulous. Among these are the followers of Mrs. Eddy. They have a wide throat to swallow beliefs. They can believe anything, for do they not believe that Mrs. Eddy will reappear on earth? It was an old argument for the omnipotence and omniscience of God that a God who could create the sun and stars could do anything; that a God who could know the future a hundred years hence could know anything; and we are ready to admit that a disciple who can believe that there is no physical body, only mind, and that pain is nothing real, only a fantasm of the mind, can believe anything, that nothing is so opposite to sight and sense as not to be accepted as true. One who can see any sense in such a solemn utterance as this from the Eddy Bible has left the realms of reason, and is ready to see any vision desired. "Sickness is a growth of illusion, springing from a seed of thought."

Because this vision is desired we believe it will come. And when it comes it will be believed, for there is the will to believe. The myth will grow, as a fervent imagination hardens into memory, and we shall have a duplication, in this day of science, of the account of our Lord's resurrection and ascension. But oh, the difference between the teachings to which the story is attached! Jesus went about teaching goodness, purity, simplicity, and denouncing hypocrisy. He took no fees; "Freely ye have received, freely give." The new Messiah copyrighted her teachings, sold them at a high rate, and then sold at a higher rate the right to be a teaching and practising disciple; she lived in rich comfort and accumulated vast wealth to leave after her death to the Church she had founded. While Jesus taught freely only love and forgiveness and the fatherhood of God, her successor and rival sold such rubbish as this for wisdom:

> "Remember that *all is* Mind, and *there is no matter.* You are only seeing and feeling a belief, whether it be cancer, deformity, consumption or a fracture that you deal with."

All the time sickness, sickness.

Yet we shall not be at all surprised to hear in a few days that she has risen from the dead. It is some satisfaction to know that the schism that will arise is likely to have a good effect. We would not be understood in what we have said as disparaging the moral or religious earnestness of the Christian Science body; we are concerned solely for intellectual clarity and sanity.

Parcels Post Once More

THE INDEPENDENT is in receipt of a somewhat surprising contribution, published elsewhere in this issue, which not only criticises us for stating that retail dealers of America are not earnestly opposed to extension of the parcels post, but goes on very strongly to antagonize this proposed postal reform, and does it, we are bound to say, about as well as the subject will allow. We have not seen an abler or more sweeping argument advanced since the subject was first broached. On the one point of open antagonism on the part of four or five trade journals we have no question. We believe the *National Hardware Bulletin,* the *Dry Goods Economist,* and three or four more journals quoted by this writer are what he says, anxious to prevent any enlargement of parcels post.

We do not care, however, to bear too much weight on this single lever, altho

we know from personal investigation that a very large share of the retail dealers, in all departments, in the United States, would gladly welcome a rational enlargement of the privileges now afforded us. The writer allows that "department stores" are almost always friendly; but he overlooks the fact that our country stores are rapidly becoming delivery stores, and that very soon every successful competing country store will fall into this list. The smaller delivery stores have exactly the same need of a parcels post as the larger department stores, and in their case the delivery must be largely thru the rural free mails. Waiving the fact that certain organizations are apparently or really committed to a conservative position, we still wait for any rational objection to the reform that we ask for. Our correspondent tells us that the business community—we would like to know who belong to the business community, and if it excludes all the producers of America, and includes only those who retail products—"objects to any extension of the domestic governmental transportation of merchandise beyond the present four-pound limit." Why exactly four pounds? Why not three pounds? Why not five pounds, or five and a half, or possibly seven? This determination to fix the point at four seems to us childish as well as illogical. Just at this point we are told that the Socialist *Call* assumes that the nation ought to control all carrying business, and hopes that the strike in New York City will lead rapidly in that direction. The Socialist bugaboo has no sort of influence with us, so long as our public school system and our mail system are rigidly socialistic. What we want to know is why, if the Government can successfully and safely manage four pounds, it cannot manage to safely handle, say about as much more? We believe that the general proposition is to let this power which we call government go as far as eleven pounds. So far as weight is concerned we cannot see that there is anything very dangerous ahead.

There is a blind at this point, for the use of the word government is misleading. In Europe it means a distinct entity, apart from the people; but in this country it means the organized people themselves—the people as a company. We have our postal service as it is, to argue from, and that is a system ramified thru hundreds of thousands of miles, *successfully*. When our correspondent offers instead State control of express companies, what possibly is gained thereby from his own standpoint? The State must be present and in close contact with the whole business, directing the organization—and so there is a complex or a duplex operation instead of a simplex. It has already proved easier for the people to do their own carrying, over their own highways. The question of distance does not come in, for we are already accustomed to this long haulage. Over this vast extent, of which he complains, the people, that is the Government, which is the people, are already carrying four-pound parcels. All we ask is to extend the amount permissible. Every child knows that the only hindrance in the way is the rivalry of the express companies.

We do not understand exactly why we should have it repeated to us that the business community is not yet ready for this sort of work. Nor do we quite understand why we should believe that carrying five pounds instead of four thru the post office would necessitate the Government ownership of the railroads, or an immense public difficulty, or both. Undoubtedly there would be more or less of a struggle between the old and the new carriage. That this would lead to anything else than a moderation of express charges and a rate favorable for the people we cannot see. What might be the ultimate result, so far as the express companies are concerned, we do not care to improvise at this point. We believe that the field of operation for them is large enough, and that it will remain large enough for adequate income. How a competition in carriage should prove harmful, except in the way of preventing extortionate charges, we do not understand.

THE INDEPENDENT is quite willing to note, as requested, that the subject has a social import; but it is not willing to allow that this social side of the question is based on a diminishing rural population, or abandoned farms, or dead country churches, as is asserted. Propor-

tional rural population is not diminishing. We do not know what the present census will say; but we do know that from 1890 to 1900 the country gained enormously on the city in its proportion of new settlers. The old record of 65 per cent. for the city tumbled down to a little over 30 per cent., and we know of no reversal of this tendency. Back to the country has become a universal cry. Lands are rising in value steadily, and deserted farms are a myth. At least, Governor Hughes in one of his speeches said that he should like to know where they were in New York State, for he could not find them. Country churches have often died, to be sure; but they were killed seventy-five years ago, and they do not note at all any decadence of farm prosperity. They went out when railroads began to be built. Crossroads stores have not been run to any extent for half a century, any more than crossroads taverns. They do not belong to advanced stages of country life, and are not needed.

Never was country life more progressive, better organized or more lifeful and hopeful. The crossroads has been displaced by the village store, and this village store must deliver its goods. It wants the parcels post. The trolley is reaching its fingers up into the valleys and touching the farmyards with its carrying capacity. The automobile is doing even more to reach the isolated farmhouse. We might as well forbid these forces and conveniences as to deny the farmer a parcels post. The same argument lies with intense force against rural free mail delivery in every form. It destroys many post offices; it keeps the farmer at home; it dissolves hamlet life; but it aids in the great movement of distributing the blessings of a complete life all over the country.

We are quite willing to face the frightful proposition which is offered us, of a community with no business institutions except the post office and the freight depot. We have seen the tens of thousands of district schoolhouses blotted out without a qualm, for we have seen the union schools gloriously taking up the work in their place. We have seen the little stores and taverns that used to be convenient for watering horses vanish, because we find a substitute in department stores, almost invariably within reach, by aid of the trolley and automobile. We are not worried at all when we contemplate a picture involving a more substantial country home, with its isolation abolished, hidden among the hills, but visited daily by the rural free delivery carrier, even tho he shall have in his automobile a ten-pound package for the housewife.

Without parley, we believe that the American people, almost without dissent, demand a parcels post service; and that if put to popular vote, this demand would be exprest by a majority of 90 to 1 the country over. The people are growing impatient over delay, and they are expressing this impatience very loudly. We believe that the coming Congress will hardly find it possible to ignore this desire. We quite agree with one of our contemporaries who says that the next step of social and economic progress in the United States is unquestionably bringing the producer and consumer closer together by reducing the cost of carrying small parcels.

The Disabilities of Womanhood

We wish to call the attention of our readers to the earnest plea of Marion Harland for the right of her sex to preferential treatment, a right which is often ignored because men, especially young men, are apt to be ignorant of its reason, and women are unwilling to assert it. Women do not complain that Nature has placed upon them more than half the burden of life. What they do complain of, and ought to complain of more than they do, is that extra burdens have been placed upon them on account of their weakness. If women had only their natural disabilities to contend with, their lot would be a comparatively happy one, but they have yet to get rid of the artificial disabilities which from time immemorial have been imposed upon them by law, custom and masculine selfishness. There is scarcely a human activity from climbing trees to teaching school in which women are not artificially as well as naturally handicapped. If in any case a woman succeeds in equaling a man in

achievement it means that she has really done more than the man.

As Marion Harland shows, mere equality of treatment would be unjust to women. But under the present conditions she does not even get that. She is forced to plead, to beg, for "a fair field and no favor." She deserves both a fair field and favor, and it would be for the interest of the race that she should have it, but so far she has not got even the former, and what little she gets of the latter is more show than reality. To put it plainly, women ought to be treated with chivalry; they are entitled to courtesy, but if they were deprived of all chivalry and courtesy, and allowed to compete on equal terms with men, they would be vastly better off than they are now or than they are likely to be for many years to come. "Women first," by all means; so far, however, men will not let them get even in the race. If occasionally an exceptional woman is likely to get ahead a little, the men trip her up.

Two conspicuous cases occur this week. Madame Curie, who discovered polonium and isolated metallic radium, is likely to be refused admission to the French Academy of Sciences because the Institute, of which the Academy is a part, voted by 90 to 52 that no woman was eligible. Most disgraceful of all, the motion to exclude women emanated from the Academy of Moral Sciences. Foreign academies are proud to have Madame Curie as a member, but the French believe in a double standard of fame as well as a double standard of morals. This is at least consistent.

The other case is worse, because few women are engaged in scientific discovery but many in teaching. The Board of Education of the City of New York has refused to promote a woman teacher because she got married. A man teacher who gets married may have his salary raised; a woman teacher has hers cut down or loses her job. This is a direct blow at the most sacred and important of all woman's rights, the right to marry. For years the teachers have been fighting in the courts against the rulings of the board, but last month the State Supreme Court decided that married women in New York have no rights that the Board of Education is bound to respect. The women are as powerless as the slaves against the Dred Scott case, for they neither elect the judges nor make the law.

This is fortunately a clear case, uncomplicated by the personal factors which often soften or confuse the injustice of an adverse judgment. As was said in the board meeting:

> "Her record is spotless. For twenty-one years not a complaint has been lodged against her; from not a single session of school has she been absent; not once was she tardy in getting to school. She is one of the ablest teachers in the school system. She is the only one on the eligible list; there were two others, but they withdrew. She is ready to take charge of this school."

The chairman of the elementary school committee, Abraham Stern, who opposed the promotion, could bring no other charge against the candidate than matrimony. The candidate, Mary B. Kinkeldey, is forty-eight years old. She has done excellent service as teacher in Public School 147 and would have been made principal of Public School 131 if she had not been married. She did not commit this act hastily. She could not marry younger if she had wanted to, because she had to support her parents. When relieved of this duty she had no savings left and only her salary to live on. Two years ago she married. There has been no noticeable deterioration in the quality of her work since then and there is not likely to be. It seems to us that she is entitled to be married. Also that she is entitled to be made principal. We have no business to discuss her private affairs in this way or to judge her conduct. Neither has the board.

We do not see what she can do about it. She cannot get a divorce under the New York law unless her husband commits a crime. This he would be reluctant to do, because, apart from any moral scruples, he would lose his own position, that of teacher in a college. If Mr. Kinkeldey should run away or become a cripple or a confirmed invalid, his wife might have her salary raised, but it is doubtful whether that would make her any happier than she is now. There is only one other loophole in the rules of the board. If her husband abuses her she may be promoted. We suggest, therefore, that Mr. Kinkeldey beat his wife every morn-

ing before breakfast, in accordance with the right conferred upon husbands by common law, using "a stick not thicker than his thumb," taking care not to hit her so hard as to disable her for her school duties and not to be so long about it as to break her twenty-one year record for punctuality. It will be observed that the Board of Education does not object to teachers marrying, if they take care to marry bad men. Its ruling is a blow directed solely against contented wives and happy homes. The New York teachers have their choice between professional celibacy and domestic suffering.

People vs. People

A GREAT humorist with a legal mind and the training of a jurist, if such a combination were some day to appear, might find a subject worthy of his genius in the ever recurring fury of "The People" against "The People." The thought is not new. It is at least as old as Aristophanes, and it has been ever dear to temperamental opponents of democracy. Even proverbial philosophy has used "The People" nearly as often as it has used weather or women as the symbol of all that is fickle.

But the jurist-humorist could give over some of the millennium-old jeers and present the popular psychology with a definiteness of discrimination impossible to one not accustomed to distinctions evolved thru the development of American constitutional law. Whether the Supreme Court of the United States has had or may have any other legitimate use or not, it already has served a purpose, worth all that it has cost, in showing how the collective mind, like the individual mind, may from time to time reverse itself and live serenely on, conscious and assured that it is the same psychic unity, one and indivisible, past, present and by and by.

Like the august court, the "sovereign people" has been on both sides of its Dred Scott and legal tender cases. Like the court, it divides in a five to four ratio more often than it "hands down" to posterity a unanimous decision. And, happily, from its decision while it stands, as from the decision of the court, there is no appeal. Business interests, corporate and private conduct, must adjust themselves, as they can, to the inevitable.

Taking this bit of analysis for granted the jurist-humorist would find his opportunity, year after year, to illuminate the course of human events. The beginning of the new year, especially, would afford him facts abundant and suggestion rare. We do not refer to the alleged but unreal propensity of the human mind to begin life over on the opening page of the new diary. We are thinking of the actual habit of newspaper editors and various other enterprising persons to review the year gone by and to interpret its occurrences. Particularly we have in mind the annual reviews of prices, trade and speculation. Speculation and prices, as all men know, are the barometers of weather conditions in the human mind. If one were to save up all the meteorological forecasts for a year and have them at hand when he reads the Weather Bureau's annual report, he might get both fun and instruction out of the proceeding; but it wouldn't compare with the fun and instruction he could obtain by comparing the day by day philosophy of Wall Street, of manufacturers' conventions, of tariff and interstate commerce hearings with the business philosophy that is annually applied retrospectively to financial events that have safely passed into history.

For example, has everybody forgotten the agony of apprehension thru which our financial center was living a year ago because of what an ancient writer called "a certain fearful expectation of judgment." The anti-trust cases—Standard Oil and Tobacco—were to be decided by the Federal Supreme Court. If by some mercy of Providence, not confidently looked for, the decisions should be against the Government, business might once more move forward, and hard-working millionaires might still hope to die respectably in their own beds instead of in jail or the almshouse. But decision might be against the companies. That would be the business crack of doom. A year has gone by. The Supreme Court decisions in these momentous cases have not yet been handed down, but not one Wall Street man in ten, if suddenly asked the question over the lunch table, to save his life or his credit could tell

you whether they were still on the calendar. And in the annual financial reviews they cut no figure at all. The reviewers for the most part find totally different causes for the "disturbed conditions" of twelve months ago.

Now, this illustration is not in any way peculiar. It is, in fact, admirably representative. Go over American financial and legislative history for a century, and we shall find that when business is bad the mischief is attributed to "lack of

CHARLES SUMNER.

The hundredth anniversary of the birth of Charles Sumner was celebrated in New York, Boston, Philadelphia and in other parts of the country on Friday of last week. The meeting in Faneuil Hall, Boston, was presided over by Ex-Governor John L. Bates, and among the speakers was Ex-Governor Curtis Guild, Jr. At the New York meeting Mrs. Henry Villard, the daughter of William Lloyd Garrison; Moorfield Storey, private secretary to Charles Sumner; Dr. W. E. Burghardt Du Bois, formerly of Atlanta University, and the Rev. Stephen S. Wise spoke. The portrait of Sumner owned by THE INDEPENDENT was on exhibition on the stage at the New York meeting. This portrait was painted in 1873 from life by Franklin B. Carpenter, painter of the "Signing of the Emancipation Proclamation," which hangs in the Capitol at Washington.

confidence," and the latter, in its turn, is attributed to "government meddling" with freedom of contract or the laws of trade. But after the trouble is all over you find no reviewer or interpreter willing to write himself down such an ignoramus as to attribute the "lack of confidence" which caused so much misery to any other antecedents than the conduct of business men themselves; their own speculation, their unwise expansion of credits, and their experimentation with dishonest enterprises.

We have here quite certainly the real psychology of the People versus the People, and it proves to be extraordinarily like the psychology of the individual average man. When the people is scared or in a blue funk, it attributes its peril and wretchedness to wicked and foolish men, in particular to reformers, agitators, legislators, theorists and idealists. When the people is getting three square meals a day and sleeping pretty well at night, it discovers that its former miseries and trepidations can be quite completely accounted for by its own indiscretions.

Charles Sumner

CHARLES SUMNER was born one hundred years ago on January 6, 1811. He was United States Senator from Massachusetts from 1851 until his death, March 11, 1874. His election as Senator was brought about, after a deadlock of three months in the legislature, by a fusion of Freesoilers and Democrats against the Whigs, whose candidate was Robert C. Winthrop. He was the ablest and most polished and powerful orator in the war for anti-slavery, and he was equally the advocate of peace. His speeches stirred the country as those of Wendell Phillips could not, for he was within the ranks of public life, and not an outsider.

He was a stern lover of right, and did not hesitate to oppose his best political friends when they seemed to him to be untrue to the highest standards of right. He lost the chairmanship of the Committee on Foreign Relations in the Senate, after having secured the purchase of Alaska, by his opposition to President Grant's treaty for the purchase of Santo Domingo, based on his belief that the people of that island did not desire it.

It was after a great speech on "The Crime Against Kansas" in the Senate in 1856, in which he had severely criticised Senator Douglas and Senator Butler, of South Carolina, that Senator Butler's nephew, Congressman Brooks, beat him down in his seat with a cane, causing injuries which kept him for about four years from his seat in the Senate, and which stirred the country as nothing else did until the John Brown raid. He lived thru the strenuous period of conflict which ended with the Civil War and the abolition of slavery, and he remains one of its great heroes.

Senator Sumner was a man of the highest literary culture, an aristocrat in feeling, but a radical democrat in principle. He was one of THE INDEPENDENT'S heroes while he lived, and was a greatly valued contributor to its pages. In the days of premiums for subscriptions THE INDEPENDENT distributed many thousand engravings from the portrait by Mr. Carpenter belonging to THE INDEPENDENT, which is reproduced on the opposite page.

Congress and Alaska's Coal

MR. BALLINGER, who, we are sorry to say, is still at the head of the Interior Department, recently sent to Congress a bill providing for a transfer of the notorious Cunningham coal claims to the District of Columbia Court of Appeals for adjudication. At about the same time, Mr. Pinchot sent to President Taft a long argument against such a disposition of these claims. Holding that there is abundant proof of violation of the law by the Cunningham group of thirty-three entrymen, he asks the Government to cancel the claims, saying that it cannot by reference to a District of Columbia court evade the responsibility imposed by law, and should not attempt to do so. His analysis and review of the evidence in possession of the Interior Department are convincing. Much of the proof against Cunningham and his associates is furnished by his note books and other records, and by their sworn admissions. We cannot see how this Cunningham project differs greatly from that of certain other speculators operating in the same coal field, seven of whom were indicted at Seattle in October last for seek-

ing fraudulently to gain possession of 24,000 acres, valued by the Government at $100,000,000.

A decision concerning these Cunningham claims should be made by the Land Office and the Interior Department, as required by law, and those who make it should be officers in whom the American people have confidence. If the officers whose duty it is to act in such cases are not trusted and respected by the public —and, unfortunately, it is true that at the present time they are not—they should be displaced by men of the right kind.

The Interior Department needs to be reorganized. Neither the President nor the people are getting from it the kind of service to which they are entitled. It is time for Mr. Ballinger to go. Probably there are subordinate officers of the Department who should go with him. Then the places of those who retire should be given to men of established integrity and capacity, who will act promptly upon such evidence as has been procured in the Cunningham case, without trying to shift the burden of responsibility to a local court.

An argument in reply to that of Mr. Pinchot has been sent to Mr. Taft by Falcon Joslin, who is president of the Tanana Valley Railroad Company in Alaska. He asserts that the Cunningham claims should be approved; that $10 an acre is enough for the coal land; that Mr. Roosevelt and Mr. Pinchot tyrannically and wickedly "throttled the development of Alaska," and that the coal lands of the Territory should at once be thrown open for sale under the present laws at the price named above. While, for obvious reasons, we do not agree with him about this, we are of his opinion that the vast coal deposits of Alaska should be utilized. The American people will not give this coal to the "dummies" of monopolizing syndicates of capitalists for $10 an acre. They ought not to do it. Their representatives in Congress will not do it. But these representatives should do something. The development of Alaska is greatly retarded for lack of coal, altho the Territory has hundreds of millions of dollars' worth of this fuel, of fine quality, that could easily be mined. For several years past all of it has been tied up. The coal used there has been brought from mines a thousand miles away, and not less than $12 a ton has been paid for it. Where should the blame lie? Upon Congress, which has refused or failed to provide just and reasonable laws for the utilization of the enormous local deposits.

Congress has repeatedly been urged to make laws for the leasing of this coal land. It is not a new proposition. At the beginning of the present session it was laid before the Senate and the House again by President Taft, and the Congress committee which made inquiry concerning the Ballinger-Pinchot controversy argued earnestly in its report that the lease policy should be adopted. Now is the time for taking up the question and perfecting the legislation that is required. The growth of Alaska should no longer be "strangled," as Mr. Joslin says it is, by enforced failure to mine coal that lies within a stone's throw of railroads that want to use and carry it.

Monosyllabic Pragmatism

A subscriber asks us "to define pragmatism in words of one syllable so I can understand it." We gladly comply with his request for such a definition, but we cannot guarantee that he will understand it any better than when longer words are used. For the short words of our language have been in circulation so long that they have worn smooth and slippery. It is the long, strange and new-coined words which are most clear and definite in their meaning. But Confucius wrote his immortal works in words of one syllable and we will not let ourselves be beaten by a Chinaman. So here goes: The one way to find out if a thing is true is to try it and see how it works. If it works well for a long time and for all folks, it must have some truth in it. If it works wrong it is false, at least in part. If there is no way to test it, then it has no sense. It means naught to us if we can not tell what odds it makes if we hold to it or not. A creed is just a guide to life. We must live to learn. If a man would know what is right he must try to do what is right. Then he can find out. Prove all things and hold fast to that which is good. The will to have faith in a thing oft makes the faith come

true. So it can be said in a way that we make truth for our own use. What we think must be of use to us in some way, else why should we think it? The truth is what is good for us, what helps us, what gives us joy and peace, what shows us how to act, what ties up fact to fact, so the chain will hold, what makes us see all things clear and straight and what keeps us from stray paths that turn out wrong in the end.

The Meanest Man

Apparently the meanest man on this continent is that man who calls himself Joseph G. Robin, whose sister is Dr. Louise Robinovitch, and whose father and mother yet bear the name of Rabbinovitch. It was bad enough for him as the president of a bank in this city to loot its deposits and rob or ruin its depositors, with all the succession of failures that might follow; but that is mere common, vulgar rascality. His meanness, in which his sister takes part, is in denying his old parents, because they lack his style and distinction and are only poor old Russian Jews. That is a depth of depravity far below dishonesty; for robbery and violence even are natural to beasts and men; but it is against nature to despise and reject one's parents. Even the Code of Hammurabi inflicted death on the son who said "He is not my father" or "She is not my mother."

A Decimal System

Our decimal system of money has been adopted by Canada, and is likely to be adopted by Australia. The Australian House of Representatives has gone farther, and approved in principle, by a large majority, a resolution for a decimal system of money, weights and measures. They would have the next Imperial Conference take action for the whole British Empire, but failing success they would let Australia proceed by herself as Canada has done. There is a Decimal Association in Great Britain which has urged that the decimalization of weights and measures should precede that of money, but Australia does not agree, and thinks it easier to adjust the money system first, now that Australia is to have its own mints. Out of courtesy to Great Britain the Australian advocates of the reform would make the sovereign the unit of currency, but if Great Britain declines to decimalize they would adopt the dollar as already adopted in the United States and Canada and the Philippines, and follow with the new weights and measures. It illustrates our own extraordinary conservatism that while our Revolutionary forefathers could inaugurate for us a decimal currency we have not been willing to take another step forward, altho nearly all the rest of the civilized world has done so. Even Russia has begun the task.

Tolstoy's Defense

Thirteen years ago Tolstoy planned, and ever afterward had it in mind, to retire from the world and live the life of a hermit, and he wrote a letter to that effect to his wife which was kept sealed until he actually broke away with the result of his death. It is a kind and loving letter, but it recognized that she could not accept his principles of the renunciation of the world. The substance of it is this:

> "The chief thing is that just as the Hindus nearing 60 retire into the woods, and as old religious men seek to devote their last years to God and not to jokes, puns, gossip, or tennis, so for me, entering my seventieth year, the all soul-absorbing desire is for tranquillity, for solitude, and, if not for entire harmony, at least not for crying discord between my life and my beliefs and conscience."

It is true there was such a crying discord between his life and his principles. He believed in poverty and he lived in a nobleman's palace. But to run away from family and men and end life as a hermit was to consider himself and his own spiritual state rather than those for whom he was responsible. He could do more for the world where he had the conveniences of literary life in his own home. There is such a thing as religious selfishness. It is a better lesson told in Tennyson's "Holy Grail" as well as in the Gospels that he who loses himself in caring for others finds himself. The recluse's life is a self-centered life, and that is not the best life; far from it.

The Banker Poet

The publication of the journals and letters of the late Edmund Clarence Stedman serves us as a reminder of the rarity nowadays, above all in our own

land, of men who add to what the world calls "practical" gifts an interest and even an enthusiasm for art. Leonardo planned flying machines besides painting pictures; Michael-Angelo laid out fortifications besides hewing out masterpieces of sculpture; Francis Bacon was a philosopher and an essayist as well as a grafter. "But," objects Mr. Man-in-the-Street, "why talk to us of Renaissance heroes? We live in America, in the today." Well, then, here is an extract from Stedman's diary—written at the time of the Chicago fire and the resultant flurry in Wall Street:

"Worked all day—carried my house thru. Sat up all night and finished an elaborate review of Bryant's 'Odyssey' for the *Atlantic*."

Model Farms for Towns

An attractive case of practical philanthropy comes to us from Sandwich, Mass. A village physician has left to the town his greenhouse, with 7 acres of improved land and 150 acres of unimproved land, as a sort of object lesson in the way of intensive farming. He has also left a fund of about $25,000, the income from which shall be expended, along agricultural lines, for the benefit of his neighbors. The Massachusetts Agricultural College has been consulted as to the management of this bequest, and it is recommended that a man be placed in charge who is expert in fruit growing, gardening and poultry raising. It is to become a sort of experimental farm, something like the experimental farms of our railroads, where improved methods can be utilized, along economical lines, and the people taught to make the best of everything. There will be no large or showy experiments, but just that kind of work carried on which can be done by an average business man or a small farmer. The place is kept open all the time to visitors, and instructions are given in the planting and the care of trees and vegetables. The result has proved so far very popular and practical, and we do not see why we have not here a suggestive model to be followed by a great many other villages in the United States. State experiment stations are all right, and they have a big service to work out for the people, but they are out of reach of the masses, very little felt by most farmers, and in turn they do not know the wants of the different localities. The town experiment station is a capital idea; it is a home idea, and naturally belongs in every township. Let them be multiplied.

The American Woman

Some dangers of generalization are illustrated by ten minutes' consecutive reading. In the *Spectator* we recently found an account of an English woman's experiences in the United States, which she entitled "Home Life in America." As one puts down this book, writes the editor of the *Spectator*,

"We have a strange impression that we have been reading about two distinct and separate races, one called women and the other men. . . . Notwithstanding co-education, we have all thru an extraordinary sense of cleavage between the sexes. An American woman, we are assured, never enters into her husband's business life—which appears to be the life by which he is always more or less preoccupied—neither does she ever take the remotest interest in politics. On the other hand, she alone is what we call cultivated."

Turning, not without some bewilderment, from this review of the book about our home life, we plunged into an article in the New York *Sun*, reporting certain utterances of Prof. Dudley S. Sargent, of Harvard. It seems that the prophet of physical culture has noticed, in the last twenty years, a tendency upon woman's part rapidly to assume 'the physical proportions and mental characteristics of man.' On the other hand, man is inclining toward effeminacy. Dr. Sargent concludes:

"It is to be hoped that men and women do not grow to be more alike than they are today. The same may be said of men. The assimilation of the sexes by each other is a possibility to be decried. The development I have been speaking of is mental as well as physical.

"The danger of woman's becoming too mannish is momentous. The pendulum in swinging from one extreme to the other is bound to hit at some time upon the happy medium, the point of ideal development. Care must be taken not to let the pendulum swing too far the other way."

"Her infinite variety" has not yet been staled.

Our readers will remember the consternation in Scotland when a little fragment of the Free Church refused to join the union with the United Church, and

the courts gave all the Free Church property to these Wee Frees, and how the United body rose to the occasion grandly and made up the loss. There has been a similar case in the union of the Cumberland Presbyterian Church with the larger Presbyterian Church. While generally the courts approved the union, in Tennessee the Supreme Court recognized the recusants as having the right to the property, and the congregations which held with their Church in the union were deprived of their houses of worship. It is only right that the Church at large should help them, and an appeal has gone forth for Presbyterians at large to raise a special fund of $100,000 for the purpose. It is a good appeal, and there ought to be a thousand Presbyterians who would give $100 apiece.

If Woodrow Wilson becomes the Democratic candidate for President and is elected to that office, he will have the advantage of a more thoro knowledge of American history, and a fuller comprehension of the working of American institutions than has fallen to the lot of most of his predecessors. Mr. Cleveland used to say that the chief trouble in administering affairs was with him a lack of minute knowledge of American history. During his first administration, however, he leaned almost absolutely on that master of history and statesmanship, Thomas F. Bayard. During his second administration, while Bayard was in London, his advisers were by no means as well qualified from this very standpoint of history, and then came the troubles and the disapproval of some of the best men in his party. Mr. Wilson has some decided views as to administrative policy, among the rest that the Cabinet should have a hearing on the floors of Congress.

Last week the Christian Endeavor Society celebrated its thirtieth anniversary. During this time it has had a wonderful growth and now covers the world. Meanwhile out of it, scarce different from it except in name, have grown strong denominational societies for young people, Methodist and Baptist, while the Christian Endeavor holds up the banner of interdenominational union. The last year has reported more than 4,000 new societies, the total number being now more than 74,000, with more than 3,750,000 members in more than 80 denominations and in every country in the world. Dr. Francis E. Clark, who organized the first little company in his study in Portland, Me., thirty years ago, still lives to be its leader.

Three times has Oscar S. Straus been made United States Ambassador at Constantinople, and under both Democratic and Republican administrations. He has now resigned after having served with perfect satisfaction as the wise and efficient protector of American interests, where those interests are so largely those of education, religion and archeological research. It has been of the greatest advantage that our country has had as its representative one who was able to be on good terms with the Porte, and at the same time skilful and earnest to protect the rights of American citizens. Historically and politically the Turkish Empire is perhaps the most interesting and fascinating country in the world.

Here is a curious illustration given by Dr. Booker Washington of the little interest taken in the support of negro schools in the "Black Belt" of Alabama. He says there are communities where teachers are paid but $15 to $17 per month for a school year of only three or four months, while able-bodied negro convicts are farmed out for $46 per month, those of the second class for $36, and of the third class for $26, for twelve months of the year. It is no wonder that the population is declining in these counties, because the negroes are fleeing away and going where they can get schooling for their children and escape from lynching mobs.

Forty-five of the sailors prominent in the recent mutiny on Brazil's battleships, says a well known journal of Rio de Janeiro, have suddenly died, twenty-six by sunstroke in a fort, and eighteen by suffocation in prison cells. If this be true, it suggests assassination or fatal torture. It is a strange story, and we hope it has no foundation in fact. If

these men were in prison, the Government and the people of Brazil have broken their word, for all of them were pardoned by act of Congress. Brazil could not fail to suffer eventually by such perfidy as this report suggests.

When, after a contest lasting from January 14 to April 24, Charles Sumner was elected United States Senator from Massachusetts by a majority of 1 in the House of 384 members, the jubilation of the anti-slavery hosts was beyond utterance. Meanwhile Robert C. Winthrop had occupied the seat in the Senate by appointment of the Governor, and it was the Boston *Atlas*, if we remember, which exprest its jubilation, "Now is the Winthrop of our discontent made glorious Sumner."

This is the testimony of Governor Kitchen in his annual message, on the effects of State-wide prohibition in North Carolina for two years:

"Business has experienced increased rather than decreased prosperity; morality, industry and frugality have increased, and politics and government have been to a great extent relieved of one of their most corrupting influences."

It would be a benefit to the whole country if the billion dollars spent for alcoholic liquors were saved for more profitable use.

It is getting harder and harder to brazen a patent crime or to whitewash it, and this Senator Lorimer and his Senatorial partisans are finding out. He hoped that the committee of investigation would report in such a way as to escape more public scandal, but we are glad it cannot be. The facts are too plain, and the people will not excuse those who would condone the offense. With the popular vote for Senators we would have one less chance for bribing a legislature.

China is dropping the hated Manchu cue, and here is an example of it. The most attractive feature in the late Nanking Exposition was the athletic contests between the students of schools in various provinces. One young man made the best high jump, but it was disallowed because his cue hit the pole after he had gone over it. The next day he reappeared without his cue. He had cut it off as a useless appendage. His act is typical of the new China.

The price of human hair has fallen considerably because the Koreans by the thousand are cutting off their cues. We hear the same news from China, where the President of the Board of War and the High Commissioner of the Navy have cut theirs off, followed by so many others that the Japanese barbers in Peking are kept busy dressing men's hair after the European style.

While all Italy will be celebrating in 1911 the fortieth anniversary of the establishment of the kingdom, the Vatican will keep it as a year of mourning for the loss of Rome and the temporal power. What a pity the Vatican does not know that the escape from the burdens of the temporal power was one of the greatest blessings the Vatican could receive.

Detroit has nearly half a million population, and it has successfully closed its post office on Sunday, thus giving a rest day to its employees. This rule ought to be embodied in law for the country. There are few cases in which the distribution of letters is necessary on Sunday, and the special delivery will provide for such cases.

The total tonnage of American ships engaged in foreign trade was 878,523 in 1909. The single German company which runs the Hamburg-American Line will, when its present building plans are carried out, have a tonnage of 1,022,452 gross tons. This is not very flattering to American conceit.

They had a jury trial in Olympia, Wash., the other day, and the judge who presided said it was a far superior jury to any that had ever sat in his court. It was composed wholly of jurywomen.

Adams County, Ohio, is being finely cleaned up. More than 1,500 indictments have thus far been returned by the grand jury, and a third of the voting population are disfranchised.

Insurance

The Importance of Life Insurance

EVERYONE knows something of the benefits of life insurance. It is perfectly clear that when a man insures his life in favor of his wife, or some other beneficiary, and has paid the stipulated premium, even if he dies immediately afterward, his wife enters into the benefit of the estate created under the policy of the insured. Sometimes, however, a man wishes to take advantage of life insurance and the benefits it confers upon those near and dear to him, when he can no longer care for them himself. Altho recognizing the benefits of the insurance principle, he is too often led into insuring in a weak company, which is not able to carry out its part when the crisis comes. It is needless to enlarge upon the misery and suffering that will almost certainly grow out of a mistake made in the selection of the insuring company. If a man is going to put his money in a bank, does he select one with a doubtful record, and whose success is a matter of uncertainty? By no means. He goes to a bank with a good record, whose management has been reliable and conservative. A life insurance company should be chosen with even greater care, for a man cannot give his aid in case of a dispute arising over the settlement. If the insured selects a standard company, whose assets, annual income, new business, insurance in force and yearly payments to policyholders show a strong, healthy condition, he may rest assured that his investment is sound. Such a company will not fail those in whose favor the policy has been drawn. Life insurance is good not only for the poor but also for the rich. It is a pity that so much doubt and uncertainty still exists about the desirability of insurance. Death comes in any event, with or without insurance, and it is a wise man who has his policy in a strong company.

CONSIDERABLE argument has lately arisen as to whether or not insurance is commerce. Some authorities say it is and others equally worthy of consideration say it is not. Until a final adjudication the matter waits. Irrespective of the final determination of the facts as to insurance and commerce it is certain that the business of insurance in all its variations has long ago attained vast proportions. No longer is insurance merely national in its scope but it is international. The desirability of a universal language medium that could be applied to insurance is therefore quite clear. Some happy genius, some enthusiast, has consequently made an application of that novel jargon which the Esperantists imagine is destined to become the universal tongue of mankind, to the insurance business, and has evolved a number of phrases in the nondescript language as applicable to it. Interesting examples of English translations into Esperanto follow:

Surety bond, Garantiajho.
Fire insurance, Fajrasekuro.
Life insurance, Vivasekuro.
Casualty insurance, Akcidentasekuro.
Surety insurance, Garantiasekuro.
Marine insurance, Marasekuro.
Policy, Poliso (or Asekurapho).
Premium, Premiumo.
Loss, Monperdo.
Claim, Pretendo.

Names of companies:

National Surety Company, Nacia Garantio Kompanio.
American Surety Company, Amerikana Garantio Kompanio.
Fidelity and Casualty Company, Fideleco kaj Akcidento Kompanio.
Ocean Accident and Guarantee Company, Oceano Akcidento kaj Garantio Kompanio.
U. S. Fidelity and Guaranty Company, Usona Fideleco kaj Garantio Kompanio.

DURING the year 1910 there were 1,775 firemen killed or injured in seventy-six cities of the United States. The largest number recorded is in Boston, with 533. The three next largest are New York with 360, Philadelphia with 121 and Baltimore with 103.

IT is a wise man who knows his own insurance policy.

Financial

A Trust Company Closed

THE effect of the closing of the Carnegie Trust Company upon the stock market, at the end of last week, was slight and temporary. Before the end of the Stock Exchange day, there were net gains for almost all the stocks on the list, and the advance for the week ranged from 2 to 5 points for the most active issues. For a long time there had been disquieting rumors about this trust company, and the general feeling in financial circles was not of dismay or alarm, but rather of relief because a cause of weakness was to be removed. It should be noted that at the same time there was an encouraging bank statement, showing a gain of $10,000,000 in cash, a loan reduction of $22,500,000, and an increase of the surplus reserve by $12,500,000.

Serious embarrassment of the Carnegie Trust Company was precipitated by the association of the name of Joseph G. Robin, the indicted speculative banker, with the institution. Robin, whose operations wrecked the Northern Bank, was a director of the trust company two years ago and at one time owed $500,000 to it. Altho recently he had had little to do with the company, his former connection with it impaired public confidence and caused withdrawal demands which could not be satisfied promptly. The company, only four years old, has had a somewhat sensational history. Beginning with the misleading use of Andrew Carnegie's name (for he had no interest in the company, and the name was adopted against his protest), it indulged in advertising methods which are not strictly in harmony with sound and conservative banking. It was founded and for some time controlled by the late Charles C. Dickinson, whose death was caused, in May last, by the inhalation of poisonous gases while he was inspecting what was said to be a process for the transmutation of metals and the production of silver. The city had $650,000 on deposit with the company. Owing to the unexplained absence of the City Chamberlain, Mr. Hyde, who has been missing for a month, it is not yet clear whether the city is fully secured.

Several prominent directors of the company were also directors of the Madison Trust Company, the Nineteenth Ward Bank and the Twelfth Ward Bank. It was feared that for this reason there might be runs on these institutions. As a result of conferences in which Bank Superintendent Cheney and a score of leading financiers participated, it became known on the 9th that the powerful Equitable Trust Company, of which Alvin W. Krech is president, had absorbed the Madison by purchase, and that J. P. Morgan & Co. had agreed to put into the two banks cash enough to meet any demands to which they might be subjected. This prompt and commendable action averted danger and enabled Superintendent Cheney to say that the three institutions were in sound condition. A. Barton Hepburn, president of the Clearing House Association and of the Chase National Bank, in a statement to the public, exprest the opinion that the depositors of the institutions were safe and that their customers could continue to regard them with confidence.

....In the year 1910, the Lawyers' Mortgage Company, of which Richard M. Hurd is president, sold $34,495,430 of guaranteed mortgages (all except $1,530,621 to net 4½ per cent. or better), the year's net gain of such mortgages outstanding being $13,517,944, making a total on December 31 of $108,220,424. Gross earnings rose from $654,175 to $783,767, and net profits from $508,177 to $622,739, or 15½ per cent. on the capital. Of these mortgages, 60 per cent. are on Manhattan Island, 13 per cent. in the Borough of the Bronx, and 27 per cent. in Brooklyn. The average amount loaned is 62 per cent. of the company's appraisal. Many wise limitations safeguard the company's investments, and therefore its losses by foreclosure proceedings in sixteen years have been only $13,057. It has a capital of $4,000,000, with surplus and undivided profits amounting to $2,390,508.

The Independent

VOL. LXX NEW YORK, THURSDAY, JANUARY 19, 1911 No. 3242

Survey of the World

The Senate

A resolution proposing a constitutional amendment for the popular election of Senators has been favorably reported to the Senate from committee. Frequently, says the report, a Senatorial contest not only obscures important local issues, in State elections, but consumes weeks or even months of the legislative session. In some cases States have been deprived of their Senatorial representation as a result of deadlock. Another argument advanced is the temptation to legislative corruption. The majority report is signed by ten members of the committee, Senators Depew and Dillingham dissenting.——Since the Lorimer case has been opened, another United States Senator has been charged with premeditated violation of the laws against corrupt practices in elections. The accused Senator is Isaac Stephenson, of Wisconsin, and his accusants are members of a committee of the Wisconsin Senate. Senator Stephenson is in his eighty-second year and a rich lumberman and farmer. According to his own sworn statement, the primaries and election of 1908, when the alleged violations of the law occurred, cost the junior Senator from Wisconsin $107,793. The report filed with Governor McGovern charges that of this amount about half was used "to unlawfully and corruptly procure" his return to the Senate. Mr. Stephenson won out by only three votes, after three Democratic members of the Legislature had, by quitting the joint Assembly, made that majority possible.——The Lorimer battle was opened in the chamber on January 9. Resolutions declaring the Illinois man's election fraudulent and void were introduced by Mr. Beveridge and by Mr. Owen—the latter being a Democrat, representing Oklahoma. Next day, Senator Crawford, of South Dakota, pledged his vote against Lorimer in a 15,000 word speech. Members of the Senate seem to realize that the dignity and honor of their body demand heroic action. Nevertheless, an active lobby for the Illinois man has been conducted by Edward Hines, a Chicago lumberman, and others. It has even been openly asserted that Speaker Cannon has entered the controversy on behalf of Mr. Lorimer, as well as various former members of both branches of Congress from Illinois. Undoubtedly a majority of the Senate opposes his seating, and the effort made by Lorimer's friends to have the Senate decide that a two-thirds vote is necessary to remove him has apparently been checked.

The New Senatorships

Except, possibly, for the Lorimer case, the legislative elections of United States Senators command at the moment our closest attention. Ohio sends to Washington, in place of Dick, Republican, Atlee Pomerene, Democrat. Many names are "mentioned" in connection with the Massachusetts Senatorship, but the opposition to Mr. Lodge's candidacy to succeed himself has thus far failed to unite. A Democratic caucus was announced for last Monday. There is, in Rhode Island, a likelihood of deadlock over Senator Aldrich's successor. The Republican members of the Wyoming Legislature have chosen Senator Clark as their nominee, to succeed himself. The caucus vote is equivalent to re-election. In New Jersey, the Wilson-Martine battle against James Smith, Jr., continues without new developments of importance, tho Mr. Smith's candidacy seems on the whole to lose ground. But the most interesting contest is that waging in New

York State. Governor Dix, unlike Dr. Wilson, refuses to be drawn into the controversy, in spite of the pressure exerted upon him by press and politicians. Mayor Gaynor, on the other hand, has continued to throw his influence toward Edward M. Shepard. Mr. Shepard "stands for everything that is best in politics," Mr. Gaynor writes to a member of the State Senate; for a generation "New York has been represented in the United States Senate by men who were mere lobbyists . . . or corruptionists." This is intended as a home thrust at Mr. Sheehan. But the most significant event has been the declaration that the New York "organization" opposes Mr. Shepard. Mr. Murphy, the leader of Tammany, is responsible for this announcement, which is regarded as a pledge that Tammany will support Mr. Sheehan. It is a question whether Tammany is much more unanimous than the rest of the Democratic party is today, in and out of New York State. J. Sergeant Cram, Mr. Murphy's lieutenant at "the Hall," has flatly declared his insubordination and his hostility to the Sheehan campaign, and Mr. Cram is not the only insurgent. Even Thomas F. Grady, recently disappointed in his ambition to act as leader of the majority in the Albany Senate, has come out against Mr. Sheehan. Still, at the moment of writing, the latter is the candidate most likely to be sent to Washington. The discipline of Tammany Hall may be depended upon. The Democratic joint caucus was announced for Tuesday of this week.

Trust Cases

The agreement which led the Government to prosecute the Atlantic steamship companies will expire in February, and it is said that they will not renew it. Mr. Humphrey's bill has been favorably considered at Washington by the House committee to which it was referred, but it will not be reported until the committee has ascertained what legislation the Department of Justice desires. This bill excludes the ships of the agreeing companies from our ports by imposing a fine of $200 for each passenger, providing for the forfeiture of all merchandise carried, and canceling mail contracts to which the companies are parties.——Testimony in the Government's suit against the Great Lakes Towing Company was taken last week at Duluth.——The Government has accepted from the Sugar Trust $700,000 in settlement of claims on account of tariff drawback frauds. District Attorney Wise says that the evidence obtained did not warrant criminal prosecution. ——At Buffalo, last week, the Standard Oil Company paid $23,766 in fines which were imposed two years ago, when it was found guilty of accepting rebates from two or three railroad companies. Payment had been delayed by appeals.——Arguments were made last week before the Supreme Court in the Standard Oil and Tobacco Trust cases by Attorney-General Wickersham and others for the Government, and several of the leading lawyers of the country for the defendants.——It is asserted that agreements like the one on account of which the Government is prosecuting the Atlantic steamship companies, but relating to freight, have been made by the companies in the South American, Australian and South African trade. Independent refiners of oil complain that these companies discriminate against them by giving preferential rates to the Standard Oil Company.

The Railways

Louis D. Brandeis, before the Interstate Commerce Commission, stating that the railways have proved their genius for co-operation in their combinations against shippers, asks:

"Why should they not combine against the combination of the United States Steel Corporation, and the other companies which keep at such high figures the price of rails and other steel products?"

Only because "Mr. Morgan and the other men who control the steel company exercise a similar control over the railroad world."

"Four steel companies have, all together, 65 directors. Forty of these 65 are directors, in the aggregate, in 52 railroads: some of them in ten or more different railroads. The 52 railroads operate about 140,000 miles of line out of 236,378 miles in the whole country, including more than two-thirds of the whole trackage."

Therefore it amused Mr. Brandeis to hear counsel for the Pennsylvania Railroad speak of the heavy burden of the increased cost of steel rails,

"When the Pennsylvania and the Reading own most of the stock of the Cambria and the

Pennsylvania Steel Companies—which, in eight years, have earned in profits $38,000,000."

Coal, like steel products, is controlled by the railways. The remedy advocated by Mr. Brandeis, as a substitute for the increase of freight rates, is a saving of $75,000 daily in operating expenses, which now approach $2,500,000. Witnesses have told of savings in labor cost in other industries amounting to 32 and even 50 per cent. "Is there," asks counsel for the Seaboard Shippers, "any reason why scientific management should not yield like fruit, applied to the maintenance and equipment of railways?" For railways in officially classified territory fuel costs about one hundred millions annually. In regard to economies here, we have, says Mr. Brandeis, the evidence of the superintendent of locomotive operation on the Erie Railroad, offered in a paper read last May before the American Railway Mechanics' Association:

"He has shown that the same engine, in the hands of the same fireman and engineer, on the same day, presented the following difference in fuel consumption: In the first hour, with ignorant and careless firing, it used 2,088 pounds; in the second hour, with intelligent firing and care, it used 720 pounds, although the work in the second hour was severer than in the first.

——The day before Mr. Brandeis addressed the Commission, Clyde Brown, counsel for the New York Central Lines, announced that the Central has plans calling for improvements costing $42,000,000, and consisting principally of freight terminals on the West Side of New York City. He stated that the operations of the lines he represented showed a surplus of $1,000,000 in 1910, as against a surplus in 1909 of $4,700,000.——Judge Holland, in the United States District Court, sitting at Philadelphia, has inflicted fines of $40,000 each on the Philadelphia & Reading Railway, the Lehigh Valley, and the Bethlehem Steel Company, charged with offenses against interstate commerce laws. The defendants will appeal.——The directors of the Pennsylvania Railroad Company will present to the stockholders, at their annual meeting in March, a resolution authorizing an increase of $100,000,000 in the capital stock. The present authorized capital stock is $500,000,000. of which $412,610,000 has been issued.

Various Items

The Crumpacker bill, providing for a reapportionment of the membership of the House of Representatives noticed editorially January 5, was on January 13 favorably reported by the Committee on the Census. The report was unanimous.——An agreement has been reached by which Canada and Newfoundland will voluntarily make such changes in the existing regulations of Newfoundland fisheries as are necessary to remove the objections of the United States. When the decision was handed down last summer by the Hague Court it was provided that the reasonableness of the existing regulations of the fisheries should be passed upon by an expert commission. To expedite the settlement the Newfoundland Government suggested that the questions at issue be settled by direct negotiations instead of by the commission of experts.——A statement by counsel for Mrs. Eddy's heirs that her bequest of $2,000,000 to the First Church of Christ, Scientist, of Boston, is forbidden by the laws of both Massachusetts and New Hampshire, is published, and a petition in equity setting forth that Mrs. Eddy's will was illegal, praying for a construction thereof, and asking that an injunction be granted against the paying out of moneys on account of the estate until legal questions are settled, is filed with the court.

The Philippine Islands

Elaborate preparations have been made for the annual carnival at Manila, which will begin on February 21, and continue for one week. With the festival there will be an industrial exposition. Expecting a considerable number of visitors from China and Japan, the managers of the carnival have induced the steamship companies to make special round trip rates from Yokohama, Kobe and other points.——The Sultan of Sulu, who recently visited this country, has sent to President Taft a letter, dated December 5, in which he says:

"I arrived in Jolo on the 9th ult. safe and in the best of health, and myself and party feel like new-born men. . The 19th of last month I invited the chiefs, headmen and business men of the district to a banquet and there made a speech in which I ordered the chiefs and headmen of the district to be loyal to the

Government and above all to send their children to school, for which I set an example by sending my brother's children."

He expects, if he lives, he adds, to visit the States again, "bringing other chiefs along to open their eyes as ours were opened."——The Society of the Carabao is an order composed of officers of the army or navy who have served in the Philippines. From a published report of a speech made at its recent annual dinner by President Taft we take the following:

"If we desert the Philippines, now they are our wards, and run away from the trust given us by fate, we shall be cowards. I am willing to part with the islands when we can do so honorably. But we cannot do so until they have a government, with a full idea of the responsibilities attending such government. I hope that time will come when we shall be ready to let them go, but when they will be unwilling to separate themselves entirely from us. I think in such a separation there may be danger to them and to all concerned. I hope for the continuance of a bond of sympathy between this country and the islands. We have been in the Philippines only twelve years. For this time only we have had experience in governing a dependency. I think what has been done justifies the claim that the American people, especially the American army and navy officers, are able to adapt themselves to all conditions and to meet any emergency. I think our government of the Philippines has been the most altruistic ever practised by a nation with a dependency."

Discussion in the islands as to immediate independence was made, he thought, for political purposes, and did not represent the real desire of the people.

Mexico and Central America

The revolutionists in Northern Mexico continue to carry on a kind of guerilla warfare. Their power has been broken, but they make raids upon ranches and unprotected small towns in Chihuahua, quickly returning to the mountains. The Government needs cavalry. It is said that Madero's funds are nearly exhausted. He sold his property about a year ago for several hundred thousand dollars. Dr. Hernandez, a prominent physician and alienist of Mexico City, says that Madero is insane by inheritance, and would be placed in an asylum if the Government should capture him. He asserts that Madero some time ago declared that he was a reincarnation of Hidalgo, and that later he assured his followers that his soul was that of Juarez.——Bonilla and his revolutionists have been gaining ground in Honduras. Last week they captured Truxillo and several other towns on the north coast. The gunboat "Hornet" moved along abreast of the land forces, convoying several schooners from which arms were delivered to new recruits. It is said that Bonilla has 5,000 men. The north coast towns surrendered promptly. At Tela, the garrison of 200 soldiers joined the revolutionists. Another army, under General Duron, has taken the entire province of Choluteca, lying between the capital and the south coast. With Duron is Paul Mason, an American and an expert manipulator of machine guns, who fought with Estrada in Nicaragua. It is reported that President Davila has offered to retire and to give Bonilla half the offices, if he will accept Antonio Rosales as President, and that Bonilla has declined the proposition.——At Washington, on the 10th, Secretary Knox and Señor Paredes (Davila's agent) signed a treaty which guarantees the loan of $10,000,000, negotiated by Honduras with a syndicate headed by J. P. Morgan & Co. Altho the treaty has not been published, it is understood that it provides for recognition by both countries of a supervising agent of the bankers, who will see that a certain part of the customs revenue is set apart for the debt. It is reported that the Secretary preferred the Santo Domingo plan, but was convinced that the Senate would not accept it. The plan which was chosen binds Honduras, protects the bankers, and in a certain sense connects the United States with the finances of Honduras. The foreign debt is about $112,000,000, with $85,000,000 of unpaid interest included. It is said that the bondholders will accept $4,000,000, and that $6,000,000 will be used in building an interoceanic railway.——Our Government has consented to the establishment of the new French bank which is to refund Hayti's foreign debt, but one-half of the capital must be supplied and owned by Americans.——President Estrada, of Nicaragua, has issued a proclamation restoring complete religious liberty and reopening the Protestant schools (most of them in the hands of Moravian missionaries) which Zelaya

closed eight years ago. Congress has decided that it has no power to prosecute Zelaya. Diplomatic relations with the United States have been resumed. Nicaragua's Minister, Señor Castrillo, has been received at Washington, and Elliott Northcott, recently United States Minister to Colombia, has been transferred to Nicaragua. Our Government has asked for a report as to steps taken, if any, for the prosecution of those responsible (under Zelaya) for the execution of Groce and Cannon, the two Americans who fought with the revolutionists.

South America

It is now admitted that the mission of Panama's representative, Dr. Mendoza, to Colombia, was a failure. He was cordially received by Colombia's President, but popular feeling against him was very bitter. A prominent Senator demanded that he be sent to prison as a traitor, because of his relation to the secession of Panama. Many in Colombia expect, it is said, that Panama will be restored to Colombia if the Democratic party gains control of the Government of the United States. Dr. Mendoza was sent to negotiate a treaty of peace and reconciliation. —— Diplomatic relations between Argentina and Bolivia, interrupted by a quarrel about the Argentine President's decision (as arbitrator) in Bolivia's boundary dispute with Peru, were resumed last week. This was due to the influence and good offices of the United States, and our Government has received the thanks of the two republics. ——Emilio Estrada has been elected President of Ecuador, to succeed President Alfaro, who was prevented by the Constitution from being a candidate. Estrada's candidacy was supported by the Alfaro government, altho Estrada's leading opponent, favored by the army, was President Alfaro's nephew.

German Diplomacy

Persia is now the center about which European diplomacy revolves, and, in so far as we may judge from the tone of the week's dispatches, Germany has turned the tables on England by outbidding her for the favor of Russia. The process of isolating Germany has not proceeded smoothly. When France and Great Britain a few years ago tried to settle their African interests by private agreement, France to have a free hand in Morocco and Great Britain in Egypt, Germany objected and forced a conference of the Powers at Algeciras. In 1907, when Russia and Great Britain came to an agreement as to their interests in Central Asia, Russia to have a free hand in the north of Persia and Great Britain in the South, Germany was again ignored. The latest blow to German interests was the announcement a few months ago that the railroad to India would be built thru central Persia, from the Russian Caucasus to British Baluchistan. But Germany had long been ambitious to construct this important link in the chain connecting Europe with India, and the road which has been slowly making its way thru Asiatic Turkey in the direction of Bagdad is a German enterprise, designed for this purpose. The Bagdad-Constantinople trade would not begin to pay for the construction of a mountain railroad like this, but a Russo-Anglican Persia, stretching from the Caspian Sea to the Persian Gulf, blocked the way to India. It was doubtful if the German road would be allowed to reach the Persian Gulf. The English papers asserted that British interests would not permit a terminus on the Gulf unless under British control. The German papers asserted that the road would be built without regard to British interests and opposition. At any rate, Germany was not checkmated. The Kaiser had power enough to force the retirement of Iswolsky, the anti-Teutonic Foreign Minister of Russia, as he did formerly Delcassé, the anti-Teutonic Foreign Minister of France. An agreement has been brought about between Germany and Russia, according to which the German road to Bagdad is to be permitted to connect with the Russian end of the Trans-Persian road. What other and perhaps more important provisions the agreement may include is a question that is open to speculation. According to the German press it means the virtual

abolition of the triple entente of Russia, Great Britain and France, and a portion of the English press regards it in the same light. On the other hand, M. Pichon, the French Foreign Minister, assured the Chamber of Deputies that the agreement was another guarantee of peace and was in no wise antagonistic or detrimental to the Franco-Russian alliance. The agreement is assumed to have been outlined at Potsdam on the occasion of the Czar's visit to the Kaiser nine weeks ago. What effect it will have upon the Persian situation remains to be seen. Events have hitherto appeared to be moving rapidly in the direction of the partition of Persia. The Russian troops are stationed in the northern part along the Caspian Sea, and the English are preparing to undertake the policing of the southern part about the Persian Gulf. The recent agitation in the English newspapers over gun-running on the Gulf and the disorder of the southern provinces, both evils of long standing, may be interpreted as foreboding active British participation in Persian affairs. It should be remembered that the Anglo-Russian agreement did not give Great Britain complete control of the Persian Gulf. The boundary line between the British sphere of influence and the neutral strip touches the head of the Gulf. This point was sharply criticised in England at the time when the agreement was made public, but the Government stated that the British claims to special interests in the Gulf had been conveyed to Russia in a subsequent note and had been received without protest. If this is all the assurance that Russia has given to England in this matter, it would not be a very safe reliance in case Russia and Germany should work in harmony. Turkey has apparently as much to apprehend from this new Russo-German agreement as England. Of late the Turkish Government has been coming more and more under German influences. Its loans have come from Germany; German officers are training its army, and the German language is to be taught in its schools. But this confidence is likely to be lost if Germany should seem to favor Russia's designs on Turkish territory.

Strikes in Portugal

Ever since the establishment of the republic, Portugal has been disturbed by strikes. Employees in all sorts of industries have taken advantage of their new privilege in order to raise their wages, which have been absurdly low. The strikes have been remarkably free from violence, and they appear to be due to purely industrial causes, in this respect differing from the strikes induced in France by the General Federation of Labor, which have a political purpose and are avowedly revolutionary. There does not seem to be any intention to attack or even embarrass the Government, for it is recognized that the Government is doing all it can for the working classes and sympathizes with their efforts to better their condition. Senhor Machado, Minister of Foreign Affairs, has publicly declared his gratification that many thousands of workmen were receiving increased wages as a result of their series of strikes. The double strike of last week, involving all the railroad men of the country and the clerks in city stores, was handled diplomatically by the Government and brought to a speedy close. All troops were kept under orders in their barracks, but were rarely called upon for patrol service because of the peaceable disposition of the strikers. Leaders of the railroad men telegraphed orders to the locals forbidding the destruction of property, and care was taken that the railroad trains should not be stalled between stations. Cars loaded with perishable goods were run thru to their destinations, and no interference was attempted with the carrying of mails by automobiles and boats. Provision trains were allowed to enter Lisbon. The manifesto issued by the railroad strikers requested other unions not to strike in sympathy unless they were asked to. Minister of the Interior Almeida exerted himself to the utmost to secure a settlement of the strike, but for three days his efforts were unsuccessful, chiefly because the Portuguese railroads are largely controlled by foreign capitalists. Finally, however, a compromise was effected by which the men gained a considerable increase in their wages, altho not all they asked for. The Northern and Eastern

railroad companies consented to an increase of their expenditures for wages of $200,000. The strike of the employees of business houses was for the purpose of securing a weekly day of rest and a reduction of the working day to twelve hours. The Government issued a decree for a weekly day of rest, but the latter request seemed to be impracticable. Senhor Almeida, on account of his failure to settle this strike, sent in his resignation to President Braga, but it was not accepted. The strikers also had confidence that he was doing his best, and when he presented himself at their meeting they cheered him and passed a resolution requesting him to withdraw his resignation; they then returned to work. Following these, the employees in the gas and electric light plants went out on strike, and the city was only feebly illuminated by the aid of the naval electricians and stokers. Some of the gas mains were broken by the strikers. A strike or mutiny of the garrison at Elvas occurred on January 13, and it is reported that the Government has acceded to the demand of the soldiers and granted increased pay.

Plague and Famine in China

The plague at Harbin, in Manchuria, continues to increase in virulence and there is great danger that other parts of China will become infected. The Russian authorities in Harbin have succeeded very well in protecting their portion of the city from the disease. There have been only seven deaths in the Russian quarter while in the Chinese quarter of Harbin 1,300 have perished. New cases occur every day at the rate of 100 or more and almost all of them are fatal, usually within forty-eight hours. On account of the ignorance and superstition of the natives very little can be done to check the spread of the disease. The Chinese will not permit the cremation of the bodies of the victims of the plague and it is difficult to secure their burial. In some cases the bodies of whole families remain in the houses where they died. Burials are conducted on a large scale in trenches outside the city; nevertheless many corpses have been left in the streets to be eaten by dogs or thrown into the river, thus spreading the infection. Many missionary doctors have volunteered for service in Manchuria, altho it is as dangerous as going into battle. A French physician, Dr. G. E. Mesny, while attending the sick at Harbin, caught the plague and at once isolated himself in his room. After writing farewell letters and his will he died there alone. The Chinese Government has appealed for aid and will insure the lives of foreign physicians at $20,000 each. At a conference of the foreign physicians in Pekin, it was decided that in order to protect the capital from invasion a quarantine must be established along the Great Wall. Only first class passengers will be allowed to enter from Manchuria. ——In the province of An-Huy frightful famine conditions are reported to exist.

Foreign Notes

Mr. Winston Churchill, who was severely blamed by the Opposition press for calling on the military to aid the police in the siege of the two London anarchists, has published a letter in which he denies having issued any such orders. He says that the only part he took was to approve the action of the police in keeping the firemen from approaching the burning building while the firing was going on.——The Liberian Minister has signed an agreement with France providing for the delimitation of the disputed boundary line by a mixt commission. This opens the way for the securing of the loan necessary for the rehabilitation of the Liberian financial system. It was originally proposed that the funds for this purpose should come exclusively from America, but later English, French and German financiers were permitted to participate. —— The new electoral reform bill prepared by the Italian Government extends the franchise to all men over twenty who can read and write. Voting is made compulsory. A fine of $5 is imposed for the first omission to vote and $10 for the second. This will bring into the electorate the Catholics who have hitherto in accordance with the wishes of the Pope abstained from taking any part in politics.

International Baseball

BY J. J. PEGUES

[The author of this account of baseball games that were international as well as intercollegiate was captain of the University of Chicago baseball team that recently visited Japan and the Far East. Our readers will remember the entertaining account of "Wisconsin vs. Japan in Baseball," by D. J. Flanagan, one of the Wisconsin players, published in our issue of December 30, 1909.—EDITOR.]

THAT the great American game of baseball has secured a wonderful hold on the people of Japan was clearly shown during the recent visit paid by the University of Chicago ball nine to the Orient for the purpose of playing an international intercollegiate series of games with Waseda and Keio, the two leading universities of Japan. The visit was the result of a two years standing invitation on the part of the Waseda University of Tokio, Japan, to the University of Chicago to send a baseball team over for the purpose not only of testing the skill of the college players of the two lands, but of securing, at the same time, a better understanding and to promote a greater feeling of friendship between the two countries in bringing the university students of both nations into intimate contact. To further these aims the governing body of the University of Chicago not only decided to send a team to the Orient, but in return invited the Waseda nine to pay a visit to our country in the spring of 1911. This invitation was accepted.

Before telling anything of the trip made by the Chicago team it will perhaps be well briefly to outline the baseball situation in Japan. The game was introduced there some twenty odd years ago, but never gained much hold until about eight years ago, when it was taken up in the leading universities as a result of the efforts of Mr. Fred Merrifield and Mr. Alfred Place, two old University of Chicago ball players engaged in educational work in Japan. Almost immediately the game sprang into widespread popular favor. Not only the leading universities, but also the lower schools began to organize teams and since then the game has become as popular among the youths of Japan as it is in the United States. It has hardly gained the universal popularity in the islands that it has at home; and yet whenever the game is played huge crowds turn out to see it, and with almost every boy playing it is only a question of a few more years until almost every one in Japan is vitally interested. One rather unusual and perhaps favorable feature of baseball as played in Japan is the absence of any professional influence. The Japanese seem to believe in sport for sport's sake alone, and prefer to support contests by contribution rather than by paid admission to the field of play.

To return to the trip itself. It was in June of 1910, that the University of Chicago Faculty decided to allow its baseball team to invade Japan. During the summer months it is too hot for foreigners to play ball in Japan, and it was necessary, therefore, that the trip be made in the fall. The division of the college year at Chicago into four quarters made it possible for the members of the team to attend summer school, leave on September first, and return the 1st of January, without losing any school work. All members of the ball team of 1910 were eligible to take the trip, but two men, Kassulker and Sauer, gave up the pleasure because they felt they were needed on the football squad.

Two university teams, Washington and Wisconsin, had already visited Japan, and both had found the Japanese more than a match for them after a summer without team practice. Knowing this, we determined to go prepared to play our best game. With this end in view we spent the summer playing practice games with strong semi-professional teams in Chicago. As a result, we were really in better shape for a hard series in the fall than during the regular spring college season. The teams of Waseda and Keio also spent the summer

months in practice; so that all three teams were in the pink of condition. A great deal of interest had been manifested in the United States regarding the forthcoming series, and in Chicago the papers commented to a considerable degree on the games to be. But the interest at home was nothing compared to that in Japan. As soon as it was known that we were to take the trip we began to receive demands for pictures of the teams, to be printed in the Japanese papers. Before we left Chicago, Mr. Yamasake, the Japanese Consul, gave the team a reception in order that we might meet the Japanese residing there, and later a number of them gathered at the station with the Chicago students to give us a rousing send-off for our long journey. When we reached Seattle we were greeted as we left the train by a queerly accented Chicago "yell," delivered by about 200 Japanese who had gathered to welcome us there. Here also a Japanese team had been got together to play us and give us our first insight into Japanese play; and after we had defeated them they showed the true Japanese politeness by thanking us for having played them, and led us off in our ball suits to a reception given in our honor by their consul. Such interest in the trip on the part of the Japanese even in America amazed us, and when, barely within wireless radius some 1,200 miles out of Yokohama, we received the first of a series of messages from Japanese papers, universities and individuals, bidding us welcome and asking for news, our amazement grew still greater.

We landed at Yokohama in a pouring rain, but in spite of the steady downpour a large crowd had gathered to greet us. Before we could leave the ship we were surrounded by reporters who stuck like leeches, questioning us in broken English. Their persistence was really amusing, and their questions so varied and comprehensive as to cover our lives from birth far into the future. It was somewhat embarrassing on our part to be subjected to a cross-examination, in all sorts of English, but we knew that it was all meant in the best spirit, and was done only with a view of comparing Americans and Japanese students. So we answered back as best we could. And everywhere we went we were objects of unending interest and courtesy. Thruout our stay we were considered not only as guests of Waseda University, but also as guests of the Japanese nation, and while objects of constant curiosity, we were at the same time subject to every form of Japanese politeness. Also I may say that while the Japanese stared at us constantly and

AT OSAKA. THE MAYOR IS THE GENTLEMAN IN STREET DRESS.

MR. FUKUDA.
Keio's catcher in native dress.

questioned us continually, we returned both stares and questions with interest, as they seemed far stranger to us than we can have seemed to them. They see many foreigners while we had never before seen Japanese under anything like natural conditions. When we were hauled thru the streets of Yokohama in "rickshaws," on our way to the train for Tokio, we insisted on leaving the tops of our man-drawn carriages down in spite of the steady rain; so that we might have an unobstructed view of the strange sights which surrounded us. Most novel to our eyes were the people themselves, stalking thru the mud of the narrow sidewalkless streets on stilt-like wooden clogs, and protecting their flapping skirts and kimonos from the rain with oil-paper umbrellas. Odd sights surrounded us on all sides, and it was only thru stern necessity that we foregoing sightseeing during our first few days in Tokio, and devoted our time to practising for the games now close at hand.

Hundreds of Japanese turned out to watch us practise and to compare us with their champions. So great was the interest manifested that we were requested to practise in secret as far as possible, and without previous announcement, as it was feared the students would desert their class-room work to watch us in action. Only a "world's series" could excite such interest at home, and we looked forward with much curiosity to the first game. We wondered what sort of a crowd would greet us when we really crossed bats with them in a game. We had been told at home that immense crowds would turn out, but that unlike an American crowd they would sit like stone images thruout the contest, watching the game without a sound or the slightest show of enthusiasm. We were soon to find out for ourselves. When we drove up to the field for the first game we found it decorated for the occasion. The fences were draped with red and white bunting and the entrance festooned with American and Japanese flags. Practically all of the spectators had entered the field when we arrived, an hour and a half before the game was to commence, and as we passed in we were greeted with a great outburst of handclapping. Everyone rose to salute us and then settled down once more and waited for the game to start. It was a strange sight which we saw. Their grandstands were merely high earth embankments where the bare legged kimono clad crowd squatted on their heels. Not a Japanese woman was in sight, and during the entire series only a few came out to see a game, as it is still considered hardly proper for them to do so.

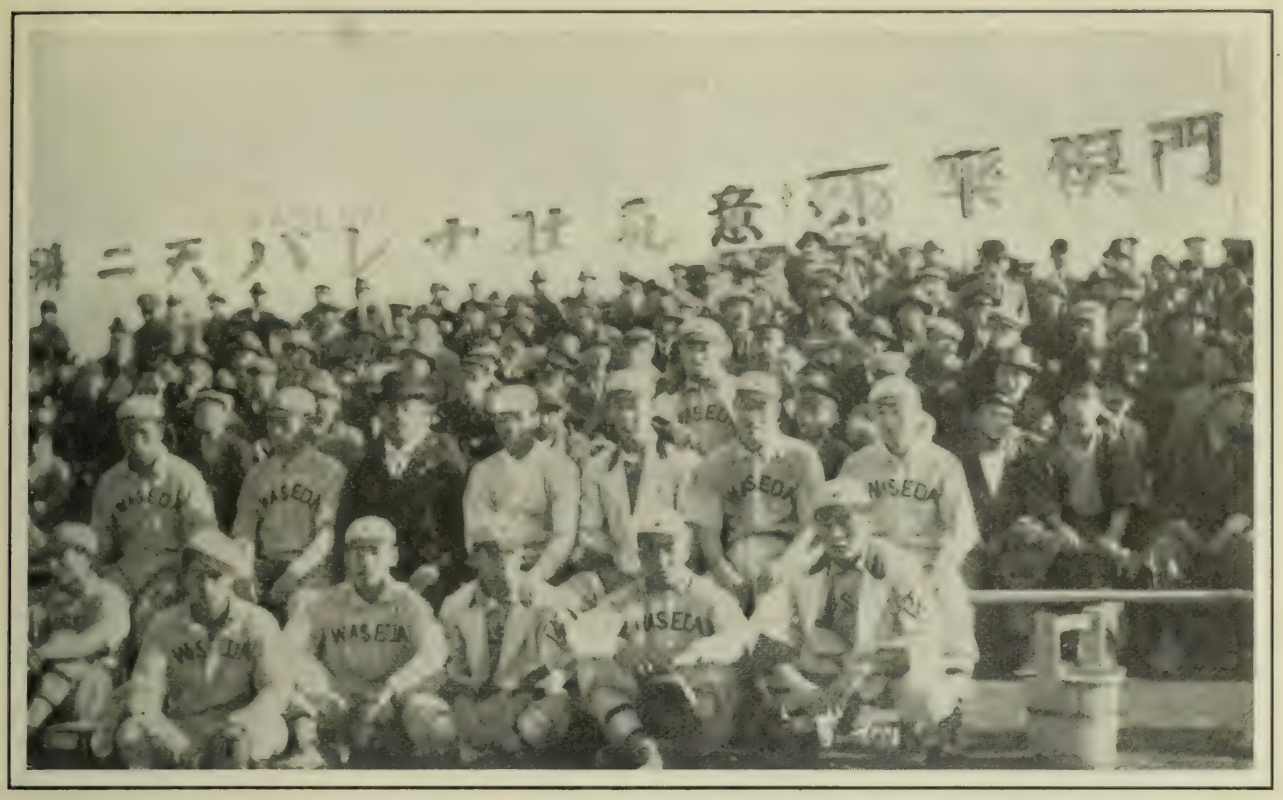
When the time for the game to commence arrived the captain of the Waseda team insisted on our taking the choice of innings, a privilege always assumed by the home team in America. The first man up for Waseda drove a clean hit to the outfield, and to our amazement, as we had expected absolute quiet, the whole crowd rose as one man and yelled till they were hoarse. From then on the crowd behaved exactly as a

crowd at home would, yelling and cheering continuously. The students also had an organized rooting section, led by cheer leaders. Once the noise commenced we felt natural. The odd surroundings faded out of our minds, and we were playing baseball, not some queer Japanese game.

That first game ended 9 to 2 in our favor. This, I think, was somewhat of a surprise to the Japanese as they had confidently expected to beat us. Our next game was with Keio, on whom the Japanese now pinned their hopes, but in vain, as we downed them 3 to 2 in a hard-fought contest. Even then they expected to take the series from us, and they fought like demons for every game, never giving up till the last man was out. Two of the subsequent games took ten innings to decide, but we made a clean sweep of the entire series, taking the seven games played in Tokio and the three played later in Osaka.

The games, while exceedingly hard fought, were characterized by friendliness between the players, by clean play, and by ready acceptance of the umpire's decisions on both sides. Only once did we question a decision and that was due to a misunderstanding by both parties. As a result of accepting decisions without dispute we were highly praised by the Japanese papers, and applauded by the spectators. But really we deserved little praise, as the umpiring, which was done by ex-members of the teams we played, was excellent, and absolutely impartial thruout. The spectators were also remarkably impartial. Of course they wanted very much to see their own teams win, but they always applauded good plays on our part. The gentlemanly conduct and true sportsmanship of the spectators, and of the players, made a strong impression on us. After every game they lined up along the streets leading from the field to cheer us as we drove away, and the banzais (Japanese hurrahs) were just as hearty after the seventh and last game in Tokio as they were after our first victory.

Before passing on it is perhaps well to compare the Japanese and American college teams. I think that the larger and better college teams at home, taken all in all, are perhaps slightly superior to the best Japanese team which we encountered. At the same time, I think we were fortunate to capture ten straight games as we did, for we are not really that much superior to them. To be sure the Japanese are somewhat handicapped in stature. But as in everything that they undertake, they have made a study of the game and have developed the features to which they are best suited. They cannot bat with the force that Americans do, and we were able to play our outfield in close and cut off many drives that at home would go as hits. They stand up to the plate well, are good waiters and excellent bunters. Their throwing is weaker than one encounters among good teams at home. We were able to score several times from third on a rather short fly to the outfield, on which we would hardly have dared to run against an American outfielder. Nor was the pitching particularly speedy. The Japanese have attempted to over-



THE WATER-BOY AT TOKIO.

come this by pitching many more curved balls than an American would, and it was rarely that they would risk a straight ball against us. Their work in the field was brilliant rather than steady. They made a number of sensational plays, but at the same time they missed some easy chances. In base running they are somewhat handicapped and somewhat favored by their size. They are not as fast runners as Americans, but are good in sliding into a base, and are more difficult to tag because smaller. They know all the tricks of the game and use them continually, so that we had constantly to be on the lookout. But, as I have already said, they are not the equal of a good American college team. The records show that we outplayed them in every department of the game. Our fielding average was slightly better than theirs and our batting and base running was markedly better in every game, both at Tokio and later at Osaka.

Our trip to Osaka, where we played only three games, was the direct result of the very wide interest that was taken in the international series, as it was everywhere spoken of in Japan. It was arranged that after a twenty-six day stay in Tokio our team and the Waseda team should be taken down to Osaka, 250 miles south of Tokio, as guests of the *Mainichi Shimbun,* a leading newspaper of Japan, to play three more games there, in order that the people of that vicinity might witness some of the international contests. Our long stay in Tokio had been made one unending round of pleasure thru numerous attentions and entertainments, among which were receptions in our honor by American Ambassador O'Brien, and by Count Okuma, ex-Minister of Japanese Foreign Affairs; dinners and banquets given us by Mr. Ishii, present Vice Minister of Foreign Affairs, and by the members of the teams and the alumni of Waseda and Keio; and dances and theater parties. After this pleasant stay we departed, together with the Waseda team, in a special car for Osaka. By this time we thought that we had seen the utmost of Japanese hospitality and expected no more demonstrations. But to our amazement we were greeted at the principal stations en route by considerable crowds and by brass bands, and when we finally reached Osaka after dark we found the whole station and the streets surrounding it jammed full with a monster crowd all anxious to see us and bid us welcome to their city. We were hurried into waiting flag-draped

WASEDA ROOTERS MARCHING ON THE FIELD (TOKIO).

THE WASEDA TEAM (TOKIO).

jinrikishas and escorted thru town to our hotel by 1,500 students of Osaka high schools. Each man carried a lighted Japanese lantern on a long pole, and on each lantern was inscribed "Welcome Chicago." The Mayor of Osaka opened the first game with an address of welcome, and then pitched the first ball to the batter in true American style. After each of the games we were presented with floral pieces by different schools and organizations of the city. Whole schools attended the games in bodies. School would be suspended for the day and the students would march to the field. Some of them tramped as much as thirty miles to reach the field, and we were told that individuals had come as far as 200 miles by train just to see us play. It is impossible to tell how many people saw the games, but it was estimated that about 30,000 stood thru each contest. Many of these walked out and back, as the one car line reaching the field could not even pretend to handle such unprecedented traffic.

We played only three games here in a week. The intervening time was occupied in sightseeing in Osaka and in the neighboring cities of Nara, Kyoto and Kobe. At each city we were welcomed by the Mayor, and at each temples, forts, and castles, which are usually closed to the public, were opened for our visit. As I have said before, every one seemed to consider us as guests of the nation, and everywhere individuals put themselves out to make us enjoy our stay in the "Flowery Kingdom" to the utmost, and to show us that a true feeling of friendliness existed for us as representatives of the United States.

After such manifestations of friendship and good will, and after the highly pleasant times that we enjoyed during every day of our stay in Japan, one may be sure that it was with a real feeling of regret that we finally had to part with the many friends we had made there. And as we steamed out of Kobe harbor, leaving behind us a pursuing launch filled with the Waseda team, newspaper representatives, and a band playing "Auld Lang Syne," we could but feel that to some extent at least we had come to know the Japanese students, and that they had come to know us, and that we had also done at least a little to secure a better understanding and a stronger bond of friendship between their nation and ours.

But altho our invasion of Japan was at an end, our trip was by no means finished. The Americans residing in Manila, upon hearing that we were to tour Japan, had invited us to travel 2,500 miles additional and play American and native teams in the Philippines. Our vacation time allowed us to do this. So instead of heading homeward from Japan we turned southward toward Manila, stopping en route at Shanghai and Hong Kong; and, returning, we went up the river from Hong Kong to Canton.

We finally reached Manila after a rather tempestuous voyage, during which most of the party lost more than their love for ocean travel. Six games were to be played here in a week. So it was necessary to play the very next day after our arrival. We were in poor condition for a hard contest and lost to the championship team of the islands 4 to 0. This was the first and only game we lost in the Orient, and two days later we won from the same team 4 to 1. Rain made it impossible to play more than four out of the six scheduled games. Three of these were with American teams and one with a picked Filipino team. The Filipinos played well in the field, but like the Japanese were weak at batting and pitching, so that we had little difficulty in winning from them.

In Manila as in Japan, we had been most royally treated, tho in a different way. Here we were among our own people once more, and we were made to feel this fact most strongly by being taken right into American homes. The team was divided up and the different members entertained by various residents. All of the clubs of the city sent us visitors' cards and everywhere we were welcomed in hearty American fashion. It was with regret, strangely mixed with pleasure, that we once more turned homeward. We had enjoyed a trip without parallel in college annals. We had seen Japan pretty thoroly, a little of China and a little of the Philippines. Others might make the same trip as individuals, but more than half the pleasures that we enjoyed would be missed entirely. We had enjoyed many strange experiences; had been entertained most hospitably; had seen many new sights, and had enjoyed our trip to the utmost; and yet it was with feelings of satisfaction that most of the men found themselves on the last leg of the 18,000-mile journey and their faces turned homeward once more.

CHICAGO, ILL.

THE CHICAGO PLAYERS AND THEIR SPECIAL CAR (OSAKA).

Our Consumption of Intoxicants

THE official figures for the consumption of alcoholic beverages in this country show that the per capita consumption of spirits fell from 2.52 gallons in 1840 to 1.37 gallons in 1909. Since the drinking of spirits is almost entirely confined to whisky, rum, gin and brandy, it is apparent that the consumption of the liquors which contain the largest proportion of alcohol has been reduced about half. If the figures for the closing decades of the eighteenth and the early decades of the nineteenth centuries were available they would show that there was even more "hard drinking" at this early period.

The consumption of wine has more than doubled from 1840 to 1909, increasing from .29 to .70 gallons. A large part of this increase is due to the consumption of native wines.

When we consider the per capita consumption of beer and ale, the greatest change is apparent. This has increased from 1.36 gallons in 1840 to 19.97 gallons in 1909. To how great an extent this change is due to the German immigration, which first came to this country in large numbers about 1848, is, of course, problematical. Many of the wine drinking races, like the Italians, after a brief residence in this country, become consumers of beer.

Altho there has been a great increase in the total consumption of intoxicants during the period 1840 to 1909, there has been a change from those drinks containing a high percentage of alcohol to those containing a low percentage—and this is the one cause for encouragement.

WILLIAM B. BAILEY,
Assistant Professor of Political Economy in Yale University.

The Insurgent Movement in Canada

BY EDWARD PORRITT

Author of "Sixty Years of Protection in Canada," Etc.

DOMINION politics are becoming interesting at Ottawa, and even more so in the prairie Provinces; for at no time since confederation in 1867 has there been more combustible political material in Canada than since the uprising of the West against the tariff, the railway companies and the terminal elevator interests in the summer of 1910. Two sets of circumstances account for the accumulation of trouble that is now breaking over the Laurier Government. Laurier is now revealed as a Liberal of democratic professions, who since he came into power in 1896 has abandoned all concern for democracy; and the New Feudalism, much strengthened in its intrenchments by the Laurier Government, has been overplaying the game, with the result that its special privileges were never in greater jeopardy than they will be between now and the general election, whether this be in 1911 or 1912. It has taken a long time for Canada to realize just what kind of a politician Laurier developed into as soon as he came into office fourteen years ago—an amazingly long time in view of the fact that the Parliamentary franchise is quite wide, and that general elections come about once in every four years. But it is not difficult to see why the Government, nominally Liberal, has been tolerated since 1896. To begin with, there has been no Opposition in the House of Commons that has counted for anything, or that has had any traditions or policies better than those of the so-called Liberals. Party names in Dominion politics, as Goldwin Smith often pointed out, ceased to have any meaning or significance after 1896. Since then they have been merely labels —one attached to the party in power, and the other to the party in opposition, neither party being identified with any political causes or principles of the least value to the people of Canada.

Laurier's earlier career accounts in a great measure for the halo that encircled his head until the general election of 1908, and that served to hide his deficiencies from his former followers. From 1871 to the downfall of the Conservatives in 1896 he posed with success as a democrat. While he was in opposition he was at war with the special privileges bestowed on the manufacturing interests by the national policy of Macdonald and the Conservatives; and like all Liberals of the period from 1879 to 1896, he opposed the jobbery of the Macdonald administration, and also the largesse and special privileges that were bestowed in those days on the Canadian Pacific and on a few other railway companies.

The Canadian Premier is a commanding figure on the platform or in the House of Commons. He looks the leader from head to foot, and he has always made the most of the physical advantages which gave him the chance of posing as a statesman. He talks well on the surface of things, and can get down a little if he has been well primed. It was these characteristics that made it easy for Laurier to slip into the leadership of the Liberal party in the House of Commons when Edward Blake retired in 1887; and it was his reiterated professions of democracy that made reformers and radicals all over Canada hope for much when the Liberals, with Laurier as leader, came into power in 1896. The Liberals had been continuously out of power since 1878; and between 1878 and 1896, with the Conservatives easily in control of Parliament, much corruption and many abuses had become well established at Ottawa and in all the wide area of Dominion politics.

The tariff from 1879 to 1896 had been arranged at red parlor conferences in Toronto on the basis of so much protection for so much campaign contribution. There was no secret about these red parlor conferences. Goldwin Smith wrote about them as he did about any other extra-constitutional development in Can-

ada. The promoters of the Canadian Pacific Railway got anything they suggested in the way of subsidies, land grants and tax exemptions. The civil service at Ottawa and everywhere else in Canada where it was under the Dominion Government was exclusively a preserve for adherents of the Tory Government. The Senate was loaded down with Tory politicians whose only claim for a seat in the Upper House of the Dominion Parliament was that they needed an easy and secure job which carried a salary. The daily newspaper press which supported the Tory Government was subsidized by means of Government advertising and printing; and expenditures by the Dominion Government were increasing at a rate that was viewed with exceeding alarm by Laurier and his colleagues of the Liberal Opposition.

These were the conditions that existed when Laurier came into power in 1896. Many reforms were indeed long overdue; and in 1896 Laurier as a reformer had a greater opportunity than any Prime Minister in England or in any of the British oversea Dominions. Earl Grey, who became Premier in 1830, is the only statesman in the British Empire who was confronted with an opportunity for service greater than that offered to Laurier in 1896. In some respects Laurier's opportunity was greater even than that of the Whig statesman who remodeled the medieval system of Parliamentary representation that prevailed in England until 1832. Laurier in 1896 was directly responsible to the democracy of Canada—a responsibility much greater than that of Earl Grey to the then unenfranchised middle and working classes of England; for it was the dem ocracy of Canada that had taken Laurier at his word—believed in him when he was the leader of the Liberal opposition and when he pledged and repledged himself and his party to much needed reforms—and gave him his majority in the House of Commons.

In opposition and at long distance, Laurier seemed like a statesman. Just as soon, however, as he came into power it developed that he was only a politician; and it is because he has been only a politician during these last fourteen years that he is in for so much trouble this winter—trouble that will become increasingly threatening to his Government between the end of the Parliamentary session of 1910-11 and the next general election.

The first thing that Laurier did when he came into power in 1896 was to carry his government and the official Liberal party bodily and completely over to the New Feudalism. This was in fulfilment of a bargain with the protected manufacturers of Toronto made on the eve of the general election at which the Liberals were returned to power. In opposition Laurier denounced protection in vehement language. At Winnipeg in September, 1894, he characterized the national policy of the Conservatives as slavery for the people of Canada. In 1897 Laurier adopted to the last detail the policy he had thus denounced. He has extended this policy in almost a score of new directions since 1897—made it more burdensome than it was from 1879 to 1896; and in his last public utterances he insisted that the men who benefit from this extended national policy are in possession of "vested interests" which must be adequately safeguarded before any tariff concessions can be made to the United States to secure a treaty of reciprocity.

The Senate at Ottawa today is as it was from 1878 to 1896, when the Tories were in power. It is loaded down again with heelers or men who have made campaign contributions, only in 1910 these men are Liberals—or at least described as Liberals—not Tories, as was the case in the days of Macdonald. About one-half of the newspaper press in the large cities in 1910 is as subserviently tied to the Government; only today it is Liberal and not Tory daily newspapers that are the recipients of Government largesse, and that declare, in season and out of season, that there should be a special day of thanksgiving for the genius of statesmanship bestowed on the Dominion since the Tory Government went out of power fourteen years ago.

The Dominion Government can do more than any other government in the English-speaking world for a newspaper press that supports it. The Laurier Government has been able to do more

for the press than any other Government ever in existence at Ottawa. Government printing and advertising, tariff and bounty largesse, railway subsidies, seats in the Cabinet and seats in the Senate, have gone to men who control newspapers; and it is because this subsidized press has been so zealous in its service of the Government that people in Canada have been so long in finding out that Laurier is a politician as distinct from a statesman. Liberals between 1878 and 1896, and in particular at the national convention of 1893, assailed the corruption existing at Ottawa. They assailed this evil with good reason. But there has been no improvement in this respect since Laurier became Premier.

It is chiefly, almost exclusively, thru the organization of farmers in Ontario and grain growers in the prairie Provinces that Laurier has become popularly understood. The New Feudalism, with its control of the grain elevators and of the railways, and with its entrenched position behind the tariff and the combines, has always rested with the greatest weight on the farmers in the wide stretch of country between the Ottawa River and the Rocky Mountains. About 1900 the grain growers of the West realized where nearly all their economic troubles originated, and to whom they were compelled to pay tribute. Organization followed daylight. Since then organization has become so complete that there are now six distinct but federated associations of farmers in Alberta, Saskatchewan, Manitoba and Ontario, served by a newspaper press which they themselves control, and which cannot be bought by the Government or made subservient to either of the political parties. It was this free press that first enlightened farmers in the four Provinces, and it was chiefly thru the instrumentality of this press that the revolt of the West against the New Feudalism broke out when Laurier was in the prairie Provinces in July and August last.

On this tour of the Premier there was some astonishingly plain speaking. Laurier's speech in Winnipeg in 1894 and all the pledges of the Liberals before 1896 were recalled and compared with the performance of the Laurier government; and this winter 600 farmers from the Western Provinces came to Ottawa to remind Laurier again of his pledges and his lack of performance, and to reach an understanding with him as to what he intends to do to curb the New Feudalism—to curb the railways in the West, the elevator men at the Lake terminals, and to bring under control the combines and mergers that of recent years have been working their tariff privileges to the last half cent.

These troubles of Laurier's arise out of his legislation since 1896 for the aggrandisement of the New Feudalism. But this winter Laurier is in trouble on another count. At the 1909-10 session of Parliament in antagonism to any spirit of democracy, he committed Canada to the buying or building of what has since come to be known as Laurier's Navy. It was urged that this tremendous new departure was one to which the Dominion should not be committed until the electorate had been consulted. But with an election three years off, Laurier is indifferent to the electorate. On the navy question he went his own way; and his two second-hand cruisers—one at Halifax, the other at Esquimalt—are now of the Canadian Royal Navy, and available for the protection of the Dominion's seagoing mercantile marine, which consists of two small vessels of the Micmac Line, with Pictou, Nova Scotia, as their home port, but which are generally in service as tramp steamers in any other part of the globe than Canada. The Government press endorsed the navy; and Laurier concluded that the Dominion was with him. At the end of October, however, a by-election in Quebec was fought solely on the navy question. The seat had been held by a Liberal. Laurier put up a Government candidate. Bourassa, the Nationalist leader in Quebec, nominated an anti-navy candidate. Bourassa's nominee is now of the House of Commons, and Bourassa is ready and eager to fight every by-election in Quebec on the navy question.

Here, as in the prairie Provinces and in Ontario, Laurier's troubles are due to his persistent disregard of democracy. He has done more than any other political leader in any English-speaking country since the days of the younger Pitt

to set back democracy and to frustrate its opportunities. Laurier has imagined that with the privileged classes of the New Feudalism on his side he could flout democracy. But the New Feudalism has not been true to Laurier. Like the Old Feudalism in England, and the New Feudalism in this country, it has overplayed the game. It has made itself too burdensome to the common people of Canada, and particularly to the farmers of the three grain growing Provinces. The railway companies, the grain and elevator interests, and the protected manufacturers and the combines have acted as tho there could be only one harvest season for them. They have snatched for the last handful heedless of the trouble they were creating for the politicians at Ottawa. The West became organized and articulation followed. Then came revolt; and it would seem that by the revolt of the West Canada is facing a political movement more pregnant with results for democracy in the Dominion than any political uprising since the rebellions in the Provinces of Quebec and Ontario in 1837.

HARTFORD, CONN.

The Seven Tourneys of Sir Marblebones

BY HERMANN HAGEDORN

SIR MARBLEBONES, with helmet knocked awry,
Blade broken, dented armor and hurt shins,
Home from the tournament the seventh time
Defeated rode, a gourmand of the dust,
Yet of the anger of pricked glory free.
His brow was bloody and his back was sore,
And somewhat hazy were his large, round eyes—
Thus great Sir Marblebones the seventh time
Rode from the tourney, chuckling as he rode.

"For shame!" the gudewife cried. "Ye freeze my speech!
I blush before the dames whose lords are *men*
For such a spouse who now the seventh time
Crawls home defeated to my bower for balm!"
Sir Marblebones spoke not, and then he spoke.
"A little liniment, a little flax,
A little supper and a little wine,
Bring, gentle wife!" And she with scornful eyes
Brought, and flung down the platters and sat dumb,
The while he supped; but smiling—with the star
Of vision lighted in each eye—he spoke:
"'Tis wondrous fine to fall before the strong.
Seven times thus have I fallen, and my blood
Throbs at the memory of my grand defeats.
Cheap triumph might I gain of him and him,
Cheap armor and a scanty wreath of green
And ladies' favor and a fop's applause.
But I have courted drubbings and the dust,
Matched me with Roland and with Charlemagne,
And, mark!—the first day like a log I fell,
The second not so log-like; and the third,
Faith, Charlemagne cried out, 'He has an arm!'
The fourth I learnt from Oliver his trick
Of swift disarming, and from Ganelon,
The fifth, his crafty play of feint on feint
Ere the annihilating blow opes wide
The shivering casque. From Turpin next I learnt
His habit of large faith and little fear.
'S nails! How it leaps like lightning down the reins
And makes of man and horse one thing of flame!
Full well I fought that day, full glad I fell.
And now the seventh time from the tournament
I ride defeated, struck of Roland's blade
In open combat, hip and thigh struck down
In the sight of all. Seven times, seven times struck down!
But mark! Today in Roland's deathless eyes
I read great Roland's secret! Peerless he
Whose will is God's will and whose dream is God's!
Montjoy! Tomorrow in the lists I ride
Once more against great Charlemagne. I think—
Dame, wipe the anger from your cheeks and bring
Blades, blades, and shining armor!—for I think
There is yet one thing grander than defeat
By Roland, Oliver and Charlemagne!
Dame, bring me blades to choose from and a shield!"

CAMBRIDGE, MASS.

Mother

BY LOUISE DUNHAM GOLDSBERRY

TO describe my mother I should need a pencil that could paint the azure of her eyes, the gold in the brown of her hair, the delicate fairness of her cheeks, and the sweetness of one like no other woman I have ever known.

Like that, I think, young Mary must have been.

And often I have tried in verse and prose to put my mother to the dear music of my thought of her; and always I fail. I think I shall never be able to express her grace, her quenchless courage, her jewel-beauty. And so slight and slender she was that I now marvel at her flame-soul which poverty cannot put out nor heart-break scar.

HER STORY.

I have wondered why mother sometimes will not let me kiss her, and then again will not suffer me out of her sight. Father is always precious—lovely old father! I'd like to marry a man just like father, who'd spoil my little babies as father spoils me. But I shall never marry. A father is ALL I want; with this dear old home and mother's rose gardens to live in. Go far away with a strange young man? No, this girl likes only father.

And father adores me, too. We make a beautiful couple. But I do not see why I did not grow tall, like father. He laughs when I ask him why he has such a small girl instead of a queenly one, and he says he'd not exchange his small girl for the tallest queen ever born. All the girls make love to him; and the boys to me. And I do like people to like me; especially babies. All the babies in this end of town are my particular own and I steal and borrow them in most flagrant fashion.

Little Mac has found a place in the fence where a paling is off and he comes there, gets half-way thru, and sticks fast. Then I hear him: "Oh, do *tum*," he calls; "do tum *twit*" Then when I rescue him he goes through my pockets and eats my peppermints and I say: "What made you cry, Mac?" He wets a finger in that big drop on his cheek, and meditates. Then: "I *fot* a bear'd det me. I did surely 'mos' hear *a* bear, Lady Jane!"

"You surely are a humbug," I say severely. "The bears are five hundred miles away," I add.

"Well," he answers, sucking mints, "my feelin's *was* so scared!"

Mac calls me "Lady Jane." Kenneth calls me "L-a-d-y," in a slow little Southern drawl. Ruth calls me "My Lady." And I think it's a dear name.

I go down to the gate about the time I think they are dressed in evening frocks, and presently a head comes bobbing from somewhere, and then another; and soon I have all my "honey-bees," as father calls them, and we take walks up and down. And it's amazing what wise things wee ones can say that grown-ups like me could never think of thinking. I'll be seventeen next month and I'm not half as wise as Mac. If babies come straight from a baby soul-nursery in heaven I suppose these are the things they heard said there, and they require some years down here before they learn to forget the heavenliness.

Mother gives beautiful parties. She gave one of them last night, when I was seventeen. I am seventeen still, but it seems as if I was seventeen only at that party, last night. Mother says I am a woman now. Think of it! Me—a woman! I'd never believe it. Father doesn't believe it, either. When I told him he just opened his arms and I went right into them, and he rocked me and talked secrets just the same as he's always done, about what a gay little girl mother was, and how he used to swing on her gate and make love to her across it, and what a dear daughter he has. (That's me.) And then, when I had grown sure I was only just five or six years old, he said, "Now don't tell mother—but *we* know you'll never be anything but father's little, little, little girl!"

My party was really delicious. All

over the grounds were hung paper lanterns, and as there was no moon, the stars overhead and the lanterns that every breeze tilted made a fairyland. I had all the town babies in, just at dusk, and they were the gayest ever. We played Forty Thieves and Ugly Duckling and a lot of other little old stories. Then I sent them home. But Mac came back, later.

"I didn't *not* wun away, Lady Jane," he explained; "I des walked. An' I tum to tiss you some more. I fot you'd have your feelin's 'bused 'f I didn't tiss you some more an' I like to tiss you, Lady Jane."

Wasn't that dear of the baby thing?

Mother dressed me. I begged to wear my hair down, but she said: "No; ladies wear their hair up." Well, you need not be all-the-way-grown-up, to be ladies, I suppose. Still I certainly like the curls best. So does father. When I went downstairs to show him his dear daughter he just looked puzzled; turned me 'round and turned me face about again; and studied me. Finally he saw. And his eyes crinkled. "Well," he said, over his spectacles, "mother really has done you up in woman-style, hasn't she? I suppose you—do you *like* it so?

"No, daddy, I don't," I wailed. "I think it's horrid. But mother said"—I choked. How could I say what mother said!

"Mother said," nodded father.

I took off his spectacles and kissed his eyes, and as he pulled out my hairpins, one by one, and the curls tumbled, I told him: "She really did say it, father. She says I'll probably be married before my next birthday, and I *must* wear it up!"

"Married," mused father. "Mother said 'married,' did she? That's a big word for mother to pin all your curls up with," said father.

Mother came down just then, very stately, with a little angry look in her eyes, too!

"I did Jane's hair myself. Why did you take it down?"

"Well," said father, "I am not quite ready to turn my daughter into a woman."

"I am," said mother, quickly, sharply. "You are not his daughter; not my daughter."

"Oh, yes, I am," I cried back. "I *have* to be father's daughter."

Father put me in the big rocker and led mother to the door and shut it. With mother outside.

Then he picked me up and sat down, hugging me close.

"Do you love me, daughter?"

I kissed him.

"You *know* I love you, daughter?"

I kissed him.

"Once there was a poor lady who wanted her house filled with children. And out in the graveyard was a row of five little graves. Not a babe that came lived past its second birthday. One day in a strange city she saw a two-year-old baby girl. She loved it, from the first look of its eyes; eyes blue as your eyes, daughter. And she said to her husband: 'I want that child—I'll *steal* it, if you do not get it for me!' That poor lady! Only a few weeks before they had put the last little grave in that row of graves —and there would never come another child now to her. This little stranger child with eyes like yours was motherless, and when the childless man and his wife left that city the child had been given to them by law. That poor lady did not let it go from her arms day or night on the long journey home and she hid it in her bosom at night and whispered over it and crooned over it. And the man knew she had barely walked the borderland of madness. That man, that childless man, adored the little child. She —she always loved him above all others —did she not, daughter? And if she had been of his heart's blood he could not have loved her more preciously, more utterly—*could he, daughter?*"

And all the while father's arms were holding me close and father's cheek softly rubbed my cheek as he talked.

And I understood.

"But mother loves me—*some?*" I cried, miserably.

"Mother has always loved you dearly, but her poor heart has never got very far away from those five little graves. She still weeps on rainy nights; still mourns, uncomforted, for her babes."

"I understand," I whispered on father's lips; "I do understand."

"And that's all," said father. "Only I think she thinks—maybe—your little children may bring peace to her child-

hungering arms—maybe—and that is why she puts up these curls."

I clutched him. I strangled his head in my arms. "Oh, father! father! Don't let her marry me," I cried. "I don't think I'll ever be grown up enough to marry; truly, truly, father, I don't!"

After my party was all over, mother came into my room, into my bed, and I took her head into my arms and she wept and wept. And I wept. And she said I'd always loved father best and she wanted me to love father best. "But, oh, Jane, Jane, my beautiful little dead children that I bore and gloried in and buried in the dark ground!"

And I wore my curls piled high on my head after that night. . . . I don't know that father's wealth was truly the reason, but, it seemed the fashion as soon as I did up my curls for the young men to propose. Father said—I always told him every word—father said: "Is it very afflicting?" and I said: "Not very; but Mac is jealous. Mac was behind a rosebush, and he descended upon that young man in a fury and answered him for me.'

"'No!' he stormed. 'No! She won't not *a*-tall! Lady Jane is doin' to marry me when we're drowed up!'

"'Yes,' I murmured. 'I've promised Mac to marry him and help keep a candy shop.'

"Then, as Mac pulled me toward the house, I said: 'Thank you, Dr. Gregory.' I hadn't time to say more. Mac was very angry."

Father approves of Mac. A nice, steady lover, "goin' on" four, is a great pleasure to father, and he has promised to stock the candy shop and to patronize no other.

And he hoped Dr. Gregory would accept Mac's answer as final.

. . . . . .

This has been a beautiful summer. Mother has been so dear. She said that, as I was the prettiest girl in town, I should have the prettiest clothes. *Think* of it! Mother to say that when I have been raised on "Handsome is what handsome does." I told father, and he said: "Mother's caught it pretty bad, too."

And mother gave me some jewels.

I wonder how God happened to think of making jewels.

And her own jeweled comb, too; very tall, with the stones all in front. Father caught me before a mirror quite shamelessly admiring myself beneath the glitter of the white diamonds, with candles burning on the chimneypiece to show them off.

"Mother says, 'Handsome is,'" he said.

"Mother says, 'The prettiest girl in town,'" I said.

And I said: "Oh, father! Why didn't you wait for me! We do make so beautiful a couple. You with that lovely white hair; and mother has brought me up *so* nicely!"

To be sure, Dr. Gregory has been always coming over to all our parties and picnics and I think his patients must feel neglected.

Mother likes Dr. Gregory. She says he is brilliant. And a girl would be indeed proud of so brilliant a husband. But I feel that, if ever I have a husband, I must love him.

Mother says I am to marry Dr. Gregory. Mother said to father: "She has flirted long enough. Mrs. Gray has refused a very nice young man's addresses for Alice, because, as she said, 'Alice should not take Jane's leavings.' I believe the child has refused every eligible youth in town this summer."

"Sensible child," murmured father.

"Well, she will marry Dr. Gregory," said mother.

I said "No"; always "No." But mother told him "Yes." And he put a gorgeous diamond on my finger, and mother married me to him.

Mac and I wept together. Mac promised to grow up very fast and in quite an awful voice said:

"N' I'm doin' to kill him all dead."

Yesterday was my wedding day.

. . . . . .

I wrote that two years ago. I did not know these pages had escaped the fire I made of dolls and childhood books and childhood toys. Everything I could find I burned, in a fierce little bonfire out in the meadow lot. Old Hardy and I; old black Hardy and I. Old Hardy whimpered all during the wedding ceremony: *"Poor little Miss Jane. Poor little Miss Jane."*

And I found it tonight.

I am hungry tonight. I have eaten bread and molasses and bread and molasses till I can eat it no longer. It's strange mother never remembered to find out if any bad habits were in hiding under his brilliancy. If I had loved him, I should long ago have died. But I have frozen instead. Must a woman take drunken kisses simply because a man has married her? I fled to the stable loft that night when he came in at midnight —with drunken kisses. And he was my husband—*and it was night.*

I slept out in the stable loft last night. I felt so awed, so frightened, so *precious.*

It was I—Jane—and hid within I carried a little child—wherever I went it would go. Not for one second could I slip away and be alone with just myself. It was there—hidden under my heart; and I hid from the father of it! How frightened I am, to think I can't for one little minute get away from that little baby.

Suppose he should come out here some night? Suppose he should come up the ladder into the dark, hunting me?

Shall I tell him?

I went to sleep, thinking that thought, and I wakened hearing him calling out of the darkness: *"Jane—Jane—Jane."* A sober man's voice, and a gladness leaped and quivered in me that it was so. And I was not afraid. But I could not answer.

He came up the ladder. The still, starry sky showed like a painted picture on a wall in the open high window. The clover hay smelled sweet. And the darkness held no fear.

He looked so tall; *and he was sober.* He stooped over me where I lay—*I and mine*—and his lips found me; his tears were on my face. *And the darkness held no fear!* "Jane," he whispered; *"Jane"* —and I have been crazed with fright!— *"Jane!"*

When consciousness came back arms tenderer than father's arms held me; kisses sweeter than father's kisses were on my mouth. And he whispered: "I love you, I love you! Jane, I love you! You hid from me—my God!" he sobbed, "you hid from me—you and your baby. —Oh, Jane, Jane, I'll be good; I'll be good!"

. . . . . .

That was all. The little book was locked, with the key left in the lock. And I had found it—after I had buried my beautiful mother. Read it in bewildered amaze. My mother was utterly in love with her brilliant husband and he worshiped her two little feet. To think their married life began in so sore trouble, and that it was I, her only child, who slept with her that night in the clover hay!

WASHINGTON, D. C.

The Shark

BY THEODORE ROBERTS

A SHADOW, deep in the blue astern;
A flicker of brown; a gliding fin
Shifting, but ever keeping the course—
Quiet and keen as sin.

Sometimes close in our wake he swam,
And sometimes far, with a careless air—
But we knew that always his evil eye
Had the schooner in its care.

Thru the doldrums, across the line,
We crawled, and on deck at every turn
The skipper marked, with uneasy smile,
That voyaging fin astern.

All day, all night, day in, day out,
He held to our wake in that lazy sea.
"He's waitin' for more than the galley scraps,"
Said the whiskered mate, to me.

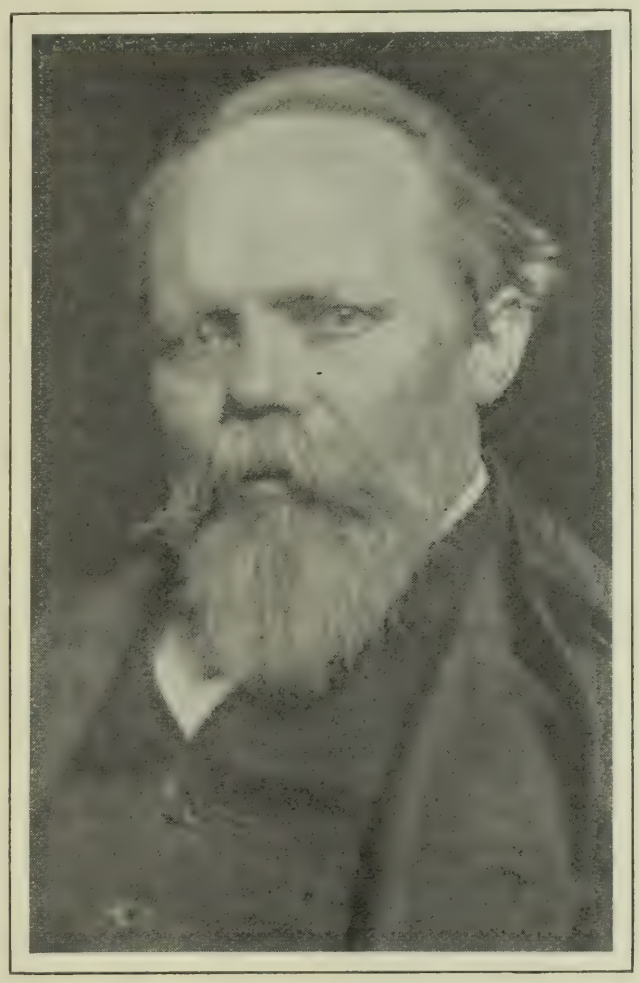
The men aloft looked out and saw
(Where the sinister dorsal tacked and slid)
Th' unhurried lift of a yellow eye
Under a steady lid.

At last we won to a brisker blue,
With waves astern and porpoise ahead—
And the flag of that devilish craft was gone.
"Thank God," the skipper said.

BARBADOS, B. W. I.

THE GOOSE-GIRL (GERALDINE FARRAR) IN "KOENIGSKINDER."

Music, Art and Drama



SOME twenty years ago an American critic wrote an article on the musical situation in Germany in which he remarked: "Who knows but that a quarter of a century hence the most prominent opera composer will be Engelbert Humperdinck?" He chose this name chiefly because of its oddity, for the man who bears it had not yet made his mark as a composer, but was known chiefly as a friend of Wagner, and one of his helpers at the first "Parsifal" festival in Bayreuth. But in 1893 he produced a fairy opera, "Hänsel and Gretel," and woke up the next morning to find himself famous.

Not since the "Freischütz" had a German opera won such a sensational success. Its vogue became as great as that of the three years older "Cavalleria Rusticana," and this popularity was accepted as a welcome proof that the sordid blood-and-thunder realism, or "verism," as it was called, of the young Italians was not the only thing opera-goers were interested in. "Hänsel and Gretel" was a musical setting of one of Grimm's fairy tales; it was intended, primarily, for children, but adults became no less intensely interested in it, because it made them young again and because the music was melodious and dyed in glowing Wagnerian colors.

A single successful opera in these days is enough to make a man rich. Humperdinck might have rested on his laurels, in his villa on the Rhine; but in truly creative minds wealth does not quench ambition and the love of work. He again wrote an opera, "Die Heirat wider Willen," but it was not in his genre, and failed to please. Then he re-

turned to fairyland, writing incidental music to a play called "Königskinder," and this music he subsequently elaborated into an opera. He took more than a decade to do this, and perhaps the score would not be completed yet had not Andreas Dippel urged him on, promising a brilliant performance of the opera at the Metropolitan. Owing to Mr. Dippel's transference to Chicago, it became Mr. Gatti-Casazza's pleasant duty to stage "Königskinder," and this duty he has fulfilled in the most admirable manner, giving the opera a splendidly picturesque setting, a fine cast, and plenty of rehearsals, under Alfred Hertz.

Its première was as brilliant an occasion as that of Puccini's "Girl of the Golden West." In both cases the composer was present and was called out with the singers dozens of times; and after each of the first performances there was a reception in honor of the composer in the foyer of the Metropolitan. Both of these Europeans therefore have occasion to congratulate themselves for giving New York the privilege of witnessing the first productions of their new operas. In no foreign city could a cast have been provided equal to the Metropolitan's, which included Geraldine Farrar, Louise Homer, Herman Jadlowker, Otto Goritz, Albert Reiss, Adamo Didur, not to forget two little girls, Edna Walter and Lotte Engel, who sang and acted the parts of the children charmingly.

PROF. ENGELBERT HUMPERDINCK.

There is much in this opera that will appeal to children, but as a whole it is a fairy-opera for grown-ups rather than for them. Wagner has taught us all to take gods and dragons and other supernatural things seriously; in New England women were burnt as witches not so very long ago, and our cities swarm with soothsayers in whom thousands believe. It is not difficult, therefore, to get into the mood for appreciating the story of Ernst Rosmer (Frau Max Bernstein), of which the central figure is a princess stolen by a witch and seen, as the curtain rises, tending her flock of geese. A king's son, who has wearied of court life, comes along while the witch is in the woods gathering poisonous herbs, kisses the pretty goose-girl and tries to make her elope with him; but the witch's spell makes it impossible for her to follow him. A broom-maker, a woodchopper and a spielmann, or fiddler, now come from the neighboring town of Hellabrunn to ask the witch how they can get a king, and she advises them to choose the person who, at the stroke of twelve on the morrow, first passes thru their town gate. When the gate opens it is the goose-girl whom the astonished eyes of the burghers rest upon; and when the king's son, who is present disguised as a swineherd, proclaims her queen, they angrily drive them both away. Lost in the woods, the royal children arrive, starving, in midwinter, at the witch's hut, where they partake of poisoned bread and die in a last embrace, while the fast-falling snow covers their bodies with a shroud.

Gluck's "Armide," which is one of the season's successes, shows, though it is

133 years old, that "atmosphere" is not so new a thing in music as the partisans of Debussy would have us believe. However, modern composers are more adept in this sort of thing than Gluck was. If the story of "Königskinder" is a clever imitation of a Grimm fairy tale, the music is no less delightfully "atmospheric" in its airs, harmonies, and orchestral colors. It does not, like "Hänsel and Gretel" include any real folk songs, but much of the music has the simplicity, directness and tunefulness of real folk music, and, like that, it comes from the heart and goes to the heart. Wagner once said of Beethoven that in his music everything is melody—all the harmonic parts, and even the rests. The same is true of Wagner himself—and of Humperdinck. His new opera charms at a first hearing, but one needs to hear it repeatedly to realize all the lovely details of its melodious interweaving of harmonic parts and leading motives, of which there are a number, characterizing the personages of the play.

JOHNSON (MR. CARUSO),
The hero of "The Girl of the Golden West."

Public and press were unanimous in applauding Geraldine Farrar's goose-girl as one of the most fascinating and pathetic impersonations, and next to her Mr. Goritz came in for the most cordial praise. "Königskinder" is undoubtedly a popular success, a permanent enrichment of the operatic repertory. Whether the same is true of Puccini's "Girl of the Golden West" is doubtful. It has already drawn four crowded houses and everybody agrees that it is worth seeing. Nobody claims, however, that it is an American opera, as it should have been in view of its libretto, which demands local color emphatically; and most of the judges also agree that from the purely Puccini point of view, it is not equal in musical interest to "Madama Butterfly," "La Bohème" or "Tosca."

Folksongs and Concert Givers

Madame Sembrich's folksong recital gave rise to a violent dispute in the New York press as to whether Stephen Foster's songs can be classed as such. Some of the experts upheld the view of the old historians that a song, to be a true folksong, must be by an unknown author, while others agreed with the leading German lexicographer, Dr. Hugo Riemann, in including in the species other songs that have the characteristics of *Volkslieder*. It is, after all, a mere question of definition; but if we accept the broader definition, then America has, thanks to Stephen Foster, folksongs that no European country can surpass in beauty and emotional depth. Madame Sembrich, who had omitted Foster from her program in New York in deference to the opinion of a critical adviser, sub-

sequently confessed her mistake by putting the "Suwanee River" on her other programs among the folksongs. That is a true folksong if ever there was one. Puccini should have put it in the mouth of the negro minstrel in the first act of "The Girl of the Golden West," instead of the tune of a Zuni Indian sun dance, with which the minstrel is supposed to make the miners weep.

Years ago some of the leading artists at the Metropolitan discovered that they could make even more money by giving song recitals thruout the country than by remaining at that Opera House. Ernestine Schumann-Heink was the first to abandon the opera altogether; Marcella Sembrich and Lillian Nordica followed her example; Johanna Gadski also sings in opera this winter only during half the season. New York's loss is the country's gain.

It does not follow by any means that a Metropolitan reputation will carry a singer successfully across the continent as a concert giver. Some have discovered that to their surprise and grief. The four women just named, however, "made good" in the concert halls at once and have lost none of their following even this season, which is reported a bad one, presumably because of the great number of competitors.

Wagner concerts are much in vogue, and it was at such that Lillian Nordica and Johanna Gadski made their first appearances this season in New York. Both were in full possession of their glorious voices and enchanting art—the adjectives are none too strong.

Maurice Renaud, for four years one of the most popular members of Oscar Hammerstein's opera at the Manhattan, gave his first song recital last week after a stage career of twenty-eight years. It must have seemed strange to him to stand there all alone without the usual stage surroundings, with only a piano to support him in place of the usual orchestra of seventy or eighty players. It was a severe test of his vocal art—a test which not a few opera singers are not equal to; but he came out with flying colors, which, by the way, were all French, with the exception of two Schubert songs and the serenade from Mozart's "Don Giovanni," which he sang by way of contrast to the diabolical serenade of Mephisto from Berlioz's "Damnation of Faust." There were moments when a certain straining and deviation from the pitch indicated that this sterling artist will be fifty next year. But for the most part his voice sounded as fresh and as beautiful as it did a decade ago.

THE SHERIFF.
In the operatic "Girl," the Sheriff—Jack Rance—is sung by Mr. Amato.

American composers have had their innings lately. The Volpe Orchestra puts at least one American piece on each of the programs as a matter of principle, and so far Edgar Stillman Kelley and MacDowell have profited by this. Henry K. Hadley conducted a new symphony of his at one of the Symphony Society's concerts, and the Kneisel Quartet has played a new quartet by Rubin Goldmark, a former pupil of Dr. Dvorak, who once said to him, after playing over one of his pieces: "Now there are two Goldmarks." Rubin Goldmark is a nephew of Carl Goldmark, the composer of "The Queen of Sheba," who, by the

THE HERTER LOOMS, NEW YORK CITY.

way, was once told by a lady who had just been informed who he was, that "that must be a very pleasant position!"

The Herter Looms

The exhibition of tapestries and rugs at the Herter Looms in Fifth avenue emphasizes again the loss of the fine old industries and the recurrent determination in the working nature of man to revive what was once done superbly well.

At the Herter Looms the attempt is made not only to go on with the industry of weaving, which seems to have reached its zenith in the fourteenth and fifteenth centuries, but to improve it, making use of modern progress in the art of design and in the sciences in developing an American art-industry. The technical advantage which the French have is considered a strong factor, and so Mr. Herter has brought over a number of weavers from France, whose fathers and grandfathers and great-grandfathers have woven on the looms all their lives. Therefore it can be truly said there is no lapse between periods and countries in the mechanical perfection of the weaving.

The hand loom used is practically the same sort that has been in use from the most ancient times. The old Hindus and Chinese and Egyptians used the same. The loom is spoken of as improved by the inventions of the fly-shuttle and the use of power in the eighteenth century, but the loom was thereby commercialized, not improved.

We are so accustomed to connect the archaic type of drawing and sentiment with textile art that it will take time or convincing artistic evidence to adjust us to the modern pictorial idea in warp and woof. It happens, too, that the best things of the Herter Looms are those in the flowing, unconstrained, decorative style of the old tapestries. This may be a mere accident. Certain it is that the modern looms can triumph over earlier work in the stability of their dyes. Even the famous scarlet of the fifteenth century Gobelin fades, but a few years ago the French Government sent its chemist, Chevreul, to teach the Gobelin dyers the secret of fast colors, and not the Gobelin dyers alone have profited by his instructions. At the Herter establishment the Gobelin type of loom, which provides for placing the cartoon on the wall where the weaver must turn round to see, while he weaves his drawing in free hand over a mere chalk line, is not used

Instead, the colored, finished cartoon is placed directly under the warp, and all the responsibility the weaver has in reproduction is to match the color with his threads.

The different styles of design which hang in the exhibition studio seem to be a collected exhibition, but, with the exception of a few old pieces, they only point to the variety of effect that can be got from a mind at once scientific, modernly faithful, industrious, learned in the past of the craft, and artistic at all points. The old historical tapestry which has had its worn places restored on the Herter looms, yet looks identically complete, shows that this artistic industry knows its historical business. Nothing is claimed for the American future that we cannot favorably compare with art's accomplished past.

The National Academy

The National Academy of Design, of West Fifth-seventh street, modestly suggests that New York City permit it to erect in Bryant Park, at the Sixth avenue end, "a building which shall fill the block from Fortieth to Forty-second street." A newspaper states that the project commands the support of Park Commissioner Stover.

At first thought, the suggestion is excellent. The academy building would serve to deaden the sound and obscure the sights of the Sixth Avenue "L!" But, on reflection, one demands: Upon what grounds can the academy make such a petition? For the institution is national only in name. The annual exhibition of the Pennsylvania Academy of Fine Arts, in Philadelphia, is in every sense more "national," and, likewise, a more honored and a more interesting occasion than any of the New York institution's. We hold no brief for the so-called "Independents," but it is a fact that seldom has there been organized a more banal show than the recent exhibition in West Fifty-seventh street, and that almost the only canvases to command one's attention are the product of what Mr. Mather calls the "naturalists." Mr. Robert Henri, a member of the Academy, but not altogether in sympathy with academic methods, has pointed out that of three painters awarded medals every one was a member of the jury! He alleges no improper motives, yet the situation is an unhappy one. Nor was our own visit to the Winter Exhibition much more happy, in spite of our interest in the Homers collected there (not precisely novelties), and the Lawsons—notably the "Harlem River at High

PART OF THE HERTER EXHIBITION.

Bridge," with its characteristic greenish hue. True it is that there was a difference this year in the matter of the number of the exhibits. One whole gallery was given up to the sculptors. The 362 pictures hung were only a quarter of those submitted to the jury of selection, but comparatively few even of these were actually worth looking at.

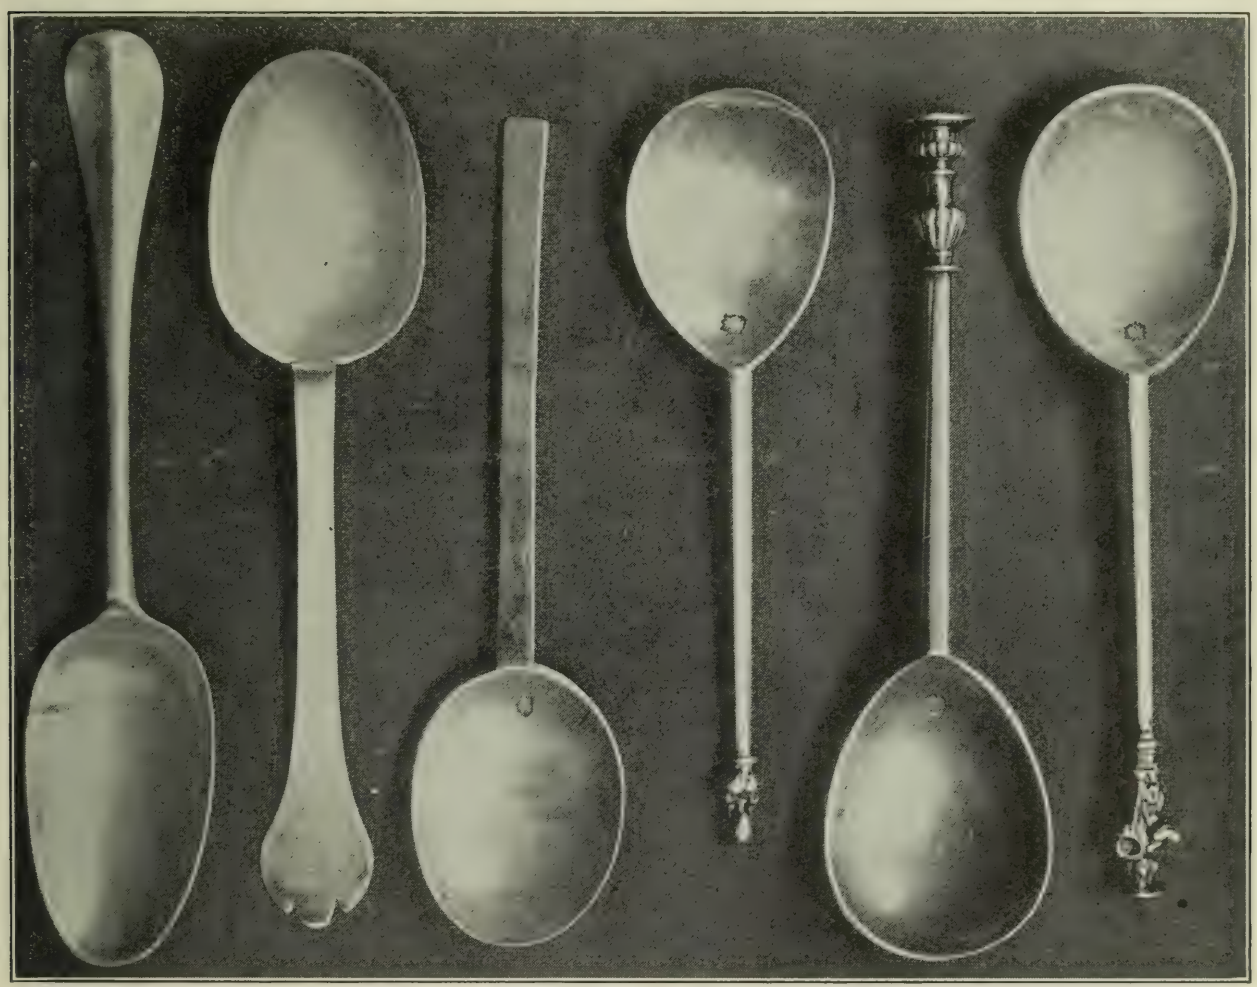
As usual, the figure compositions were few and not interesting. Kenyon Cox showed a cross-eyed baby unable to look at a picture book held for it by a mother with familiarly articulated wrists and elbows. The piercing greenness of the landscape in which the figures were placed probably accounted for the eye disturbance. Mr. Cox's judges gave him the prize for the best figure composition. *They* didn't mind! The really beautiful figure picture there was a quiet little girl holding a cat, called "Two Friends," by J. Alden Weir. John W. Alexander's pleasantly enunciated color brushed into a large canvas this time revealed two sinuous ladies in the sunny rays from a casement occupied with a rag of a pussy on the skirts of one. The younger decorative painter, Louis Vaillant, in his "Sleep of Diana," managed to put a bit of mystery in the color that made for the effect of sleep, though he has not yet been able to get the movement of life into his rather well arranged forms, vegetable or human. Of good portraits there were few. Even the large portrait for Yale of President Dwight, by Mr. Tarbell, was not simply enough treated in the head to carry well from the position that will be necessitated by its size. The landscape by Gardner Symons called "Silence and Fleeting Light," and that by John Carlson called "Druid Oaks," were both good problem pictures as regards technique.

It is almost as difficult to remember good things among the sculptures to which the south gallery was given up as among the paintings. No really distinguished work was there. Possibly Mr. Borglum's "Washington of 1753" would point up into an interesting monumental thing. Fraser's busts of the Vanderbilt children have charm, so has Spicer-Simson's bust of an imaginative and very much alive child, called "The Golden Age." The Alice Freeman Palmer Memorial by Mr. French faces Karl Bitter's unfortunate high relief of President Angell, of the University of Michigan—one cannot quite say effaces. Edward Berg's winsome little figures and the always praiseworthy contributions of Charles Grafly are to be signalized. The gallery where visitors lingered least is the Academy Room. Prizes went as follows: The Carnegie Prize of $500 for the most meritorious oil painting not a portrait, William S. Robinson, A. N. A., "Golden Days"; the Thomas R. Proctor Prize for the best portrait of the exhibition, Douglas Volk, "Marion of Hewnoaks"; the Isidor Memorial Medal for the best figure composition, Kenyon Cox, "Book of Pictures"; the Helen Foster Barnett Prize for the best piece of sculpture, Abestenia St. Leger Eberle, "Windy Doorstep."

To return to the question of the moment: Shall New York City grant the "National" Academy of Design permission to break ground in Bryant Park? What do non-New Yorkers think about it? Certainly the parks were not designed as sites for exhibition galleries. And it seems to us especially daring for the Academy authorities to have made the suggestion before the close of their exhibition on January 8.

Spoons

The spoon has held a delicate position in household art from its earliest times, hovering between an intimate personal tool made by its owner and an artistic implement made by the skilled worker. The decoration has followed motives close to life—family emblems, clan symbols, vocational suggestions, domestic materials. To the spoon, more than to any other household object, a ceremonious and religious touch has been given. But never in all its art-history has decoration weakened its functional details until modern times.



The type of spoon which concerns us most nearly, because it is our immediate racial expression, is, of course, the English, from the fifteenth century down. One can trace our own kind of feeling and thought so clearly in these forms, and so easily find the successive steps of

change to our own prevailing commercial patterns, that one could almost write out a genealogy of this class of utensil. The fifteenth century was our finest period of production, as a modern English people, altho it did not reach the imaginative hight of the Anglo-Saxon period. Also, the first spoon that bears a hall mark is dated 1488.

There is in New York now an exhibition at Crichton's in Fifth avenue which illustrates the best period remarkably well. This historical group is peculiarly instructive because its period is not completely illustrated in the important spoon collection at the Metropolitan Museum, which is made up of fine single examples from all periods. The Crichton collection was assembled by the Rev. Thos. Staniforth about fifty years ago, in England, and includes examples of work as late as the seventeenth century. But we are more interested in the sixteenth century ware, where the life of the times seems to stamp itself, not so much by a literal portrayal of its motives of interest as by the constraint of its spiritual and manneristic temper.

Yet when we pick up the Puritan spoon of 1651 we feel at once the abolition of the church and form, and the desire to be only utilitarian. Mere restricted function remains, even the broad bowl narrows to its point of economy of use. In this attempt of the Puritans to be less than simple they were artistic in spite of themselves; their penurious spirit produced a piece of fine art.

The ribbed head pattern of Queen Anne's period in 1710 is the beginning of the loss of the spoon's traditional beauty. Curiously enough, it is the exact form which connects with the spoon of today. Our commercial patterns are made up of this decoration and of the helter-skelter variety of applied ornament devised in George III's reign. The beaded edge, the raised shell stamp and sunken tracing which we see now on all the spoons of the ten-cent stores were designed at this period in good faith and originality,

SOME SPOONS AT CRICHTON'S

if not in the fine sense of structural meaning and enrichment which distinguished the early makers.

A Season of Dramatic Revivals

IN our issue of December 15 we praised the staging of "The Merry Wives of Windsor" at the New Theater. Unfortunately, the revival did not meet the popular taste and was soon retired. Meantime the production of Maeterlinck's "Blue Bird," which proved unusually successful, was transferred to the Majestic Theater, across Columbus Circle—the home of moving pictures and black-face comedy. While the New Theater Company was touring, finding, in acting repertory, the opportunity to rehearse, Miss Olga Nethersole was received at the New Theater as a visitor, and produced there still another Maeterlinck play, "Mary of Magdala." The piece deserved to fail. It did so unerringly, yet it might have come nearer to sustaining the poet's reputation had the English rendering been less dull, or the acting passable. This version of the Bible story is undeniably commonplace; and never was there the sense of illusion in its acting. The scenic part was indeed beautiful, but Miss Nethersole's theatrical manner is grotesquely out of place in the handling of Maeterlinck's severely simple prose. As an affected courtesan in the first act she was admirable, but as she repented she deteriorated. Since the last act is really the only dramatic one of the play, the effect was quite spoiled, in spite of the excellent management of the crowd. This consisted of the lame, the halt and the blind whom Christ had healed and who are gathered in the house of Joseph of Arimathea on the eve of the crucifixion. When it is proposed to rescue Christ, they all make excuse, and it is not easy to find one who will admit receiving any benefit from him. Even Lazarus proves ungrateful. And while their cowardly quarreling goes on the Saviour passes by the window, stoned and jeered by the crowd in the street. The play has been recently published in English* and may be as well read as seen, for its long speeches, such as the exposition of the stoic philosophy in the first scene, do not make good material for the actor.

After the Magdalene the New Theater welcomed back its own players, whose revival of Wilhelm Meyer-Forster's "Old Heidelberg" can hardly fail to hold its place in the company's repertory. The story of the German Prince whose one escape out of hidebound convention and court etiquet occurs when he attends the university, where he joins a student corps and falls in love with the pretty niece (Miss Jessie Busby) of the picturesquely doddering old innkeeper (William McVay), is at once pathetic and humorous. The most finished performance was that of Ferdinand Gottschalk, who made much of the rôle of valet to His Royal Highness (Frank Gilmore). Mr. Bruning, too, proved once more his talent as a character actor, making the most of "Kellerman," the weary steward of the Prince's student corps.

This was followed at the New Theater with a dramatization of Thackeray's "Vanity Fair," by Robert Hichens and Cosmo Gordon-Lennox. Like all plays from classic novels, this depends for its interest chiefly upon the delight of recognizing in real flesh and blood the characters we have known only on the printed page. It is a succession of familiar episodes in the life of the social climber, Becky Sharp, in seven scenes tastefully staged and excellently played. Notwithstanding the dominance of this character, the star is not allowed to eclipse the lesser lights, but all are given a chance to shine. Good ensemble acting is the special field in which the New Theater should, and indeed often does, excel its rivals. The play ends at the turning point in Becky Sharp's career, one of the few really dramatic scenes in the book, when Rawdon Crawley, released from the debtor's prison, discovers her with Lord Steyne. Her downward path, to which Thackeray devotes a quarter of his space, is left to be inferred by the spectator. It is a question whether either play or book conveys the moral that Thackeray obviously intended. Becky is such an engaging little villainess, and the people she cheats and whee-

*MARY MAGDALENE. *By Maurice Maeterlinck.* New York: Dodd, Mead & Co. $1.20.

dles are quite as bad as she and not half so attractive. Her sudden downfall in the moment of triumph therefore arouses the sympathy of the spectator instead of giving him a proper sense of well-merited retribution. And after five scenes of light comedy he is not at all prepared for the tragic *dénouement,* so that he is about as much surprised and shocked by it as Becky herself.

In one respect the present season has been a singular one. Last year, it will be remembered, proved disastrous to more than one manager, and to dozens of productions. The present dramatic year has already seen an unprecedented number of revivals; two or three of them have, indeed, just been described. For the most part, a high degree of success has been attained here, and deservedly. This has been especially true of the performances of that admirable actor, Mr. William Gillette. It is to be hoped that his threat of retiring is but a threat. However, if Mr. Gillette talks of leaving the stage, Miss Barrymore has returned to it, and once more it is a revival, altho Miss Barrymore herself took no part in the original Lyceum production of twelve years since. When one announces the piece as by Sir Arthur Pinero, one has said either too much or too little, for here is no typical play of realism and social rottenness. "Trelawny of the Wells" is a comedy of stage folk, and as such proves the superstition that plays about players are taboo quite as false as such a proposition respecting novels about novelists or poems about poets would be. That is not all. Besides showing one the theatrical boarding house and the wrong side of the flies, besides abounding in simple, hearty humor and pictures vaguely reminiscent of Dickens, "Trelawney of the Wells" is one of the pieces which sends one home a better citizen: not as the result of a sermon preached, but only because the romance was a pretty one, the comedy clean, and the conclusion comforting. The present cast is highly competent.

POMANDER WALK AND THE PEOPLE WHO LIVE THERE.

"Pomander Walk," at Wallack's, is distinguished among the new plays of the season by the fact that none of the critics have been successful in finding fault with it. Nobody feels inclined to, even if he is paid for it. The play is in the Georgian period and style; a com-

munity play, making us acquainted with people as real and permanent as those who live in Mrs. Gaskell's "Cranford" or Mr. Bennett's "Five Towns." The scene is unique, an old-fashioned English crescent out Chiswick way, where everybody knows the family affairs of everybody else, and so do we. The love-making that goes on under the elm and in the gazebo is under the supervision of five upstair windows and at critical moments five front doors open simultaneously. The acknowledged head of the community is the retired one-eyed Admiral, who lives with Bosun Jim in No. 1. This is the house next to the river, where the "Eyesore" stands all day and fishes, never catching anything except when he hooks the cat which belongs in No. 2, together with Mrs. Pamela Poskett, relict of the late Alderman Poskett, but beginning again to take notice. The violinist, Basil Pringle, lodges here, but is more often to be found giving lessons in music, and other things, to Miss Barbara Pennymint, who lives with her mother and the parrot in No. 3. No. 4 is overcrowded, and needs attention from the district visitor, for it houses the retired butler, Mr. Brooke-Haskyn, Esq., his wife, Selina, whom we know as we do Mr. Partington at second hand, and their interesting family of four or five children; then there are Jane, the nurse, the Rev. Jacob Sternroyd, antiquarian, and a secret lodger. No. 5, the last house on the right, which has a foreign look owing to its white paint, shelters Madame and Mademoiselle Lachesnais and their maid Nanette. The outsiders or disturbing elements of this peaceful oasis are, besides those mentioned, the Muffinman, the Lamplighter and Lord Otford. We should beg pardon for having mentioned them all; but they are all friends of ours and we want you to know them.

In returning to the season's revivals, let us consider, above all, the veterans. From Germany has come Herr von Possart, in an array of plays from the French and English, as well as in his native tongue. Shylock is perhaps the part with which his fame is most closely identified. From France, Madame Bernhardt has once more journeyed, bound for the West and then Australia. It is interesting to read the following in the Washington correspondence of THE INDEPENDENT, December 25, 1879:

> "The world has had cause to grow weary at the sight of Sarah Bernhardt's name, at the tales of her reputed coffin and skeleton, of her fatherless children, of her fabulous dresses, her much vaunted 'art'."

We still regret that she ever collaborated to such a degree with her press agency. It is unfortunate in a sense that the New York critics have laid emphasis upon this wonderful woman's vitality; tho it is natural enough. For tho she bored our Washington correspondent (not by her acting, notice!) full thirty years ago, ten performances in one week seem nothing to her now; and when we saw her in "L'Aiglon," where her part of the pathetic Eaglet is the longest, we believe, of contemporary French rôles, there was no trace of waning energy. In fact, in one respect there has been profit: for as Madame Bernhardt has aged, she has gained in restraint and in true art. Her Eaglet is as boyish a figure—and as appealing—as ever. The actress is supported by a company of unusual merit, even as compared with the best French companies seen outside of Paris. The excellence of the cast revealed itself more conspicuously in other plays—in Moreau's "Trial of Jeanne d'Arc," for example. This last is simply a situation play, yet out of it Madame Bernhardt drew effects so varied, evoked emotions so powerful, that the spectator was no more than an instrument on which she played seemingly at will. Her month's stay in New York was marked by the production of one novelty, the "Judas" of an American, Charles De Kay, which was translated into French for the purposes of production. This piece, which failed to justify itself, is only one of the season's numerous Biblical dramas; even George Moore is a theologian of the footlights nowadays ("The Apostle"—not yet seen in New York). "The Samaritan" of Edmond Rostand, written for Madame Bernhardt herself for presentation during Lent, has stirred up heated discussion in New York thru its daring representation of Christ in person. It is a question whether, in the twentieth century, such plays are fitted to the theater, above all, to the American theater, whatever may have been the tradition of ecclesiastical drama in the Middle Ages.

Literature

Politics and Sociology

THE large number of books on the social sciences appearing in the course of a year necessitates brief and collective treatment. Some of the works here mentioned will, however, receive more extensive criticism in later issues.

Professor Stimson's work on *Popular Law Making*[1] is a study "of the origin, history and present tendencies of law-making by statute." He examines English legislation from its earliest days, and points out its relation to present-day legislation; he considers modern trusts and monopolies, labor unions and various other social phenomena along with the laws that have been passed affecting them and compares the legislative attitude of one time with another. Professor McIlwain writes learnedly of the historical phases of the relation between legislation and judicial action.[2] He differs with those who have found sanction for the modern judicial expansion of powers in historical precedent; while admitting, to some extent, the precedent, he declines to justify unreservedly the modern tendency.

Ex-President Northrop, of the University of Minnesota, collects some thirty of his addresses on political and biographical subjects and publishes them "not as a contribution to human knowledge," but because his friends have asked him to publish them.[3] His friends are amply justified; for the essays are characterized by a wholesome good sense, by high ideals, by an ardent and far-seeing patriotism and a warm sympathy. Mr. Choate's volume[4] also is a collection of addresses, including the "Lincoln" address delivered in Edinburgh in 1900 and the one on "John Harvard," delivered in Cambridge in 1905. Of these no doubt his "Lincoln" is at once the best known and the best. Professor Ford treats in detail the expenditure of our National Government and the accompanying waste and corruption.[5] It is a dark picture which he draws, but he sees signs of improvement. "The present rule of privileged interests must be overthrown. Committee government must be superseded by responsible government. That means a hard struggle, but it is inevitable, and the signs of the time indicate that the people are quite ready for it and are craving effective leadership." Mr. Wilcox gives an analytical study[6] of the cities of Washington, New York, Chicago, Philadelphia, St. Louis and Boston, describing their governments and problems. It is an invaluable book for the student of municipal science.

Captain Mahan discusses the balance of forces among the European nations, with particular reference to Germany and England, and the relation of European conditions to the future of the United States.[7]

There are three new books on railways. Mr. Hill[8] claims for one of his chapters a priority in the putting forth of "the doctrine of conservation as a whole, and not an incident of some one occupation." As befits the writings of a great road-builder, his volume is in a large measure a glorification of the railroad as a highway of progress. Mr. Vrooman contributes a well-considered and well-written argument for public ownership of the railways.[9] The results of public ownership in the various countries are given, and the evils attending private ownership are related. The supreme argument for nationalization he considers to be not so much the lowering of rates, the improvement of service and

[1] POPULAR LAW MAKING. *By Frederic Jesup Stimson.* New York: Charles Scribner's Sons $2.50.

[2] THE HIGH COURT OF PARLIAMENT AND ITS SUPREMACY. *By Charles Howard McIlwain.* New Haven: Yale University Press. $2.50.

[3] ADDRESSES EDUCATIONAL AND PATRIOTIC. *By Cyrus Northrop.* Minneapolis: The H. W. Wilson Company. $1.50.

[4] ABRAHAM LINCOLN AND OTHER ADDRESSES IN ENGLAND. *By Joseph H. Choate.* New York: The Century Co. $2.00.

[5] THE COST OF OUR NATIONAL GOVERNMENT. *By Henry Jones Ford.* New York: The Columbia University Press. $1.50.

[6] GREAT CITIES IN AMERICA. Their Problems and Their Government. *By Delos F. Wilcox.* New York: The Macmillan Company. $1.25.

[7] THE INTEREST OF AMERICA IN INTERNATIONAL CONDITIONS. *By A. T. Mahan.* New York: Little, Brown & Co. $1.50.

[8] HIGHWAYS OF PROGRESS. *By James J. Hill.* New York: Doubleday, Page & Co. $1.50.

[9] AMERICAN RAILWAY PROBLEMS. *By Carl S. Vrooman.* New York: Henry Frowde. $1.50.

the bettering of labor conditions, as the emancipating of the people from their present economic subjection to an intolerable tyranny. Mr. Van Wagenen covers some of the same ground.[10] He calls attention to "the world-wide triumph of government ownership," and regards the world as now upon a government-ownership basis. He reviews the history of public ownership from its beginning in Belgium to the present day. His book is clearly and simply written for the general reader.

A new edition—the fifth—of Professor Taussig's well known tariff history is also to be numbered in this list,[11] as is also a new and greatly expanded edition of Miss Coman's Industrial History.[12]

Mr. Schlueter has made a careful study of the brewing industry in this country, with a particular reference to the development and organization of its labor forces.[13] The rise of the industry from its beginning among the Pilgrims (probably as early as 1623) is traced to its important dimensions today; but it is the organization of the brewery workmen that comes in for most detailed and exhaustive treatment. The task which the author set for himself has been well fulfilled. The sugar industry is described by Professor Surface.[14] The history of its use and manufacture is given, and a great wealth of information on every phase of the subject is furnished. Professor Surface does not apprehend any great change in the industry from the development of better sugar-producing plants than sugar-cane and sugar-beets. The success of syrup manufacture from glucose has been significant, but the reduction of sugar from glucose has not been successful; and so "we are scarcely justified in making a surmise as to what the future holds in store in the way of sugar substitutes."

Woman's economic position is discussed in a number of essays collected in the first number of *Proceedings of the Academy of Political Science in the City of New York*.[15] Among the writers are Miss Helen L. Sumner, Prof. Emily Greene Balch, Mrs. Florence Kelley and Miss Josephine Goldmark. A new edition of Mr. Cromwell's *The American Business Woman*,[16] a work which has been of great practical value to self-supporting women, is also to be mentioned here. Dr. Mangold's *Child Problems* discusses a wide range of subjects relating to the child.[17] Child labor is treated in its many aspects, and a considerable part of the book is given to a consideration of the delinquent child. A strong plea is made for discreet education along the lines of sex physiology.

Mr. Dean, in his study of industrial training,[18] declares that, somewhat as with *Alice* and the *Red Queen*, "all the running that our educational policy can do" is required to keep us "in the same place, and if it wants to get somewhere else it must run at least twice as fast as that." A long familiarity with industrial training schools fits him with especial equipment for explaining the methods and progress of industrial education. Commissioner Andrew S. Draper furnishes an introduction.

Mr. Ghent's volume[19] is a collection of six Socialist essays, written in the second person, and addressed respectively to the seekers of success, the reformers, the retainers, some Socialists, Mr. John Smith, and the skeptics and doubters.

President Polk's diary, covering approximately the period of his Presidential term, is now for the first time printed.[20] It is a large work, filled with every manner of detail about his life in the White House. A transcript of the manuscript had at one time been made for George Bancroft, and it had been Mrs. Polk's wish that the manuscript should

[10] GOVERNMENT OWNERSHIP OF RAILWAYS. *By Anthony Van Wagenen.* New York: G. P. Putnam's Sons.

[11] THE TARIFF HISTORY OF THE UNITED STATES. *By F. W. Taussig.* New York: G. P. Putnam's Sons. $1.50.

[12] THE INDUSTRIAL HISTORY OF THE UNITED STATES. New and revised edition. *By Katharine Coman.* New York: The Macmillan Company. $1.50.

[13] HISTORY OF THE BREWING INDUSTRY AND THE BREWERY WORKERS' ORGANIZATION. *By Herman Schlueter.* Cincinnati: The International Union of United Brewery Workmen. $1.50.

[14] THE STORY OF SUGAR. *By George Thomas Surface.* New York: D. Appleton & Co. $1.00.

[15] THE ECONOMIC POSITION OF WOMEN. *Edited by Henry R. Mussey.* New York: The Academy of Political Science.

[16] THE AMERICAN BUSINESS WOMAN. *By John Howard Cromwell.* New York: G. P. Putnam's Sons. $2.

[17] CHILD PROBLEMS. *By George B. Mangold.* New York: The Macmillan Company. $1.25.

[18] THE WORKER AND THE STATE. *By Arthur D. Dean.* New York: The Century Co. $1.20.

[19] SOCIALISM AND SUCCESS. *By W. J. Ghent.* New York: The John Lane Co. $1.

[20] THE DIARY OF JAMES K. POLK. *Edited and annotated by Milo Milton Quaife.* In four volumes. Chicago: A. C. McClurg & Co. $20.

be used in the preparation of a life of her husband. Nothing came of her wish, however, and in 1901 the Polk family disposed of all the personal records of the President to the Chicago Historical Society. Prof. Charles W. Mann began to edit the diary in 1908. He died in May of the following year, whereupon the work was taken up and completed by Professor Quaife.

The Journals of the Continental Congress[21] being published by the Library of Congress have reached their eighteenth volume and the end of the year 1780; large, handsomely printed volumes they are, carefully annotated and giving verbatim the original records with their corrections and deletions. They are of interest to the general reader as well as of value to the historian and politician. For example, the duty schedule of a proposed tariff law (or recommendation to the States) of December 18, 1780, consists of only thirty-five items. One of the reasons for the imposition of duties is stated to be "to restrain the importation of Foreign articles of luxury; being the ballance of trade in favor of the United States, and support the credit of a paper medium," and in accordance with this "Jewellery, Gaming Tables of all kinds, Carriages, and Gilt Furniture" are taxed 100 per cent., "Broad cloaths above 12 shillings" at 5 shillings a yard and "Narrow cloaths above 5 shillings" at 2 shillings, and "Tobacco pipes 6 shillings per groce."

A work of exceptional value is Professor Van Hise's *The Conservation of Natural Resources*.[22] We have had plenty of articles and books on particular phases of the conservation problem, but nothing which has correlated those phases and given us the subject as a whole. This work is now performed in a concise and thoro manner. It is safe to say that this book will remain for some time the authoritative cyclopedia of the conservation movement.

Mr. Gompers published the results of his observations during a three months' tour of Europe last year.[23] He finds that the condition of labor is in almost every respect better in America than in the transatlantic countries, and he gives a good many figures and other details to support his assertion. He is greatly imprest with the strength of trade unionism in Germany, and he finds Munich a model trade union center. The wretchedness of European railroads, the lack of running water, of bath tubs and of ventilation in the houses, and the general conditions of living are also discussed. It is a notably readable book, in which evidences of editorial assistance are plentiful. But it must be read as the work of a partisan and an advocate of a particular school in the labor movement, and not the work of an impartial observer.

The Temple Dictionary of the Bible. Written and edited by Rev. W. Ewing, M. A., and Rev. J. E. H. Thompson, D. D., and other scholars and divines. With 500 illustrations. 8vo pp. lx, 1012. New York: E. P. Dutton & Co. $1.00.

The American publishers here introduce an English *Dictionary of the Bible* which has the advantage of being edited by two scholars who have had long missionary experience in Palestine and are familiar with its geography and customs. It is supplied with sufficient maps for the use of the ordinary reader, and is well supplied with fresh illustrations. What will at first most surprise the reader is to meet the unusual number of abbreviations of common words run into the text for the sake of compactness. The tone of the work is rather conservative, yet not severely so. While it is not claimed that Moses wrote Genesis, the prevailing division of the text between authors alphabetically designated is not accepted; and yet the writer to whom Leviticus is assigned discovers a gradual development of the observances therein described. Yet, again, the Book of Daniel is made nearly contemporary with the events described and not brought down, as most scholars bring it down, to the Maccabean period. There is much useful and helpful in this compact and cheap volume, and it should be welcomed for conservative use.

[21] JOURNALS OF THE CONTINENTAL CONGRESS. 1774-1780. Edited from the original records in the Library of Congress. Washington: Government Printing Office.

[22] THE CONSERVATION OF NATURAL RESOURCES IN THE UNITED STATES. *By Charles Richard Van Hise.* [Illustrated.] New York: The Macmillan Company. $2.

[23] LABOR IN EUROPE AND AMERICA. *By Samuel Gompers.* New York: Harper & Bros. $2.

Literary Notes.

....Marion Miller is the illustrator of the Sturgis & Walton Company's *Outdoor Diary for Boys and Girls,* which is just what its title suggests: being designed "as a pleasant incentive to the direct observation of nature. . . . Teachers of nature classes will find it a very real assistance." Besides the rather crude illustrations in color there is plenty of space for note-taking by the young naturalist. The price is one dollar.

....The *Introduction to Philosophy* by William Jerusalem, put into English by Professor Sanders (Macmillan; $1.50), is doubly welcome, first on account of its exposition of the author's own system or rather method, a realistic philosophy based on genetic principles and closely allied to pragmatism; and, second, because it serves as a guide to the movements of recent thought thru its numerous references to contemporary literature.

....Temple Scott's *Christmas Treasury of Song and Verse* (New York: Baker & Taylor Co.; $1.25) did not reach us in time to be described at the proper season; but isn't there a Christmas every year? The introductory essay by the editor is a rather perfunctory performance, but the anthology, which is, after all, the essential matter, contains the best that has been written in English verse in celebration of the most glad day in all the year.

....Continuing the series of monographs on *Modern Religious Problems,* Prof. L. B. Paton, of Hartford, has written a volume on *The Early Religion of Israel* (Houghton, Mifflin Co., 50 cents). Its scholarly and suggestive presentation of the subject puts it in the first rank in this fine series. One would search in vain elsewhere for so clear and comprehensible a discussion of "survivals" and so accurate a portrayal of the elements of pre-prophetic Yahwehism.

....Clarence J. Child, of the University of Pennsylvania, is the editor of the neat edition of *The Second Shepherd's Play, Everyman, and Other Early Plays,* issued in the Houghton Mifflin Co.'s Riverside Literature Series (40 cents). The "other early plays" are the *Quem Quaeritis* from the *Regularis Concordia Monacharum* (Englished), the Brome *Abraham and Isaac,* fragments of the Robin Hood plays, and the Oxfordshire *Saint George.* Prof. Child contributes a critical and historical introduction and sixteen pages of notes.

....The fascicle, Si-Simple, in the Oxford Dictionary, is the work of Dr. W. A. Craigie. It contains 1,578 words, of which 820 are Main words. The number of quotations is 8,698, as against 806 in the "Century." The word which furnishes the greatest number of definitions and examples here is "side." The slang use of the word is not indicated; a more grave matter is the total omission of the word *Sillycock* (*Sillicock*), the name for a cock on the exterior of any building, made use of in connecting garden hose, etc. (*Oxford English Dictionary;* Henry Frowde.)

....Novels are taken very seriously now. They figure on the lists prepared by pedagogs for reading and study." Dictionaries are based upon them. The *Thackeray Dictionary* is by Isadore Gilbert Mudge and M. Earl Sears. It is a stout volume, costs three dollars, and is published by E. P. Dutton & Co. The characters and scenes of Thackeray's fiction are all indexed, and there are synopses of all Thackeray's works. Where a character has been drawn from life, and the model is recognized, the circumstance is noted. An invaluable book for the complete Thackerayan.

....Arthur Villiers is the editor of *Rutledge's Every Man's Cyclopædia,* issued in a single volume of 650 pages by E. P. Dutton & Co. ($1.50). Here are alphabetically arranged names of importance in biography, history, geography, law, etc.; also abbreviations, synonyms, pseudonyms, and, besides, words commonly misspelled. The biographical or historical value of the book is, of course, nil; here is a specimen entry: "Shakespeare, William (1564-1616): Poet and Dramatist." Living men seem not to be included, since the Shaws number not the great G. B., nor the R's the sole ex-President.

....Mr. Chesterton has written that the composition of a good parody is proof of a writer's reverence for the author imitated. We are not sure that this holds water when applied to the volume *A la manière de,* by Paul Reboux and Charles Muller (Paris: Bernard Grasset; 3 fr. 50). Yet some of the parodies are wickedly clever, and not every one of them is wicked. Besides French authors, classical and contemporary, Tolstoy, Dickens, Shakespeare, Conan Doyle and Maeterlinck are hit off by the collaborators. An earlier edition, containing only a portion of the present matter, attracted much attention in Paris two or three years ago, and went into twenty editions.

....Last week we commented editorially on the candidacy of Madame Curie, who was rejected by the French Academy of Sciences. George Sand, too, came near being an Académicienne. Her friend Flaubert, in writing her a chaffing letter anent the rumors of her election, paraphrased Saurin's famous line to Molière: "Rien ne manque à ta gloire; tu manquais à la notre." Innumerable French women writers have been "crowned" by the French Academy. In the majority of cases the work so honored, especially if a novel, is judged from the ethical as well as from the literary standpoint; the honor sometimes carries with it a small sum of money, and inevitably makes a difference in the sale of the book.

...."*Pepys's Diary* is long, and life is short; yet those who have failed to meet the Diarist have missed a rare pleasure." It is thus that Henry B. Wheatley opens his introduction to *Red-Letter Days of Samuel Pepys,* edited by Edward Frank Allen (Sturgis & Walton; $1.25). We ourselves have found it one of the secrets of the lure of Pepys's Diary that one is obliged to turn a good many pages in order to find the most delightful passages:

eliminate the slight difficulty, and there is a corresponding diminution in the reward. Yet there can be no doubt but that the present editor has cleverly chosen many of the most readable entries. His book runs to 300 pages, and is illustrated.

....*From Freedom to Despotism* is the alarming title of an alarmist book by Charles M. Hollingsworth (Washington: Published by the Author; $1.50). "It is shown," writes Mr. Hollingsworth, "that active economic development is a necessary basis for the establishment and maintenance of free government; free institutions inevitably declining as national economic development is completed." Newton Mann is the author, the James H. West Co. the publisher of a volume to be read along with Mr. Hollingsworth's: *The Import and Outlook of Socialism* (Boston; $1.50). "Socialism" writes Mr. Mann "is at present far from popular; but movements in the direction of socialism *are* popular and long have been."

....A friendly rivalry exists between G. K. Chesterton and Hilaire Belloc as literary journalists. Mr. Chesterton, on a railway journey, pulls everything out of his pockets, and writes an essay on the subject; Mr. Belloc is his competitor, but slightly varies the method. The latest volume by the latter, who has "done" Nothing, and Everything, is entitled *On Anything*. (Dutton; $1.25.) Some pages of this work make one ask the question, Was it worth while collecting all this? Yet, in the main, largely because, without quite equaling his rival in brilliancy, he is supremely well traveled and well read, the product is calculated to entertain the reader during more than one hour of leisure; provided only that he does not insist on reading books straight thru.

....Two more volumes (the third and fourth) have appeared in the Houghton, Mifflin Co. edition of Emerson's *Journals*, never before published, and issued at $1.75 the colume. Here is part of the entry for July 15, 1833 (iii, p. 165):

"I have just returned from *Père le Chaise*. It well deserves a visit and does honour to the French. But they are a vain nation. The tombstones have a beseeching, importunate vanity and remind you of advertisements. One epitaph was so singular to be read by *me*, that I wrote it off: *Here lies Auguste Charles Collignon, died, full of confidence in the goodness of God, at the age of 68 years and 4 months, April 15, 1830. He loved to do good and tried to do it, and led a gentle and happy life following as best he was able the morality and lessons of Montaigne and of the Fables of La Fontaine.*"

We have taken the liberty of translating the epitaph that impressed the Sage of Concord.

....The *Report of the Librarian of Congress and of the Superintendent of the Library Building and Grounds* for the fiscal year ending June 30, 1910, is now published by the Government Printing Office. For the year covered by the report, the gain in printed books is 90,473, as compared with the preceding year. The actual number of volumes in the Library, including the Law Library, is now 1,793,158. This, of course, does not include manuscripts, maps, music, prints, etc. The most interesting of the new acquisitions are the manuscripts, whose number is not stated. Colonial history must be enriched by the examination of the original letter book of Dennys de Berdt, 1765-1770, covering nearly the whole period of his agency in England for the Colonial Legislature of Massachusetts. Another valuable accession is that of the William Short Papers, numbering upwards of 3,000 documents.

....Fogazzaro's forthcoming novel, "Leila," is shortly to be published in Milan, and translations are expected to follow soon thereafter. The plot is jealously guarded by publishers and author alike; yet revelations enough have been made to quicken natural curiosity. "Leila" is far less a continuation of "The Saint" than a study in contrasts: the contrast between the mystico-tragic temperament of the hero, Massimo Albert (a minor figure in "The Saint": he whom Benedetto called his best-loved disciple), and the ardently passionate heroine; who may or may not prove as dishevelled a personage as she of the same name delineated by George Sand. The standpoint is almost mediæval: the fundamental opposition is that of woman to the spiritual achievement of man; woman, the eternal ally of the world, the flesh and the devil. The romance ends with the engagement of Leila to Massimo and their resolution to face the world together, after having attended the funeral of Benedetto, the Saint.

Pebbles.

AMONG the many delightful remembrances we received was one from the Berkshire Life, mentioning the fact that the premium on our policy is due January 30.—*Chicago Tribune.*

THE BIBLIOPHILE IN PARIS.

The foolish man, 'tis he who takes
His way along the Rue de Paix,
Or stands bewildered 'mid the roar
That sounds thruout Rue St. Honore;
Or to escape the city's noise
Doth ride or drive within the Bois,
Or seeks relief from dirt and grime
In quarters of the old regime.

Let him not sit with pallid cheeks
Reading in the Bibliothèques—
The bargain hunter, shrewd and keen,
Will haunt the book stalls on the Seine.
The books, they are not always bosh,
That you encounter au rive gauche.
And there, at least, you walk at ease
And smoke and stroll along the quais,
And run across, as like as not,
A volume really comme il faut.

From all distractions keep aloof
While crossing over the Pont Neuf.
Look not to left and not to right,
But quickly pass L'Ile de la Cite.
'Twill chance, perhaps, that as you came
You stopped and looked at Notre Dame—
But tarry not for priest nor verger,
Ho! for the realm of Henri Murger!
Where 'mid the book stalls you may search
For volumes truly très recherche.

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

THE semi-annual index of THE INDEPENDENT for the last six months is now ready. Subscribers may obtain a copy free of charge by sending us their request on a postal card.

Proposed Tariff Legislation

MUCH support has recently been given to the project for a permanent Tariff Commission by discussion in and out of Congress, the addresses made at the convention of the National Tariff Commission Association, and the tactful efforts of the President. There is now pending in both the Senate and the House a bill for such a commission. It was introduced by Mr. Longworth (a member of the Ways and Means Committee), it has the approval of Mr. Taft, and there is an expectation that it will have the support of nearly all the members in each faction of the Republican majority. Provision is made by it for a permanent commission of five members, not more than three of whom are to be from one and the same political party. The term is six years and the annual salary $7,500. Following is the most important part of those sections which say what the commission is to do:

"It shall be the duty of said commission to investigate the cost of production of all articles which by any act of Congress now in force or hereafter enacted are made the subject of tariff legislation, with special reference to the prices paid for domestic and foreign labor and the prices paid for raw materials, whether domestic or imported, entering into manufactured articles; the condition of domestic and foreign markets affecting the American products, including detailed information with respect thereto; together with all other facts which, in the judgment of said commission, will be helpful to Congress in providing equitable rates of duty on any article, and in aiding the President and other officers of the Government in the administration of the customs laws."

Power to summon witnesses and to procure books and papers is granted, but the punishment of those who do not comply with the commission's orders is left to Congress. Results are to be submitted, with explanatory reports, to the President or "to Congress," whenever the President or Congress shall call for them. It will be seen that neither the Senate nor the House alone is empowered to obtain a report. This is a defect, for a Republican Senate might refuse to join a Democratic House in making a demand.

There is need of a permanent Tariff Commission, which should be, so far as practicable, a non-partisan body. Its duty should be to ascertain and report the facts required for just legislation. But it cannot be expected that Congress will empower a commission to fix rates or even to recommend what the rates should be. The Tariff Commission Association, in the resolutions adopted last week, asked Congress to make a commission "having functions analogous to those of the Interstate Commerce Commission." Congress will not do this, and the President, knowing the limits of the proposed legislation, said in his address at the association's banquet:

"You do not desire that these men should fix tariff rates or recommend tariff rates to be fixed. You desire only that they should furnish the correct information upon which the body Constitutionally charged with fixing tariff rates may properly act, so that the public may have the truth from the Tariff Commission and then advise itself as to how Congress has acted with respect to a truthful presentation of premises."

One ground for objection to the pending bill is that it does not make sufficient

provision for laying the truth before the public.

Owing partly to the doctrine set forth in the latest national Republican platform, much prominence has been given to the need of inquiry as to the difference in production costs. Undoubtedly, the commission should strive to find out what the cost of production is here and what it is abroad, but the results of its investigation in this field may not satisfy the prevailing expectation as to the value of them. Representative McCall, who asks for a permanent commission, said last week:

"If there are a hundred different concerns engaged in producing an article, are we to take the cost of production of the most efficient of them, or of the most expensive? If, in fixing the tariff, we take that cost which is the highest, the other ninety-nine are likely to fatten upon an unnecessary amount of protection. On the other hand, if we take the one which is the cheapest and best managed, the others may be driven out of business, and economically the most favored establishment may develop into a domestic monopoly."

But there is much for a commission to do outside of an inquiry as to production costs. These costs, varying as they do, should be ascertained and reported, and Congress should be required to make as fair an average of them as the conditions will permit.

In connection with this project for a commission, it is desired that revision hereafter shall be made by treating each schedule or subject separately; that is to say, that there shall be no general and comprehensive revision, but that only one, or two, or three schedules shall be revised in a session of Congress. There have been several hearings concerning a concurrent resolution designed to secure such treatment of tariff duties by excluding amendments which would open the door for a revision of the entire list. It is not yet clear that the proposed restriction can be surely made, except by unanimous consent, and it is probable that revision by separate schedule in most instances would be confined mainly to slight changes, because a sharp reduction of one group of duties would so seriously affect other groups that justice would require concurrent action with respect to them.

This has not received sufficient consideration. If Congress should undertake to reduce the general average of duties, its action with respect to one schedule, or group of duties, would so affect other duties (and protected interests) related to these that a prompt revision of these also would be required, and the result would be a revision of a majority of the rates in force.

Moreover, if the proposed revision is to lower the general level of duties, we are not convinced that it ought to be made by treating one schedule after another. Revision made in this way might be going on for several years, and business undoubtedly would suffer by reason of the dragging delay. It is impossible in a general revision, said the President last week, to prevent the action upon one schedule from being influenced unduly by promised action upon another. This is true. On the other hand, many groups of duties are so related to each other that one of them ought not to be revised without the concurrent revision of others, and business interests may reasonably object to a revision of the tariff prolonged through a period of three or four years. But if there is to be revision, either comprehensive or affecting certain parts of the law, it is greatly to be desired that Congress shall have trustworthy and complete information, and shall be guided by it. Such information would be supplied by the proposed commission.

The Longworth bill, with some changes, ought to be made a law before the end of the present session. But the passage of it cannot be predicted with confidence. After certain days set aside by the rules for calendar measures and proceedings by unanimous consent are taken out, less than twenty work days remain. The project is opposed by the Democratic minority in the House. Mr. Clark, who will be Speaker next year, says an appropriation for it would be a waste of public money. Those provisions of the Longworth bill which define the commission's duties are suggested by the Republican platform's doctrine that tariff rates should be protective and should equal the difference in labor costs, plus a reasonable profit. This doctrine is rejected, of course, by the Democrats, a large majority of whom are committed

to the support of a tariff for revenue, with only that incidental protection which such a tariff gives. They are soon to control the House, and they hope to elect a President in 1912. It is to be expected that they will strive to prevent the establishment of a Tariff Commission now by the Republican party. The Republicans should have made their commission last year.

Another Pension Bill

YET another pension bill has passed the House by an overwhelming majority. It is now up to the Senate. Should it pass the Senate it will be up to the President. It ought not to pass; it ought not to be signed.

We do not object to a fair and just pension bill. We believe in a pension for civil employees of a railroad and the post office, who have served on a moderate wage for a lifetime of physical ability and have passed their period of usefulness. We believe in pensions for teachers who, after honorable years of prolonged work, should be retired. We believe in pensions for soldiers who in the service of their country have suffered disabling wounds or disease. They should be honorably cared for. But a service pension is a different thing.

The Sulloway Service Pension bill gives a pension to every man who was mustered into the Civil War for ninety days, whether he did actual service or not; up to $36 a month for those seventy-five years old, an average of about a dollar a day. The total addition to the pension roll, it is calculated, would come up to $45,000,000. If there were any reason or justice in it we would not object, even tho it should absorb all the economies which President Taft is trying to secure. But there is no good reason for it that will not equally apply to every old man and woman in the land.

Who are these soldiers? They are not those who were disabled by wounds or disease. These have already been provided for by other pension acts. Those acts have been interpreted most liberally. We do not say that they have been interpreted recklessly and dishonestly, altho this is often charged and such cases doubtless exist; but this is at least true, that the interpretation has been generous, so that now there are nearly 500,000 old soldiers on the roll, and more than half as many widows. What we would say is that for the most of the soldiers who returned from the war it caused them no physical injury. They were none the worse for it. It was quite as healthy a life as that of the clerk or carpenter who remained at home. The out-of-doors physical exercise, training and exposure were good for them and fitted them better for subsequent success in civil life. They came back bronzed, robust, proud of their soldiers' record and have properly gloried in it ever since. We are not speaking of the ninety-day men, or the men who deserted that we hear so much of, altho there were such, nor of those who were paid for their enlistment by bounties when the enthusiasm of patriotic fervor had waned. Abraham Lincoln bought a substitute; many others did the same. Those substitutes got their pension in advance, and yet we do not grudge them their pension now when they suffered for the risk they had been paid for.

We have a reasonable suspicion as to the motives of legislators who would add to the burden of old wars. It is very easy to grow sentimental over the old soldiers. Those who volunteered deserve praise. But it is votes that these Congressmen are after, votes partly. Old soldiers are spectacular. They are a fine subject for eloquence and sympathy. And they have votes, more than the nearly half a million that they cast themselves, for their sons are often glad to have the monthly help to support their families. But this is not all. In the course of nature the cost to the treasury for pensions would constantly decrease. There are now only about 2,000 survivors of the Mexican War, and death is rapidly thinning the roll of the soldiers of the Civil War. That means that the expense of government will be much less, for now the cost of pensions, added to the annual appropriations for the army and navy, uses up three-fourths of our income. If appropriations are reduced we shall have a surplus in the treasury. That is not wanted. That would mean a reduction of taxes, and that would fall on customs. We would be likely to reduce

the tariff, and that is just what the interests concerned do not wish. Reduce tariffs, allow foreign competition, and prices would fall, and profits for big corporations would be reduced. Everybody knows what tremendous interests are devoted to the defense of high protection. When the pension expenditure falls the tariff will fall, and so we must have new pension bills to keep up the otherwise dwindling appropriations. There is the milk in the cocoanut.

We have hope that the Senate will keep the bill in committee indefinitely. The lower House has a way of passing bills which no one cares to oppose in hopes that the Senate will kill them. But this bill may pass the Senate. Then will the President veto it? That may be too much to hope. Why should a President have more courage than a member of Congress?

The New Star

THREE hundred years ago—perhaps three thousand years ago—there occurred a fearful catastrophe in the heavens. It may have been when Shakespeare was alive, perhaps when Alfred the Great ruled England, or Moses was coming out of Egypt, but the news of it reached this our earth not a month ago. It had to come here by the slow train of light, which travels only 186,000 miles a second, and takes eight minutes to travel from the sun to the earth. It takes hundreds of years to bring us news from the Milky Way, where this terrible catastrophe occurred.

Two dead stars were moving on their way, as they had been moving for billions of years. We do not know what started them and all the other stars on their course, but they are all moving. Our sun, which is a live star, not a dead one, travels a dozen miles every second, and carries all its retinue of planets with it. These two dead stars were probably moving quite as fast. They were dead—they had been alive once, bright and hot like our sun, but in the course of time they had given out all their heat, just as our sun will give out all its heat one of these cycles of years, and it too will be dead, dead as the moon and invisible as the moon will be when it ceases to reflect the sun's light. These exhausted, dead stars may be ten times or a hundred times as many as the visible stars. It is what all stars are coming to, and the time to cool is unlimited. These two dead stars were dark, invisible to all but God himself, and deadly cold, down to absolute cold, over four hundred degrees below zero. But they were not so dead that they could not feel when they happened to come within some few million miles of each other. They would seem to have no business to come near each other, for each ought to keep its own track if they were both members of one great stellar system. The earth does not meddle with Jupiter, and the asteroids, which are not so very far apart from each other as distances go in the sky, never collide.

But astronomers have lately made an extraordinary discovery about the stars. They do not seem to belong all to one system, but to two systems. One set of stars are moving along in one general course, while another stream of stars is moving in quite another course. A star going in one course may get entangled with a star going on the other course. We do not know, but perhaps this is the way it happened that these two dead stars came near enough to discover each other's neighborhood and feel each other's pull. So they came nearer and nearer to get acquainted, not straight head on, but closer and closer, swifter and swifter, till they had reached a pace of four hundred miles a second, when they came together with a crash.

As we have said, they did not come together head on, center to center, for, besides the force which drew them together, there was their other proper motion which drew them in other directions; and so they grazed each other. The smash, such as it was, broke off a considerable portion of each of them. Moving at such a tremendous speed, the main portion of each kept on its course, but reducing its speed by the pull of attraction behind until it had passed out of the influence and had slowed down to its normal rate. It had taken only an hour for the two to pass each other. But the great mass of what was broken off

was vaporized to atomic dust by the heat of the collision. The force and heat were fifty times what would be produced by an equal weight of dynamite. What is the nature of the new vaporous mass the spectroscope tells us; and we learn that the hydrogen, the lightest of the gases, was flying off at the speed of a thousand miles a second, ensphering the heavier elements. The first tremendous heat, ten thousand times that of the sun, is rapidly reduced as the stellar vapor expands and fills a larger space. We know one new star which has made a nebula of the spiral sort. But usually, or always, the new star fades away gradually, until after a few years the telescope can hardly find it. It has become a new third dead star, or perhaps a nebula, or a swarm of meteorites. We do not know where the meteorites were originated that fall to the earth. Perhaps they are pieces that dropped off from some shattered world.

Such was the new star discovered December 30 in the constellation of Lacerta by the Rev. T. H. Espin. Almost every year records one, occasionally caught by the naked eye, but more often discovered on the photographic plate. If there are a billion live and dead stars, as astronomers conjecture, it may be expected that once in a year some two of them may collide. But we have never seen a living, visible star suffer a collision. Must it not be that the invisible stars are much more numerous than the visible ones? Can it be that all the stars we see are the product of such collision? If so, who can tell us how and when this vast infinitude of stars first began to be? What explanation is better than the old one, "He made the stars also"?

Neutralize the Canal

LAST Thursday President Taft sent his expected message to Congress urging the fortification of the Panama Canal, and recommending that an appropriation of $5,000,000 for beginning the work on the proposed defenses be made at the present session of Congress. On the following evening, at Cooper Union, in this city, David J. Foster, chairman of the Foreign Affairs Committee of the House of Representatives, and James A. Tawney, chairman of the Appropriations Committee, opened the campaign for the neutraliation of the Canal. The matter must now be threshed out in Congress, and we are happy to inform our readers on the best advice we can get from Washington that Congress is unlikely to appropriate money for fortifications until at least the President has exhausted every effort to get the principal nations of the world to agree to the Canal's perpetual neutrality.

Had the Canal been built a few years ago there would have been little or no opposition to fortifying it. But a sentiment for international peace has been growing thruout the country ever since the first Hague Conference of 1899, and the Government itself is now affected with the spirit. Such men as Foster and Bartholdt, Tawney and Keifer, in the House, no longer stand alone in their fights for international courtesy, good will and peace. Even the recent manufactured Dickinson-Wood war scare was exposed in time and failed to result in the usual appropriations. The country at last refuses to be "hobsonized," as Mr. Tawney says.

Our army and navy, of course, wish to emphasize their importance and insure their permanent maintenance. They naturally want work provided for them at the Canal. We, and the people, long for a time when army and navy shall cease to exist as anything more than a police force of the land and sea; and we are desirous to limit and reduce their service to the vanishing point. It is the reign of peace we seek.

In our issue of June 16 we published an exhaustive and convincing article favoring the neutralization of the Canal from the pen of Congressman Foster, and we supplemented it with an editorial in which it was shown that already the policy of neutralization has had no small vogue among the nations. Already the Suez Canal, the Straits of Magellan, the Danube River, the Black Sea, the Ionian Islands, Luxembourg, Norway, Switzerland, Belgium, Honduras and a portion of Savoy have been neutralized. The *status quo* is also guaranteed in all the territories bordering on the Baltic and North seas, while the Rush-Bagot treaty of 1817, between Great Britain and the United States, practically guarantees the

neutrality of the Great Lakes and Lake Champlain. The neutralization of the Panama Canal, therefore, is no new and untried method of insuring international peace.

What is the argument, then, that Theodore Roosevelt, General Wood and Secretary Dickinson advance in favor of fortification? In brief it may be stated thus: Since we have built and own the canal, we should never let it be used by an enemy with whom we may be at war. In other words, we cannot afford to give an enemy the same access to both the Atlantic and Pacific oceans that we demand for ourselves. To insure this we must fortify the canal.

Leaving aside the question as to whether any fortification could protect the whole 50 miles of length of the canal against a single man on a dark night with a dynamite stick in his pocket, or an aeroplane 5,000 feet in the air—that is, whether there is anything that can really protect the canal but a navy, we claim there is no admiral in the world who would risk traversing the canal, tho neutralized, if his nation was at war with us. But even if he would do such a thing, no nation would have anything to gain by going thru the canal to attack us. The only nations that could possibly do us any permanent injury in case of war are England, Germany, France and Japan. The merest tyro in naval strategy knows that a war with Germany and France would be on the Atlantic and a war with Japan on the Pacific. All three Powers would have everything to lose and nothing to gain by going thru the canal to fight us in a remote ocean. England might possibly desire to go thru the canal if she were at war with us. But it is no secret that President Taft is now at work negotiating an obligatory arbitration treaty with Great Britain, in which hereafter all disputes whatever are to be settled by arbitration. And, moreover, it is said that Japan is ready and even anxious to arrange a similar treaty with us. There is also every likelihood that France and even Germany will follow suit. Indeed, the only possible hypothesis that there is likely to be war with England, France, Germany or Japan rests on the false assumption that our feelings of good will toward them are not reciprocated or that the responsible heads of these enlightened states are either fools or knaves.

If, then, we have nothing to fear from the great fighting Powers of the world, what have we got to worry about from such nations as Spain, China, Venezuela and Chile?

Again, to fortify the Canal would cost $50,000,000 before we got thru, and some $10,000,000 a year to keep it garrisoned. Neutralization, on the other hand, would cost nothing. While the cost of living is steadily rising—thanks largely to our military expenditures, as the Massachusetts Commission has just shown—do our people propose to go on to the verge of bankruptcy just for the benefit of ordnance manufacturers, battleship builders and all the "Fighting Bobs" of the army and navy?

But the most compelling reason why the Canal should not be fortified, but neutralized, is that it would thus give us the esteem and good will of mankind. We are aware that Mr. Roosevelt has said that we shall lose the respect of the world if we do not fortify. We are willing, however, to take our chance with international public opinion and the verdict of history. As Congressman Foster well said: "To fortify the Canal would be a criminal expenditure of the people's money and a crime against civilization."

We indorse, therefore, the resolution passed at Cooper Union last Friday night, and we hope that other mass meetings thruout the country will take similar action. We reprint for the benefit of our readers the resolution in full:

In view of the fact that the civilized world is united today as never before by reason of quick transmission of news, interdependence in commerce and finance, because of common intellectual interests, democratic ideals, and the existence of international organizations, unions, bureaus and other institutions which are doing their work irrespective of national boundaries and which tend to make international war hateful, unprofitable and (unless provoked by armaments) unlikely to occur; in view, also, of the gigantic cost of maintaining an armed peace that has brought Europe to the very verge of bankruptcy, is hindering the material and social development of America, and even threatens to overwhelm in blood the civilization which has been so long maturing; therefore, be it resolved that we request the President and Congress of the United States, in dealing with other nations, to depend as little as possible upon the show and use of force

and as much as possible upon reason, good will and justice. And that we especially ask that the people's money shall not be wasted in building and maintaining fortifications on the Panama Canal until our method of neutralization has first been tried and failed, nor that addition shall be made to the present strength of our navy until inclusive arbitration treaties have been offered to all the great nations and been refused by them.

Mr. Perkins on the Crisis

It was not a muckraker, nor a professor, nor any of the familiar type of the dangerous element, but Mr. George W. Perkins, lately of the banking firm of J. P. Morgan & Co., who told the National Civic Federation the other night that this country faces a crisis as grave as that which preceded the Civil War.

This is serious language, and we cannot suppose that it was uttered irresponsibly. There have been persistent rumors about town that Mr. Perkins is a converted man. It is said that he has experienced some kind of "conviction"—whether of what the late Mr. Moody would have called "sin" is left to conjecture—and that he will devote his remaining years to the moral and financial service of that institution—human society—which the elder Henry James, in a moment of exaltation, once called "the redeemed form of man."

Whether these rumors be true or not does not much matter. The important thing is that a man of ripe business experience, and not in the habit of talking for sensational effect, has told the multimillionaires something that they will have to take seriously. There is a crisis. It is as grave as Mr. Perkins pictures it, and it is with entire propriety likened to the crisis before the Civil War. The struggle in those years was to determine who or what was sovereign in these United States. Did sovereignty inhere in the organized and intrenched aggregate of vested interests, known as the "slave power," or in the American people? Mr. Perkins did not say that the question today also is precisely what it was then, namely, Who or what is sovereign in the United States? But his remarks showed plainly enough that this is what he meant: Does sovereignty today inhere in the organized and intrenched interests known as "the money power," or in the people of the United States? Mr. Perkins plainly is of opinion that sovereignty still inheres in the people, for, he said, there are just three possible ways to solve our present problem. We may create a co-operation on a vast scale and put it under the regulation of the Federal Government; we may turn over all the big and important enterprises to Government ownership; or, third, we shall have, whether we like it or not, "out and out socialism."

It is not clear just what Mr. Perkins means by co-operation, except in so far as he obviously has no faith in the attempt to restore the old regime of individualistic competition thru legislation and Supreme Court decisions outlawing combinations in restraint of trade. "We are living," he said, "in a get-together period." The whole world is being drawn together in an infinitely complex organization, and this condition makes competition deadly, just as hand to hand fighting in the trenches makes battle deadly.

"The intensity with which business is being done, with which all people are drawn close together today, makes competition the most deadly sort of a game. We can go on and play it, if we want to, but the result will be so disastrous that we will have to give it up in the end."

In all seriousness we hope that Mr. Perkins will, on some suitable occasion, describe more explicitly his scheme for an inclusive co-operation under Federal regulation. Every phrase that he has so far used to express his idea might have been taken from any standard exposition of "out and out socialism," which, we understand, Mr. Perkins does not at all advocate. From what he said about the bearing of decisions soon to be made by the Supreme Court, we judge that Mr. Perkins desires, in any case, to keep the way open for great combinations of capital and organization. "The Supreme Court," he remarked, "is on the verge of saying that you must do business on the retail plan, or that you must do business on the wholesale plan."

It is quite plain that if business must again be done on the retail plan, under the assumption that competition is possible and wise, there will be a call for such action as Senator Cummins has advocated, namely, a limitation of capital employed by any one corporation doing

interstate business. Mr. Perkins is quite right in holding that under such a plan America would take a back seat among the nations and stand not on the order of her going. No. Mr. Perkins's analysis is scientifically sound. There are just three possibilities before us in the present crisis, and Mr. Perkins has named them.

Governors and Governors

There seem to be two doctrines prevalent as to the duty of Governors. One is that promulgated by Governor Hughes, of New York, that it is the duty of a Governor to be the leader of the people and to guide and push its interests before the legislature, and when the legislature goes wrong to appeal to the people. That is the way that Governor-elect Wilson is now doing in New Jersey, and in both States the people seem to like it. But that is not the way that Governor Dix thinks right. He seems ready to let the legislature of New York do whatever it pleases with no influence from him. Governor Hughes's way made him a Presidential possibility, and people already begin to talk in the same way of Governor-elect Wilson, but not of Governor Dix. The people choose a Governor just as they choose a President, not merely to be an executive officer, but to direct legislation also. The people were glad to see President Roosevelt take this responsibility, and it would have pleased them if President Taft had been somewhat more active in the same way. It is not illegitimate for a President or a Governor to influence legislation in the way he thinks legislation ought to go; for he is, under our constitutions, both an executive and a legislative official, and he should be active in both fields of power.

Seeing Magnetism

It has long been a matter of wonder that none of the human senses could perceive so powerful a force as magnetism. The belief that we ought to be endowed with a magnetic sense has shown itself in our language, in such semi-metaphorical and semi-superstitious phrases as "animal magnetism," "human magnets" and "magnetic speakers." It is easy enough to induce sensitive persons to believe that they feel a coolness or a tingling when a little horseshoe magnet is drawn over their hands or that they see blue flames coming from the north pole and red from the south, but then the same effects are produced with an unmagnetized horseshoe if the poles are plainly marked. Scientists have stuck their heads into the jaws of the strongest electromagnets and pulled them out again with the same impunity as Van Amburgh in the lion's mouth. The subject would be serenely unconscious of the fact that lines of force were passing thru his brain strong enough to raise a riot in a keg of nails. But recently Silvanus P. Thompson, in England, has reported that faint sensations of light are produced by a magnetic field induced by an alternating current, and Knight Dunlap, of Johns Hopkins, confirms the statement in the last *Science*. When the head is placed near or inside a coil thru which a strong alternating current is passing, a flickering is observed which changes in intensity as the head is turned at different angles to the lines of force. The flicker occurs only in the peripheral part of the visual field, but is perceptible even when the eyes are open. Whether the field affects the retina or the optical centers in the brain is not known.

Drama and the Pedagog

Readers of our review of the current drama will note that most of the space this month is given to revivals. This is not because THE INDEPENDENT wants enthusiasm for the good, the new and the beautiful. It is interesting to read in *The Musical Courier* what are the impressions of Prof. Felix E. Schelling, of the University of Pennsylvania, after seeing a current musical show. Professor Schelling confesses that his dramatic studies have, as a rule, "ended with the closing of the London theaters of triumphant Puritanism before Oliver Cromwell came into power." Let us quote the *Courier:*

"The Professor thought the 1911 piece which he saw 'flippant and inane, and as a picture of life for the most part quite absurd.' He dubbed it 'devoid of ideas, repetitions, preposterous, and full of stale old sentiments, hackneyed situations, vulgarities and banalities.' Of the audience, the learned commentator did not seem to be any more enamored than of the play: 'There are hundreds who sit in open-eyed wonder before the glitter of tinsel deck-

ing a bevy of painted "stage ladies" to one who could not follow a dialog of any subtlety with understanding. This is why our theatrical plots revolve in tedious repetition about the thirteen original situations, none of them original any longer, and why we continue to perpetrate on the stage with bland, unblushing iteration the eleven ancestral witticisms.'"

After this quotation it is surely unnecessary for us to explain why THE INDEPENDENT is more interested in the season's revivals than in its musical comedies.

A Rich Estate

When our valued correspondent, Mrs. L. H. Harris, was made administrator of her late husband's estate she was asked by the county clerk at Nashville to give an inventory of his possessions. She hardly knew how to do it, and declared that the statement that he left $2.35 in his purse and $116 in the bank and 400 books is misleading. So she added:

"The major part of his estate was invested in heavenly securities, the values of which have been variously declared in this world, and highly taxed by the various churches, but never realized. He invested every year not less (usually more) than $1,200 in charity, so secretly, so inoffensively and so honestly that he was never suspected of being a philanthropist, and never praised for his generosity. He pensioned an old outcast woman in Barron County and an old soldier in Nashville. He sent two little negro boys to school, and supported for three years a family of five who could not support themselves.

"He contributed anonymously to every charity in Nashville; every old maid interested in a 'benevolent object' received his aid; every child he knew exacted and received penny tolls from his tenderness. He supported the heart of every man who confided in him with encouragement and affection. He literally did forgive his enemies, and suffered martyrdom on September 18, 1910, after enduring three years of persecution without complaint. He was ever recognized as one of the largest bondholders in heaven."

But it was not the treasures laid up in heaven that the county clerk wanted record of.

We are glad to publish the following authoritative letter in regard to the plans for the Princeton Graduate School:

PRINCETON, NEW JERSEY.
January 7, 1911.

The Editor of The Independent:
New York, N. Y.,

MY DEAR SIR:—In your issue of January 5th in an article on the "University of London," by Dr. Slosson, the following statement appears:

"Princeton University is spending millions to secure the complete isolation of the grad uate department."

Every one who knows the facts knows that this is not true. Nothing of the sort is planned or will be done. Why Dr. Slosson should make this statement is to me astonishing, for I gave Dr. Slosson the facts in the case when he came to see me in Princeton about a year ago. What is proposed is residential separation of such graduate students as choose to live in the Graduate College buildings, and no other separation—because all the graduate students are to have their work as heretofore in the libraries, laboratories, seminaries and lecture rooms on the central campus in the midst of the undergraduates.

I ask that you will print this statement in order that the truth in the matter may be known.

Ever sincerely yours,
ANDREW F. WEST.
Dean of the Graduate School.

Men whose business is with money value should receive pay accordingly in money. Where there is added dignity and honor that may represent part of their pay, but the remuneration in money should be ample tho not lavish. A justice of the Supreme Court of this City of New York receives a salary of $4,500 greater than that paid to the Chief Justice of the United States. To be sure, the latter has more honor, but the United States, which needs the ablest men in its Supreme Court, ought to be able with its salary to secure the very strongest men who might make many times their income by private practice. We heartily approve the bill to provide for the payment of Federal judges on a more equitable basis.

Here is another Senator, Mr. Stephenson, of Wisconsin, who is charged by a committee of the State Senate with securing his nomination by bribery. This is a case quite different from that of Senator Lorimer, of Illinois, where it was the Legislature that was bribed; in this case it is the people in the primary nomination. While doubtless it is more difficult to bribe the electorate than the Legislature, this is yet possible. Senator Stephenson admits that he paid $107,000 to carry the primary, a sum which is evidence of corruption. But legislation ought to be able to correct this danger.

Insurance

Improvidence

A SMALL wooden frame house burned down recently in the outskirts of Elizabeth, N. J. The owner and his wife went into town one evening to do some shopping, and returned to find a smoldering pile of ashes and the remnants of a curious crowd which had gathered to witness the conflagration. The couple had been on the whole thrifty, and owned the house themselves. Their home was worth about $2,000, but was not insured. It also developed that the wife had hidden in a mattress the sum of $300 in bills.

Their ignorance was pathetic. They could easily have insured their house fully for a yearly premium of $6, and if they had taken out a five year policy they could have secured a yearly rate of possibly less. Their $300 in bills should have been placed in the savings bank.

We have already given a picture of the improvident famly that had $2,300 in assets in the afternoon and nothing at night. Now let us consider what would have been the case if the family had been wiser. The $300, placed in the savings bank, would yield at 4 per cent the sum of $12 a year. The house, insured at $2,000, would cost, let us say, $6 a year. This, even if no fire occurred, would give a profit of $6. If the house burned down the assets of $2,300 would be intact, $300 safely in the bank and $2,000 in fire loss, which would immediately be paid by any strong insurance company.

How many people are probably exactly in the precarious position in which this unfortunate family of Elizabeth lived! The insurance companies are ready and anxious to secure homes against loss, and the savings banks welcome deposits. It is beyond argument that our financial stringencies would be vastly relieved if all the currency hidden in mattresses and stockings were deposited in the bank and started in circulation. It is a wise man who profits by the experiences of others. Possibly the recital of this incident may lead others to look into their provisions against loss, and save them from a similar calamity.

IT has been held that the value of the life of a workingman, killed in the following out of his gainful occupation, is 1,200 times his daily wage. Thus the dependents of a man earning $2.50 per day who thus meets death could recover $3,000. The establishment of such a minimum as a basis for life insurance might well be generally fixed upon, and if all men could be brought to properly perceive its benefits few would reject it. Insurance reduced to ideality would, of course, provide for a continuance, after death, of the insurer's income while living. Unfortunately, this is not always possible. The appraisal of the value of a man's life at 1,200 times his income per diem, however, is certainly not extravagant.

THE Travelers Insurance Company of Hartford has classified its payments on claims for vacation accidents from June 1 to November 1 as follows:

	Indemnity.	Death.	Total.
Automobile	$45,811.13	$56,250.00	$102,061.13
Sports or recreation.	23,657.61	.....	23,657.61
Boating or bathing..	9,991.33	18,025.00	28,016.33
Bicycles	5,612.07	5,500.00	11,112.07
Hunting or fishing..	2,620.61	.....	2,620.61
Total	$87,692.75	$79,775.00	$167,467.75

IT is estimated that 350,000 automobiles are now in use in the United States and that $500,000,000 or more is invested in automobile plants. This is becoming an important branch of insurance, and many standard companies are now going into the automobile insurance field.

THE recent explosion in the Grand Central Station, New York City, broke $25,000 worth of windows, it is estimated by the plate glass insurance underwriters.

FINANCIAL

New York Real Estate for Small Investors

NEWSPAPER readers thruout the country are frequently interested in published statements showing the rapid increase of the value of choice real estate in New York, especially in the financial, wholesale trade and select residential districts of the great city. Sometimes the history of a piece of property reads like a romance. There is nothing safer for investment than New York real estate of high quality, but as a rule it has been beyond the reach of the ordinary investor, because of the large sums required for either purchase or loans on mortgage. For example, lofty buildings, worth millions of dollars, may be in the market, but the average investor, living in the city or a thousand miles away, cannot buy one of them, and therefore in past years the advantages accompanying investment in such property have been withheld from persons of moderate resources. In recent years, however, capitalists have formed companies designed to enable such persons to acquire an interest in this real estate by subdividing and distributing the value of it in mortgage bonds representing $1,000, $500 or even $100.

This is an interesting development of real estate investment methods and it is destined to attract much attention here and abroad. We noticed a few days ago that a company of this character, whose officers' and directors' connections and resources give assurance of exceptional stability, had bought a new twenty-story building worth several millions and was distributing the property, so to speak, in 6 per cent. bonds secured not only by the building, but also by all the company's assets, which exceed $10,000,000, mainly real estate. This company aims to place these securities, or subdivisions of ownership interest, in European countries as well as in the United States. The time has arrived when the thrifty small investors of Europe, together with Americans in similar circumstances, may, if they choose, be part owners of some of the choicest real estate in New York City, enjoying a very comfortable return on their investments, with security continually enhanced by the growth of value from year to year.

The Chase National Bank

ALBERT H. WIGGIN, vice-president, was last week elected president of the Chase National Bank of the City of New York, and succeeds A. Barton Hepburn, who becomes chairman of the board of directors, with full executive powers. Mr. Hepburn is president of the Clearing House and of the Chamber of Commerce. The new president, Mr. Wiggin, was born in Medfield, Mass., in 1868, and started his career as a bank clerk in Boston, and in 1891 became National Bank Examiner. From 1894 to 1897 he was assistant cashier of the Third National Bank, in Boston, and the two following years was vice-president of the Eliot National Bank. Eleven years ago he came to New York as vice-president of the National Park Bank, and in 1904 became vice-president of the Chase. Mr. Wiggin is a director and member of the executive committees of the Bankers' Guaranty and Astor Trust companies and of the Lawyers' Title Insurance and Trust Company. He is also a director of the Union Exchange National Bank, Mutual Trust Company of Westchester County, the Fidelity-Phenix Fire Insurance Company, the International Paper Company and other corporations, and is a trustee of the Northwestern Mutual Life Insurance Company. The Chase National was started in 1877 with a capital of $300,000, which eleven years later was increased to $500,000, and in 1898 to $1,000,000. In 1906 its capital was further increased to $5,000,000. The first two presidents were Samuel C. Thompson (1877-84) and John Thompson (1884-86). The third president was ex-Comptroller of the Currency Henry W. Cannon (1886-1904). He was succeeded by Hon. A. Barton Hepburn. The surplus of the Chase is $5,000,000, its undivided profits are $2,953,397.87, and its total assets are $106,336,750.80. The directors, in addition to Mr. Hepburn and Mr. Wiggin, are Henry W. Cannon, James J. Hill, Grant B. Schley, John I. Waterbury, George F. Baker, Jr., and Francis L. Hine.

The Independent

VOL. LXX NEW YORK, THURSDAY, JANUARY 26, 1911 No. 3243

Survey of the World

A Do-Nothing Congress

Thirty-two working days remain in which Congress may complete the business of its short session. Of this time, six of the Senate's days must be devoted to eulogies. Certain Senators would profit by this situation, and aggravate it by filibustering. Tariff board legislation is still in committee in both branches, and Chairman Payne, of the House Committee on Ways and Means, was to report on Tuesday a bill for a permanent board, the measure being made up of provisions from the Dalzell and Longworth bills. There is little chance of its being enacted at this session. Indeed, Republican leaders will be thankful if they get an appropriation for the maintenance of the actual board. The Lorimer case will not reach a vote in the Senate until late in February, if then. The report of the Ballinger-Pinchot investigating committee lies unconsidered in the Committee on Agriculture of the House of Representatives.

Two Constitutional Amendments

Senators Borah and Clapp spoke, January 19, in support of the former's joint resolution to amend the Constitution by providing for the popular election of Senators. Senator Clapp said that the popular impetus behind this movement was "irresistible," and asked: "Why should the Senate seek to stem the tide?" Senator Rayner, speaking next day, denounced the amendments proposed by Senators Depew and Sutherland, supporting the previous speakers.——James A. Reed, the new Senator from Missouri, urges the adoption of the Borah resolution and also the amendment of the Constitution to legalize a Federal income tax. Twelve States have now ratified this amendment: Alabama, Georgia, Illinois, Kansas, Kentucky, Maryland, Mississippi, Ohio, Oklahoma, Oregon, South Carolina and Texas. Governor Bass has sent a special message to the New Hampshire Legislature favoring the ratification. In five States the Legislatures have met and refused to ratify the amendment. They are Louisiana, Massachusetts, New York, Rhode Island and Virginia.——A committee of the lower house of the Kansas Legislature has voted unanimously to report favorably a Constitutional amendment for the enfranchisement of women.

The New Senators

The deadlock in the New York Senatorial situation continues. On the first joint ballot William F. Sheehan, candidate of the Democratic caucus, received 90 votes; Edward M. Shepard, 13; various other Democratic aspirants, collectively, 14; Senator Depew, 80. On the failure to elect on the first joint ballot, a tendency to regard the caucus as no longer binding declared itself, and Mr. Sheehan's following began to shrink. The leader of the Democratic insurgents is Franklin D. Roosevelt, a Senator from Northern New York, and a distant relation of the former President. Mr. Shepard is out of the running, and Mr. Sheehan's stock is below par; but who the "dark horse" is remains a question. Judge Parker has urged the legislators who are giving him their votes to support his law partner, Mr. Sheehan; but they have not complied. The Democratic State chairman, W. A. Huppuch, who is Governor Dix's partner, has also urged members to stand by the caucus candidate.——In Massachusetts, Henry Cabot Lodge was returned for a fourth term, with six votes, two of them Demo-

cratic, in excess of a majority.——Henry F. Lippitt, of Providence, a "stand pat" Republican, succeeds Senator Aldrich, of Rhode Island.——Charles F. Johnson, of Waterville, succeeds Eugene Hale as Maine's Senator, and will be the first Democrat representing Maine in the Senate since Franklin Pierce.——Other results are as follows:

Alabama—John H. Bankhead, Democrat, re-elected; Connecticut—George Payne McLean, Republican, elected to succeed Morgan G. Bulkeley, Republican; Delaware—Henry A. du Pont, the Republican incumbent, is the choice of the caucus and will be duly returned; Indiana—John W. Kern, Democrat, elected to succeed Albert J. Beveridge, Republican; Michigan—Charles E. Townsend, Republican, elected to succeed Senator Burrows; Minnesota—Moses E. Clapp, Democrat, re-elected; Missouri—James A. Reed, Democrat, elected to succeed William Warner, Republican, but refused the certificate of election by the Missouri Secretary of State, as he had refused to file a statement of campaign expenses, denying the constitutionality of the State law requiring such action; Nebraska—G. M. Hitchcock, Democrat, elected to succeed E. J. Burkett, Republican; New Jersey—First ballot, Tuesday 24th: if 11 electors stand by James Smith, Jr., against James E. Martine, deadlock may result; North Dakota—Porter J. McCumber, "Stalwart," and A. J. Gronns, "Progressive" Republican, elected; Pennsylvania—George T. Oliver, Republican, re-elected; Utah—George A. Sutherland, Republican, re-elected; Washington—Miles Poindexter, Republican, elected; West Virginia—Clarence W. Watson, a bituminous coal operator, is the choice of the Democratic caucus, and will succeed the late Senator Elkins. The long term will go to another Democrat.

The Democrats Gloat

Governor Harmon, of Ohio; Champ Clark, unanimously chosen by the Democratic caucus to succeed Mr. Cannon as Speaker of the House, and Senator Bailey, of Texas, were the most prominent figures of the Democratic party's Jackson Day celebration, at Baltimore. Mr. Clark declared himself in favor of tariff revision schedule by schedule; Senator Bailey prefers a more radical treatment of the whole matter. "The most obnoxious items first," said Mr. Clark. "As between rotten apples," insisted Senator Bailey, "there is no choice. Every schedule in the Payne-Aldrich law is bad." Republican newspapers exult in the "split" over this issue, which is, confessedly, the great problem of the next Congress. In that Congress, Oscar W. Underwood, of Alabama, will serve as chairman of the Ways and Means Committee. Mr. Bryan's name was not mentioned at the Baltimore jubilation.

More Vote-Buying

From Danville, Ill., comes news of an inquiry on the part of the District Court in Vermilion County, Speaker Cannon's bailiwick, into the alleged bribery of voters at the recent general election. Mr. Cannon's majority last November was larger than for several years, but no suspicion is entertained however, that corruption has been as prevalent as in Adams County, Ohio. Local option contests have always been close, and both sides have won repeatedly. The sheriff and his campaign manager have confest to the purchase of a large number of votes. Other confessions are expected to follow.——A special committee of the New Jersey Assembly has heard testimony showing that the degradation of the ballot reached a climax at last fall's election in Atlantic City. Repeating, violence at the polls and fraud were, testimony tends to show, shamelessly practised by the Republican majority.

Naval and Military

The President's special message urging the fortification of the Panama Canal and recommending an appropriation of $5,000,000 for the initiation of the work on the proposed defenses has not been enthusiastically received. The movement favoring neutralization gains friends.——The army appropriation bill, just passed, carries an item of $770,000 to provide field guns and ammunition. This is one of the largest appropriations of the kind made since the Spanish War. The bill as a whole carries $93,000,000 in appropriations, a reduction from last year.——The President's letter reprimanding Commander W. S. Sims, of the battleship "Minnesota," who at the Guildhall banquet to American naval officers, in London, pledged the United States "to the last dollar" and the "last man" to aid Great Britain in any future war with a foreign Power, was included in a general

order read to the officers and men of the battleship fleet on January 20.——That Capt. Robert E. Peary came within 1.6 miles of the North Pole—near enough to establish his claim to having been at the exact spot—is the decision of the House Committee on Naval Affairs, which has been considering the bill to retire Captain Peary with the rank of rear admiral.

Aviation

Almost daily progress is reported in the art of flying and all countries are taking part in its development. The most interesting event of the week is the demonstration of the possibility of flying from the deck of a warship at sea and alighting upon it. Eugene B. Ely flew out over San Francisco harbor on Thursday and after circling the fleet landed upon the cruiser "Pennsylvania." A platform 130 feet long had been erected for this purpose, but the biplane was checked within 60 feet by the catching of weighted ropes with hooks under the machine. After taking lunch in the captain's cabin, Ely rose from the platform and returned to land.——A new American endurance record was made at San Francisco by Philip O. Parmalee, who remained in the air 3 hours and 40 minutes.——Lieut. Paul W. Beck, of the United States Army Signal Corps, sent wireless messages from a Wright biplane run by Parmalee. The apparatus used weighed less than 35 pounds. The messages were received at two naval stations several miles away.——A novel form of accident occurred on the aviation field at Issy-les-Moulineaux, when two aeroplanes came into collision in the air. A monoplane in rising dashed into a biplane which was just coming to the ground. Both machines were wrecked, but neither aviator injured.——The Haitian aviator, Henry Weymann, made the flight from Chalons to Betheny, 18 miles, and returned, carrying two passengers, and a few days later three passengers, in his Farman biplane.——A Peruvian aviator flew from Lima to Callao, circling over the harbor and returning.

Various Items

A reciprocity agreement between the United States and Canada has been arrived at on the basis of an exchange of the foodstuffs and agricultural products of Canada for certain manufactured commodities produced in this country. The details of the agreement will not be made public until it has been submitted to the Senate and the Canadian Parliament.——By a vote of 9 to 6 the House Committee on Industrial Arts and Expositions has decided to report favorably the Estopinal bill designating New Orleans as the Panama Exposition city, and appropriating $1,000,000 for a Government exhibit. Meanwhile, Representative J. Hampton Moore, of Philadelphia, wants the celebration to take the form of the construction at Washington of a great memorial commercial museum. ——Charles D. Norton, secretary to the President during the last six months, will soon retire, resuming his Chicago insurance business. The President is likely to appoint a man of political experience to the post—possibly James A. Tawney, the veteran chairman of the Appropriations Committee, and a victim of the November elections.——Mr. Carnegie has added $10,000,000 to the fund of the Carnegie Institution in Washington. This brings the endowment of the institution up to $25,000,000.

The Islands

It was expected at the end of last week that there would soon be war between Hayti and Santo Domingo. On the 20th the troops of Santo Domingo occupied Grand Gosier, on the Haytian frontier, and Hayti's Government was sending troops to repel what was regarded as an invasion. Committees had been trying to reach a settlement of the dispute as to territory crossed by a road which Santo Domingo is building, but the negotiations had come to nothing. On the 21st, Hayti's President asked for the good offices of the United States to prevent war. It is said that Hayti would accept arbitration. The boundary dispute is a very old one.——At the request of the attorney representing General Guerra, recently commander of Cuba's army, Judge Miyeres, last week, ordered the arrest of Captain Cordoves, formerly aide-de-camp of General Monteagudo, commander of the Rural Guard. After the arrest, General Guerra identified Cordoves as the companion of Lieutenant Perez at the time when the latter attempted to assassinate him. Perez is a

fugitive from justice. Cordoves is also accused of plotting to kill Vice-President Zayas and Señor San Miguel, editor of the *Lucha*.——Explaining that the appropriation of $300,000 for raising the wreck of the battleship "Maine" will be exhausted within a few weeks, Secretary Dickinson asks Congress to provide for completion of the work.——President Gomez tells the Cuban Congress that an immediate appropriation of $2,000,000 is needed for a new aqueduct, to supply water for Santiago. For lack of water the streets are not lighted and the people suffer. Water is brought in tank cars from the naval station at Guantanamo. ——At the suggestion of the Governor of the Hawaiian Islands, there will be introduced in Congress a bill making, on the island of Hawaii, a national park, which will include the two large active volcanoes of Kilauea and Mauna Loa. It will have an area of 56,000 acres, and nearly all of the tract is now public land.

Mexico and Central America

There were several engagements last week in Chihuahua and Sonora between Mexican troops and the revolutionists, but the number on each side was small. In two attacks upon revolutionists entrenched at Baquirichic, in Chihuahua, thirty-six of them were killed. It is known that the Tahuamari Indians are fighting with the insurgents, for seven of the dead were men of that tribe. The Government forces were victorious. Many of the insurgents have become bandits. In their raids they have killed ranchmen who refused to give them money.——Our Government became interested, last week, in the conduct of the gunboat "Hornet," which has been assisting Manuel Bonilla in his revolutionary attack upon the ports of Honduras. When the "Hornet" left New Orleans she had no arms or fighting men on board and could not be detained for violation of the neutrality laws. Our Government, it is said, has been told that her war material was taken on board at a Guatemalan port. Guatemala was reminded, last week, of the treaty agreements which were designed to prevent any Central American republic from promoting a revolution in another. Guatemala denied that she had violated the agreements, and asserted that her soldiers were continually patrolling her frontier in the interests of peace. An investigation concerning the conduct of the "Hornet" was started at Washington, where a treaty relating to the loan of $10,000,000 to Honduras by a New York syndicate had recently been signed. The gunboat was then at Truxillo, a port captured by Bonilla two weeks ago. The United States gunboat "Marietta" had been sent to Ceiba, and the cruiser "Tacoma" to Truxillo. On the 20th, Commander Davis, of the "Tacoma," seized the "Hornet," put her crew ashore and manned her with forty-five American engineers, gunners and sailors. Bonilla had refused to surrender the vessel, but his men made no resistance. The "Hornet" can no longer assist his land forces.——It is now said that the Nicaraguan Congress may order the prosecution of ex-President Zelaya for the execution of Groce and Cannon. He is in Belgium. Paul Mason, an American who fought for Estrada, has arrived in New Orleans. He received $1,000 and a colonel's commission from the new Government, which, he says, will pension Cannon's relatives, who live in Pittsburg. Every American who fought with Estrada, he adds, has received $1,000 and a tract of land.—— The Panama National Assembly has voted to give $100,000 in aid of the Panama World's Fair at New Orleans in 1915.

South America

Ecuador refuses to submit her boundary dispute with Peru to The Hague tribunal. This dispute was referred to the King of Spain for settlement. While it was in his hands the two countries quarreled about it, and were on the point of beginning war when the friendly intervention of the United States, Brazil and Argentina caused withdrawal of troops from the frontier. Then the King declined to act as arbitrator. Whereupon the three mediating Powers suggested arbitration by The Hague tribunal. Peru consented. Ecuador now declines, saying that a settlement can be reached only by direct negotiation with Peru. —— President-elect Estrada, of Ecuador, on the 21st held a conference with prominent citizens of Guayaquil concerning (the dispatches from Guaya-

quil say) "an intimation from the United States that the Galapagos Islands might be leased for a term of ninety-nine years for the sum of $15,000,000." There was unanimous objection, on the ground that it would not be patriotic to accept such a proposition. These islands, fifteen in number, lie near the equator and 600 miles from the coast of Ecuador. They have been regarded as desirable for use as a naval base.——There has been a kind of bloodless revolution in Paraguay. President Gondra and Vice-President Gaona, elected in September last, were constrained to resign, last week, owing to the seizure of the Presidency by Colonel Jara, Minister of War. Congress accepted Gondra's resignation (offered, he said, on account of ill health) and promptly elected Jara in his place. Jara at once formed a new Cabinet.—— Dispatches from Lima, on the 18th, said that Colombian troops had invaded Peru, occupying the region of the Yapura River, and that serious consequences were feared. The region in question is one involved in boundary disputes.—— The Colombian Government has ordered the imprisonment of Gen. Juan Tovar, who commanded the Colombian army in Panama at the time of the secession. Some years ago he was tried for misconduct in Panama and was acquitted. This new prosecution is said to be due to the official investigation made by ex-Senator Perez y Soto concerning the charge that Colombians conspired with Panamans and Americans to procure the independence of the province on the isthmus.—— The negotiations for a re-establishment of diplomatic relations between Venezuela and the Netherlands have been unsuccessful, and Venezuela's commissioner has resigned.

The Dutch Defences

The apprehension now prevailing in England over the designs of the Kaiser has been increased during the past month by events in Persia and the Netherlands. Russia has formally agreed to promote the German railroad to Bagdad by connecting it at the Persian frontier with the Russian road to India, which will interfere decidedly with England's determination to control the land route to her Indian empire. And the plan for enlarging the navy and sea coast defences drawn up by the Dutch Government seems to be aimed directly at England. The defence bill as introduced into the Dutch Parliament provided for an expenditure of $21,250,000, about half of it for the navy and the rest for fortification and munitions on the coast. This was surprisingly large, but the most peculiar feature of it was the plan for the construction of a new and expensive system of fortifications at Flushing, raising the defences at that point "to the level of modern means of attack." The only purpose for this would be to control the mouth of the River Scheldt, but the Scheldt leads into Belgian, not into Dutch territory. Belgium freed the Scheldt from Dutch tolls by the payment of $6,400,000, and the closing of the river at any time would cut off Antwerp from maritime commerce or from naval assistance by any of the Powers which have engaged to protect Belgian neutrality. Flushing is the nearest point in the Netherlands to both France or England, and would be invaluable to Germany in case of a war with either or both. The English papers point out that while the Dutch Government proposes to expend millions in the fortification of the western coast, apparently against Great Britain alone, nothing is to be done to strengthen the defences of the eastern frontier, which are entirely inadequate to keep out a German force. The frontier would, in fact, be abandoned at the start, and the sole reliance would be the inundation of a strip of land, from Muiden to Gorkum, which would make an island out of the greater part of Holland. This plan of defence was adopted in 1874, and the waterways and dykes constructed accordingly, but it is doubtful if the flooding could be accomplished quickly enough to prevent a German raid across the border. The German Government has never guaranteed the neutrality of Holland, and in the German press and even on some German maps it is counted as already one of the states of the German federation and the basis for an attack upon England. By the annexation of the Netherlands Germany would not only be greatly strengthened in Europe, but would acquire the much desired colonies. The court and capitalists of the Netherlands are supposed to favor Ger-

many, but the people as a whole are jealous of national autonomy. The defence bill, on its introduction, met with such strong opposition that it was withdrawn, and the Minister of War, who fathered it, General Cool, was compelled to resign. His successor, Major Colign, will not reintroduce the bill in its present form.

French Foreign Affairs

The address of M. Pichon, Minister of Foreign Affairs, before the French Chamber of Deputies, was awaited with great interest because of the curiosity to know what view he would take of the recent changes in European politics, particularly of the Potsdam interview and the ambitious naval program of Austria. On the former point M. Pichon declared that the Russo-German negotiations had not taken the French Government by surprise. They had been in the air since 1907, and ever since the opening of these negotiations it had been agreed that loyalty to existing alliances was the ground upon which conversation of this kind ought to be conducted. It was the duty of France to maintain conciliatory relations with the dual monarchy, while at the same time safeguarding the rights of Russia, her ally. In regard to England, M. Pichon said:

"Our entente with England has never been more intimate and more complete than it is today. There is not a single question upon which the two Powers are not agreed to pursue a common policy. This coalition of the two countries, which continues to grow more cordial, is one of the great events of the last six years. It is significant, moreover, that these two nations, whose confidence in one another increases day by day, seek in all circumstances to give effect only to a policy of peace."

The Foreign Minister declared that the position of France in Morocco was stronger than ever. The Shawia region was more tranquil than it was before, and order had been established on the Algerian frontier. Schools and hospitals had been founded and the trade routes made safe. Critics of French foreign policy were inclined to ask whether France was not on the road to becoming isolated in the world. To these pessimists he would reply that France was bound to Russia by an alliance, to England by an entente, to Spain by pacific agreements, and to Japan by other arrangements. She entertained friendly relations with Italy. The voice of France counted in the councils of Europe. In discussion of the statement of the Foreign Office, Jean Jaurès, the Socialist leader, urged the adoption of President Taft's proposals for unlimited arbitration treaties. M. Jaurès said: "The United States understands that it is not enough for a nation to be strong. She must also struggle toward the goal of higher ideal justice." The proposed treaty between the United States and Great Britain would be the first link of a chain which would bind all nations and peoples not to bear indefinitely the burden of armed peace which was only a hideous caricature of real peace. In his reply, M. Pichon said that France was a hearty advocate of arbitration, as has been shown by her attitude at the last Hague Conference. The Government was negotiating a treaty with Denmark and was prepared to negotiate one on the broadest basis with the United States. Nevertheless, he was opposed to unlimited treaties. It was impossible to arbitrate questions involving vital interests and national honor. M. Pichon did not think that President Taft's proposal would be adopted even by the United States Senate, for the American Government was at present occupied with plans for the development of its navy and the fortification of the Panama Canal.——An insane man fired upon Premier Briand from the gallery of the Chamber of Deputies on January 17. The first bullet from his revolver struck the ministerial bench and the second the leg of Léon Mirman, Director of Public Relief, inflicting a slight wound. M. Mirman seems to be especially unlucky. In 1893, when he was speaking in the Chamber, he was injured by the explosion of the bomb thrown by the anarchist Vaillant.

Japan

The trial of anarchists in Japan, which has been going on since the first of November and has attracted a good deal of attention in other countries as well, was concluded on January 18. Of the twenty-six prisoners twenty-four were found guilty and condemned to death; the other two were given prison sentences of eleven and eight years respectively. The trial was conducted in

secret, but foreign diplomats and many prominent Japanese were in court when the sentences were given. The Chief Justice stated that the trial had been absolutely fair, impartial and constitutional and that it had been proved beyond a doubt that

"Kotoku and his associates plotted a violent revolution by means of explosives and deadly weapons. They intended to plunder the wealthy, burn the Government offices, assassinate the high officials, attack the imperial palace, and attempt the life of the Crown Prince, whose palace is less securely guarded."

The death sentence was afterward commuted to imprisonment for life of all of the anarchists except the leaders, Denjiro Kotoku and his wife, who will be executed. The prisoners received the sentence with shouts of "banzai" and cheers for anarchy. On leaving the court Madame Kotoku smilingly bowed to the spectators and said, "We beg the pardon of all of you." Kotoku, the originator of the conspiracy, at one time lived in San Francisco and had been connected with a Tokyo newspaper. The affair created great consternation in Japan, where an attempt against the sacred person of the Mikado is regarded as sacrilege. Socialistic and anarchistic groups in America and elsewhere, seeing in this another Ferrer case, have protested violently against the conduct of the trial. ——The budget, which was introduced into the Diet of January 21, calls for largely increased expenditures. The total budget appropriation is $276,000,000. The annexation of Korea and the disastrous floods necessitate heavy expenses both this year and in the future. A system of internal improvements will be carried out in Korea and measures taken to prevent further damage by floods in Japan. During the next six years $137,000,000 will be spent for railroad improvements, including the reconstruction of the main line from Tokyo to Shimonoseki as a broad gage road. The Premier stated that, altho Japan's relations with other governments are most amicable, it would be necessary for Japan to devote large appropriations to the improvement of the navy, in order to keep up with the advance in construction and conspicuous innovations adopted by other Powers in the types of their warships. Forty-two million dollars will be spent for the naval program of the next six years. Notwithstanding these heavy burdens, Premier Katsura declared that the financial condition of the country was excellent. There has been a gain of $240,000,000 in business during the past year, in which the manufacturers contributed $70,000,000.——Orders for a super-Dreadnought for Japan have been given to an English firm. It will have a tonnage of nearly 28,000 and will cost about $12,250,000.

China

The attempt made by the Chinese Government under the guidance of the missionary physicians to confine the bubonic plague to Manchuria has failed and the disease is likely to invade both Korea and the rest of China. Five deaths have occurred at Tien-tsin and ten in Pekin. The legations in the capital have established their own quarantine. The Japanese in Manchuria are erecting plague camps accommodating 4,000 persons. The American Consul at Harbin, Roger S. Greene, remains at his post altho the Legation notified him that he might close the consulate and leave as most of the foreign residents are doing. In one day twenty-four bodies were picked up in the streets of Harbin. ——The famine in the northern part of the Province of An-hui becomes daily more serious and the funds so far sent by the Red Cross Society are altogether inadequate. At Chin-kiang the relief is being distributed thru a local committee composed of Protestant and Catholic missionaries and Chinese.——A riot took place on January 22 in the streets of the treaty port of Hankow in which foreign interference was necessary. It originated in an attack upon the British police by the natives, who, seeing them carry the dead body of a coolie to the station, assumed that they had killed him. The British and German gunboats landed parties of marines to defend the foreign quarter and in the fight with the mob ten Chinese were shot.——The Government has yielded somewhat to the demands of the Assembly. The Grand Council will be reorganized at once into a cabinet and steps taken immediately for the election of a Parliament to convene in 1913.

Reciprocity in Protection

BY LAFAYETTE YOUNG

[The writer of this article has been appointed to fill out the term of the late Senator Dolliver. He is also a candidate for the long-term Senatorship.—EDITOR.]

IN the last issue of the old year THE INDEPENDENT says, editorially:

"Canada wants free trade with the United States, and the United States wants free trade, or as near it as possible, with Canada. Who objects?"

I should reply, emphatically, the farmer—the real farmer—where there are not too many stones in the ground. We do not have to dig up stones to farm in Iowa, for example; but we take annually from the soil of our State food products, including everything that results from agriculture, worth $800,000,000. Eight hundred million dollars' worth of food products every year we bring forth; and it is the only mine in all the world that can yield that much and have the same amount next spring ready for use. All other mines are exhaustible; but this mine, owned by the farmers of Iowa, never diminishes in its yield of riches. I raise my voice to preserve the workingman's part of this enterprise, by which he will have work and wages and the ability to buy what there is to sell. This principle has paid the public debt; it is digging the Panama Canal, beautifying Washington, making rivers and harbors useful to commerce, furnishing the means for every luxury and necessity which we enjoy. To take away any part of that revenue from the Government is to put an end to certain American enterprise.

I know that the principal public complaint in the country today is that farm products are too costly. Many parts of the country desire the lower cost of living which they have been led to believe free farm products would give them. By one bit of jugglery after another the great majority have become convinced that the high cost of living is all due to the tariff on food. When a man pays thirty-five cents a pound for beefsteak he is told by the butcher that the tariff is responsible. When he buys butter and eggs at high prices he is told it is caused by the tariff; till nearly every man in the East has been caused to array himself against the agricultural schedule and the products of the farmer. The Eastern States, being the seat of our principal manufacturing industries, are raising their voices for cheaper food products. They are looking longingly to Canada for the products they have been buying from Iowa and Illinois. The South, not producing what she consumes, joins with New England to deprive the farmer of protection.

The tariff is a selfish proposition, with every man who manufactures demanding free raw material and protected products of the mill. Even the National Manufacturers' Association, which ought to stand solidly for everything that will preserve American markets for American products, is aligning itself with the free food and raw material States, and THE INDEPENDENT asks—"Who objects?"

Well, when the farmer of the great West has been robbed of his share of protection in the grand co-operative enterprise, preserving America for Americans, when reciprocity is dropped and the American system of protection is destroyed by the selfish greed of the manufacturer, the East will also lose its part; for when they organize our country on that basis there will arise a new brand of insurgents which will make the present gallant band look like boy scouts. Thirty years ago the farmers of the West came very near casting their lot with the Democratic party over precisely this same principle. That they did not was because James G. Blaine came out from Maine, and under his leadership we organized a combination between the East and West—a system of reciprocity; a mutual co-operative society; object, mutual advantage; the department of the West to produce the food, the department of the East the manufactured product. Even then it was many years of patient endurance by the West before full fruition was

finally reached, in 1896, under the Dingley law. Then we began to do business.

This country has flourished more since the election of McKinley than in any double period of time in the previous history of the Government. We quit burning our corn for fuel in Iowa, for the partnership was on an equality. Both the East and West were flourishing. But the East has become jealous because we are getting $9 a hundred for hogs. And now they are painting on their banners, "Free food products from Canada; untaxed raw materials."

It is a grand scheme for the East, but I regret the suggested dissolution of the partnership. Its influence will be widespread. It means a great deal more to the country than a temporary reduction of a few cents a week in the individual cost of living. It means that the East will finally be compelled to compete with Japan and Germany in free American markets as regards their manufactured products. If New England is determined to buy Canadian wheat and corn and oats because they may be a little cheaper, the farmers will insist upon buying manufactured products where they, too, are the cheapest. A protection which does not protect all is too selfish a proposition to live in America today.

Why are we flourishing on the farms? Because we have Americans to feed. Americans today receive good wages. Therefore they live well. This is the universal condition, now, in America; but it has not always been the condition. I know what it is not to have a market. I remember the conditions in Iowa long ago, when she had no market for her farm products. The farmers lived the simple life, with a loom in every home. They shod their own horses. It is to this condition that the East is trying to restore us by giving notice of a dissoluton of the reciprocal treaty of protection. It was only when the factory and the farm began to reciprocate—the greatest reciprocal trade relations ever known—that the farmer quit burning corn and began to prosper. Towns and villages began to grow. Churches were built and in every community was thrift, prosperity and good cheer. Protection gave America to the Americans. Farm mortgages were paid and the farmer has at last assumed a position with other American laborers—a position of independence never dreamed of in other lands. He has had time for education. He has had use for a library. He stands on a par today with other Americans. He appreciates protection. It is not to his discredit. I believe that every Senator and Representative in Congress has voted to protect the products of his own people. Every farmer is familiar wth the system. He sees it illustrated by a pig with both feet in the trough fighting his associates away. The pig is fighting to preserve his own protection and to prevent his fellows from having any.

The President demands scientific revision of the schedules. I agree with that demand. There are schedules needing scientific revision. But selfishness may make scientific revision impossible. What are we going to do in the farming States, for instance, if the public demand is appeased by a scientific revision of the schedule which shall put agricultural products on the free list, and drop the matter there? Every test in Congress has demonstrated that men will always stand by the productive interests of their own States. All the scientific revision in the world will not change that condition. A voice has been raised everywhere for every man in the United States except the right one. Voices are raised everywhere for the consumer. But where is he? I would like to see a real plain consumer who is not at the same time a producer. If he exists he is a useless drone and ought to be expunged; yet men were elected to the new Congress on the doctrine of helping the consumer. If we protect the producer we protect every one in the country who is worthy of protection—and of all the producers of America, for the health and wealth and happiness of the nation, there is none to compare in importance with the farmer.

Behind very much of this popular agitation is really the free trade idea—free trade in everything but our own product. The free trader is the most unreconcilable man ever born. He sees only one side of every bill, and that is what it is going to cost when he buys. It is the cost of things that alone con-

cerns him. You find these men everywhere, and underneath all this agitation is the free trade spirit latent in this country. But visit the manufacturing places of Japan, and of Germany, which is—or will soon be—our greatest competitor in the markets of the world. All that Germany and Japan want is free raw materials and little places to work, while the workmen live most anywhere.

Are we to adjust our conditions and are we to go into the scramble with Germany, Japan, Italy, and France? Are we to adopt free raw materials as the academic student of the tariff would have us, and free food products? We have a great new country where we could put Germany and Japan down inside of Texas and then you would need a search warrant to find either one of them. With us are absolutely new conditions different from theirs. Yet the doctrinaire, the academic student, who wants free raw materials and free food products, contemplates having Old World conditions prevail here, and he thinks he can do it without a merchant marine—without an American ship on the sea. It is impossible. And yet we must have a market—a constantly increasing market—for our produce, under any conditions. Much more must we have a foreign market if we attempt to reduce the home market by restricting protection.

If we had a merchant marine it would be the traveling man of the ocean for American trade; the omnibus for the hotel. Now, we get exactly what the other people do not want and we sell only what they cannot produce. Suppose that you and I owned the only hotels in a town and that I owned the only conveyance. How many guests would you have till after my beds were filled? The other nations own the ships and we get just what is left over. Yet we are trying to abandon a part of the American market by obliterating certain import duties. It is said that we have business enough at home; but if we surrender a part of it to these doctrinaires and those who want everything cheaper, we must either give up or find markets somewhere else for those we give away.

Nor is it all the agitation at home that is behind this effort. The assault upon our protective tariff, persistent, everlasting, ingenious, comes largely from other parts of the world—from our rivals who are trying to get into this rich market. Every one who has something to sell wants to get into the United States with it duty free. Importers or agents of foreign manufacturers insinuate themselves everywhere, suggesting legislation tending to a lowering of the tariff. I am not burning up with sympathy for other parts of the world. Do you know what the average men of other countries think of Americans and what they say of us when we are not present? If you did you would have less self-esteem and more inclination to keep intact the protection wall which gives America to Americans.

I have been a Republican for a long time and have never had occasion to repent. I am proud of the progress we have made under Republican administration and of our prosperity under the Republican principle of protection. We cannot afford to abandon it any better than we can afford to throw the tariff into the hands of the Democrats to establish a system for revenue only. It might reduce the cost of living a little, but it would reduce the ability to live at all a great deal. It would impoverish the purchasers of America; for the consumer, whoever he is, in one field, is but the producer in another; and if the returns from his producing are reduced what does it signify that his cost of living is also a little reduced?

They are talking about schedules. They say it is all a question of schedules, and they want to get hold of a few, where there is the least power of defence behind them, and pacify the public by reducing them, without the danger of having other choice preserves encroached upon by the only effective artillery known in tariff legislation. They want to appease the Republican party in the East by attacking the agricultural schedule and in conformity with what is presumed to be the popular wish put food products and raw materials on the free list. But there is danger ahead. If such a thing is done the country will be impoverished, not enriched thereby. It is not a matter of schedules. It is a matter of principles. A glib-tongued orator can

tear any schedule to pieces if you give him time to study and play upon the words therein, if he is out with it alone and there is no one in the audience to call attention to his sophistry and his inconsistency. Men do not come out to Iowa to talk about reducing the agricultural schedule. They come and tell us that Iowa is the greatest agricultural State in the Union and then begin lambasting some other interest thousands of miles away.

It is not the schedules but the principle for which we must stand if we would stand at all—the principle of *reciprocal* protection; if the principle of protection at all is correct. That principle of protection has been indorsed by every one. There is no one who is not ready to fight and vote for protecting the industries of his own State. But there are many, today, who seem ready to strike a blow at protection anywhere else, especially at anything which protects the farmer of the West. And even THE INDEPENDENT asks—"Who objects?"

In the name of the farmers who are furnishing America, this year, with over nine billion dollars worth of produce, and are ready to do it again next year, and the year after, and the year after that if they have a chance to keep the farms running, I want to object to any proposition so unjust, so dangerous, so certainly injurious to the whole country, as depriving them of their right to reciprocal protection, for the political pacification of the manufacturing East.

WASHINGTON, D. C.

A Hut in the Apennines

BY MISS E. BOYLE O'REILLY

HIGH on a pass among the Apennines
A friend once took me to a peasant's hut
Where at the table as we entered in
An aged couple sat, who played at cards.
The husband, white haired, ruddy, fresh from toil,
His hands yet stained with balsam of the wood,
Sat smiling at his wife, her lover still;
And she gave answering smile, still full of charm.

And when we asked the reason of their game
Gayly and easily they answered us,
In the sweet Tuscan speech no tongue can match
With the true dignity of Italy:
"Each night we play, and he who loses must
Thru the next day be subject to the other,
And gladly do whatever he is bid."

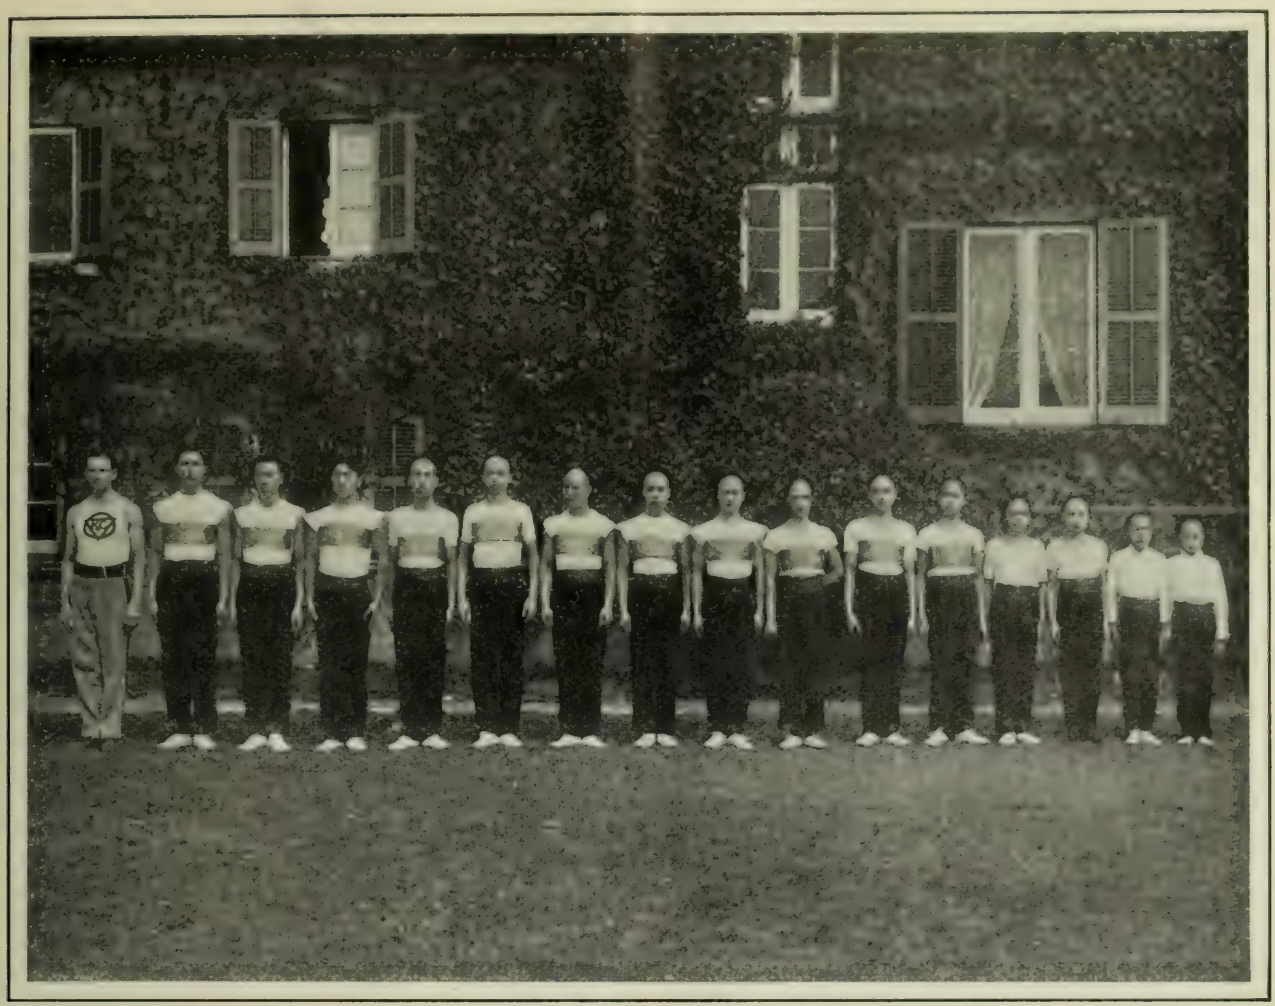
I know not why, but oft this little scene
Comes back to cheer me as I onward go,
Restless, self-centered, doubting, blindly on.
Often I seem to see the mountain hut
Whose scanty windows scarce let in the light,
Buried perhaps in snow through winter storms:
I see again the brightly glowing logs,
The fresh plucked daisies placed before the shrine,
The tender face of that sweet aged wife,
The stooping shoulders of her husband true.

Oh I am sure they nearer are to God
Who bear the lingering years with simple love,
Who live unconscious, hardy, happy lives!

BOSTON, MASS.

The Chinese Olympic Games

BY W. W. LOCKWOOD



General Secretary of the Y. M. C. A. at Shanghai.

THE third week of October, 1910, promises to be historic in the chronicles of Chinese history. During that week the classic city of Nanking, the capital of the Chinese Empire during the Ming dynasty, was crowded with thousands of Chinese students, the representatives of the New China. The principal colleges thruout the empire were adjourned for the week. Railroads now running into that ancient city brought trainloads of young men and women. From Shanghai, two hundred miles distant, came a thousand enthusiastic Chinese, representatives of the new generation. The steamers, bearing the flags of many nations up and down the east coast of China, brought their quota. Thru the canals of the interior on houseboats and on the antiquated wheelbarrow rattling over the rough stone paths came large numbers from the country districts. So numerous were the guests that scores of houses were fitted up as temporary hotels to provide for them. This was without doubt the most representative national gathering that has assembled in the Chinese Empire in forty years of history. What was this great occasion which brought together such a representative company and stirred the nation from center to circumference? It was New China holding the first national games—the "China Olympic Games," as the press of Shanghai chose to call them.

The first national games for China were held in connection with the Nanking Industrial Exhibition, made possible by the great Viceroy Tuan Fang and other progressive officials who had visited the St. Louis Fair and other similar exhibitions in the West and had become convinced of their value to the nation. Its scope was national and had as its main purpose to bring together for the first time the natural and manufactured products of the empire. The Nanking Exhibition covered many acres of land, there were many buildings erected by the Provinces, and various other features familiar to all such exhibitions in the West. The national games were held in the exhibition grounds, on a field especially provided and equipped for the purpose.

One hundred and forty athletes from five different sections of the empire participated in the games. To choose these representatives five preliminary field days had been held in the following great student centers: Peking in the north; Canton, in the south; Shanghai, on the coast; and at Nanking and Hankow, in the Central Yangtse region. Great enthusiasm characterized these preliminaries. It was a great honor for a student to be chosen to represent his college and his section of the empire in these first national games. The expense of time and money to send these teams was not inconsiderable in some cases. Two of the teams required three weeks' absence from college, owing to the distance to be traveled and the lack of railway facilities.

The honors contested for were: (1) The sectional championship of the empire; (2) the national college championship; (3) the high school championship; (4) the national championships in tennis, basketball and football; and (5) the individual national records in the following events: the 100-yard, 220-yard, 440-yard, 880-yard sprints; putting 12-lb. shot; running jump; 120-yard hurdles; throwing 12-lb. hammer; pole vault; running high jump. The rules adopted by the officials were those laid down by the Amateur Athletic Union of North America. Dr. M. J. Exner, physical director of the Chinese Young Men's Christian Association, was depended upon by those in charge to do much of the preliminary work, since it was known that he had had considerable experience in this line of work, having been for fifteen years one of the leading physical directors of the Y. M. C. A. in North America, and had been chosen by that organization to pioneer the physical department in China.

PROGRESS ALL ALONG THE LINE.

YOUNG CHINA AT DUMBBELL DRILL.

The contest to determine the college championship was the most interesting of the week. The championship at the last narrowed down to two institutions —Nanyang Technical, a Government college, and St. John's University, a leading missionary institution, both located in Shanghai. With two events yet to be pulled off, the missionary institution had a lead of ten points. In the next event, the pole vault, the Government college won first, second and third, thus winning nine points and bringing them within one point of the leaders. The excitement knew no bounds during the last event, a relay race, which St. John's won by only a few inches. This victory gave the missionary institution the national championship.

The records made this year at Nanking would not have won a place in an intercollegiate meet in North America or England, but, nevertheless, the results were creditable considering the few years the sons of the Middle Kingdom have applied themselves to athletics.

How was it possible for China in the year 1910 to hold a national athletic tournament? Such a thing would have been unthought of ten years ago. To trace the growth in the athletic spirit one must go back to the remarkable reform edict of September, 1906, when, by one stroke of the vermilion pen, the Empress Dowager swept away the age-honored literary system of education and substituted as an ideal the most modern system of scientific education, patterned after the American model. China's old system of education was individualistic. Students studied at home and gathered only once in three years, when the examinations were held. The new education brings students together in central institutions. These new institutions have sprung up on every hand. We see the provincial capitals, where seven years ago the students in modern schools were numbered by the score, today are filled with thousands of students in modern institutions. These provincial centers have not only primary, intermediate and high schools, but colleges of higher learning, also, and special institutions where law, medicine, industrial science, pedagogy, mechanics, mining, military science and many other subjects are made a specialty. Simultaneous with the gathering together of large student bodies, a competitive spirit has been generated which has manifested itself in the adoption of Western athletics.

The old scholar in China was ascetic.

ON YOUR MARKS.....GO!

China, too, has her athletes—thanks to the enterprise of the colleges and of the Shanghai Y. M. C. A. Dr. M. J. Exner is China's first physical director.

THE STRENUOUS LIFE IN THE FAR EAST.
The athletic games held in connection with the Nanking Industrial Exhibition last October are a sign of the times.

The new scholar has become athletic. The old scholar was characterized by a long, solemn countenance, a pair of broad-rimmed goggles, and a sallow complexion; he was quiet, sedate, and prided himself upon his long fingernails, the unmistakable marks of a gentleman of leisure. Like the monk of the Middle Ages, in exalting the mind he was led to despise the body. On the other hand, the new scholar of China effervesces with college enthusiasm, cheers his college team on the athletic field, and appears on dress parade in smart military uniform. He magnifies the importance of the body, and vies with his fellows in athletic prowess. Old China shunned all kinds of exercise as if it were poison. Physical exertion was not considered to be in keeping with the dignity of the true gentleman. In Shanghai a story is current of a scholar from the interior whose inquiry upon seeing for the first time the British bluejackets playing football, was, "Who pays those foreigners for running around like that?" But today the New China has its football, its tennis, its cricket. The new education has brought with it a new gospel of the value of the body and its importance to manhood.

The rapidity with which organized athletics have developed in China is phenomenal. Ten years ago there was scarcely a handful of students to be found within the eighteen provinces who had any knowledge of or any desire for athletics. The first field day for the Chinese was promoted by the Chinese Young Men's Christian Association, and Western college men laid out the field, prepared the apparatus, started the races and held the stop watch. But once instituted these interscholastic events proved very popular, so that during the past year field days were held in practically every provincial capital of the empire. A recent field day in Canton continued for two days, had 1,250 contestants, and an attendance of 20,000. Today the Chinese themselves have charge of all arrangements and are as conversant with the rules as are the American college athletes. Government officials, from the Viceroy down to the lowest magistrate, attend these events and in this and other ways indicate their approval.

The national games are having and promise to have in the future a still larger influence in the development of the national spirit of the Chinese people. The Olympic Games of Greece were from the first a great influence in the development of national unity among

A PYRAMID OF CHINESE GYMNASTS.
Three thousand persons witnessed the gymnastic exhibition of these young Chinamen at Shanghai.

the Greeks. The Olympic Games brought together representatives from all parts of the states, made them acquainted, and bound them together in a common interest. This same result is noted in China. The games at Nanking received wide attention in the Chinese press. They came at the time of the opening of the National Senate in Peking. The leading British newspaper of the Far East, the *North China Daily News,* the editor of which is a brother of the editor of the London *Times,* calls attention to this fact editorially:

"While the athletic contests in Nanking were inspiring the youth of China with a new appreciation of national unity, another representative gathering of still greater influence (the newly organized Senate) recorded in the distant capital of Peking its unanimous vote with almost equally demonstrative enthusiasm in favor of an early opening of the promised Parliament. It may be, therefore, that the Nanking Sports will, in the course of time, become invested with the same significance that the first Olympic Games had for the ancient Greeks."

"When will China be represented in the world's Olympic Games?" This question is being asked in all seriousness by China's modern literati. Others, looking farther into the future, ask, "When will the world's Olympic Games be held in Peking?" Those who have followed China closely during the past five years have seen more wonderful things happen than the possibilities raised by these inquiries.

"Is China awake?" ask some in America. There is no longer doubt about China's being awake, and no doubt that the nation is making rapid progress toward the adoption of Western education and civilization, and is now consumed with a desire to acquire everything modern that the Western nations have to offer. The change is rapid. Sir Robert Hart said recently that China has made more advance during the past five years than Japan made in any one decade. When one considers how Japan startled the world in the three or four decades of transformation he comes to realize something of what the above statement means. Is it not a significant fact that one of the first things to be appropriated by China is modern athletics? There is no phase of college life more needed, none that will make such a large contribution to the people. Many

centuries of city life, a lack of right conceptions as to the value of the physical life, together with an all too strong emphasis on scholarship, have contributed to make China a needy nation from the physical standpoint. The national games, in bringing students from all sections of the empire together in a common interest, in promoting a patriotic pride in the athletic possibilities of the sons of the empire as compared with those of other lands, all these have called the attention of the people to the importance of physical development, and in this way have made a large contribution to the nation's life.

SHANGHAI, CHINA.

The Parcels Post Again

BY SYLVESTER C. SMITH

MEMBER OF CONGRESS FROM CALIFORNIA.

I READ with much interest what you have to say from time to time about the parcels post as I read everything on that subject that comes under my observation but I want to say that you are mistaken as to the facts in one or two particulars.

First, the farmer does not care anything about the rural parcels post. He would not patronize it if it were established. He can now 'phone in for goods and have them sent out by the rural carrier, but he doesn't do so. Why? Because he and his children like to drive in to town—God bless them for that desire. And they have the time for doing so. The American farmer is no longer the drudge he was a generation or two ago. Improved machinery and methods of farming give him many leisure hours, and towns are not far apart.

Second: in the general parcels post, the people do not want the zone system of postage. They want one flat rate as at present, but want the present rate reduced. Why? Because they want to trade at remote catalog houses and have their purchases brought home as cheaply as possible. I find no disposition on the part of the people to hide their real desire in this matter. They say frankly, "We want to trade where we please," and that is certainly their right and privilege. The only question is, how far should the Government go in carrying their purchases home for them. But let us keep the fact in mind that the point of interest on the part of the people in the parcels post question is the desire to trade at remote points, naturally the catalog house. The great mass of the people have no other interest in this subject. I have attended numerous meetings of farmers' institutes, farmers' clubs, granges, etc., and this has been the unanimous voice; and last year representatives of the National Grange and also of the National Farmers' Reunion testified to the same effect before the House Committee on Post Offices and Post Roads.

Now a word as to competition with express companies. You are fond of issuing the common insult that "the four arguments against the system are the four express companies." In your issue of January 12, 1911, you say:

"Every child knows that the only hindrance in the way is the rivalry of the express companies." Now let us see.

If we should establish the rural service (which only a few city writers really want), the express companies would not be affected, for they do not now cover that field. If we continue the present one-rate system (and I know of no one who is advocating a zone system of postal rates), then we meet the express companies in competition at only a very few long-haul points. So in neither case are we threatening the express companies with serious competition. We can do that only by adopting their method of making rates—the zone system. The country does not want that in its postal service.

WASHINGTON, D. C.

The Demonstration of Mary Baker Eddy*

BY AUGUSTA E. STETSON

[There are abundant documentary evidences which prove that Mrs. Eddy held Mrs. Stetson in the highest and most affectionate esteem and considered her a most precious student and faithful Christian Scientist. Since the passing of Mrs. Eddy there has been among her followers in the Christian Science Church much questioning as to whether she would not appear in the flesh, as did Jesus after His burial. Among those to whom this expectation has been attributed is Mrs. Stetson, the founder, pastor, reader and spiritual head of First Church of Christ Scientist of New York City during twenty-three consecutive years. Accordingly we have asked Mrs. Stetson to prepare the following article, tho, of course, it will be understood that THE INDEPENDENT does not indorse the Christian Science philosophy. Mrs. Stetson is the most distinguished of the followers of that faith and for many years has been on terms of affectionate intimacy with Mrs. Eddy. In the following article Mrs. Stetson declares her belief that Mrs. Eddy "will walk and talk with her disciples until she has given final proof of her teachings." This article is evidence of Mrs. Stetson's loyalty to the doctrines of her Teacher as to the "illusion of death," and we are glad to present it as an important statement of the belief of Christian Science.—EDITOR.]

YOUR request for my reasons for believing in the possibility of a demonstration of life over death, or the reappearance of our revered leader, Mary Baker Eddy, affords me an opportunity to reaffirm my unswerving and uncompromising conviction in the power of the Christ Mind to conquer sin, sickness and death. As I understand the teachings of Jesus, the omnipotence and omnipresence of God is as demonstrable today as it was two thousand years ago, when the meek and mighty Nazarene, Jesus the Christ, our Way-shower to eternal Life, came forth victor over death and the tomb.

Mrs. Eddy has for forty-four years followed in the footsteps of the great Master Metaphysician, Christ Jesus, even to the tomb, through and beyond which she will pass in her *final* proof of the teachings and demonstration of divine metaphysics—the immortality of man and the universe.

If the reader will stand with me on the platform of divine metaphysics, or Christian Science, and will look through the lens of spiritual thought, he will readily understand my reasons for believing in the potency of the Mind of Christ to awaken humanity from the d eam of death and the to·nb.

One of my reasons for believing in the possibility of man to demonstrate eternal life is that I accept the Holy Bible as the Word of God. This book was written by inspired men, and is the record of the true creation and the false —the real man, made in the image and likeness of God, the Father (which is found in the first chapter of Genesis and is the record of the spiritual fact of creation), and the second, or mythological account of Adam—the carnal, so-called man, in whom all die. "For to be carnally *minded* is death; but to be spiritually minded is life and peace" (Romans 8:6).

I reason from the following postulates of Christian Science: "God is infinite, the only Life, substance, Spirit, or Soul, the only intelligence of the universe, including man" ("Science and Health," page 330). Also that "all causation is Mind, acting through spiritual law" ("Science and Health," page 417). Therefore it follows that every effect is a mental phenomenon. Accepting these hypotheses, I admit but one causation—eternal Life, Truth and Love; one Christ, the Son of God, the impersonal idea; and one universe, the manifestation of God or spirit. Spiritual man and the spiritual universe are the expression of infinite spirit—God and His Christ, manifested in His infinite ideas.

Acknowledging but one Cause—Spirit, Mind—Jesus evolved *spiritual* phenomena, and by his reflection of the power of God He demonstrated the omnipotence of Spirit, which destroys the phenomena of material belief, with its effect, sin, disease and death. Thus he proved the supremacy of spiritual consciousness over the belief of the material senses.

From Moses to Jesus, humanity had

*Copyright, 1911, by Augusta E. Stetson.

been calling for a deliverer from suffering, sorrow and death. The people of God had cried out for a Messiah, a Redeemer, until the individual and universal longing and yearning for something better than sin and death exalted the Wise Men to behold and follow the star of hope and faith, which led them to the place where the young Child lay who was to redeem them from servitude to a tyrannous master—a false mentality, or belief in matter of sentient substance, possessing life and intelligence.

The cradle song of Christ Jesus was not sung in vain. The anthem of immortality rang out from the heavenly choir: "Unto us a child is born, unto us a son is given: and the government shall be upon his shoulder: and his name shall be called Wonderful, Counselor, the mighty God, the everlasting Father, the Prince of Peace." Down through the centuries the great organ of eternity has reverberated this anthem: "The government shall be upon his shoulder: and his name shall be called Wonderful, Counsellor, the mighty God, the everlasting Father, the Prince of Peace."

MRS. MARY BAKER EDDY.

I believe in the resurrection of the so-called dead (either here or hereafter) from the belief that man is material—composed of flesh, blood and bones—to the understanding that mind is the standard of man, and that man is the emanation of the One Mind or Spirit, perfect and immortal as his Principle, God.

From this vantage ground of spiritual understanding Christian Scientists discern the spiritual facts of being. Our leader, Mrs. Eddy, says in "Unity of Good," page 46:

"I do not deny, I maintain, the individuality and reality of man; but I do so on a divine Principle, not based on a human conception and birth. The scientific man and his Maker are here; and you would be none other than this man, if you would subordinate the fleshly perceptions to the spiritual sense and source of being."

Jesus' teaching and demonstration in the healing of the sick, the raising of the dead, and the proof of the omnipotence of the Christ Mind over the tempestuous waves, when he commanded, "Peace, be still," aroused the antagonism of the materialists, who resisted the law of God as enforced by Jesus. This compelled Jesus, the Master Metaphysician, to rise to the heights of spiritual supremacy in the demonstration of Truth over error, Mind over matter, and Life over death, thus proving that the law of spiritual life annuls the so-called law of sin and death. Let me quote from "Science and Health," page 314:

"Because of mortals' material and sinful belief, the spiritual Jesus was imperceptible to them. The higher his demonstration of divine Science carried the problem of being, and the more distinctly he uttered the demands of its divine Principle, Truth and Love, the more odious He became to sinners and to those who, depending on doctrines and material laws to save them from sin and sickness, were submissive to death as being in supposed accord with the inevitable law of life. Jesus proved them wrong by his resurrection, and said: 'Whosoever liveth and believeth in Me shall never die.' . . .

"Jesus' spiritual origin and understanding

enabled Him to demonstrate the facts of being —to prove irrefutably how spiritual Truth destroys material error, heals sickness, and overcomes death." (Page 315.)

Jesus left this inspirational promise to his followers: "Verily, verily, I say unto you, he that believeth on me, the works that I do he shall do also; and greater works than these shall he do; because I go unto my Father" (John 14:12).

Again I quote from Mrs. Eddy:

"The history of Jesus shows him to have been more spiritual than all other earthly personalities. . . . From him mortals may learn how to escape from evil. . . . The Christ-idea, or the Christ-man, rose higher to human view because of the crucifixion, and thus proved that Truth was the master of death. Christ presents the indestructible man, whom Spirit creates, constitutes, and governs." (S. & H., pp. 315-316.)

"The understanding of his spiritual individuality makes man more real, more formidable in truth, and enables him to conquer sin, disease, and death. Our Lord and Master presented himself to his disciples after his resurrection from the grave, as the selfsame Jesus whom they had loved before the tragedy on Calvary.

MRS. AUGUSTA E. STETSON.

"To the materialistic Thomas, looking for the ideal Saviour in matter instead of in Spirit and to the testimony of the material senses and the body, more than to Soul, for an earnest of immortality—to him Jesus furnished the proof that he was unchanged by the crucifixion. To this dull and doubting disciple Jesus remained a fleshly reality, so long as the Master remained an inhabitant of the earth. Nothing but a display of matter could make existence real to Thomas." ("S. & H.," p. 317.)

Christian Scientists believe in and understand Jesus' reappearance to his disciples, and to five hundred brethren at one time. He appeared to them in visible form until he rose beyond their apprehension. This is no argument for spiritualism—the material theory of the intercommunication of the so-called dead and the living (which is not Christian Science); but it is a strong argument for spiritualization of thought through which to discern the real man and the real universe, and a cessation of discord, disease and death.

Had the faith and understanding of the disciples risen with their Master to a higher spiritual apprehension of the mental Messiah, Jesus would longer have been appreciable to them and to the brethren. Were the faith and understanding of the students of Christian Science—through demonstration of the Christly qualities, chief among which is divine love for God and man—sufficiently exalted, our great leader, Mary Baker Eddy, would appear in visible form and with audible speech, in verification of her teachings and demonstration of the Science of divine Mind.

From the resistance of the unillumined human Mind to the possibilities of the mind of Christ, one would conclude that "Life were a blessing not worth possessing, and death a consummation devoutly to be wished."

If humanity would struggle for recourse to the divine Mind, which all possess, individual and universal consciousness would rise to grasp the spiritual reality of existence, and would lose its finite anchorage to the belief of life in matter, and its consequence, death. Then

would mankind seize the great possibilities, the living activities, and the divine dominion of man in the image and likeness of his Maker. Jesus demonstrated the eternal verities of his spiritual selfhood, and proved his mental ability to dispel the illusions of belief in substance matter. He revealed the man of God's creating, verified his teachings of God's omnipotence and omnipresence in manifestation of the ideal man, and vanquished the phenomena of so-called mortal man—death and the tomb.

I believe that our revered leader, Mary Baker Eddy, was God-anointed and God-inspired to write "Science and Health, with Key to the Scriptures," the textbook of Christian Science. Through spiritual illumination she discerned the might, majesty and supremacy of the Christ Mind. Every page of this textbook is luminous with the substance and reality of God and His spiritual universe, including man.

The radium of Spirit penetrates, dissolves and disperses the substanceless shadows or images of the mortal concept—the counterfeit man and the counterfeit universe, and discloses the divine reality and spiritual verities of being.

Throughout her writings Mrs. Eddy teaches that there is but one God, one Christ—the impersonal idea or Son of God—and one universe, the body or expression of creative Principle. Every object in the spiritual universe, from the infinitesimal to the infinite, is a member of the body of Christ.

Jesus understood and demonstrated Truth. Mrs. Eddy follows Christ's teachings, and enjoins her followers to adhere strictly to his instructions in the way to eternal Life.

Mrs. Eddy says:

"Jesus of Nazareth was the most scientific man that ever trod the globe. He plunged beneath the material surface of things, and found the spiritual cause. To accommodate himself to immature ideas of spiritual power—for spirituality was possessed only in a limited degree even by his disciples—Jesus called the body, which by spiritual power he raised from the grave, 'flesh and bones.' To show that the substance of himself was Spirit and the body no more perfect because of death and no less material until the ascension (his further spiritual exaltation), Jesus waited until the mortal or fleshly sense had relinquished the belief of substance-matter, and spiritual sense had quenched all earthly yearnings. Thus he found the eternal Ego, and proved that he and the Father were inseparable as God and His reflection, or spiritual man." ("S. & H.," p. 313.)

On the cross, Jesus met the mockery of his enemies, who said, "He saved others, himself he cannot save" (Matthew 17:42). Even his disciples believed he had yielded to death, and did not look for his demonstration of eternal Life; yet he was working out in the dreary tomb the scientific facts of being, that "Man is not material, he is spiritual" ("Science and Health," page 468).

In Jesus' walk to Emmaus he found his disciples discussing his death. Not recognizing the Master, they said:

"Art thou a stranger in Jerusalem, and hast not known the things which are come to pass there in these days? And he said unto them. What things? And they said unto him, Concerning Jesus of Nazareth, which was a prophet mighty in deed and word before God and all the people . . . But we trusted that it had been he which should have redeemed Israel." (Luke 24:18-21.)

Today history repeats and resembles itself. Eleven times Jesus appeared to his disciples after he had risen from the dead. The first time, at the resurrection morn, he appeared to Mary,

"who stood without at the sepulcher weeping: and as she wept, she stooped down, and looked into the sepulcher. And seeth two angels in white sitting, the one at the head, and the other at the feet, where the body of Jesus had lain. And they say unto her, Woman, why weepest thou? She saith unto them, Because they have taken away my Lord, and I know not where they had laid him. And when she had thus said, she turned herself back, and saw Jesus standing, and knew not that it was Jesus. . . . Jesus saith unto her, Mary. She turned herself, and saith unto Him, Rabboni; which is to say, Master (Teacher).

"Jesus saith unto her, Touch me not; for I am not ascended to my Father: but go to my brethren, and say unto them, I ascend unto my Father, and your Father; and to my God, and your God." (John 20:11-14, 16-17.)

On the evening of the same day "when the doors were shut, where the disciples were assembled for fear of the Jews, came Jesus, and stood in the midst, and saith unto them, Peace be unto you" (John 20:19).

This is the third time that Jesus appeared to his disciples in a form which they recognized, and he spoke audibly to them.

"And after eight days again his disciples were within, and Thomas with them: then

came Jesus, the doors being shut, and stood in the midst, and said, Peace be unto you. Then saith he to Thomas, Reach hither thy finger, and behold my hands; and reach hither thy hand, and thrust it into my side; and be not faithless, but believing. And Thomas answered and said unto him, My Lord and my God. Jesus saith unto him, Thomas, because thou hast seen me, thou hast believed; blessed are they that have not seen, and yet have believed." (John 20:26-29.)

There are those in this hour who, not having seen, yet believe. The omnipotence of eternal Life Jesus recognized, obeyed and demonstrated. The law of omnipotent, everpresent Truth and Love, manifested in spiritual man through the resurrection of Jesus the Christ, Mrs. Eddy acknowledged, obeys and will demonstrate to all who have spiritual vision and who patiently wait for her reappearance.

Humanity has always been impatient of final evidence. The law of nature is, "First the blade, then the ear, then the full grain in the ear."

With the stupendous task before Jesus of reversing the testimony of the so-called mortal mind; trusting the Principle and rule of his divine being, he began his demonstration of the law of Spirit over the claim of a pseudo-material law. Mrs. Eddy refers to him in "Miscellaneous Writings," page 162:

"He must stem these rising angry elements, and walk serenely over their fretted, foaming billows. . . .

"Clad with divine might, he was ready to stem the tide of Judaism, and prove his power, derived from Spirit, to be supreme; lay himself as a lamb upon the altar of materialism, and therefrom rise to his nativity in Spirit."

Thus we faintly apprehend the responsibility which Jesus assumed when he grasped the right hand of God and went forth to conquer evil in the fleshly mind, and to prove the power of man when governed by God. Our revered Leader, Mrs. Eddy, whom I believe to be God-appointed and God-anointed, repeats the history of Jesus, our Way-shower, and is the first to discover the Science of being which Jesus taught, proved and left to the world as a divine bequest. When her mission dawned upon her she clasped the hand of omnipotent Love, and humbly, obediently accepted the cross, that she might fulfill the law of love, which annihilates all that is unlike Christ. In regard to this hour of her experience in spiritual development, let me quote her own words:

"I saw before me the sick, wearing out years of servitude to an unreal master in the belief that the body governed them, rather than mind.

"The lame, the deaf, the dumb, the blind, the sick, the sensual, the sinner, I wished to save from the slavery of their own beliefs and from the educational systems of the Pharaohs, who today, as of yore, hold the children of Israel in bondage. I saw before me the awful conflict, the Red Sea and the wilderness; but I pressed on through faith in God, trusting Truth, the strong deliverer, to guide me into the land of Christian Science, where fetters fall and the rights of man are fully known and acknowledged." ("Science and Health," p. 226.)

The great moral and spiritual work that Mrs. Eddy has done and is doing for herself and for humanity, in following and obeying the law of God and the teachings, life, example and demonstration of Jesus the Christ, our Way-shower; her mighty wrestlings to overcome and rise superior to the false belief of mind in matter; the continual persecution which followed her spiritual evolution as she aroused and met the enmity of the carnal mind, which opposes itself to Spirit; her unceasing prayers for more of the qualities of Christ, and spiritual love, which alone destroys the claim of fear, malice, hatred, envy, revenge, lust and hypocrisy, termed in Christian Science animal magnetism, mesmerism, hypnotism—all these qualities of the carnal mind, the effects of which are death, and which Mrs. Eddy met with dauntless, demonstrable faith and understanding during forty-four years,—all these experiences through which she passed to lift herself and humanity to discern and demonstrate the spiritual facts of being are priceless blessings to humanity.

The battle between Truth and error, the irresistible conflict between Spirit and flesh, impelled her and still impels her to rise to the zenith of demonstration of the law of God—eternal Life, Truth and Love, and to manifest the second coming of Christ, in proof of the Scripture, "To them who look for Him [Christ] will He appear the second time without sin unto salvation."

The great spiritual blessings which flow from her unselfed life, and love for God and humanity, the Christly example

and teaching of Mary Baker Eddy, if but partially comprehended, would place her in the very heart of hearts of mankind as a loving friend, an emancipator from the ills to which flesh is heir, and would endear her to the entire world as a universal benefactor who has revived the waning faith of thousands in a God of Love, who is an ever-present help to His children.

Mary Baker Eddy lives and reflects the omnipotence of ever-present Love. Paul asked: "Why should it be thought a thing incredible with you, that God should raise the dead?" (Acts 26:8). Mrs. Eddy does not believe in the phenomenon of the fleshly mind termed death.

I believe in the teachings of Jesus the Christ and of Mary Baker Eddy; therefore I believe that "Life is real, and death is the illusion" ("Science and Health," page 428).

In a letter written in 1909, and published in *The Christian Science Sentinel,* under the heading, "There Is No Death," Mrs. Eddy says:

"My beloved Edward A. Kimball, whose clear, correct teaching of Christian Science has been and is an inspiration to the whole field, is here now as veritably as when he visited me a year ago. If we would awaken to this recognition, we should see him here and realize that he never died; thus demonstrating the fundamental truth of Christian Science."

Christian Scientists are striving to awaken to this recognition by possessing and radiating the qualities of Spirit. I believe implicitly in the Holy Bible, and in the life and resurrection of Jesus Christ. I believe in our Leader, Mrs. Eddy's, spiritual interpretation of the Word of God in her book, "Science and Health, with Key to the Scriptures," the textbook of Christian Science, and in her other writings. As taught by Mrs. Eddy, I admit but one premise: "Spirit is infinite: therefore *Spirit is all.* 'There is no matter' is not only the axiom of true Christian Science, but it is the only basis upon which this Science can be demonstrated" (*Christian Science Journal,* Vol. XXVI, page 697).

In *The Christian Science Sentinel* of September 3, 1910, is a letter of inquiry addressed to Mrs. Eddy, and her reply, which I give in full:

"Last evening I was catechized by a Christian Science practitioner because I referred to myself as an immortal idea of the one divine Mind. The practitioner said that my statement was wrong, because I still lived in my flesh. I replied that I did not live in my flesh, that my flesh lived or died according to the beliefs I entertained about it; but that, after coming to the light of Truth, I had found that I lived and moved and had my being in God, and to obey Christ was not to know as *real* the beliefs of an earthly mortal. Please give the truth in the *Sentinel,* so that all may know it."

MRS. EDDY'S REPLY.

"You are scientifically correct in your statement about yourself. You can never demonstrate spirituality until you declare yourself to be immortal and understand that you are so. Christian Science is absolute; it is neither behind the point of perfection nor advancing toward it; it is at this point and must be practised therefrom. Unless you fully perceive that you are the child of God, hence perfect, you have no Principle to demonstrate and no rule for its demonstration. By this I do not mean that mortals are the children of God—far from it. In practising Christian Science you must state its Principle correctly, or you forfeit your ability to demonstrate it."

The mental atmosphere of today is pregnant with the query, What is Truth?

"Truth's mighty arguments are rolling down
From inland mountain to seaboard town."

The question confronting the twentieth century thinker is, Shall we continue from material concepts to evolve material phenomena — discord, disease and death—or shall we refuse longer to attempt to open "The future's portals with the past's blood-rusted key"? Shall we not rather accept Truth—Christ—*now,* and find the way to health, holiness and immortality?

The timid or the unillumined, who desire popularity and prefer the mesmerism that shuns conflict for the sake of personal ease, that fears ecclesiastical authority and materializes our Leader's teaching, would relegate the Church to a mere material organization, and would rob it of the power of spiritual healing —the proof of spiritual life. Humanity demands the religion of Love revealed by Mrs. Eddy, and they who admit no compromise of her clear utterances, but maintain them in their spiritual strength and integrity, honor her, and thus overthrow animal magnetism in all its insidious and subtle suggestions of a power opposed to God.

"God is my life," were the words with which our Leader trustingly entered the valley of the shadow of darkness, to test the light of Spirit to illumine her

through its illusion. The Psalmist said: "In the time of trouble He shall hide me in His pavilion." The tomb is not His hiding place. He is Light, and is the light lighting the pathway of our Leader into the radiance of "one endless day" (Mary Baker Eddy).

Christians of every denomination, and Christian Scientists, believe that Jesus appeared to his disciples, in a form recognizable to them, and that he gradually emerged from the human into a wholly spiritual state of being. His disciples walked and talked with him until their limited, finite sense ceased to behold him. They were not able to retain the visible presence of their Master, which spiritual thought would have enabled them to do.

"Holy Writ sustains the fact in Science, that the heavens and earth to one human consciousness, that consciousness which God bestows, are spiritual, while to another, the unillumined human mind, the vision is material. This shows unmistakably that what the human mind terms matter and spirit indicates states and stages of consciousness." ("S. & H.," p. 573.)

The senses of sight and hearing abide in Mind, and therefore cannot be lost. Material sense sees its objectified thought and hears its mental impressions. Spiritual sense sees spiritual manifestation and hears the language of Soul expressed through its idea, man. Christian Scientists believe that they will both see the presence and hear the voice of their Leader, Mary Baker Eddy, and that she will walk and talk with them until she has given final proof of her teachings.

Jesus' experience and instruction would have been worthless to humanity had he failed in his final evidence of immortal manhood. God did not fail Jesus, His masculine representative of the ideal man; nor will He fail Mary Baker Eddy, the feminine representative of Good, God, or the ideal woman, who has followed the same Christ Principle which delivered Jesus. Jesus built his Church on the foundation rock, Christ. Mrs. Eddy discovered the Science of being which Jesus taught and demonstrated, and continued the spiritual building, "the structure of Truth and Love" ("Science and Health," page 583), against which "the gates of hell cannot prevail."

Pæans of praise ascend continually to Almighty God for the teachings of Jesus the Christ and of Mary Baker Eddy, and for the light of understanding of the Eternal purpose which is unfolding and revealing man as immortal, here, now and forever.

New York City.

For the Touch of God

BY WILLIAM E. HUTCHISON

And are the ages passed away when Thou,
O God, revealedst unto men in ways
Compelling awe and faith—as in the days
Of Sinai—palpably thy presence? Now
Seems Thy dim seat beyond creation's end;
And men deny Thee, for they feel Thee not.
Hast Thou cast off humanity—forgot?
Or have men lost the power to apprehend
The one reality? Return, O Lord!
How long! Thy servants here attend
To hear Thy voice. Or touch with living coal
The tongue of some new prophet, that Thy word
Once more our mad, wild, wandering minds control,
And ancient faith in Thee possess the soul.

Tuscaloosa, Ala.

What the Modern Library Is Doing

BY JOHN COTTON DANA

Librarian of the Newark Free Public Library.

MODERN library methods began with the meeting of a few librarians at the Centennial Exhibition in Philadelphia in 1876. These librarians formed an association and began the publication of a professional journal. Since that time the development of libraries, both public and collegiate, has in this country been perhaps more rapid than the development of any other public educational institution. The benefactions of philanthropists have had something to do with this rapidity of development. But before the habit of giving libraries had been taken up by the very rich, the movement toward the establishment and improvement of these institutions in our villages, towns and cities was well under way.

When librarians began to take an active interest in the improvement of their calling thirty years ago, they naturally first turned their attention to the technique of administration. This was the era of book-shelf, book-storage, catalog, classification, accession book, shelf list, and of all the many other improvements in keeping, handling and indexing books.

Then came the era of library buildings, partly due, as suggested already, to the benefactions of the unduly rich; an era of the development of some baneful tendencies, from which libraries have not yet recovered, and will not for many years. Trustees of town and city libraries and trustees of colleges and universities were for a time overcome, and many of them are still overcome, with the desire to erect monuments of their own brief day of authority, and architects were ready to take advantage of human weakness in this direction. Nine out of ten of the college and town and city library buildings in this country, built within the past twenty years, are too small, or improperly arranged, or hideously ugly, or all three; and this altho in almost every case a proper building could have been erected for the money lavished on an inadequate structure, or a very monstrosity.

Next came an era of publicity. The movement in this direction has not yet been carried as far as it might well be. In a few communities it is now well understood that a proper part of the library's work is to make itself fully known to its constituents and possible users; but it is not yet realized by either public or college libraries that the public's expensive organizations which collect, store and lend books should also give unprejudiced information about them, and this as freely as publisher and bookseller give prejudiced advertising.

About ten years ago work with children was actively begun. Up to thirty years ago libraries were almost universally closed to children. As the modern movement gained headway it was realized that a community's collection of books is an educational tool which the librarian should administer for the greatest benefit of that community. When a librarian with this thought in mind was asked if children could borrow his library's books, only one answer was possible: that the use of a library is limited only by the number of books it contains and by the ability of the library staff to serve those who may call for them. The barriers to the admission of children to a library and to their use of its books were rapidly broken down. The age limit was dropped here and there from eighteen to twelve, then from twelve to ten, then to eight, and soon disappeared altogether.

As soon as children began to come with freedom to public libraries librarians discovered that they did not have a sufficient supply of books suited to children's capacities. At about this same period a change took place in the materials used in teaching reading in the public schools. Before this change, the opinion seems to have been held by school people that any material was good enough on which to practise reading. The protest which arose against this opinion resulted in the publication of a great many volumes of classic books, prepared especially for children's use.

Reading in the schools came to be confined chiefly to works of writers of acknowledged merit. Pupils read, not from the old-fashioned, scrappy, graded readers, but from books called "supplementary," published especially for their edification. This movement resulted in placing on the market many hundred different books prepared for children, most of them being complete wholes from English and American literature, others being careful adaptations of classics and old myths and stories skilfully retold. This change in reading material was the beginning of an age of children's reading, in the schools as well as in public libraries.

Libraries bought these books for the young with eagerness and made them accessible to children of all classes. They soon discovered that if a library were made attractive to children and had on its shelves books within the range of their comprehension and reading power, these books would be eagerly taken and read, even tho they did not include the writings of authors who had been vastly popular for several decades. To put it more plainly, the boy of twenty-five years ago wished stories by Castleman, Optic and others of that class; but, if an inviting open-shelf library had on its shelves none of these, and did have books of greater literary merit, boys would take the latter, read them with interest and pleasure, and soon would not miss their old favorites. In a word, again, libraries discovered that it was not difficult to improve, to a considerable degree, the reading taste of children in their respective communities, by the simple process of offering only the better books.

Children began to come to libraries in large numbers; in numbers too large in many cases for the single room the library could spare for their use. They not only overcrowded their special room, but their number made it impossible for librarian and assistants to give them that attention in the way of careful suggestion and specific guidance which they greatly needed.

Much was being said at this time of the importance of teaching children not simply how to read, but also what to read. More was made, perhaps, of this guidance of children in their reading than the matter deserves; or, rather, ability to read understandingly on any general subject has been found to be so important and so rare an acquisition as to put the selection of things to be read in a subordinate place.

But whether there were any call for careful guidance or not, the libraries soon realized that in their single children's room or corner they could not accommodate the crowds which came. The libraries of large towns and cities soon realized, also, the far more important fact that the crowd of young people which visited the main library was only a small portion of the children of the whole community, all of whom were equally entitled to share in the use of the public's storehouse of books.

The principle that a public library is for all the people, and not for the men of letters and the special student only, had by this time led to the establishment of branches. The branch idea became very popular, in some respects unduly so. It was the fashion, and the fashion has not yet quite passed, to ask a public benefactor for funds with which were built ornate and expensive structures to serve as branch libraries; structures often not well adapted to their purpose and absurdly expensive to maintain.

In these branches full half of the space available for readers was commonly given up to children. Children's departments in large city libraries thus became largely expanded, and by subdivision were made to cover, in a measure, the whole city.

The art of lending books to children now became exalted into a specialty. Children's librarians were in great demand and a school was established to train them for their work.

At this point the librarians, properly enamored of their work, but blinded a little by their enthusiasm, seemed unable to see the limits to their field, or to see the field itself in its proper relation to other educational fields. They found they were popular with all children and were applauded by parents. They knew that reading is an art approved by most and that the reading of good books is approved by all. They had books under their control; they were sure they could select good ones for children, and they found the task of ministering to chil-

dren's wishes a delightful one. Naturally, they hastened to increase the opportunities for this ministration. They attracted children to their special rooms in main libraries and branches by prizes, by games, by pictures, by museum specimens and by other devices. They talked to the children, and mothered them, and read to them, and told stories to them. The art of being a librarian for children gained in importance, and, to the initiated, daily grew more recondite and more wonderful. Concerning it there developed the same group of words and phrases which accompany the growth in popularity of every new cult. The reports of meetings of children's librarians of this period, which is just coming to an end, have a very perceptible atmosphere of religious devotion, almost of fanaticism.

Especially strong was the story-telling hypnosis in this stage. It was found that children will listen to stories, and that if the stories come from books which are in the library the children, after listening to the stories, hasten to borrow the books. Here was a pleasant method of increasing the circulation and of guiding children in their reading. The discovery aroused much enthusiasm. Hundreds of young women studied the elements of dramatic art and practised on groups of children in children's rooms in libraries, that they might lead them to read more books and better ones.

This seemed to be worthy work; but it was discovered to be somewhat out of place. Story telling has long been practised in the kindergarten as part of a well defined system. It belongs also to some extent in the first grades of the schools. To practise it in the library calls for a diversion of skill and energy from a field where skill and energy are always insufficient.

While this development of children's rooms in libraries and branches, with an accompanying development of library motherhood in the assistants, was going on, the use of books by children had been greatly encouraged by another method. It was found that, even with its branches, no library can come into close touch with more than a small per cent. of all the children of the community. A library in a city of 300,000, for example, with ten distinct centers or branches, cannot get close to more than 10,000 to 20,000 of the 60,000 young people in that city. It was found, also, that no matter how skilled and enthusiastic might be the fifteen or twenty assistants in all the children's rooms of the city, their influence could reach a few individuals only.

The libraries' natural allies were obviously the teachers, and to them they turned. It would be more appropriate to say, if it could be said with truth, that the teachers turned to the libraries for assistance. But the fact is that efforts for coöperation between teachers of the art of the reading and keepers of supplies of reading have come almost entirely from the latter.

Coöperation is effected chiefly in this way: The libraries lend to individual teachers small collections of books for use in their classrooms. These collections are selected by the teachers themselves, or selected by libraries for them, as the former may prefer. They include books adapted to the age and the studies of the children in the rooms to which they are sent. The teachers use them as they see fit, with no restrictions and with no financial responsibility. They may read to the class from them; they may permit the children to read from them in the room; they may lend them for home use; they may use them chiefly as a reference collection, to supplement the work done in the room; and they may change them as many times in a year, wholly or in part, as they may choose.

This seems an ideal arrangement. It puts a town's or a city's collection of books at the command of the city's paid experts in education in the most complete way. It makes of every schoolroom a branch library, at no additional expense for space or service. It interests every teacher in the resources of the main library—at least it should do so. It puts a small library directly under the hand of every child in the city, and thereby tells him plainly of the large main library which is at his service. And, finally, it gives him in his reading the enthusiasm and guiding skill of one, his teacher, who should most care to persuade him to read and should have most skill in telling him what to read.

This method of sowing a library broadcast in the community is now practised in many towns and cities. It is as ef-

fective in a community scattered thinly on farms over the hills of Vermont, with its half dozen little isolated red schoolhouses, as it is in a huge school building with a score of rooms and a thousand pupils in a great city. Plainly this is a most effective and most economical way of bringing the people's books to the people's doors. It can be improved by extending the custom, already somewhat practised, of making the collections larger,including in them books for adults and inducing teachers and pupils to work together in putting these books in the hands of the pupils' parents. The method can be supplemented by opening a room with a separate outside entrance, on the ground floor of each large city school building, as a general branch library for all who live near the building, and as a special reference library for the pupils in the building. This is on the point of being done in several cities.

But, effective as this classroom, branch-library method of book dissemination promises to be, it falls short in accomplishment; and its inefficiency must be laid at the door of our colleges and universities. Let me briefly explain this charge.

In our educational system stimulus and guidance come from the top. A city which has a properly equipped and efficient high school system is sure to find its primary and elementary schools well and enthusiastically conducted. A State which has a progressive university crowning its educational system finds that every high school within its borders is eager for recognition of its merits and zealous to have in fact the merits which it claims. As in efficiency and enthusiasm, so in subject and method, the highest educational institutions rule all below them.

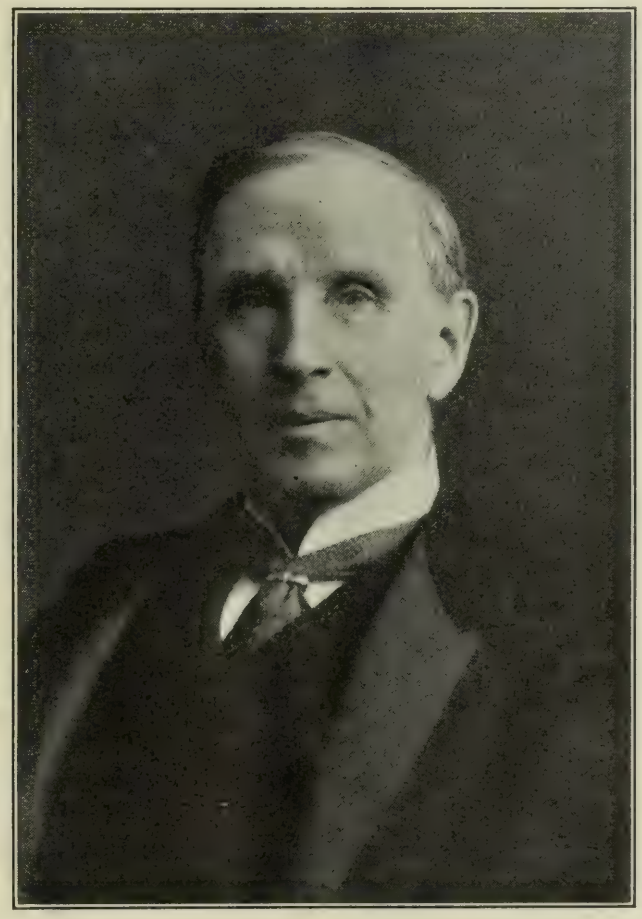
Now, the colleges and universities of this country make of relatively small importance the arts of reading and of the use of books. Their libraries are almost without exception poorly housed. In none is there given to all pupils instruction worthy the name in the art of using a library. The students who come to them have not had persistent practice and definite instruction in the art of reading, in skill in understanding printed words, in acquisition of a large reading vocabulary, for four or five years previous to their entering college. The importance, the fundamental and all-embracing importance, of knowledge of the English language as the vehicle of thought, as the foundation of all learning; the absolute necessity, would one become even passing wise, of being able to read good books quickly and understandingly—these things are not continually insisted upon; indeed, they are quite neglected. The colleges have lamented much that their students cannot write. It would be well if they concerned themselves first over the fact that their students cannot read.

The result of this neglect is that few college graduates know how to read. They never have been compelled to practise reading, and only by a prodigious amount of practice can any save the gifted ones ever learn to read. Also, they do not know how to use books. Also, they do not think that high skill in reading and in the art of using books and a library is the one thing of supreme importance in education.

The graduates of our colleges become teachers in high and normal schools. Their indifference to the reading art marks the work of these institutions. The result is that the teachers in our public schools, graduates of our high and normal schools, have not been made to read much; have not learned to read well; read very little during their years of teaching; know little about the literature of and for children; think that it is not of great importance that all children, by constant reading, acquire a large reading vocabulary and gain a firm hold of the tool by the use of which alone thought is possible; are indifferent to books and print; and finally, do not handle efficiently the collections they may have in their classrooms from a public library, and in many cases are not willing to have such collections.

Reading is the most important of all the arts. It is taught now chiefly thru the ministrations of the yellow journals. The foundations of its proper teaching with proper and helpful material should be laid more broadly and more carefully in our colleges and universities.

NEWARK, N. J.



Lord Morley and India

BY SIDNEY BROOKS

[The writer of this article is one of the best known of British publicists. His last contribution to THE INDEPENDENT appeared in the issue of December 15, 1910.—EDITOR.]

WITH his retirement from the India Office, Lord Morley's career as an active administrator comes to an end. He remains, it is true, in the Cabinet, holding one of those dignified and unexacting posts that smooth the workings of the British system and enable a statesman who feels himself unable to support the burden of a great department still to place his judgment and experience at the service of the country. And the country is more than ever thankful that such posts should exist. It would not, without a severe pang, part with Lord Morley altogether. His hold on England, like his position in the public life of England, has been something peculiar to himself. One separates him instinctively, one has always separated him, not merely from the ordinary run of politicians, but from all politicians. His "atmosphere," his influence, and the ways in which he uses it, are all different from theirs. It would be hard to illustrate by parallels the nature of that influence. Perhaps the nearest definition of it would be to say that it resembles the power that forty odd years ago John Stuart Mill wielded over England. Over the intellect of England it is less than Mill's, by the margin that divides the creative mind from the critical. Over English politics, on the other hand, it is greater than Mill's. Lord Morley has been a member of four Cabinets, has governed both Ireland and India thru some anxious and harrassing phases of Irish and Indian history, has introduced and passed some crucial pieces of legislation. Mill was never in a Cabinet and his success, such as it was, in Parliament was rarely more than the reflex action of his success out of it.

It is rather as personal and moral forces and in their effect on the tone of English public life that the two men seem to me to stand so close together on a single pedestal. That pedestal one can but roughly describe as character. The character of Lord Morley's power is the power of Lord Morley's character. He has reached and holds his present position because of his habit of always telling the truth exactly as he sees it. That was Mill's way; it is Morley's, too; there is no reason why it should not be every one's. "Honest John" was the nickname with which the Newcastle workingmen paid tribute to Morley's constancy and courage. This cold, austere, self-contained man, with none of the accomplishments that Englishmen ask of their leaders, accused of being a doctrinaire, known to be a philosopher, was yet able, thru the influence of an upright and un-

RT. HON. JOHN MORLEY,
First Viscount of Blackburn; Secretary of State for India since 1905.

swerving character, to capture and dominate the confidence and affections of the populace. That is a fine position to have won; and much may be forgiven to a man who has been able to win it. Much has been forgiven Lord Morley. Nine hundred and ninety-nine out of every thousand Englishmen, I suppose, believed his views on the Boer War to be absolutely mistaken, and his whole attitude toward Imperialism outworn and mischievous. Yet they took from him what they would take from no one else, because they knew that his opinions were his own, were held with apostolic fervor, and had been formed with a single desire to get at the truth. The more England has disagreed with Morley, the more has she respected him. And quite rightly. You will look in vain, or almost in vain, for his union of personal earnestness, powerful intelligence, and high moral sense.

Morley came late into politics; he was nearly fifty when he first entered Parliament; and the reputation he had built up as a journalist and a man of letters at once handicapped and helped him. He was a diffident, halting, rather jerky speaker; even now, after more than twenty years of it, he is apt to be too discursive and disjointed. The average M. P., I suppose, had as little sympathy for him as Danton had for Saint-Just; the average Peer was frankly frightened by him. Yet he conquered the House of Commons and he has conquered the House of Lords just as he conquered Newcastle. His career has been one more illustration of the old and vital truism that in public life as in all other avenues it is what a man is that matters. Lord Morley's niche in English history may or may not be permanently secure. Personally I believe that as the author of a new and momentous departure in Indian policy his name will live. But it may well be that he will be mainly remembered not as a statesman but as a writer. In the field of letters his function has been eminently that of an interpreter and expositor, but of an interpreter who brought to the elucidation of his theme a ripe and original mind, a capacity for profound reflection, and a fortifying sense of all that makes life worth while and government possible. He has, of course, "read everything." Better still, he has turned everything over and over in his mind till it has become fused with all his thoughts. Mill, Burke, Wordsworth and the French Revolution are, I should judge, the greatest of the influences that have shaped him. People call him somber, but I should doubt whether that is the right adjective. No man can feel more strongly than he the duty to do his best to better things, tho no one at the same time is more conscious that improvement at best must be hideously slow. If there is melancholy in his social and religious creed, it is only because he thinks and feels so deeply and so intently. His reason may urge him to despair, but not so insistently as the ardor of his spirit prompts to hope and activity. It was this ardor of his spirit that drew him to Gladstone and Gladstone to him. There were many gulfs between them, but they were all easily bridged by each man's recognition of the other's intrinsic loftiness.

When Mr. Morley, as he then was, became Secretary of State for India, in 1905, there was an outburst of thankfulness among the British administrators of the great dependency that the best brains in Great Britain, or at any rate in the Government, should have gone to the India Office. Lord Morley is, indeed, by far the most distinguished statesman who has presided over the destinies of India. And in 1905 it was of peculiar moment that the portfolio of Secretary of State for India should be held by a man of first-rate abilities, authority, prescience and courage. For one thing, a Radical Government was in power and many of its supporters seemed inclined to prescribe for India as tho it were a larger Yorkshire. For another, it was clear that British rule in India was entering on a new and critical phase. A legitimate dissatisfaction was beating against the bars. The very excellence of British rule was producing the conditions most favorable to its resistance. The point had been reached when the educated Indians began to realize that they had a personal use for the axioms in moral copperplate their rulers had set them to copy and to apply to themselves and their own conditions those maxims of freedom they had imbibed from the study of English literature and English history. The new spirit in India was in part a reflec-

tion of the English spirit penetrating the native mind. England had given India peace, security and education along Western lines. She had built railroads and made intercourse both possible and popular among the diversified myriads under her sway. She had introduced the quickening spirit of commercialism. Her persistence in teaching English had manufactured the beginnings of something that might almost be called a sentiment of solidarity. She had introduced here and there the representative principle and had admitted thousands and hundreds of thousands of natives to the administrative ranks. Her schools and colleges were annually turning out many thousands more for whom no employment could be found. By sanctioning a native press and the privilege of open meetings she had stimulated a widespread intellectual ferment. The Japanese victories over Russia, again, had thrilled the entire Orient with a sense of unimagined possibilities. Add to this that Lord Curzon's Viceroyalty had ended by exasperating every section of Indian society and that the partition of Bengal in particular had provoked an outburst of vehement resentment, and the vital importance of having at the head of affairs a man of Lord Morley's open-mindedness, serenity and caution will be readily appreciated.

In a sense he was almost embarrassed by the warmth with which the news of his appointment was received. The Indian politicians especially, overjoyed by the accession of a Radical Government to power, were transported with delight when it became known that Lord Morley, whose writings had nurtured a whole generation of Indian publicists, was to proceed to the India Office. They felt assured that a new era had dawned, that Lord Curzon's ideal of "efficiency" would be replaced by the ideal of "sympathy," and that political concessions and an expansion of Indian opportunities would appeal to the new Secretary of State far more effectively than administrative perfection. In the long run, of course, it never does a statesman any harm to be looked up to with the confidence and regard in which educated Indians held and still hold Lord Morley. It has enabled him to speak to India with a directness and an authority such as no previous Secretary of State has commanded. But at first expectations, as was inevitable, were pitched too high, and Lord Morley found it necessary to discourage the notion that his appointment portended any sudden or revolutionary change in the British system of governing India. He had, moreover, to grapple with several anxious problems bequeathed to him by the preceding administration. He had to decide whether the partition of Bengal was to be sustained or reversed or modified; he had to settle the vexed question that had led to Lord Curzon's resignation—the question of the relative powers and status of the civil and military authorities in the scheme of Indian Government; and he had to wind up the negotiations that followed on the expedition to Tibet. All this had to be taken in hand at once. And to add to the difficulties of the situation the unrest in India, before Lord Morley had been eighteen months in office, developed into overt disorder British officials were murdered, British goods boycotted, formidable riots broke out in many parts of the country, an agitation working with bomb and dagger defied the efforts of the police to unravel its meshes, it really looked for a time as tho India were on the verge of a convulsion that would shake British power to its depths. And not only was Lord Morley new to his office, but the Viceroy with whom and thru whom he had to act was also a new man and had, indeed, barely taken up his residence in Calcutta when the Balfour government fell. That, I think it will be agreed, was a situation well calculated to evoke and test whatever a man had in him of the stuff of statesmanship.

It is with a sense of profound gratitude that his countrymen, looking back today over the events of the past five years, realize how finely Lord Morley has sustained the ordeal imposed upon him; with what patience, courage, coolness and faith he has borne himself; how prescient, pertinent and healing has been his policy. It is true that much that he has done or left undone still finds its hostile critics. He ought, men said, to have put down his foot sooner and more firmly on the question of the partition of

Bengal; he did not support the civil servants as promptly and powerfully as he might have done in the face of native clamor; he was dilatory in countering the propaganda of disloyalty and terrorism; his appointment of an Indian to the Viceroy's Executive Council and his proposal to vest in the Viceroy power to create by proclamation Executive Councils in any province under a Lieutenant-Governor were experiments of the utmost hazard; and in the last year or two he has taken to interfering excessively in the details of Indian administration, thus derogating somewhat from the authority that should belong to the Viceroy alone. These criticisms, even if they could be justified—and I do not think that at all points they could be—detract very little from the merit of Lord Morley's term of office. Four overwhelming achievements stand to his credit. First, he interested the British democracy as it had never been interested before in the problems and responsibilities of Indian government. Second, he resisted all the pressure that was brought upon him to appoint Lord Kitchener as Viceroy, and in doing so he probably saved the British Raj from being gradually transformed into a military autocracy. Thirdly, to the dismay and indignation of many of his Radical colleagues and supporters, he did not hesitate to resort to drastic methods of repressing the propaganda of anarchism and sedition. Fourthly, and best of all, he perceived that the time had come to enlarge the scope of Indian liberties, to pay more heed to the good will of the people than to the smoothness of the administrative machine, and to convert the British scheme of government from an absolute monopoly in the higher ranks to a limited partnership. That is the reform with which his name must always be identified in Anglo-Indian history. For good or ill—personally I am convinced that it will be for good—it is destined to work a vast change not only in the forms and methods of British rule in India but in its spirit. Already it has largely pacified the unrest that five years ago threatened to hurry India into anarchy. England will never be without the possibility of a crisis in her prodigious task of ruling India, but thanks to Lord Morley, those possibilities are no longer probabilities.

LONDON, ENGLAND.

Efflatus Dei

BY W. F. SPOTTSWOOD

Æons endless; whorl and wheel;
Whirling mist and glowing ball;
Mad the burning planets reel;
Crashing down, the meteors fall.

Silence—there is none to hear;
Vacancy—no eye to see;
Galaxy and flashing star,
All that is, is yet to be.

Naught was here till Thought arose,
Wot and weighed this shining sand;
Till the eye, no floweret blows;
Star and sun were naught, unscanned.

Naught were matter, naught were law;
Light nor darkness, silence, sound;
Vain the mighty spiral's flaw;
Vain the circling comet's round.

Soul of mine, till thou wert bid
All thy Maker's work to see,
Heaven and earth in thee were hid;
God created *all* in thee.

Deathless matter! So the sage
Names it, in his latest lore;
Grants it neither youth nor age;
Endless dure, behind, before.

Soul of mine, shalt thou be naught,
While the endless process runs?
Thou, for whom the suns are wrought,
Star of star, and sun of suns?

Growth Outside the Body

BY J. BISHOP TINGLE

PROFESSOR OF CHEMISTRY IN MCMASTER UNIVERSITY.

IT is well known that when certain smaller portions of the body are removed, they may often be caused to reunite—thus for example, a severed finger joint, when replaced in position, can be made to grow again. Many cases are on record of teeth being transplanted from one mouth to another—for a due consideration.

The question naturally arises as to what is the length of time which may elapse before union of the parts in question ceases to be possible. The answer is that there is no apparent limit, if the severed tissues be prevented from drying and be protected from the bacteria and ferments which are found floating in the atmosphere. Whether such protection could be realized in practice was, until recently, open to doubt.

Some time ago Dr. Alexis Carrel, of the Rockefeller Institute of New York City, began work on this problem. He removed various organs such as the kidney or portions of arteries, from various newly killed mammals—generally cats or dogs. These organs were then retained for weeks or months, at a temperature close to the freezing point, and subsequently transplanted into the bodies of other animals. It was found that, under these circumstances, they quickly united with the parts of the new body with which they were in contact and performed their ordinary functions in a strictly normal manner.

It is hardly necessary to say that unusually rigid aseptic precautions were taken to prevent any infection either of the transplanted organs or of the animals in which they were placed.

It having been thus proved that organs may be removed from the body and kept "potentially alive" for weeks, a further step naturally suggests itself. Can such organs be caused to *grow* outside the body? The most recent work of Drs. Carrel and Burrows, carried out at the Rockefeller Institute, answers the question in the affirmative.

Portions of tissue were removed from warm blooded animals immediately after death. The tissue was sealed up, kept at the temperature of the body from which it was taken and supplied with "food." This food consisted of liquid squeezed from the body of the same animal: it is termed "plasma." Under these conditions, after a time, the tissue began to grow. Often its growth was much more rapid than it would have been had the tissue remained undisturbed in the animal's body because in its new environment it was getting much more food than it would have obtained normally.

As the tissue grew the new parts resembled the parent ones. Cartilage grew cartilage, fragments of kidney grew cells such as are found only in kidney, portions of spleen reproduced the pulpy material such as is present in that organ.

When some of the newly grown tissue was removed and placed separately, with fresh plasma, it continued to grow just as before. It did not require the parent tissue to direct it. It follows, therefore, that it is possible to grow two generations of cells outside the body from which the original tissue has been taken.

One of the most important of the results which were obtained was with a tumor, rather closely related to cancer. Fragments of this were made to grow artificially in the manner just described. It was found that these tumor cells, as compared with other material, began to grow much sooner after their removal from the body, and their growth was far more rapid. In one experiment a piece of tumor tissue was seen to be actively growing two and a half hours after it was first supplied with plasma. Twenty-four hours later it had increased fourteen-fold and at the end of forty-eight hours twenty-two-fold.

These experiments open up an important new field for investigation and furnish a new weapon of extreme value to those engaged in the fight with cancer. The skilled worker can now actually follow with his eye the reproduction of cancer cells and, by varying the conditions and the food which is supplied to his cancerous material, he may hope to discover the factors which help and those which hinder its growth.

TORONTO, CANADA.

Literature

A Modernist

FROM his earliest years a Catholic child is brought up in the most tender affection and most dutiful reverence for the Pope. Formerly, when family prayers were in vogue, special *Paters* and *Aves* were always offered up in behalf of His Holiness. In such sentiments, amid such prayers, was raised, no doubt, "A Modernist."* It is no wonder then when he found the teaching and piety of his childhood wrecked and the great ideal fallen from its high plane that our author should turn and at first hand address the Pope. It seems a relief to go to headquarters and there give vent to his disappointment. The author we know to be a man of the highest character, who has been honored in the Church, and his work proves him a careful scholar. He is not to be whistled down as unworthy of consideration. He has not given up his faith nor withdrawn from the Church, but we are sure he has not taken the new oath against Modernism.

What, we may ask, do *The Letters* charge the Popes, the Curia, the Jesuits, official Catholicism, with doing? Merely that they are striving by every means, fair and foul, to keep themselves afloat. There was a day when Rome and its representatives spoke and acted like Gods. That day is past. She is on the defense everywhere. If Rome today is driven to the wall in her own territory she owes it to herself, specially on the day when Hildebrand urged the *demos* against Henry IV. For then democracy, which threatens clericalism, started upon its onward progress.

This stand of Rome is no more than that taken by other organizations, from state to the Trust. No state will forego its prerogatives, neither will the Standard Oil Company. Rome must stand unchangeable. If infallible and, with the Holy Spirit's aid, supreme ruler of states and men, the Pope should do as he does. Pius X must be right. If the Papacy is right, Catholicism cannot be wrong. They both are two names for the one theocracy. But our author hopes for better things:

> "I feel constrained to aid in the formation of a public opinion which shall in time destroy the secular in them [religious orders] that the spiritual may more truly live." P. 76.

Here is a distinction which we wish might exist. "A Modernist" holds that there is a difference between Roman officialdom and Catholicism. Besides the professional creed he sees a disposition of mind and heart which makes genuine Catholicism. There is such a distinction, but such a worshipful spirit is more than Roman Catholic, and its longing is the unique common trait of humanity. It is the uplifting of the heart, familiar in Plato, Buddha and Philo. It was the ladder which Jacob saw in his dreams, as also the star which led the Magi. Catholicism is something more. It is a state—a Roman state, whose soul is a Greek philosophy, namely Aristotle's. Like all states and all philosophies, Catholicism lays down its laws, its limits, its conditions of membership. To be a Catholic means that all these must be accepted without change, without diminution.

The present work is historical and sharply controversial. Its careful accuracy covers many of the matters on which Modernism is at variance with the Church as ruled by Pius X and the Jesuits. On these points he shows no mercy, and for those who feel the importance of the conflict no other way has yet appeared. And yet the inevitable overthrow of intransigeance as at present in control will come, not in the storm of conflict, but thru the disintegrating processes of intellectual light and spiritual heat. It was doubtless so with "A Modernist."

The real blow, in our opinion, which will in the long run finish absolutism in the Church is the double training which a child gets. As a Catholic he learns that the fulness of all power is vested in the Pope, whence it comes to the

*LETTERS TO HIS HOLINESS, POPE PIUS X. *By a Modernist.* 12mo. Pp. 300. Chicago: Open Court Pub. Co. $1.25.

Bishop and from him again it passes to the pastor.

Every child first accepts implicitly what he learns from his parents or his religious teacher. Then he goes to school, he reads the daily papers, he gets some knowledge of what the world has settled to be true, and which sometimes contradicts what he has been taught. If he has small brains he does not notice the contradiction. Otherwise he observes that other creeds produce just as good, just as honest men as does his own. He begins to think and think hard. He begins to question. To him as a Catholic Pius IX was always right, so was Leo XIII, so is Pius X. To him as a citizen he learns that McKinley's tariff act had to be overhauled, that Roosevelt failed largely in his campaign against the trusts, that Taft has had to modify many of his positions. A widespread distrust of the country's judiciary is in the air. He pauses and wonders, and finds himself a Modernist.

John Brown

THE temper of Mr. Villard's biography of John Brown* is in the best sense judicial, and the treatment exhaustive. Years of research have been given to the task, new material has been discovered, and all the testimony, old and new, has been carefully examined, sifted and reviewed. The result is a work which is likely to stand as the authoritative record of John Brown.

What we know of the early life of Brown is mostly contained in the autobiographical sketch which in 1857 he wrote for the son of his friend and supporter, George L. Stearns. This sketch Mr. Villard gives in full. It is the record of a boy who saw many hardships, and who, like most other frontier boys, learned to be useful and self-reliant at an early age. At six he was a rambler in the Ohio woods, hunting birds and squirrels and making friends with the Indians, while at twelve "he was sent off more than a hundred miles with companies of cattle." He had little or no schooling, and he learned nothing of grammar. To the end of his life his spelling, punctuation and construction were faulty, even tho his diction attained to a high degree of noble effectiveness.

He was always a failure in business, and he was generally in debt. Much has been made of this fact to his discredit. Mr. Villard sums up the matter in Brown's favor, largely on the testimony of Marvin Kent, who, with his father, was Brown's principal debtor. Brown, writes Kent, "was a man of ordinary caliber, with a propensity to business failure in whatever he attempted." But despite his failures and his debts, no taint of business dishonesty clings to him.

The time at which Brown took his formal vow against slavery has been a matter of dispute, and is not yet settled. The fact itself is certain enough, and the occasion has been vividly pictured by John Brown, Jr.; but the date has been variously given as 1836, 1837 and 1839. Mr. Villard is satisfied to let it rest as "before 1840." It does not appear, however, that antagonism to slavery became with him an absorbing passion until some years later. Tho he joined in the work of helping and protecting fugitive slaves and in promoting agitation, yet his various business ventures, his interminable lawsuits and the cares of a large family engrossed his attention.

In June, 1855, he sold his Ohio belongings, and after a brief stay in North Elba, N. Y., followed his sons, Owen, Frederick, Salmon, Jason and John, to Kansas. Mr. Villard follows his movements in Kansas with extreme care, sorting and comparing the conflicting testimony. The great blot on Brown's reputation, his seizure and killing of five men on Pottawatomie Creek, May 24-25, 1856, is treated at length. It has been justified from many standpoints, but the author's judgment is that "from the point of view of ethics" it

> "cannot be successfully palliated or excused. It must ever remain a complete indictment of his judgment and wisdom; a dark blot upon his memory; a proof that, however self-controlled, he had neither true respect for the laws nor for human life, nor a knowledge that two wrongs never make a right."

The act which immortalized his name was the seizure, with eighteen men, on October 16, 1859, of Harper's Ferry. It was an act of heroic madness, of which

*JOHN BROWN. A Biography Fifty Years After. *By Oswald Garrison Villard.* (Illustrated.) Boston: Houghton-Mifflin Co. $5.

there was no possible chance of success. Cut off and surrounded, he was captured, tried by the Virginia authorities, and executed on December 2. It is in this brief period between his capture and his execution that the author finds the manifestations of the real greatness of Brown. He writes:

"Not often in history is there recorded such a rise to spiritual greatness of one whose hands were so stained with blood, whose judgment was ever so faulty, whose public career was so brief. John Brown is and must remain a great and lasting figure in American history. . . . The story of John Brown will ever confront the spirit of despotism, when men are struggling to throw off the shackles of social or political or physical slavery."

Mr. Dooley Says. By Finley Peter Dunne. New York: Charles Scribner's Sons. $1.

Mr. Dooley is still the most popular of American philosophers and he has not ceased to deserve his popularity. The genial old Irishman has filled many books with his monologs, which cover as many subjects as a Presidential message. Sometimes his essays do not come up to the Dooley standard, but his work as a whole has shown improvement rather than deterioration, and he is as far from becoming tiresome or monotonous as ever. The secret of Mr. Dooley's undiminished attractiveness lies in his peculiar combination of the rapid-fire brilliancy of Mr. Chesterton with the genial humor of Mark Twain. Many examples of his happy skill at definition are scattered thruout the book like plums in a good pudding. "Drugs are a little of a pizen that a little more would kill you." "I care not who casts th' votes iv me counthry so long as we can hold th' offices. An' there's on'y wan way to keep the women out iv office, an' that's to give thim a vote." "Speaking f'r mesilf alone I don't read books. I can get th' same wrong idees iv life fr'm dhrink." "The five-foot shelf is th' main thing. Otherwise th' libry may get mixed up with readin' matther on th' table." Also, "Anny kind of a fact is proof iv a belief," an assertion which classes Mr. Dooley among the pragmatists and marks him as a follower of the late Professor James, of Harvard. Sometimes he is a little severe, as when he wonders "If two hundred years fr'm now people will cease to talk iv William Jennings Bryan. He won't, but will they?" Or when he mockingly praises the legislators who have "rejooced the tariff to a level where th' poorest are within its reach." It would manifestly be unfair to pick things like these out of a book if as many good ones were not left behind. But we can assure our readers that there are.

Literary Notes

....*The Bainbridge Mystery* is the title of the latest novel by Grace Tyler Pratt; having this subtitle: *The Housekeeper's Story.* (Boston: Sherman, French. $1.20.)

....Edmund Montgomery is the writer of *The Revelation of Present Experience* (Boston: Sherman, French. 80 cents) to which we hope to give more extended notice in a later issue.

....Among Scribner's importations none is more attractive than Arthur B. Chamberlain's *George Romney* ($4). There are seventy-three plates and a letterpress of unusual attractiveness.

....*The Singing Mouse Stories* are not for every reader of Emerson Hough's successes. They are too imaginative, and perhaps too delicately wrought. They should be read at the fireside, after one has dined. They are prettily decorated, and published by the Bobbs-Merrill Co. ($1.)

....Alfred Dwight Sheffield has published thru the Houghton, Mifflin Company *The Old Testament Narrative,* "Separated Out, Set in Connected Order and Edited." The book covers substantially the entire Old Testament narrative arranged in its sequence as a history of Israel. ($1.50.)

....A little volume which should prove of value to the business man whose son is to follow in his footsteps, and who is asking himself, "Shall I send my boy to college?" is published by the University of Chicago Press (55 cents), the author being the president of that university, Harry Pratt Judson.

....The many subscribers who write to us for the most recent and authoritative books on the various sciences will be glad to know that a list of such books will be prepared by the professors of Columbia University for distribution to public libraries at the expense of Mr. Chester De Witt Pugsley, of Peekskill.

....From the Government Printing Office at Washington comes, as Bulletin No. 70 of the United States National Museum, an interesting history of *The National Gallery of Art, Department of Fine Arts of the National Museum,* by Richard Rathbun, assistant secretary of the Smithsonian Institution, in charge of the United States National Museum. Inventories of such munificent gifts as the Harriet Lane Johnston, the Charles L. Freer and

the William T. Evans collections, with twenty-six accompanying illustrations excellently printed, form at once the more interesting half of the document and a preliminary catalog of the National Gallery. This is a good piece of work, tho it is a disappointment to find that the several hundred examples of Oriental painting in the Freer collection, by many thought to be the most valuable acquisition of the National Gallery, are not cataloged.

....Robert Morris Pierce's *Dictionary of Hard Words* (Dodd, Mead; $1.20) contains some 19,000 words which present difficulties in pronunciation or spelling. The distinctive feature in the book is the use of a phonetic alphabet and a system of "clarified spelling" which goes a little beyond the "simplified" but is easily readable.

....McClurg & Co., the Chicago publishers, announce for publication next fall a translation by Frances Douglas (Mrs. Charles F. Lummis) of Ibanez's story of bull-fighting, *Sangre y Arena.* Mrs. Lummis's rendering will have the approval of Señor Ibanez himself. The book will be illustrated in color by Troy and Margaret West Kinney.

....Many of the former students of the late Prof. Friedrich Paulsen, of Berlin, will be glad to read the delightful account of his early years which he had written just previous to his death, and which is now published under the title *Aus Meinem Leben.* (Stechert, $1.) The volume is finely bound and well illustrated with photographs of the author and the persons and places connected with his youth.

....If one wants to learn current progress in the study of *Comparative Religion* he cannot do better than to read the brochure of 72 pages with the above title by Louis Henry Jordan, which gives a survey of the subject during the three past years. (Otto Schulze & Co., Edinburgh). We are pleased that the author gives credit to the United States, next to France, in directing study to this most important subject.

....Professor Rudolf Kittel, the present occupant of the Old Testament chair in Leipzig, made so famous by the elder Deletzsch, has just sent forth an excellent summary of the Old Testament researches of recent years in a volume of 232 pages entitled *Die Alttestamentlische Wissenschaft nach ihren wichtigster Ergebnissen,* published by Quelle und Meyer in Leipzig. The book is characterized by a cautious yet progressive conservatism.

....Rev. Francis E. Clark tells in a well-printed and compact booklet of less than fifty pages the story of *Thirty Years of Christian Endeavor,* including "The Story of the Year" (Boston and Chicago: United Society of Christian Endeavor; ten cents). The society celebrates its birthday on February 2d, and in this attractive little book, handsomely illustrated, the founder emphasizes its cosmopolitanism and magnitude today, which he contrasts with its small beginnings.

....Dr. Salomon Reinach's *Orpheus* has recently been translated from the French and revised by the author. (Putnam. $3.) As a general history of religions the book lacks perspective and an adequate grasp of the subject. Dr. Reinach has read widely in the best sources, but the results of his study are not well organized, and one cannot help feeling that a modicum of critical judgment would have saved him from many egregious blunders as well as from wild conjectures.

....From Frankfort comes the announcement that the publication of an autobiography of Richard Wagner, covering the period 1868-1873, will occur on May first. The existence of these memoirs has been repeatedly called in question. In a preface the composer authenticates the manuscript, which was dictated to his wife, and directs that it remain unpublished until some time after his death, in order to spare embarrassment to persons mentioned therein. The memoirs are in four volumes of 1,158 pages.

....Miss Louise Collier Willcox gives her anthology of meditative and mystical poems the title of *A Manual of Spiritual Fortification* (Harper. $1.25). The poems range from the 13th century to the 20th; and from such gentle spirits as George Herbert and William Wordsworth to such turbulent ones as Walt Whitman and Percy Bysshe Shelley. English poetry is rich in poems of religious feeling, and altho the author has included no hymns in her book, it is full of lyrical expression of sincere faith and reverence—the "sense of God in the universe."

....Two more books on Education are issued by the Macmillan Company in Dr. Ernest Norton Henderson's text book on the *Principles of Education* (pp. 593; $1.75), and the *Essentials of Character* by Dr. Edward O. Sisson (pp. 214; $1). Dr. Sisson has for his subtitle: "A Practical Study of the Aim of Moral Education." Both of these books are works of trained laborers in the field of pedagogy; Dr. Sisson being Professor of Education at the University of Washington, Dr. Henderson, Professor of Education and Philosophy in Adelphi College, Brooklyn.

....The name of Emma Goldman has become so associated with anarchy that her new book *Anarchism and Other Essays* (New York: Mother Earth Pub. Co.; $1) will be regarded as authoritative, if there can be an authority in such a field. She cannot, however, write with the ability of Kropatkin or Tucker and she does not devote much space to the exposition of the philosophy of anarchism. A life of the author, a defense of assassins, an argument against woman's suffrage, a plea for free love and a general attack against existing institutions and conventions compose the volume.

....Alfred Tennyson Dickens, the eldest surviving son of the great novelist, recently gave to the public some interesting reminiscences of his father's life at Gad's Hill. One of these related to a ghost which haunted a neighboring piece of waste land, on which stood a monument to a cavalier named Charles Larking. As the maid servants all threatened to leave, Dickens, armed with a double-barrelled gun, and his two sons with bludgeons, set out to find it. Suddenly they saw a white object and

heard an awful noise. Dickens cried, "Stand fast, or I fire!" The ghost proved to be an asthmatical old goat. Whether or not Dickens *did* fire, witness doth not relate. So that we do not know how close was the analogy to the case of Tartarin of Tarascon and his famous lion—that proved to be an equally asthmatical old ass.

....Missouri is in a fair way to disprove the proverb about a prophet and his own country. Senator Frank McAllister, of Monroe, will introduce a bill to buy Mark Twain's boyhood home, which stands within the corporate limits of Hannibal. Representative Frank Socey, of Marion, has prepared a bill appropriating $10,000 for the erection of a monument to the humorist. If the house can be put to some better use than most "birthplaces," let the State go forward with its project. As for the "monument," however, wouldn't the humorist be a little inclined to "snicker" at the suggestion that he needs it?

....*International Arbitral Law and Procedure*, by Jackson H. Ralston, late American agent of the Pius Fund Case, umpire of the Italian-Venezuelan Claims Commission, etc., breaks new ground and instantly becomes the authority on the procedure and practise of international commissions. The volume bristles with citations from arbitral decisions and is too technical for the general reader, but will be invaluable to government officials, international lawyers and judges. A weighty piece of work, highly creditable to American scholarship and published for "The International School of Peace" by Ginn & Co. of Boston.

....Phillips Brooks's sermons are republished in a popular edition by E. P. Dutton & Co. At six dollars for the ten volumes, instead of fifteen, as in the original edition, these sermons lie within the purchasing power of almost every underpaid clergyman in the land. Other recently issued sermons are those of Sir William Robertson Nicoll, LL. D. (*Sunday Evening;* Hodder & Stoughton. $1.50); Dr. A. H. Bradford (*My Brother;* Pilgrim Press. $1.25); and Dr. F. Homes Dudden (*Christ and Christ's Religion*; Scribner's. $1.75). Perhaps we should not call Dr. Bradford's distinguished volume "sermons." It is described by the author himself as "composed of a series of essays and addresses on various phases of the social question"—the last being the sermon preached before the International Congregational Council in St. Giles Cathedral, Edinburgh, in 1908.

....In *Figaro* is described a tilt between Tolstoy and Turgeneff that occurred in 1861. Both novelists were visitors at the home of the poet Fet, near Yasnaya. The hostess inquired after Turgeneff's natural daughter, who was being brought up in France. "With British exactitude," said he, "she asks me to fix the sum which my daughter may spend for charity. And now she teaches her pupil to mend the ragged clothes of the poor." "You consider that a good thing?" asked Tolstoy. "Certainly," replied the other; "it brings the benefactor into direct contact with the persons whom he is helping." "On my part, I think that a well-dressed child who handles dirty and ill-smelling rags is playing a hypocritical and theatrical farce." "I must ask you not to speak in this way," exclaimed Turgeneff, with menacing looks; adding, after a retort from Tolstoy, that he regarded criticism of his plan of education as impertinent, and threatening to box Tolstoy's ears. A duel would have followed but for Turgeneff's subsequent apology. Later, on reflection, Tolstoy regretted his violence. Seized with remorse, he sent Turgeneff a letter asking his pardon. "I find it exceeding painful," he wrote, "to think that I have made an enemy of you." Turgeneff forgave, but the complete and definitive reconciliation took place much later.

Pebbles

"Isn't it shocking to think of the hundreds of citizens in that Ohio county who have been fined for buying and selling votes?"

"Yes, and they have been fined on evidence that would not be considered for one moment by a Senatorial investigating committee!"—*Chicago Tribune.*

"Why are you sobbing, my little man?"

"My pa's a millionaire philanthropist."

"Well, well! That's nothing to cry about, is it?"

"It ain't, ain't it? He's just promised to give me $5 to spend for Christmas provided I raise a similar amount."—*Chicago Record-Herald.*

EXAMINATION PAPERS.

I.—Dislocate the following passage:

"Broke, broke, broke,
In thy cold, gray down, O day!
And I would that my tongue could utter
The things I try to say."

II.—Rewrite the above in iambic decimeters, being careful that the feet keep in step.

III.—Explain this line from Lawrence Hall: "Better motoring in Europe than cycling thru Cathay."

IV (a).—Who fed the Lotus Eaters?

(b) Who took the apple from St. Agnes's Eve?

V.—What allusion is there to Hughey Reynolds in "Beers, idle beers."

VI (a).—Quote a yard and a half of blank verse from "Useless" and then fill in the blanks.

(b) Frustrate the rhyme scheme of "Claribel."

VII (a).—Who danced with the crannied wall flower?

(b) In what poem is it stated that without eternal ink life would be meaningless?

VIII.—Show how the theme of "In Momauguin" is stated the following passage:

"'Tis better to have bathed and burned,
Than never to have bathed at all."

N. B.—Please set forth your ignorance as plainly as possible; and don't mumble your words, because that rattles the mathematical fiend. After spotting the passages use Carbona.)—*Yale Record.*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

The Tariff Question

NONE of the tariff duties imposed by the Payne-Aldrich act will be changed by Congress at its present session. There will be no report from the Tariff Board. Several months must pass before the board will be ready to submit a statement concerning any schedule or group of duties. This is unfortunate. We hoped that the board would be able to report this winter about something. But its task is not an easy one, and there is no evidence that the three members have failed to do their duty. Such a Tariff Commission as the one for which provision is made in the Longworth bill (approved by the President) will not be created at the present session. Mr. Bailey has given notice that a vote upon a Commission bill will not be permitted in the Senate before adjournment, on March 4. The Longworth bill has been rejected by two-thirds of the Republican members of the House Committee on Ways and Means. Those who want a Tariff Commission can now reasonably expect nothing more than legislative support for the present Tariff Board, and the proposed appropriation for the maintenance of this board will not be passed easily.

There are Democrats who say that it will be the President's duty to call a special session of the new Congress, immediately after March 4, for downward revision of the tariff and a reduction of the cost of living. They assert that a majority of the people at the recent election demanded revision in accord with the Democratic doctrine that duties should be imposed for revenue only. We do not think this is true. In our judgment, a majority of the American people are still in favor of the protective policy. Moreover, the cost of living was not perceptibly affected by the Payne-Aldrich revision. That revision, bad as it was, was misrepresented during the campaign, even by such men as Governor Dix, who asserted that it had "increased the duties on all the necessaries of life."

Our present tariff is not what it should be. But let us see what, if anything, could be done if the President should call a special session in March next for further revision of the duties. In the House the Democratic majority would propose and pass a bill or bills reversing the policy which has prevailed for many years. That is to say, they would seek to displace the present duties by duties imposed for revenue. What their method would be we do not know. Mr. Clark, who is to be Speaker, prefers revision by separate schedules. Mr. Bailey, Democratic leader in the Senate, would have the entire tariff revised in one bill. The Democratic members of the coming Committee on Ways and Means were appointed last week by caucus. It is understood that they will now begin to prepare revision bills, which will be proposed when the opportunity arrives, in December next, or at an earlier special session, if one should be called. If there should be a special session, the House would pass a revision bill affecting certain schedules or the entire tariff, and the duties in it would be determined in accordance with the doctrine that they must be imposed only or primarily for revenue. The address made last week at the Baltimore conference, taken with other expressions of opinion, show that the Democratic tariff-makers would un-

dertake to be faithful to this doctrine. Their bill would not be accepted by the Senate. Altho the Republican insurgents will probably hold the balance of power there in the new Congress, they would not vote for a revenue tariff bill. They are protectionists. Therefore there would be no tariff legislation. But the special session, with its revolutionary tariff propositions, and the uncertainty in many minds as to the outcome, would seriously affect business interests. As nothing could be accomplished, it would be better to avoid such disturbance in March and several following months.

The next revision, whether made for revenue only or in harmony with the protective policy, should be made upon a basis of facts ascertained by competent officers. We mean that they should be ascertained by a good tariff commission. They are needed as much by revenue-only Democrats as they are by protectionist Republicans. The reception of such facts from a commission by a Democratic House majority would not bind that majority to apply the protective policy in legislation. Such a commission as ought to be established at Washington would not report as to tariff policy; it would only procure and report the information without which neither the protective nor the revenue policy ought to be enforced.

We think there must soon be another revision. It is unfortunate for the whole country that the revision of 1909 was not properly made. The disturbance which will be caused by the coming revision and the preparation for it will be a heavy price to pay for the Republican party's blunder. It seems to us that the Democratic leaders and the Democratic majority of the coming Ways and Means Committee should strive to avoid a special session; should join the Republicans now either in making a good tariff commission or in promoting the work of the present Tariff Board; and should prepare their revision bill for use next winter with the aid of such facts as a commission or the board will be able to lay before them. We do not believe that the board should be regarded by the coming Democratic majority in the House, or by the present Democratic minority there, as in any sense a hostile body. Tariff revision may be the dominant issue in next year's national campaign, and probably it will be the leading topic in the first regular and long session of the new Congress. Both parties ought to desire a basis of unquestioned facts. If our people are required next year to choose at the polls either a revenue tariff or reasonable protection, they and their representatives should have all the tariff information that competent and honest public officers can get.

The Jews in Council

THE Association of Reform Hebrew Congregations has been holding its biennial conference in this city during the past week. It includes a very strong and influential body of congregations, thoroly Americanized, using generally the English language, satisfied with their American Zion, and having no desire, for the most part, to establish a nation of their own in Palestine. These let the refugees from Russian tyranny go, but this is their Zion.

Two matters came before the conference which may interest, or ought to interest, others than Hebrews. One of these is the resolution offered, with a very able address by Mr. Louis Marshall, and referred to the executive committee. What Mr. Marshall urged was that so long as Russia flouts her treaties with us, and insults our nation by refusing to allow American citizens of Jewish birth to visit Russia, our Government should annul all our treaties with Russia, and suspend all commercial relations. He would not have us go to war, not at all; but he would have us do what a gentleman does when insulted, not fight, but have nothing to do with the offender.

Now what has Russia done? Under the treaty of 1832 equal privileges are given to the citizens of the two countries:

"The inhabitants of their respective States shall mutually have liberty to enter the ports, places, and rivers of the territories of each party, wherever foreign commerce is permitted. They shall be at liberty to sojourn and reside in all parts whatsoever of said territories, in order to attend to their affairs, and they shall enjoy, to that effect, the same security and protection as natives of the country wherein they reside, on condition of their submitting to the laws and ordinances there prevailing,

and particularly to the regulations in force concerning commerce."

This is the treaty agreement, but it has been shamefully broken by Russia, because she feels she cannot give foreign Jews the privileges she will not give to Jews of her own nation. No American citizen of the Hebrew faith is allowed to visit Russia, even tho it be his ancestral home. The Hon. Oscar S. Straus was our Ambassador at Constantinople, and he wished to visit St. Petersburg, but he could not go except by a special and particular exception to the rule. No American citizen who is a Jew can get a passport viséd by the Russian Ambassador or Consul here. That it is a great wrong is beyond all question, but it depends on a greater wrong inflicted on all Jews in Russia. The conference was in deep sympathy with the address and voted to send a copy of it to the President, and it enthusiastically adopted the resolution.

Our Government is in no position to make such a protest. If we can break our treaty with Russia and suspend all commercial relations because our citizens are insulted in Russia, why should not China break treaties with us because we insult Chinese and refuse to allow them to come to this country? To be sure there is no treaty between China and the United States allowing free mutual ingress, but the insult is the same, and the moral offense the same. China has grounds for deep offense and so has Japan. China has exprest her resentment, and the people have boycotted American goods for awhile. The pot which proposes to call the kettle black ought to hesitate and blush red.

The other matter before the Union of American Hebrew Congregations was a new one to them, but an old one to our Christian Churches; what we call home missions. The Jews have made very little provision for the religious care of their immigrant people, and yet these poor immigrants, in their zeal, have usually managed to keep up worship so long as they talked their national languages. But their children have been very loosely held. To be sure, there has been a Synagog and School Extension Fund, but its main business has been to support the Hebrew college for the education of rabbis in Cincinnati. It has also done something to supply occasional religious privileges for scattered Jews in country districts, but the great mass of Jews in the cities who never go to the synagog, and for whom there are no synagogs, have been neglected. Really, the great thing done by the meetings last week was to begin home mission work, to attempt to convert Jews to Judaism.

Of the million or more Jews in Greater New York barely more than one-third have been identified with Jewish congregations. All the synagogs and temples could not hold one-third of the Jews living here; and it is plain that something effective should be done to reach the enormous number of un-Judaized men, women and children.

It is a modest beginning that has been made in the subscriptions received, but to do the work well will take hundreds of thousands or millions of dollars. Millions have been given for hospitals, schools and other forms of Jewish relief, but the basal want of religious provision for recalling those who are living and growing up practically godless has not been properly considered, and this session will open a new era for American Judaism. This is a work that will draw Christian sympathy if not help, for it is an effort to meet the evils of indifferentism and atheism, and to develop righteousness and the fear and love of God.

The Harrisburg Frauds

With the settlement of Pennsylvania's civil suits, by the payment of $1,300,000 in cash, there comes an end of the prosecutions that have brought the Harrisburg Capitol thieves to justice. There remains only the pending appeal in the case of Huston, the architect, who was convicted and sentenced to be imprisoned for two years. The successful pursuit of the guilty men has been highly creditable to all who were engaged in it. There has been no ground for the complaint, sometimes heard when such corruption is exposed, that the "men higher up" are permitted to escape. Among those who were vigorously prosecuted to

conviction was William L. Mathues, who had been holding the office of State Treasurer; William P. Snyder, the Auditor General, who had been a candidate for higher places; and James M. Shumaker, the State's Superintendent of Public Buildings and Grounds. And one of the defendants in the civil suits, who shared in the payment of the large sum which the State received, was H. Burd Cassel, formerly a member of Congress.

The guilty men have been punished by imprisonment or otherwise. Mathues died in misery and disgrace while his appeal was pending. Snyder and Shumaker are in the penitentiary. Sanderson, the contractor, whose stealings exceeded those of all the others, died in exile, after conviction, and only death saved him from prison. There have been other deaths in the group of accused men. The builder of the Capitol was thus taken away; his partner has paid a large sum to the State. Harris and Hardenbergh, predecessors of Mathues and Snyder, as Treasurer and Auditor General, respectively, were protected by the statute of limitations, so far as criminal proceedings were concerned, but they participated in the payment by which the civil suits were settled. There is plenty of evidence that all the defendants have suffered greatly by reason of the scorn of the people as well as on account of the prosecutors' relentless pursuit of them. But all their suffering has been richly deserved.

These frauds were committed by prominent representatives of the dominant party, who felt secure because their party, embracing a large majority of the voters, had been in power continuously for many years and had sheltered other rascals of their kind. Exposure was due to the election of an alert and fearless man from the other party to the office of Treasurer. Official investigation followed, and prosecution was promoted by an honest Governor and a strong and honest Attorney General. The State was fortunate in having such officers. The work has been well done. In the record of the State it is an offset for much that has been discreditable. It is a warning that will have weight in Pennsylvania politics and at the capital. It may also be fairly regarded as a promise that the government of the State shall hereafter be clean.

Colds and Cough Mixtures

As we advance into the winter time, especially in our changeable climate, coughs and colds become a bane of existence, and scarcely any family is without them during December, and January, and February. They are supposed to be due to exposure to cold, but modern medicine has disposed of that idea to a great extent. They are not common in the extremely cold regions, but, on the contrary, are quite rare. High up in the mountains the inhabitants are particularly free from them. They are not so common on the farms of our own Northwest, in spite of the frequent sudden change of the temperature there, as they are in the more equable, tho we may scarcely speak of it as salubrious climate of the East. Colds are rarer in Canada than they are in the United States; that is, people suffer from them less in Montreal than they do in Boston or New York. Arctic explorers do not suffer much from what we know as colds, tho they may have to stand the bitterest kind of cold. Nansen and his men, after two years within the Arctic Circle, with scarcely a hint of pulmonary affection, came down with an ordinary cold during their first ten days in civilization in the so-called temperate zone, and were confined to their beds because of the presence of fever in connection with them.

We have learned the lesson that colds are slight infectious fevers which spread particularly among the population of cities and that are due to contagion, and not at all to changes in the weather. These may predispose by lowering resistive vitality, and by disturbing the circulation in mucous membranes, but it is the presence of an infectious germ that gives rise to the symptoms of the cold. When one of these bothersome affections gets into a household, usually more than one person suffers from it, and it spreads in offices and schools and the like. It is much more frequently caught in a crowd than anywhere else. The people who have to ride home on

crowded cars in the evening have a succession of colds during the winter time, and those who have to work where many people come and go during the day are particularly liable to them. It is not to some sudden change in the weather that the physician looks for the origin of a cold, but to some rather intimate contact with other sufferers from similar affection, as for instance, in a church or a theater, at a political meeting, or somewhere else where the emanations from the breath of others is likely to find its way into the respiratory tract.

We have learned to prevent the spread of consumption by carefully using a handkerchief before the mouth when coughing, and by not expectorating except under such conditions as will permit of complete destruction of the expectorated material. We owe it as a duty to others to take these precautions. We do it now as a matter of habit in the more serious bronchial affections, but it should be done also with regard to even such apparently trivial things as common colds. When we cough without something before our mouths, a little experiment often made in the bacteriological laboratory shows that we scatter bacteria for at least three or four feet in front of us. In church, immediately after a prayer is finished or a sermon, some one starts a cough and then a whole battery of coughs explode, and at least the modern physician has the uncanny feeling that nearly everybody is coughing his particular brand of bacteria freely into the air for the benefit of others.

While this change has come over medical opinion with regard to the causation of a cold, another change has been coming with regard to remedies for a cold. Realizing now that it is not a change in conditions due to temperature, but an affection brought about by microbic invasion, physicians do not attempt to cure colds, but to help Nature in overcoming them. Patients are cared for, that is the real meaning of the word cure, and their vitality increased so that they shall be able to throw off the infection. For this the most important thing is to get the patient's general health in as good condition as possible. Extra energy is needed to resist the microbic invasion, and this can be obtained by resting from other occupations. If complete rest cannot be secured, at least much more sleep than before should be taken, so as to give Nature a surplus of energy for resistive purposes. Probably the addition of two or three hours to the sleep for a few days is the best possible remedy for a simple cold. If in addition to this, exertion is limited as much as possible, then the best conditions for rapid elimination of the cold are secured. If there is fever, rest is indispensable. Free access of air, however, must be allowed. The patient need not be made uncomfortable by cold, but fresh air is an absolute necessity. Usually this means also cold air. The affection of the lungs limits the respiratory capacity, therefore the air that finds its way in in respiration must be as pure as possible, in order to make up for this. Exposure to cold air does not give the patient a fresh cold unless he becomes chilled. Above all, at night there must be an abundance of fresh air in the rooms of those whose lungs are hampered in their activities.

Of course, the various emunctories of the body must be made to do their work as well as possible, for the toxins secreted by the bacilli, and which, absorbed into the circulation, cause the chilly feelings, must be freely eliminated. The bowels must be regular, the kidneys must be made to act freely, the skin must be stimulated to secrete more freely, and the application of water to the skin is especially likely to keep that organ in good condition. All of these emunctory organs are helped by having a large supply of liquid in the system to draw from. Hence the old-fasioned grandmother's remedies, flaxseed tea, decoctions of horehound, of Irish moss and the like, were valuable because they supplied an extra amount of fluid. They were taken in large doses. They were often almost as sweet as treacle. The taking of sweets tempts to the taking of more fluids. This was what made these old remedies valuable. Nothing softens a cough like having an abundance of fluid in the system. We eliminate twice as much fluid thru our lungs when we cough frequently as during normal health.

As to other popular remedies, not much that is good can be said. Nearly

everybody has a suggestion to make to a friend with regard to a cold. Quinine and whisky is a favorite example. The quinine in large doses gives a headache and buzzing in the ears. The whisky in those unaccustomed to it adds to the headache. The use of quinine is founded on the old-fashioned idea that since it cured malaria it would cure other febrile conditions. We know now that that is untrue. The use of whisky is a remnant of the time when whisky was used much more freely by physicians than at the present time. It probably always does more harm than good to those unaccustomed to it. As for the ordinary cough remedies, the less said about them the better. We have seen all sorts of advertised cures for coughs and colds. All of them contain opium or its derivatives. They will stop a cough, but only by deadening sensibility, so that reaction does not occur, tho it ought to. Cough is a conservative process tending to expel material that should not remain in the system. In the great majority of cases it should be rather stimulated than stopped. To stop it will prevent the elimination of toxic products. In Farmers' Bulletin No. 393, the United States Department of Agriculture calls attention to the fact that all the familiarly advertised remedies for coughs and colds contain habit-forming drugs. Morphine, codein, chloroform, heroin and cannabis indica are the commonest. All of these do harm rather than good.

Colds are usually simple ailments. Serious affections, however, sometimes masquerade, especially after middle life, under the guise of a cold. If simple hygienic precautions do not benefit it, it is well then not to trust to friendly suggestion or home remedies. They are likely to do more harm than good. If medicine is to be taken the physician should be consulted. But the patient will say, I am not ill enough for a physician. Then you are not ill enough to take medicine. A cold neglected may be serious. A cold trifled with often is. A cold dosed and remedied foolishly is not infrequently the beginning of chronic conditions that are lasting and may be permanent. Rest, liquids, elimination, air—these are the cardinal principles of therapy—not drugs and dosing.

Abetting Class Antagonism

We observe with concern that the example of Mr. Carnegie and Mr. Perkins in talking about social injustice is being followed by influential newspapers in apparent thoughtlessness of grave consequences. When a man like Mr. Perkins proclaims a crisis as serious as that which preceded the Civil War, responsible journalists and public speakers should think twice before using language that is calculated to foment distrust of the existing social order. Millions of voters in the United States are toying with facts and ideas. It is a habit not easily curbed when once acquired. One of these days voters inoculated with ideas may go to the polls and do things that would be unpleasant for those persons whose conduct is now being so lightly subjected to hostile criticism.

For example, here is a New York morning newspaper of unquestioned respectability, which has never heretofore been accused of fomenting hatred of the rich. With a lack of reserve which we fear will seem culpable to gentlemen whose names are printed, it devotes three compact columns to an account of the methods by which the rich escape taxation. Such journalism would be sufficiently indiscreet if phrases were carefully chosen to avoid all suggestion of class struggle. But what shall be said of such an appeal to class prejudice as this:

"It has been proved that a rich man need not pay a tax upon his personal property in this State unless he elects of his own free will to do so. Not so the man of small means unless he deliberately perjure himself."

Or this:

"These methods of evasion, however, were open only to the wealthy. The poor man does not know about them to begin with, and he cannot afford to engage a high-priced lawyer to inform him even if he desires to know."

Or, finally, this, on the working of the inheritance tax:

"The result is that the widows and orphans who need the money lose one-fourth of their inheritance in order that the tax may be said to be enforced, while the heirs of the wealthy who could afford to give up 25 per cent. of what is left to them get off scot free."

Do editors who publish such dogmatic assertions realize that demagogs lie in wait to appropriate and apply them to

the base enterprise of agitation? Can they expect that the masses will dwell in content and speak respectfully of great financiers whose thrift and intelligence provide capital to keep labor employed, when powerful and widely read newspapers thus insinuate that law favors the rich and oppresses the poor? Have they forgotten that for words not more offensive a once popular President of the United States has been condemned by the united voice of our most respectable vested interests?

And, with sincere pain we say it, there is yet worse to be told. The article from which we have quoted freely uses names and cites instances. We shall not commit the indiscretion of quoting the names. But think of printing in full the name of "one of the wealthiest bankers in town," and remarking:

> "He is down on the books as having no personal property whatsoever in New York, and yet he lives in a costly residence just off Fifth Avenue and spends most of his time in New York."

Two of the largest department stores are named as having taken a leaf out of this banker's notebook, "and do not pay at all." Another eminent banker is named as having committed the "grave tactical error" of filing, with the deed whereby he made over real estate to escape taxation, the agreement whereby the property should come back to him after the assessors' books were closed. This estimable gentleman saved $40,000, but at the expense of being found out as indiscreet by his business associates.

The length to which a writer may go when he thus allows himself to use the language of class feeling is, as might be expected, exemplified in the generalization which is based upon the foregoing instances. Readers are told in so many words that the loopholes in our tax laws may be availed of by all of us who are sufficiently wealthy, "provided moral scruples do not hold you back." The insinuation is too obvious to be overlooked. The writer might just as well have said that rich men who do not pay taxes are morally unscrupulous, that they are not good citizens, that they are not patriotic, that they are willing to live and do business under laws and institutions which they do not help to pay for.

We cannot believe that such disregard of the caution and conservatism that are so urgently demanded in the crisis which society is now passing thru will often be displayed by a press which, on the whole, recognizes its responsibility to the public, and must, we are sure, see the immense importance of encouraging all classes to live worthily and contentedly in that station in life to which it has pleased God to call them.

The Last Traces of Peonage

In April, 1908, Alonzo Bailey, a negro of Montgomery, Ala., was arrested and indicted before the grand jury for failure to complete a labor contract. Previous to this Bailey had formed a contract with the Riverside Company, a farming company, and upon this contract had secured the sum of $15 which he was to repay out of his wages at the rate of $2.25 a month. After working a month and a few days, Bailey quit the company without repaying the remainder due on his loan.

Now the laws of Alabama are very severe against an offense of this kind. For more than a decade it has been a State regulation that if a laborer formed a contract with another person with the intent to defraud and quit before the money secured on the basis of the contract had been repaid or without refunding he should be guilty of a misdemeanor, and the quitting *per se* made "prima facie evidence of his intent to defraud his employer." Moreover, the "defendant cannot testify in his own behalf as to his unexprest intent." The penalty for this offense was that the offender "must on conviction be punished by a fine in double the damage suffered by the injured party, but not more than $300, one-half of said fine to go to the county and one-half to the party injured."

Under this law Alonzo Bailey was, therefore, guilty of a misdemeanor and subject to the penalty just mentioned. As soon as Bailey was indicted his counsel instituted proceedings for habeas corpus, arguing that the labor contract law was contrary to both the Federal Constitution and to the Constitution of the State, the latter of which reads that

"The right of trial by jury shall remain inviolate." The lower court and the Alabama Supreme Court, however, refused the writ of habeas corpus and sustained the contract law. Whereupon the case was appealed to the Supreme Court of the United States. The Supreme Court refusing upon a writ of error at first, the case was returned to Montgomery, Bailey duly tried and convicted and the case once more returned to the Supreme Court.

The decision of this court was rendered Tuesday, January 3. The court declared, one dissenting, with Justice Hughes as spokesman, that such a law reduced hundreds of negroes to a state closely akin to that of peonage and that a State could not reduce men to involuntary servitude by classing a debt as a crime. Justice Hughes, however, dismissed the question of Bailey's race or color by saying that there was nothing in the statutes to indicate discrimination against color but that the law would operate just the same in New York or Idaho. On the other hand, he characterized this law as "an instrument of compulsion peculiarly effective as against the poor and ignorant, its most likely victims."

One is inclined to clap his hands at this decision. Too long have both white and black men of the South been tangled in meshes of this sort, with the State, and this is the saddest part of it all, aiding in the entanglement. It is needless to think that the white man as the oppressor does not suffer; he as well as the black man has been the victim of this unfortunate labor system thruout the South.

In spite of the courtesy of the Supreme Court, on the other hand, none will be fooled with the intention and working of this law. If the offender could refund or repay, his misdemeanor then and there ceased to be a crime, that is the offense it seems was not in itself a crime. Upon the same reasoning a shoplifter could return the goods when overtaken and thereupon cease to be a criminal.

The decision strikes a hard blow at labor contracts all over the country. It especially unties the hands of employer and employees in the Southern States. Georgia, Florida and the Gulf States generally, following the example of North and South Carolina, will have to reshape their labor contract laws to avoid conflict with the ruling of the Supreme Court. South Carolina, it will be remembered, threw off this yoke some months ago, declaring, to use the words of one of its judges in reply to an argument that such a contract was necessary to the prosperity of the State, that "Liberty is better than prosperity."

Perhaps the brightest side of the whole situation is, after all, not so much that the case was thus settled by the Supreme Court, but that thruout the fight there prevailed in two particular instances a disinterested love for justice. In the Supreme Court there were several justices whose sympathies undoubtedly would have dictated another ruling, being both Democrats and Southerners, while from Alabama's point of view the case was fought out from beginning to end by Southern men. As far as can be learned, no negro or Northern man took a hand in the fight, but Southern lawyers, backed by some unknown Southern private citizens, fought the battle thru to the end. When the South can get more disinterested lawyers like Ed. S. White, Fred. S. Ball and W. R. Harr, Bailey's counsel, we shall not only see the last traces of peonage rubbed away, but lynching and many other cruel practices in the South will also disappear.

Entrance Tests, New Style

If President Lowell is in any way responsible for the new entrance tests projected at Harvard, he already has one worthy reform to his credit. In any case, Harvard has stolen a march upon the other New England colleges, whose committee has been studying precisely this problem. But neither the New England colleges nor Harvard is entitled to the credit of inventing the new scheme. That belongs rather to the State universities of the West. The present action of Harvard is all the more logical in view of the rapid growth of those institutions, the tendency of high school graduates in the West and Middle West to prefer the newer to the old universities, and the result of investigations which have shown the high school grad-

uate to be an accretion more desirable than the product of private schools.

The innovation in entrance requirements is, briefly, this: Instead of judging all candidates by a written examination, for which preparation by a coach making a specialty of this business is often a better preparation than conscientious work thruout several school years, the examiners will "go behind the returns." As an alternative to the present system, by which a boy must pass examinations in subjects selected from a long list of subjects in such a way as to secure a total of twenty-six "points," the new test consists of: (1) the requirement of credentials—an official statement from his high school or preparatory school, showing what subjects he has studied, the ground covered in each, the amount of time given to each, and the quality of his work therein; (2) examination in four subjects, as follows: (a) English; (b) Latin, by candidates for the B. A. degree, French or German by candidates for the B. S. degree; (c) mathematics; (d) one of certain specified subjects. Those who avail themselves of this alternative system of admission are to have followed an approved course of study during four years.

The new scheme of examination is of sufficient importance—and merit—to deserve exposition. It is true that it is not yet "official," tho the Harvard Corporation is expected to vote its approbation. In the past, pupils hailing from remote high schools or schools of any kind which send only a few of their graduates up to Eastern colleges, have labored under disabilities not necessarily due to any inferiority in the nature of their preparation. They have often begun their collegiate course under a burden of conditions; sometimes they have not begun it at all. Yet here belongs the type of ambitious high school lad with a will to go whither his comrades have not gone, in spite of the fact that his masters cannot give him just the instruction which would best prepare him—for college? no; but for Harvard examinations. Such students as this every college in the country wants to attract. The strictest application of the new tests will make it easier for a college to admit him, while excluding his city cousin, the "sport." Hereafter, it will not be so useful for tutors to

> Pack the whole of Mill
> In one concentrated pill;

nor so essential, either, that the subfreshman be apt at the national sport, bluff.

The new entrance requirements which we have outlined are an experiment that is likely to find imitators. We welcome the thought, for it ought to mean the partial filling in of the greatest gap in American education; that which yawns between the secondary schools and our colleges.

Carnegie's Latest Gift

We do not wonder that with none of his gifts, which now amount to over $200,000,000, is Mr. Carnegie better satisfied than with that to the Carnegie Institution. His gift to it was $15,000,000, and he has just added $10,000,000 more. Its province is that of investigation, simply adding to the knowledge of the world. It is not required that the investigations shall be in the direction of profit and wealth, comfort or subsistence, but simply knowledge, from which profit, however, may come, and often does come, as a by-product. It is this Carnegie Institution, under the direction of Dr. R. S. Woodward as president, which is now building far the largest of telescopes, and which is doing the best of work in the study of the stars. Now, of all studies, astronomy has the least profitable applications, but yet it is the noblest of the sciences, and fills the mind with more wonder and grandeur than any other. There is more profit in the work of the non-magnetic ship that is surveying the ocean. It has no iron in it, but is put together with bronze, and it is correcting the blunders of latitude and longitude caused by the deflection of the compas in ordinary ships. That will lessen the danger of wreck from rocks and shoals misplaced on charts. The Institution devotes itself mostly to large enterprises that require years of research, in zoölogy, botany, chemistry, physics, archeology, and historical and literary studies. With the new gift other and larger enterprises can be undertaken. Already Dr. Pumpelly has made very important explorations in

Turkestan under this direction, which has taught us much as to the origin of our domestic animals; and who knows but this fund may open to us much as to the origin in the East of human civilization? It is all buried where the spade can find it. A very valuable library of volumes has already been issued, and we may expect that our country will, under these auspices, lead the world in scholarly research and discovery. It pays the expense and supports the scholars devoted to such research.

The Tolstoy Family

The long story told in the London *Times* of the occasion of Tolstoy's flight from his home puts his wife, Countess Tolstoy, and all the children except one daughter in a very unpleasant light. It is written by one intimately acquainted with Tolstoy and who was present with him at his death. He says that, as our readers know, Tolstoy had for years felt bitterly the contradiction between his principles as to the use of wealth and his own life, but he felt compelled, living as simply as he could, not to break with his family until it became absolutely necessary. At last the interference with his purposes were so insistent, in the desire to secure all possible control of the profits of his literary labors, that he could endure it no longer. His papers were ransacked at night to learn what he was doing and planning and to discover his will. At last he fled in the night secretly, leaving no word behind, that he might hide himself in retirement. But he fell sick and his family followed him, tho the physicians did not dare to let his wife see him until he became unconscious, fearing the result on him. Now that he is gone the family, excepting the daughter, appear chiefly anxious to make what financial profit they can out of his reputation by selling his estate at an extravagant price. The story is sordid enough.

The President's Latest Speech

We are not surprised that President Taft is still urging the importance of fortifying the Panama Canal. He has two advisers in his Cabinet who are specially commissioned to support the army and navy, and he was himself Secretary of War. Before the Pennsylvania Society last Saturday he defended this measure. We do not differ from him as to the treaty right of our Government to fortify the Canal; it is the policy of it which we deny. He said that "we built the Canal to help us defend our country." A Secretary of the Navy may have thought so, or possibly a Secretary of War; but that is not what the people were thinking of. Nor was that what the French thought of when they first undertook it. They meant it for glory and commerce, and so did we; we had no thought of war. It was not for our ships of war that we built the Canal, but for our commerce and the commerce of the world. The President wants peace, and hopes to conclude treaties for arbitration wider than any yet made, but he says we cannot hope for an arbitral court for decades. Then there will be a halt in the swift progress of sentiment for the last decade. He is not optimistic enough.

It is a most interesting report cabled from London that the Harvard excavations at Samaria, conducted by Dr. Reisner, have been so fortunate as to discover a hundred tablets, supposed to be a portion of the archives of King Ahab, and written with ink and not engraved on the clay while soft. They are in Hebrew characters. One is said to be a letter from an unnamed King of Assyria, which, if in Hebrew, must be a translation. Another is an inventory of furniture in the royal palace. At present Professor Lyon, of Harvard, who has the special direction of the work there, has had no news, and awaits confirmation of the report. If there has really been such a discovery it is of the first importance and will gratify all scholars, and particularly Mr. Schiff, who has thus far been the patron of the excavations.

We lately gave the testimony of one who accompanied Dr. Booker Washington in his recent tour in North Carolina to the effect that he did not find that anywhere he went negroes who paid their taxes found any difficulty in voting. We now see a letter in *The New York Age* saying that the same is true for Tennessee, where both parties wanted the negro vote, and both got it.

Insurance

Death of Paul Morton

PAUL MORTON, president of the Equitable Life Assurance Society, former Secretary of the Navy, and a financier of national repute, died suddenly in New York City, on Thursday, January 19, 1911. He had been in ill health for some time, but insisted on continuing in his work. Mr. Morton was born on May 22, 1857, in Detroit. He was first engaged in railroading, and was in 1896 elected vice-president of the Atchison, Topeka & Santa Fé. In 1904 he was appointed Secretary of the Navy by President Roosevelt. Of late years he has been president of the Equitable Life, and has proved a strong hand in the directing of its affairs.

The most recent statement of Mr. Morton on the subject of insurance appeared in the *New York Times* Annual Financial Review. At this time it is interesting to note his attitude on the insurance situation.

Mr. Morton believed that five years ago there was a crisis in American life insurance and the progress of the business was temporarily checked, but that since then the tide has turned strongly, and that insurance is sounder and better now than ever before. He writes in part:

"There had been just grounds for apprehension. A mad race for business had resulted in extravagance, and to offset this some of the companies had been tempted to make some investments of a more or less speculative character. These investments had for the most part proved perfectly secure and had yielded large profits, thus increasing the revenues of these companies, but it was seen that possibly there was danger in this tendency and that loss might ultimately result. Therefore greater conservation was seen to be expedient.

"Investigation showed that the insurance transactions of these companies had been conducted on sound principles; adequate premium rates had been maintained; risks had been selected with care; the mortality experienced had been normal; all obligations to policyholders had been promptly paid. In short, it was shown that the great American companies which for a time had lain under suspicion were not only solvent, but conspicuously prosperous, with ample surplus, and with by far the largest part of their assets invested in gilt-edged securities and mortgages.

"Then timid and ignorant policyholders who had allowed their insurance to lapse began to revive their policies, and the business which had shown a falling off began to show a steady improvement."

He speaks of the increase of life insurance among women, the growing popularity of "income" insurance, the incentive that insurance companies give to thrift, and concludes as follows:

"There is much talk at the present time regarding the conservation of the country's natural resources. If the officers of our life insurance companies will unite in promoting the conservation of insurance incalculable benefit will result.

"On the whole the business of life insurance is on a better basis, is conducted with more regard for safety and sanity, and is making greater progress in essentials than at any previous period of its history. And the American life insurance companies lead the world in the growth and conduct of this great work just as the American people lead per capita of life insurance held, another evidence of the foresight and thrift which have distinguished this nation in its world advance."

THE announcement was made last week that the Provident Savings Life Assurance Society has been absorbed by the Postal Life Insurance Company. The consolidation has been approved by Superintendent of Insurance Hotchkiss, and policyholders of the Provident have been notified by former President Rittenhouse of the change in ownership. The combination will take the name of the Postal Life Insurance Company. It will be operated on the non-agency plan, which is the basic idea on which the Postal Life Insurance Company was formed about five years ago. The company solicits business entirely thru advertising and correspondence; and undertakes to divide with the policyholders in the form of dividends the savings resulting from the elimination of agents. The Postal has a capital of $100,000 and a surplus of about the same amount. Its assets are approximately $650,000. The Provident has assets of about $10,200,000 and about $60,000,000 of insurance in force. By combining, additional financial strength has been brought to both companies.

Financial

Mr. Aldrich's Plan

THOSE who do not admire and respect Mr. Aldrich as a legislator must admit, we think, that there is much to be commended in his suggestions for the improvement of our currency system. Many expected that he would advocate the creation of a central bank under conditions which would enable great capitalists or groups of capitalists to obtain control of it. He has not done this. It is not fair or true to say, as some critics have said, that his proposed National Reserve Association is a central bank in disguise. Organization is needed for the improvement of our currency system, and organization involves centralization; but the centralization required by the Aldrich plan is the result of federation and fair representation of all the federated parts. No new central bank of the European type would be created, but the existing national banks, working thru local associations, and again thru district associations, would build up a representative national institution or agency, and this institution or association would be able to do for the whole country what has been done in times of stress for certain communities by such Clearing House Associations as the one which exists in New York. The provisions concerning representation, stockholding, dividends, etc., would probably, as he says, prevent "control by ambitious monetary interests or domination by political influences," if this can be accomplished by any safeguards that would permit the association to do business.

We are merely considering the main principle of the plan. It may not be, and probably is not, the best one that can be devised. There are details which justly deserve criticism — for example, the proposition for the creation of a new class of national banks with the powers and functions of trust companies. On the whole, however, the plan is one that deserves friendly consideration and careful study. It should and will stimulate intelligent discussion. It ought to be examined and weighed without prejudice. While no one expects that as it stands it will be embodied in legislation, it is quite possible that the fundamental scheme of federation, representation and co-operation will eventually be accepted and established by law.

Foreign Trade

THE Government's report concerning the foreign trade of the calendar year 1910 shows that a new high record was made as to imports and the sum of imports and exports. Figures for the last four years are given below:

	Exports.	Imports.	Excess of exports.
1910..	$1,864,411,270	$1,562,807,622	$301,603,648
1909..	1,728,198,645	1,475,520,724	252,677,921
1908..	1,752,835,447	1,116,374,087	636,461,360
1907..	1,923,426,205	1,423,169,820	500,256,385

Gold exports and imports were very nearly equal. Exports of cotton were $530,000,000, or $60,000,000 more than the highest previous record. Exports of iron and steel manufactures, $200,000,000, were greater than ever before. They have been growing. Eight years ago they were less than $100,000,000.

....Clarence O. Bigelow, vice-president and chairman of the executive committee since 1904, has been elected president of the West Side Savings Bank.

....Walter Edwin Frew, vice-president, was last week elected president of the Corn Exchange Bank of New York, succeeding William A. Nash, who becomes chairman of the board. Mr. Frew was born in Brooklyn in 1864, and began his work in Wall Street when fifteen years old. In 1889 he became cashier and in 1895 president of the Queens County Bank of Long Island City, and in 1899 vice-president of the Corn Exchange Bank. From 1904 to 1906 Mr. Frew was secretary of the New York Clearing House Association, and during the panic of 1907 was a member of the loan committee. The capital of the Corn Exchange Bank is $3,000,000; the surplus and undivided profits are $5,429,246.51, and the total resources $68,243,472.85.

The Independent

VOL. LXX NEW YORK, THURSDAY, FEBRUARY 2, 1911 No. 3244

Survey of the World

For Reciprocity with Canada

The Administration's reciprocity agreement with Canada was submitted, January 26, to Congress, where Representative McCall, of Massachusetts, introduced it, and to the Dominion Parliament. Details of the agreement are furnished in an editorial article published in this issue. The first signs of opposition were manifested in New England. Congressmen from the Northwest also are excited over the proposed admission of Canadian wheat and other grains. Senator Oliver, of Pennsylvania, in spite of representing a manufacturing State, announces his opposition. Republican insurgents from the Middle West seem on the whole better pleased. Representative Underwood (Alabama), who will be chairman of the Ways and Means Committee in the new House, says that the agreement, if enacted, will tend to reduce the cost of living in the United States, while opening Canadian markets for American products. The President, in his message communicated to Congress with the agreement, says:

> "Reciprocity with Canada must necessarily be chiefly confined in its effect on the cost of living to food and forest products,"

adding that it "will cement the friendly relations with the Dominion" which already exist. If the agreement is returned by Congress to Mr. Taft for his signature, it may be thru a combination of a majority of Democrats and a minority of Republican members. The comprehensiveness of the document dazed Congress. The delegations of the various States differ among themselves, where these are Republican, as to supporting Mr. Taft's measure. Canadian opinion is divided in regard to the agreement. Some of the Conservative journals oppose it; others join the Liberal (ministerial) press in its support. The public seems, in general, to consider that Messrs. Fielding and Paterson, the Canadian representatives, scored in the negotiations. Members representing the Maritime Provinces in especial welcome the agreement, above all its provision for free fish and potatoes. That portion of the press which looks with disfavor on the proposed reciprocity asserts that it is a death blow to a British-Canadian preferential arrangement. The answer is returned that the commodities which form the bulk of Great Britain's export trade to Canada are not affected. It is also objected that the arrangement might divert traffic from the Western Provinces to Chicago and other cities in the United States, causing the wheat trade, now concentrating at Winnipeg, to go to Chicago, and perhaps driving the milling trade south of the boundary. In England, the Conservative press takes an exaggeratedly gloomy view of the situation, even hinting at an approaching union between the United States and the Dominion. The Liberal newspapers hope for the enactment of the agreement, which they believe portends a closer union between the English-speaking countries, and America's conversion to free trade. The *Chronicle* says the compact, if approved, will be the greatest single step taken in this direction in our generation.

*

The Senatorships

In Delaware, the Republican Legislature has chosen for Senator, to succeed himself, Henry A. Du Pont.——The Nevada Legislature, altho

Democratic by four votes, has returned to the Senate the Republican incumbent, George S. Nixon.——In New Jersey, James E. Martine, Governor Wilson's protégé, and the candidate of the Democratic primaries, has been elected to succeed Senator Kean (Republican). His election was accomplished on the first joint ballot, with only three votes cast for James Smith, Jr.——New York's legislative program is held up by the failure to elect a successor to Senator Depew. Mr. Sheehan declines to withdraw from the contest, altho he loses ground as a candidate. The charge is made by his opponents that coercive measures have been used against the Democratic legislators who deny or would like to deny the binding value of the party caucus. The prestige of the Tammany leader, Charles F. Murphy, has undoubtedly suffered from his failure to bring about the election of his avowed candidate. On the other hand, the handful of Democratic insurgents have united on no one candidate. Thirteen Democrats have divided the party strength. An interesting event in the politics of New York State, tho not directly connected with the Senatorial situation, is the election of William Barnes, Jr., boss of Albany, and, until last week, Collector of the Port of that city, as chairman of the Republican State Committee, to succeed Timothy Woodruff. Mr. Barnes is a leader in the "Old Guard," over which former President Roosevelt (he has to be distinguished now from State Senator Franklin D. Roosevelt, the leader of the New York Democratic insurgents) won so signal a victory before the Republican party went down to defeat at the late November elections.——Luke Lea, an Independent Democrat, lawyer and newspaper publisher, has been elected to the Senate by the Tennessee Legislature to succeed J. B. Frazier, his election breaking a deadlock. Mr. Lea is only thirty-two years of age, and has been active in politics only four years.——Texas returns to the Senate the incumbent, Mr. Culberson, Democrat.—— Senator La Follette received re-election by the Wisconsin Legislature with sixteen votes to spare.——West Virginia is the scene of an embittered contest. Just before the joint balloting began, January 25, the twenty-three Republican members of the House left the chamber, refusing participation, and alleging fraud and bribery in the Democratic caucus. William E. Chilton, Democrat, has been elected for the long term Senatorship; Clarence Watson, Democrat, will take the chair of the late Senator Elkins. The Governor of West Virginia is expected to refuse commissions to the Senators-elect, on the ground that they have not been legally elected.

Republican "Progressives"

The "Republican Progressive League" has been formed by certain Senators, Representatives, Governors, and others: an organization which promises to "fight for the establishment of popular government." Senator Jonathan Bourne, Jr., of Oregon, has been elected president; George W. Norris, a Congressman from Nebraska, is first vice-president, with Governor Osborn, of Michigan, as second vice-president; Charles R. Crane, of Chicago, who was slated for Minister to China, is treasurer. The executive committee has the following members:

Senator Moses E. Clapp, Minnesota; Senator Joseph L. Bristow, Kansas; Representative E. H. Hubbard, Iowa; Representative Irvine L. Lenroot, Representative-elect William Kent, California; Gifford Pinchot, Pennsylvania; George L. Record, New Jersey; and the president, vice-president, and treasurer, ex-officio

The profession of political faith of the new organization, signed by nine United States Senators, thirteen members of the House, and six Governors, all Republicans, declares its object to be "the promotion of popular government and progressive legislation," in opposition to "the special interests." To this end it advocates the election of United States Senators by direct vote of the people; direct primaries for the nomination of all elective officials; the direct election of delegates to national conventions, with opportunity for the voter to express his choice for President and Vice-President; amendment of State constitutions providing for the initiative, referendum and recall; a thorogoing corrupt practices act.

"The League will coöperate with progressives in the several States, and wherever acceptable

will render assistance in promoting the organization of State leagues.

"Whenever requested by any progressive State league or by progressive leaders in State Legislatures, the National Progressive Republican League will aid in the preparation of appropriate bills and resolutions, and will furnish speakers and literature in support of legislative action upon the propositions enumerated."

Former President Roosevelt has declared himself in sympathy with the principles of the League, altho he is not directly associated therewith. Senator Bourne announced on Sunday that letters and telegrams congratulating the League on its program pour in from every quarter. The League is generally regarded to be hostile to the renomination of President Taft.——Officers of American and Canadian express companies have announced a substantial cut in thru tariffs, in some cases amounting to 33⅓ per cent. The announcement is that

"Instead of two companies which may handle an express package making a separate charge on each line, the charge will be the same as if one company had carried the package from the shipping point to its destination."

Talk in Congress

The House Committee on Ways and Means has reported favorably the bill creating a permanent tariff board. All the Democratic members voted to report this Administration measure out of committee. The bill reported is made up of provisions from both the Longworth and the Dalzell bills. The board is to consist of five members, receiving $7,000 each annually, except the chairman, whose salary is fixt at $7,500. The bill was debated in the House on Monday, and its passage was expected. Its fate in the Senate is more doubtful.——A bill was reported from the Senate Public Lands Committee, January 28, authorizing the leasing of Alaska coal lands in areas of not less than 2,560 acres to one lessee, subject to the intervention of the Interstate Commerce Commission. The term of lease is fixt at two years, with provision for the privilege of a thirty year lease. Transportation companies are expressly excluded from the privilege of leasing coal lands.——Senator Depew addressed the Senate last week in opposition to the resolution proposing a constitutional amendment providing for the election of Senators by popular vote. The Senator from New York contends that the proposed resolution repeals, in effect, the Fourteenth and Fifteenth Amendments, taking away from Congress

"all power over disfranchisement by State laws and remitting to the States unlimited authority to limit the suffrage."

There is, it is believed, small chance of Senator Borah's bill passing at this session. The Senate is more likely to concentrate on the Lorimer case. Senator Gamble, of North Dakota, a signer of the majority report vindicating William Lorimer, in a speech delivered January 23, made a plea for the Illinois man. He argued that Mr. Lorimer had been ignorant of the corrupt means used in his behalf—specifically admitting, as has Senator Burrows, the bribing of Illinois legislators. This is a departure from the original majority report. Senator Gamble sought to demonstrate that Mr. Lorimer was elected, even without counting the tainted votes. Senator Gamble has been followed by Senator Cummins, of Iowa, who takes opposite ground.——One of last week's speeches in the Senate against the ocean mail bounty bill was that of Senator Shively (Indiana, Democrat), in which the speaker took the position that the supremacy of American shipping was not to be restored by subsidy; only by the repeal of "the medieval ordinances known as our navigation code." Senator Shively especially condemns the denial of American registry to foreign-built ships, tho owned by American citizens. He said that in 1849 Great Britain had repealed the code that we had copied, whereas we retain it, with the result that the American merchant marine is destroyed. As evidence that the condition of American shipping would not be improved by a subsidy, Mr. Shively said that while, under the law of 1891, the United States had been paying 165 per cent. more for carrying the mails in American than in foreign vessels, the discrimination had been of no avail. Senator Root, on the other hand, appeals for the bill's passage. "The failure to extend American trade to South America," he says, "is due to the failure to give our merchants a decent mail service."

Philippine and Other Islands

Having been dormant for years, the volcano Taal, in Batangas Province (Luzon) became active on the 28th, and its eruptions were accompanied by more than 200 earth shocks, three of them severe.——The Philippine Assembly has passed a bill abolishing the death penalty.——General Pershing, commander of the expedition against the hill tribesmen who had attacked planters in the Davao district of Mindanao, reports that the outbreak has been suppressed. All those who were concerned in the murder of planters have been captured or killed.——In the cases against Theodore Kalaw, editor of the *Renacimiento*, and Martin Ocampo, manager of the same journal, who were sentenced to be imprisoned and to pay fines for criminally libeling Commissioner Dean C. Worcester, a stay of four months has been granted, with leave to apply to the Supreme Court at Washington for a writ of error. Kalaw is a member of the Assembly.——A bill providing for the punishment of spies who obtain or seek plans of fortifications has been reported favorably in the House at Washington. It was suggested by the unsuccessful attempt to prosecute and punish two officers of a foreign Power who were arrested in Manila as they were about to pay $25,000 for complete drawings and photographs of the elaborate and partly concealed fortifications on Corregidor Island, at the entrance of Manila Bay. There was no law under which they could be prosecuted. A package of blueprint plans of the same fortifications, with much tabulated military information, was picked up in a street of Calcutta not long ago, and forwarded to the United States Consul. Our naval and military authorities support the pending bill.——The Porto Rico House of Delegates has sent to Congress a protest against those parts of the Olmsted bill which provide that the thirteen members of the insular Senate shall be appointed by the President, and judges appointed by the Governor.——Cuba's President, in a proclamation issued on the second anniversary of the re-establishment of the republic, said it was the Government's purpose to negotiate commercial treaties with several foreign countries, always giving due consideration to the existing agreement with the United States.

Mexico's Insurgents Gaining

When the insurrection in Mexico seemed to be dying out, it took on new life, last week, and several notable victories were won by the revolutionists. Near Ojinaga (in Chihuahua) a retreating party of rebels drew a force of 200 Government troops into a trap. Passing thru a narrow cañon, the Federal soldiers were attacked from the cliffs on each side, and about 150 of them were killed, while the rebels lost but two men. This fight was in progress for two days. At Galeana, 150 miles southwest of El Paso, Tex., there were two or three engagements, in which the Government suffered defeat and heavy losses. The chief commander of the insurgents is Pascual Orozco. While his forces appeared to be scattered by defeat, he was quietly organizing them, aided by large supplies of arms and ammunition smuggled across the boundary. At the end of last week two or three small shipments of arms were intercepted, but no trace had been found of 16,000 rifles recently purchased in New York. Orozco is preparing to attack the city of Chihuahua. It is asserted that General Navarro, the Government commander, has been surrounded and isolated in the mountains to which he and his men were drawn by the insurgents. The aim of the insurgent leaders, it is said, is to cause a withdrawal of troops from the southern part of Mexico, in order that their allies there may have a free hand. This seems to be confirmed by what occurred last week in Oaxaca, a State on the Tehuantepec Isthmus, where several hundred revolutionists made a successful attack upon Tuxtepec, imprisoned the authorities, and then set out to get the support of the many contract laborers in neighboring districts. Battles are reported to have taken place in the adjoining State of Vera Cruz, where the revolutionary movement is said to be gaining force. Our Government has sent ten companies of soldiers to patrol the border as far westward as El Paso. The revolutionists' campaign is said to have been planned, and now to be directed, in that city.

Bonilla's Revolution in Honduras

The loss of his gunboat, the "Hornet" (now held by our naval forces), has not prevented ex-President Manuel Bonilla from making progress in his attack upon the Davila Government in Honduras. Ceiba was captured on the 25th by his army, under the command of General Lee Christmas, the Louisiana soldier of fortune, who was assisted by Guy Maloney, of New Orleans, and Joseph Reed, of Charlestown, Mass. These men handled the machine guns. The fight continued for three hours, and in the course of it General Guerrero, Governor of Ceiba, was killed. American and British marines compelled respect for a zone of neutrality, which included the consular property. Two days later Christmas captured Yero, which is on his road to Tegucigalpa, the capital. Considerable quantities of arms and supplies fell into his hands there. He is to attack the capital, and Bonilla undertakes the subjection of Puerto Cortez. It is said that Davila has transferred much of his wealth to Paris and is preparing to leave Honduras. A small party of revolutionists moving toward the capital from the west met with reverses at San Antonio. Their leader, Colonel Velasquez, was killed, and they retreated into Salvador, where they gave themselves up to the President of that country.——The treaty relating to the projected loan of $10,000,000 to Honduras was sent to the Senate, in Washington, last week, and President Taft urged that it should be ratified.——Announcement is made that Guatemala will negotiate a loan of $40,000,000 with American bankers, when her Congress convenes, in March.——At the suggestion of Secretary Knox, President Estrada, of Nicaragua, has appointed Ernest H. Wands, of New York, financial adviser, to assist in putting the republic's finances in order, and our Government, at President Estrada's request, has appointed Thomas P. Moffatt (Consul at Managua) to be a member of a commission which will adjust foreign claims against Nicaragua, including those connected with the execution of Groce and Cannon.——Ex-President Zelaya, now in Brussels, says his son did not tell the truth when he asserted that he (the father) was homesick and wanted to come back. "I suppose they pay him," he adds, "to sign statements published with malice. They want to make me appear as approving all the atrocious deeds committed by Taft in Nicaragua. I have no desire to return to America."——Secretary Knox, on the 24th, advised both Hayti and Santo Domingo to submit their quarrel to arbitration, and to withdraw their troops from the frontier. Santo Domingo was advised to suspend work on the road which lies on disputed territory. It is understood that this advice will be followed by both countries. ——When the Haytian gunboat "Liberté" was destroyed by an explosion in October last, seventy persons lost their lives, and among these were ten Haytian generals. There were twenty-three survivors. These have been tried, found guilty of causing the deaths of those who perished, and condemned to death.

South America

Dispatches from Ecuador say that our Government offers $35,000,000 for a ninety-nine year lease of the Galapagos Islands. President Alfaro, in a signed telegram, speaks of "the proposal of the United States," and says it ought to be accepted. Inspired dispatches from Washington, however, assert that no definite offer has been made, and that the islands would furnish nothing but a coaling station. But it is remarked in addition that our Government would not like to see them leased to any European or Asiatic Power. The Government press in Ecuador favors acceptance of the offer, but popular sentiment generally is in opposition. Protest has been made by riots in Guayaquil, where mobs hooted the President, threw stones at his house, and were dispersed only by troops.——War between Ecuador and Peru again seems imminent. Peru's troops on the border attacked a village in Ecuador. Three persons were killed. Peru says Ecuador's troops began the quarrel. Ecuador's President asserts that his soldiers arrested Peruvian outlaws. These, he adds, were rescued by Peru's soldiers, who burned several houses. Both governments are sending reinforcements to the border.——Reports from Germany say that the brother of ex-President Castro has been seeking support in Europe for

a revolution against the Gomez Government in Venezuela, but has failed. Castro is in the Canary Islands.——Brazil has sent her warships to sea, fearing, it is said, a new mutiny, as the sailors are angry on account of the recent sudden deaths, by "suffocation" and "sunstroke," of forty-four leaders in the revolt on the battleships, all of whom had been pardoned by act of Congress.——Dr. Mendoza, of Panama, commissioned to negotiate a treaty of peace with Colombia, had a chilling reception in Bogota. No hotel would give him lodgings, he could not ride in any public carriage, the streets were full of posters denouncing him as a traitor, circulars urging that he be boycotted in all possible ways were widely distributed, and leaders in Congress demanded his arrest. The President, who treated him courteously and prevented arrest, has thus excited popular hostility, and there is said to be a plot to depose him from his high office.

French Politics

The interpellation of M. Georges Berry demanding that the Government take steps to dissolve the General Confederation of Labor, or compel it to respect the laws, afforded the Premier an opportunity for an explanation of the Government's policy. Premier Briand declared that the Confederation was the result of the law passed in 1884, authorizing the organization of trade unions, and that this policy could not now be abandoned. The Confederation was founded for the legitimate purpose of securing a reduction of the hours of work and improving conditions of labor, but it had gradually fallen under the domination of fifteen or twenty agitators and had been turned into a political machine, advocating violence, sabotage and anti-militarism. The agitators at the head of the Confederation did not represent the feelings of the 3,000 confederated trade and labor unions. The policy of the Government was to punish the unlawful acts of individuals, but not to attempt any repressive legislation against organized labor. The law relating to trade unions or "syndicates" ought to be amended so as to secure proportionate representation as a safeguard against the tyranny of a few leaders, and civil rights must be conferred upon the unions so that they could own property and develop new methods of action with a full sense of their responsibility.——Since the suppression of the strike on the railroads by the strong measures of the Government, the dissatisfied employees seem to have adopted quieter and more insidious tactics, using that form of sabotage which consists not in destroying material, but in causing as much delay and confusion as possible. Certainly the disorder upon the French railroads, particularly those managed by the State, is unusually serious. Hundreds of carloads of goods have been missent in the last two months and there is no certainty that perishable goods will go thru on time, or, indeed, arrive at their destination at all. Minor accidents are frequent; signals and switches are always getting out of order. Whether this is to be laid to the inefficiency of Government management or to a conspiracy, of a revenge on the part of railroad men, cannot be ascertained.——The committee of the Chamber in charge of the revision of the marriage law is in favor of the equalization of the penalty for unfaithfulness, and it also recommends the abolition of the law granting immunity to a husband who kills his rival.——Some weeks ago we called attention, editorially, to the embarrassment of the French Government over the introduction of pocket lighters. Matches, which are a Government monopoly in France, are being displaced by apparatus which strikes fire like the old flint and steel, but uses the new cerium-iron alloy in place of the flint. These lighters have hitherto been prohibited in France, but the prohibition was ineffective, and during the debate on the subject in the Chamber, the Deputies amused themselves by lighting their cigars with them in the face of the Minister of Finance. The new law proposed by the Minister of Finance imposes a tax upon such lighters ranging from 40 cents to $8, depending upon its value. Every apparatus must have its tax number soldered on. The new regulation will cause inconvenience to travelers, as the nominal fine for lighters not bearing a tax number will amount to confiscation.

Turkish Difficulties

The Ottoman Government is finding it hard to cope at the same time with internal disorders and foreign intrigues. Macedonia is again the prey of rival bands of marauders. Albania is unreconciled. Crete is doing its best to cut loose from Turkey and annex itself to Greece. Arabia is making trouble on all its borders. The most serious of these disorders at the moment is the revolt in Yemen, which is an inheritance from the old regime. Year after year money and men were poured into Southern Arabia only to disappear like water on the desert sands. The tribesmen of the hinterland, whose natural occupation is fighting, raided the coast provinces when victorious and vanished into the desert when defeated. Now again Yemen and Azir are threatened and the Government has resolved to send a sufficient force to crush out the revolt permanently. Forty-five battalions of troops, with seven batteries of artillery, comprising field, mountain and machine guns, were sent to Hodeida the last of January. Cholera has appeared among the Turkish troops in Yemen. The German papers insinuate that the revolt is encouraged by the English at Aden.——A party of fifty Turkish soldiers whose time had expired were being taken from Beirut to Mersina, on their way home from Syria, when they mutinied at Alexandretta and tried to compel the captain to continue on the voyage without stopping at other ports. Altho the vessel was officered and manned by Greeks, it was named the "New Jersey," and bore the American flag, so our consular agent at Alexandretta went on board the vessel in order to investigate, but he was roughly handled and obliged to withdraw. When the steamer stopped at Smyrna the American consul-general there had a similar experience, but succeeded in capturing the sergeant or lieutenant who was the ringleader of the mutineers and turning him over to the authorities. The Salonica boycott committee took up the quarrel and declared against the Mail Packet Archipelago Line, owning the "New Jersey." The "Olympia," another vessel of the line, was prevented by the boycott from landing its cargo at Salonica. The leader of the boycott was put under arrest. Our embassy at Constantinople has protested to the Porte against the assaults on the American representatives.

The Turco-Persian Railroad

The Ottoman Government is naturally anxious to know the extent and character of the Potsdam agreement between Russia and Germany in regard to the Bagdad railroad. In reply to requests for information the German ambassador at Constantinople has stated to the Porte that no communication can be made on the matter because the details of the agreement have not yet been worked out. It seems to the Turks that Germany has committed an unfriendly act in concluding in secret an agreement with Russia regarding Turkish territory without even consulting the Turkish Government, when an alliance, or something near it, was being cultivated between the two countries. So far as divulged, the agreement permits the extension of the road to Bagdad in a northeasterly direction to Kanikin on the Persian frontier, where it will connect with a Russian branch of the road to be built from Baku to the confines of India. Such an extension is not provided for in the German franchise for the Bagdad railroad and the present Turkish Government, jealous of national interests, might not be inclined to grant it. Still less would it favor a German branch of the Constantinople-Bagdad road to the Russian frontier, which, it is surmised, may be included in the Potsdam agreement. In reply to the indignation and disappointment exprest by the English press that Russia should have taken Germany into partnership in the railroad business, thus destroying to a great extent the advantages of the Anglo-Russian convention as to Persia, the Russian press somewhat cynically replied that Great Britain was at liberty to negotiate a similar agreement with Germany in regard to Southern Persia, which is in the British sphere of influence, as Northern Persia is in the Russian. This means, of course, that Great Britain is to let the German railroad be extended from Bagdad to the head of the Persian Gulf, which is just what Great Britain has been trying to prevent. Here again Turkish interests are at stake, with no consideration for

Turkey. It is assumed that Great Britain can give or withhold a terminus on the gulf for the German railroad regardless of the fact that such a terminus must be either on Persian or Turkish territory. The railroad has not yet reached Adana and it must be many years at the best before it can get to Bagdad. It is likely that Great Britain and perhaps Turkey would prefer to have the whole question made the subject of a conference of the four Powers—Russia, Germany, France and Great Britain—rather than have it settled by private bargaining between them. Upon this question depends not merely the control of the land route to India, but the development of Mesopotamia. It is believed to be quite practicable to restore this arid region to its former fertility by irrigation. Acording to the estimates of the engineers, 3,000,000 acres could be brought under cultivation within three years, capable of producing 1,000,000 tons of wheat and 2,000,000 hundredweight of cotton annually. The arable land can later be much increased by the further utilization of the waters of the Euphrates and the Tigris. Corn, dates and rice can be cultivated, and large areas of grazing land devoted to the raising of cattle and sheep. The opening of this new source of food supply near to Europe would have a great influence in financial and political conditions. The new cities that would arise in this region might become worthy successors of Babylon and Bagdad. But first must come the construction of dams and ditches upon an extensive and scientific plan, and the provision of railroad facilities, either the road to Constantinople now under construction or a more direct line to the Mediterranean.

Foreign Notes

Of the twenty-six Japanese anarchists convicted of conspiracy against the Imperial family, twenty-four were condemned to death, and two given sentences of imprisonment. Half of those who were condemned to capital punishment had their sentences commuted to life imprisonment. The other twelve, including Denjiro Kotoku and his wife, were hanged on January 24. The executions were private and the Japanese press has made but little reference to the trial and its result. Regicide is, in fact, unnamable and inconceivable to the Japanese, and no provision had ever been made in the regular courts for dealing with such a crime.——Eight thousand Russian workmen on the Manchurian Railroad have struck and demand to be sent home on account of the plague. Troops have been called out to guard the road and protect the Chinese laborers, and the strikers with their families have been evicted from their dwellings. The plague at Harbin continues to spread, and over 200 deaths a day are reported in the Chinese quarter. Pekin is being deserted by its foreign population. The Government appeals to the Powers for physicians and nurses. The expenses of scientific men who wish to study the plague will be paid by the Government. Rumors that the plague was introduced by the foreigners for the purpose of destroying the Chinese are widely credited among the masses.——The Portuguese Government announces that a monthly pension of $3,300 will be paid to the deposed King Manuel. The ex-King has leased a residence in Richmond from Kaid Sir Harry Maclean, formerly of Morocco. The decree separating Church and State will be promulgated within a month. According to this, the property of the Church will be taken over by the State and the clergy will receive from the State a stipend representing as nearly as possible the interest derivable from the capital value of the property. After the present generation of clergy is extinct their successors will have to pay rent for such property as they wish to use, and in case of failure to pay rent, the State will be at liberty to sell the property and devote the proceeds to any purpose it thinks fit. The Provisional Government has declared dueling illegal and established a court of honor for the settlement of disputes. The party found guilty by the court will be fined from $50 to $1,000, the fine to be given to charity. In case of failure to pay the fine, imprisonment from three to thirty days.——The Duke of Connaught, uncle to the King, has been appointed Governor-General of Canada. The appointment may be intended to counteract the influence of the reciprocity treaty with the United States. The Duke and Duchess will arrive in Canada in September.

Mr. Taft's Early Life in Cincinnati

BY HARRY BRENT MACKOY

[Owing to the publication in THE INDEPENDENT on October 27, 1910, of an article written by Mr. Taft twenty-one years ago for the Literary Club, of Cincinnati, entitled "Political Reform in the Party," and also the article by Mr. Taft, published elsewhere this week, the following account of his earlier literary life will be found interesting.—EDITOR.]

HEREDITY did much for Mr. Taft. Yet a chief cause of his superiority consists in the capacity which he has manifested in two divergent, tho entirely harmonious, directions—the one for work and the other for play. No statesman of modern times, certainly no President of the United States, has ever possessed these gifts to a higher degree.

As a mere youngster he was fond of all outdoor sports. Marbles and swimming were his favorite amusements, while fighting was, on some occasions, even more to his mind. At the head of the Mt. Auburn crowd he would charge the gang from Mulberry Street or the boys from "Butcher Town," his husky frame carrying terror to the opposing forces. Later, at college, in the days when freshman and sophomore rushes were still tolerated, in the wrestling matches between chosen champions from each class, the side that "Bill" Taft was on somehow seemed invariably to win. And on going back home, the way he pummeled the editor who uttered some scurrilous remarks about his father is evidence of his skill with the fists. The last episode, it may not generally be known, led to a request from the *Police Gazette* for his photograph.

Charm of person, added to physical valor, naturally made him popular. Dancing was not the least of his accomplishments, and, had he wished to shine in that domain, society would have claimed his earlier years very largely. Many times, after an evening of fun, he would be found poring over his books or papers until almost dawn—a mode of life which only his vigorous constitution could have successfully withstood.

But with him the work side predominated. He never allowed pleasure to be served through all the courses. It was used as an entrée or dessert, sometimes to season with, but on no occasion to the exclusion of the substantials.

During his judicial career, his secretary says, on many and many a night would he return to the office after dinner and dictate until eleven and twelve, and even one o'clock. Frequently he would carry the record in an ordinary proceeding to his home, studying it early the next morning if engagements the evening before had prevented, and be ready when court convened to announce his opinion. Six weeks of this kind of close attention were given to the preparation of the Addyston Pipe Trust decision. The Phelan trial did not consume so much time, but was possibly more absorbing.

The same devotion to the task before him was observable in working for his law school. He helped to organize the new institution known as the law department of the University of Cincinnati, which afterward combined with the older faculty of the Cincinnati College, and for four years served it most faithfully as dean and professor of the law of property. Busy as he was then on the bench, he rarely missed a lecture, altho giving courses of from two to six hours per week. His reading for these lectures was always extensive, and the duties of directing other branches, or of rendering individual assistance to pupils, a task of which he was especially fond, were never neglected. In fact, his scholars tell to the present day of the first examination which he conducted. There were between eighty and a hundred questions propounded, and the ordeal began at nine o'clock in the morning. At six o'clock in the evening Taft was still supervising some of the boys. Even after resigning his professorship, which he did near the end of a term, he made out the list of questions for the year with the answers. He did this in pencil while traveling over the country in Pullman cars getting ready to go to the Philippines. The examination being afterward abandoned, the successor to Taft states that he found

enough matter in those questions and answers to last him for three or four years.

One outlet for the President's many-sided energies, however, has been somewhat overlooked. That was the fondness which he early took in the art of writing. We are, of course, familiar with his later essays, addresses on civic questions and political speeches, but only recently in the pages of this magazine has attention been drawn to a paper which he wrote more than a score of years ago.

When he began to study law Taft became a reporter of court news on the staff of the old Cincinnati *Commercial*, of which Murat Halstead was then editor. He did so with a twofold purpose. It was helpful to him in furnishing knowledge of the practice, the practitioners and the officers of the courts, and put him in the way of earning a livelihood earlier than he would have otherwise done. There must have been more than a latent liking for literary effort in his being which led him to take the step, tho, because about the same time he helped to organize what was known as the "Salon." This was a small coterie of young gentlemen and ladies, most of them just out of college, who used to meet on Saturday evenings at the residence of Taft's future father-in-law, Mr. John W. Herron. It was a very congenial circle and for two years the members wrote essays and discussed current topics of interest to their mutual edification and delight, the male contingent often tramping homeward after the midnight hour, and the young journalist usually being among the last to leave.

The same year Taft was elected to membership in the Literary Club of Cincinnati. At that time this institution was (as it still is) the most prominent club of its kind in the city and one of the oldest in the country. It was founded in 1849 by a dozen friendly spirits, of whom Stanley Matthews and Ainsworth R. Spofford were the best known, the exercises at first being confined almost entirely to debates. Altho always limited in numbers, and restricted now to one hundred members, it has had upon its roster men of national reputation in various lines. Among them, in addition to those before mentioned in this magazine, have been Thomas Corwin and Thomas Ewing, Sr., Oliver P. Morton, John Pope, John B. Stallo, Bellamy Storer, Senior and Junior, Moncure D. Conway, Cleveland Abbe, James E. Murdoch, T. Buchanan Read, Don Piatt, William F. Poole, Thomas M. Anderson, Benjamin R. Cowen, Charles W. Dabney and many others.

During the Civil War it was distinguished by the unique record of having fifty-one of its members enter the Union Army, of whom fifty attained positions varying from a second lieutenancy to a major-generalship, there having been three of the latter. The only one who failed to rise above the rank of private remained in the service but a short time.

At present the program at its weekly Saturday evening meetings usually consists of a paper read by the member contributing it, while, on the last Saturday in each month, a collection of shorter articles, entitled a "Budget," is furnished by one called the "Editor."

The club has also been the parent of several organizations of a similar kind, including the Chicago and Indianapolis Literary Clubs.

When Taft was elected, the character of its membership was fully as high as at any period of its existence. He had as his confrères the eloquent ex-Governor Noyes and that able lawyer, Hoadley, soon to be Governor himself; John J. Piatt, the poet of the hearth-side; Roberts Bartholow, afterward distinguished in medicine; the forceful journalist, Murat Halstead; Sir Alfred T. Goshorn, knighted by the Mikado; Manning F. Force, warrior and jurist; John W. Herron, another strong lawyer; the artist, Henry F. Farny; Ozro J. Dodds and Job E. Stevenson, both ex-Representatives in Congress; Benjamin Butterworth, at that time a candidate for the same office. The year following, Judson Harmon, then just elected Judge of the Superior Court, joined. President Hayes, tho in Washington, was still a member. It was very natural that the newly graduated college youth should feel it an inspiration to be associated with these makers of history.

The principal reason for Taft's desiring admission, however, was probably the fact that his father and two brothers, Charles P. and Peter R., had already ac-

cepted invitations to join the club. A little later his brother Horace was taken in, so that all the men of his family, with the exception of Henry, were at some time or other members upon its rolls. The father, Judge Alphonso Taft, was its president in 1881-2, and the minutes of May 20, the latter year, state how the members touchingly paid their farewell tribute to him when about to leave to take charge of the Austrian mission.

Tho the reading of papers was not compulsory, Taft found time to prepare at least four during his connection with the club, the last of which was published in THE INDEPENDENT of October 27. His two longest were an essay on the "Molly Maguires" and a discussion of the relation of "Crime and Education."

Of the second the following contemporary comment is contained in the records:

"Having thru his position as assistant prosecuting attorney of this (Hamilton) county peculiar advantages in the study of this subject and especial reason therefor, he was able to give facts and statistics leading to his conclusion that the two are in inverse ratio. The plan suggested for the abatement of crime was *a system of compulsory education.* He even went so far as to recommend that the State should supply, in a measure, the loss to the family of the child's time in cases where the poverty was so great as to render this time a mater of importance."

Concerning the first essay the Secretary's entry reads:

"Mr. Taft gave a complete history of the Molly Maguires and traced their origin in the old country. This essay involved a great amount of research, investigation and condensation."

His remaining paper was entitled "Criminal Law as Administered in Hamilton County, and is published elsewhere in this issue. It was presumably based upon personal experiences, he having only recently resigned from the office of Assistant Prosecuting Attorney of the county. It is interesting to note that the Court House riot broke out in Cincinnati just two months after the reading of this article. The riot was the result of the disgraceful conditions then existing in the local administration of the law, popularly attributed to the influence of one T. C. Campbell. After the burning of the Court House the Bar Association selected a committee to prefer charges against Campbell and placed his prosecution in the hands of two older practitioners. On Mr. Taft, however, devolved the duty of preparing the case for trial and he spent the greater part of the summer and autumn of that year in securing testimony. He likewise took an active part in the trial, and, while the defendant was not held guilty, the moral atmosphere of the community was soon cleared by Campbell's enforced departure from the city.

Mr. Taft kept up his interest in the Literary Club for nearly twelve years, altho almost continually in office during that time. Following the position of Assistant Prosecuting Attorney, he first occupied the Collectorship of Internal Revenue, then became Assistant County Solicitor, and later Judge of the Superior Court, but he only resigned his membership in the club after his appointment to the Solicitor Generalship, being then compelled to move to Washington.

It was never the purpose of Taft to devote himself exclusively to literary pursuits, yet that which he wrote seems to have been characterized by a style of much clearness, conciseness, forcefulness and logic. To some of his law students he afterward used to describe his manner of preparing cases for the Supreme Court. He would boil the facts down, he said, until there was hardly anything left; then he would go over them again to see what could be cut off. Such was apparently his method of writing. But more than all else close application to the question under examination was characteristic of him. It was, no doubt, this trait which inspired an intimate friend to say of him as a lawyer:

"No subject for his consideration was passed without complete mastery of it. His industry, thoroness and ability had already marked him as the most promising young man at the bar."

Thru all his work he has continued to enjoy himself in the hearty and natural manner of the boy at play. He is a striking example of what President Dwight, of Yale, used to call the well-rounded man—one who is developed on all four sides, morally, mentally, physically and socially. It is another form of the simple life which Taft has led, because it has been simple for him to lead it.

CINCINNATI, OHIO.

Criminal Law as Administered in Hamilton County

BY WILLIAM H. TAFT

[The following paper was written by Mr. Taft for the Literary Club, of Cincinnati, and read in what was known as the "Budget" or "Informal" on the evening of January 26, 1884. The editor of the "Budget" was Major Harlan Page Lloyd, then the law partner of Mr. Taft. The paper was afterward printed in the *Weekly Law Bulletin* under date of February 18, 1884. The court house riot took place shortly after the reading and publication of Mr. Taft's paper. It was on Friday night, March 28, 1884, that a mob took possession of and set fire to the county jail. On Saturday night, March 29, the mob set fire to and burned the court house, together with the larger part of the court records. The alleged cause of the excitement which resulted so disastrously to the city was the verdict in the Berner trial. Berner had been indicted for murder and had several times confessed to having committed the crime. In the face of the confessions, the evidence and the charge of the Court, the jury returned a verdict of manslaughter. At a meeting afterward held, at the instance of a number of citizens, speeches were made and a series of resolutions passed protesting against the action of the jury, after which the crowd proceeded to the county jail, and, failing to secure the prisoner, vented their anger in the destruction of the buildings and the killing of the officers of the law. The popular supposition at the time was that Thomas C. Campbell, attorney for Berner, was largely responsible for the conditions which caused such a verdict to be rendered. Mr. Taft was one of those who became most active in the prosecution of Campbell after these events had occurred. Our attention was directed to this article by Mr. Harry B. Mackoy, the secretary of the Literary Club, whose article on Mr. Taft appears elsewhere in this issue.—EDITOR.]

THE report of the Clerk of Hamilton County to the Secretary of State shows the number of indictments found by the Grand Jury for each year ending June 30, the numbers of persons so indicted, the number of indictments disposed of, and the number of indictments pending at the beginning and end of the year.

For the year ending June 30, 1880, we find, from this report, that the number of indictments pending July 1, 1879, was 258, that the persons so indicted were 282. The number of indictments found that year was 118, against 132 persons. During the same year the number of indictments disposed of, either by *nolle prosequi*, trial, acquittal, or plea of guilty, was 77, against 87 persons.

During the year ending June 30, 1881, there were pending on July 1, 1880, 294 indictments, against 322 persons. There were found during that year 148 indictments, against 189 persons; 102 indictments, against 112 persons, were disposed of.

During the year ending June 30, 1882, there were pending July 1, 1881, 340 indictments, against 389 persons. There were found during that year 240 indictments, against 291 persons; 95 indictments, against 112 persons, were disposed of.

During the year ending June 30, 1883, there were pending July 1, 1882, 485 indictments, against 568 persons, and 178 indictments were found against 218 persons. During the same year 95 indictments, against 112 persons, were disposed of. There were pending July 1, 1883, 568 indictments undisposed of. These results appear more plainly in a table:

For year ending June 30.	Indictments found.	Indictments disposed of.
1880	118	77
1881	148	102
1882	240	95
1883	178	112

July 1.	Indictments pending.
1879	258
1880	294
1881	340
1882	485
1883	568

These reports are made yearly, but singularly enough provoke no comment. It appears from them that during none of the years mentioned have the prosecutors been able to dispose of more than two-thirds as many cases as there were indictments found during the same year. On July 1, 1879, there were 258 indictments undisposed of. In four years this balance of untried crime has increased to more than double what it was then—to 568 indictments.

Doubtless there are other causes for the prevalence of crime in this community, but surely the failure and delay of justice thus shown must be one of the strongest. In studying these statistics it must be borne in mind that when a case is marked "disposed of," it does not necessarily mean tried. It includes all indictments which are nolled as well. A *nolle prosequi* may mean that there never was ground for finding the indictments, or, as it too often does mean, that the case has grown so stale, the witnesses are so separated and their memory of events has become so indistinct, that the prosecutor finds himself compelled to *nolle* the case rather than waste time with a useless trial.

What is the cause of this state of things? It is not in the prosecutors. As a rule, they have worked hard and tried to punish as many criminals as they could. The fault lies in the machinery for punishing crime in this county. We have a system which, in its capacity, is suited to a county of the size of Franklin, and it can not be made to do the work required. We have one criminal court to try indictments. That court also tries bastardy and divorce cases. It sits for nine months in the year, or thirty-six weeks. Saturdays are devoted to miscellaneous work. We are left, then, with 180 days in which all indictments are to be tried, divorce and bastardy cases heard. With a jury in the box, it is impossible to try more than two cases a day. It is a rare exception when even that is done. Ten days is the ordinary length of a trial for murder in the first degree. Homicide cases, not capital, usually consume from three to six days. Other indictments will certainly average two days in their trial. The present prosecutor has thirty-four homicide cases on his docket, of which six are capital. It will be found, by a careful examination of the reports above referred to, that it would take two years to try the indictments found in one, leaving out of consideration entirely the indictments pending at the beginning of the year.

Until 1882 there were in the department of justice of this county only two prosecutors, and a janitor of the office, by courtesy called clerk. In 1882 a second assistant was provided for. There is no detective connected with the office. There is nobody to hunt up testimony and prepare the cases but the prosecuting attorneys themselves. If cases are to be tried every day, if grand jury sessions are to be conducted at the same time as they ought to be, and cases are to be as perfectly prepared for the State as for the prisoner, three men cannot do the work. The result is, that the prosecutors with their small force cannot keep the court in continuous session trying cases. A half day is lost here and a day there, and by the end of the year the court is found to have lost weeks of time because the prosecutor had not cases to try when the court was ready. Then, too, continuances procured by counsel for defense make the criminal calendar prepared by the prosecutor an unmeaning record. An unprincipled defendant (and such are usually defendants in an indictment) can easily swear to an affidavit which, under the statute, will give him a continuance. Again, counsel have little difficulty in getting themselves elsewhere engaged when the case is called. This is a good ground for continuance. Witnesses in criminal cases are, many of them, members of the migratory population. The prosecutor cannot be sure when he sets a case for trial three weeks ahead whether he can be ready. He can take no depositions, and is at the mercy of his witnesses. Under the present system of selecting juries a defendant can wait until the last moment, and then demand a struck jury. A week is consumed in the selection, and striking two days.

And now, what is the remedy? First, there should be two courts to try indictments in this county. Just at present there are two of the Common Pleas Courts engaged in trying criminal cases, but it is only a temporary arrangement for one term. How little effect it can have on the 568 untried indictments it is not hard to estimate. Two courts should sit for nine months of the year, and one of them sit thru the three months of summer. The prosecutor should have five assistants. The prosecuting attorney of the Police Court ought to be one of his assistants, appointed by him, and then he could have control of the cases

from the next morning after the commission of the offense until the conviction or acquittal. Give him a detective to use in hunting testimony and a contingent fund to expend for the same purpose, for the disbursement of which he shall be responsible to the Common Pleas Court. In other words, put the State of Ohio on an equality with criminals in the preparation and trial of cases. When you have created such an office, you can properly hold the prosecutor responsible for the peace of the county. Until it is done, he can rightly escape responsibility by showing how weak a limb of the law he is.

The law in regard to continuances should be amended. Let every defendant have two weeks' notice of his trial day. During that time he can take depositions in any part of the country. If he does not do so let the absence of any witness be no ground for continuance. Criminal cases should have precedence, because they are of interest to the public. If counsel are so engaged that they cannot appear, then let the prisoner procure other counsel, or let the court appoint. Such a rule may seem strict, but if it is enforced counsel and witnesses will both be present. It is because of the laxity of the present rules that it is so much abused.

A court can try three short cases while a jury is being impaneled to try one. The time for getting a jury into the box ought to be reduced to a minimum. The quickest way to summon a jury is by selection of the court. Abolish the useless form of striking the jury. Let the court select the regular as well as the struck juries, and the number of cases in which struck juries are necessary will be but few. Abolish the exemption by reason of contribution to militia companies in summoning the sixteen of the panel. It is a lucky day when out of sixteen summoned more than four are obtained. Those four are usually the least desirable men on the panel. The others escape by a variety of excuses, chief of which is the contributing membership of militia companies. A new venire must be issued, and another day taken is consumed in getting the box full. In capital cases there is so much technicality in preparing the venire and making the return, the excuses so many, and the rule as to exclusion for opinion so strict, that three days at least are consumed in getting a jury to try a murderer.

It is a rule, humane and just, that those who are confined in jail shall first be tried. With the present facilities it is difficult for the prosecutor to try all the prisoners in jail. The jail is always full. Postponing trial of defendants out on bail until those in jail are tried is like waiting until the river runs by. Men out on bail, as a consequence, are rarely if ever tried. Release on bail is nearly equivalent to acquittal. Men with friends or money are thus put out of danger by getting bail. Their cases cannot be tried for a year or more after the commission of the offense. Witnesses have disappeared. Events are obscured by the lapse of time. Perjury is much easier because less dangerous, at a time so long after the crime. Perjury can only be attacked collaterally, i. e., by proving facts which are collateral to the direct issue and yet which are inconsistent with the perjured tale. If the next week after a crime a man takes the stand for the prisoner and swears falsely that he was present and saw a different state of facts from the truth, it may be easy to prove that that man was somewhere else. But a year after, such an unimportant fact as where he was, at the time of the crime, has gone forever into oblivion, and he feels free to swear to suit the exigencies of the case. With money, the defendant out on bail, with a year or two years' time to devote to it, if he is ever tried at all, can secure the necessary perjury. We might as well face the truth. It is well-nigh impossible to convict a man who has money in this county under our present system of prosecution. This is well understood in that part of the community from which criminals are made. It is needless to say what a pernicious effect such an opinion must have. To this, more than all other causes, must be attributed the alarming increase of crime during the two years past.

The State can much better afford to appropriate to the military companies double the sum that is received by them from our best citizens, than to lower the standard of our juries. If the judges

are responsible for the juries, they will be of a much better kind than when the responsibility is hid in a box. Under our elective system of judges there is no danger of putting too much power in their hands. Technicality in summoning juries should be abolished. If there is a misnomer in the venire, the court who issued it can tell whether the man who answers is the man he meant. The defendant is entitled to an unbiased jury, and no more Why allow him loopholes to escape by such technicality as a misnomer? In an important criminal case the work of selecting a jury is greatly lengthened by the exclusion of men who have read the account of the preliminary hearing, or of the statements of witnesses, in the newspapers. Many are able to say honestly that tho they have formed an opinion from what they have read, they would be able to decide justly from the evidence and under the law. Such men ought not to be excluded. It limits the court in its selection of a jury for noted cases to men who do not read the newspapers, and deprives the community of the judgment of its more intelligent members.

Grand juries should sit every week until the business of the previous week is disposed of. With these improvements it would soon be possible to indict a man the next week after the crime, try him the third week after it, and have him in the Penitentiary or free before the month in which he committed the crime has changed its name. Then perjury and the wiles of criminal lawyers will be robbed of all their efficiency, and crime will no longer be at a premium in this community. Is it not time that the law be framed in the interest of the State and the Public?

CINCINNATI, Ohio, February 9, 1884.

Rosaleen

BY HENRY B. TIERNEY

THERE is sorrow and pain in my heart,
Rosaleen,
For today, love, I bid you farewell;
But I promise e'en now as we part,
Rosaleen,
My soul shall with Rosaleen dwell.

You called me the blood o' your heart,
Rosaleen,
When the night heard my sigh "I must go."
I'll be loving and faithful to you,
Rosaleen,
We are sweethearts forever, you know.

Will you oft think of me when I'm gone,
Rosaleen,
When I sail o'er the deep blue sea?
Will the days and the evenings seem long,
Rosaleen,
Will you write a kind letter to me?

O pardon my words—do not weep,
Rosaleen,
Your tears are the price of the world;
Behold! There's my ship on the deep,
Rosaleen,
See! The dear Irish flag is unfurled!

And now for the last time farewell,
Rosaleen,
Pray, pray for your sweetheart true;
Far from these shores tho' I dwell,
Rosaleen,
I'll ever be faithful to you.

TRENTON, Mo.

Three English Universities—II. The University of Manchester

BY EDWIN E. SLOSSON, Ph. D.

[The first article of this new series by the author of "Great American Universities" was published on January 5 and dealt with the University of London. The last will appear March 2 and discuss Oxford University.—EDITOR.]

SAID John Owens to George Faulkner:

"I have made my will and left thee all I have."

Said George Faulkner to John Owens:

"Then, Jock, thou may make another. I won't have it."

It was some seventy years ago that these two merchants of Manchester met and this was the beginning of the University. Owens went home mad at this rebuff of his kindly intent, but after sulking for a week he came back to Faulkner and asked him what he meant by it. It was not the first time that these two friends and partners had quarreled. Faulkner was a Churchman and a Tory; Owens was an Independent and a Radical. They had little in common except affection for each other and pride in Manchester. It was to this pride that Faulkner appealed when he explained his idea, a theory of the trusteeship of wealth which since then has been more clearly enunciated and more widely acted upon. He told Owens that he ought to leave all of his property to the city where he made it, and showed him that in this way he could correct an injustice about which he had often complained, the exclusion of Nonconformists from Oxford. Accordingly, the Owens fortune, amounting finally to half a million dollars, went to the founding of a college which should be forever free from sectarian discrimination and domination, and Faulkner as leading trustee faithfully carried out the provisions of the will.

OWENS COLLEGE IN THE EARLY DAYS

Owens College opened in 1851, in a "spacious dwelling-house" on Quay street, for John Owens, like Johns Hopkins, had stipulated that his money should be expended for instruction rather than architecture. Twenty-five students were enrolled the first year. But the city took little interest in the enterprise and the attendance remained so low that after a few years the College was regarded as a failure. It seemed likely to share the fate of Manchester College, which had been founded eleven years before by Unitarians, and which had given up the struggle and removed to Oxford, where it exists to this day as "Manchester College, Oxford."

But Owens College, Manchester, remained and conquered. It overcame public indifference, rallied local support, assimilated other schools assisted in the development of local industries, adapted itself to the needs of the community, and finally blossomed into a university.

We must not suppose, therefore, that the University of Manchester owes its existence to the whim of a childless manufacturer. It is the natural outgrowth of the civic consciousness. These Eng-

lish universities have arisen as spontaneously and inevitably as the medieval universities out of Italian cities, tho the strong centripetal tendency of English life interferes with the full development of the intellectual and artistic ambitions of the provincial cities. Even Manchester is only three or four hours from London.

An appropriate expression of Manchester's civic pride I find in the prolog to a student play given at the Jubilee of Owens College:

Proud Manchester, great thoughts upon thy soil
Amid the myriads that spin and toil
Grow fruitful. Here chemistry was born anew,
And Physics' widest law came first to view.
Thou taught'st the world in Commerce to be free,
Thou stand'st for leading, light, and liberty.
And in thy heart of hearts there lie enshrined
The names of Owens, Faulkner, close entwined.
And Ashton, Whitworth, Beyer, Rylands, these,
The captains of our giant industries,
The strenuous helpers of a strenuous town,
Have they not earned, unsought, a like renown?

This is, indeed, a record worth boasting of, to have given to the world fundamental theories in chemistry, physics and commerce, to have had citizens whose names have become common nouns in all languages. Dalton is known by his color blindness as well as by his discoveries, by Daltonism as well as the atomic theory, for the Quaker chemist was an unconscious heretic, and could not see that a red patch did not match his gray clothes. The scientists of all nations use the joule as the unit of work, for it was the Manchester brewer, James Prescott Joule, who stated the law of the conservation of energy and determined the mechanical equivalent of heat and of the electric current. Cobden used to say: "What Lancashire thinks today England will think tomorrow," and the remark still holds good in a way, altho not in the sense he used it, for England, even Lancashire, is losing its faith in the all-sufficiency of Cobdenism, and the rest of the world is further from free trade than ever. But in municipal enterprise and public spirit Manchester sets an example that other cities are striving to follow. In America we are so tired of hearing the names of Düsseldorf and Manchester quoted to us as models that both cities would be ostracised if the question were put to popular vote.

Now, the University is just as much a part of Manchester as Free Trade Hall, the Cathedral, the gas works, the public libraries, the ship canal, the municipal lodging houses, or whatever else one goes to Manchester to see. The University inherits the Manchester traditions and is filled with the Manchester spirit. It stands toward the city in much the same relation as our State universities do to their States, altho mostly supported by its fees and endowment. I do not know of any university in the United States that is quite so closely identified with the city in which it is located. Perhaps the University of Cincinnati comes the nearest to it. In New York local loyalty, such as there is, is divided among three universities. Chicago resents the influence of the University in city affairs. Harvard would feel insulted to be regarded as a part of Boston.

At Manchester, for the first time in England, town and gown agreed to drop their ancient animosity and work together for the common weal. The University radiates outward in all directions and shades off indistinguishably into the life of the community. There is no partition wall between laboratory and shop. The visitor may start in with the intention of confining himself to the seven liberal arts and the three learned professions, but he will be led on and on until somehow he gets quite outside the bounds of conventional education. He will find himself associating with "base mechanicals" and sewing girls. He will be dipping into dye vats and dodging spinning mules.

He will also be confused by the lack of that clear distinction between the useful and the beautiful that we are careful to maintain in America. We hold that art, which is anything made out of marble or canvas, should be kept in its proper place and not allowed to interfere with business. We have found that the safest place to keep it is in a museum in some park, remote from the center of population. The visitor in Manchester might easily mistake the new six-story building of the Municipal

School of Technology for such an art museum. The spacious entrance hall, floored wtih marble tiles and bordered with statuary, would continue the deception. Only when he entered the rooms and found young men and women engaged in hammering iron, casting brass, binding books, embroidering dresses and icing cakes, would he realize his mistake, for real artists have been above that sort of thing since the primitive times of Da Vinci and Cellini.

The Municipal School of Art is a separate institution, but co-operates with the School of Technology and with the University of Manchester, especially in the architectural courses. Here also especial attention is given to the applied arts of local importance—textile design, metal work, stained glass, and architectural decoration in plaster and stone. In 1908-09 there were 707 students in the School of Art, 399 men and 308 women. About half of the work is done in the evening. Perhaps the reason why so much attention is paid to applied art in Manchester is because the city needs it so much. It is one of the ugliest cities in the world, especially when it rains, and it always rains.

The Municipal School of Technology forms part of the Faculty of Technology of the University of Manchester, and the Principal of the School is *ex-officio* dean of that Faculty. Students of the Municipal School, properly qualified, may take University degrees in mechanical, electrical and sanitary engineering, applied chemistry, architecture, etc. The School and the University are in different parts of the city, and there is some duplication of instruction and equipment, but in general the work of the School is distinguished from that of the University in being more specific and practical, and in being adapted to the needs and circumstances of those who have only a short time to devote to education or are already engaged in earning their own living. Even the fundamental branches, such as mathematics, physics and chemistry, are specialized early, and are taught in different ways to students preparing for different trades. This differentiation is, I think, carried further in the Manchester School than is customary in our State and city technological institutions, but not so far as in the Scranton Correspondence School.

I should have liked to have studied closely the complicated relationship of the University to the School, because it is evident that there the difficulty is the same as we experience in American institutions, the difficulty of distinguishing between the university and the trade school methods of teaching the same subject. Owens College was modeled after Oxford and Cambridge and developed into the Victoria University of Manchester. The Mechanics' Institute, founded in 1824, developed into the Manchester Municipal School of Technology. The two institutions, starting at opposite poles of society and growing independently, have now come together and in part overlap. Fortunately, there does not seem to be any serious antagonism between them and it is much better that work and plant should be duplicated than that either should be hampered in the evolution of its own form of training.

One type of educator looks to first principles; the other to a specific purpose. The old fashioned college university teaches a science with incidental reference to its applications. The industrial school teaches a trade with so much of the sciences as are involved in it. It is in the sphere of vocational training that the two come into conflict, for either method may be used and each claims superiority. In the argument from theory they are evenly matched, and we have not yet sufficient experience with the newer method to decide from results.

The technological courses in England are usually of three years. The combined cultural and technological courses of four, five, six and seven years, which our leading universities have adopted, do not seem to be in vogue in England. Probably this is because the combined course in our country is the result of a compromise between the old classical college faculty and the new vocational faculty, by which they agree to divide the time of the students. But in England the technological schools are not in general offshoots of the older colleges. They have grown up independently, and only recently, as in London and Manchester, are they coming together.

ENTRANCE HALL,
Manchester Municipal School of Technology.

The attendance at the Municipal School of Technology is about 5,000. During the session of 1908-9, 176 of the day students of the school were candidates for University degrees. Seventy per cent. of the work is done in the evening. The school authorities are anxious to have evening courses count for degrees, but the University senate holds out against it.

Instruction is provided in seventy-six different trades, many of them subdivided into several courses. Electrical engineering has the largest number of stu-

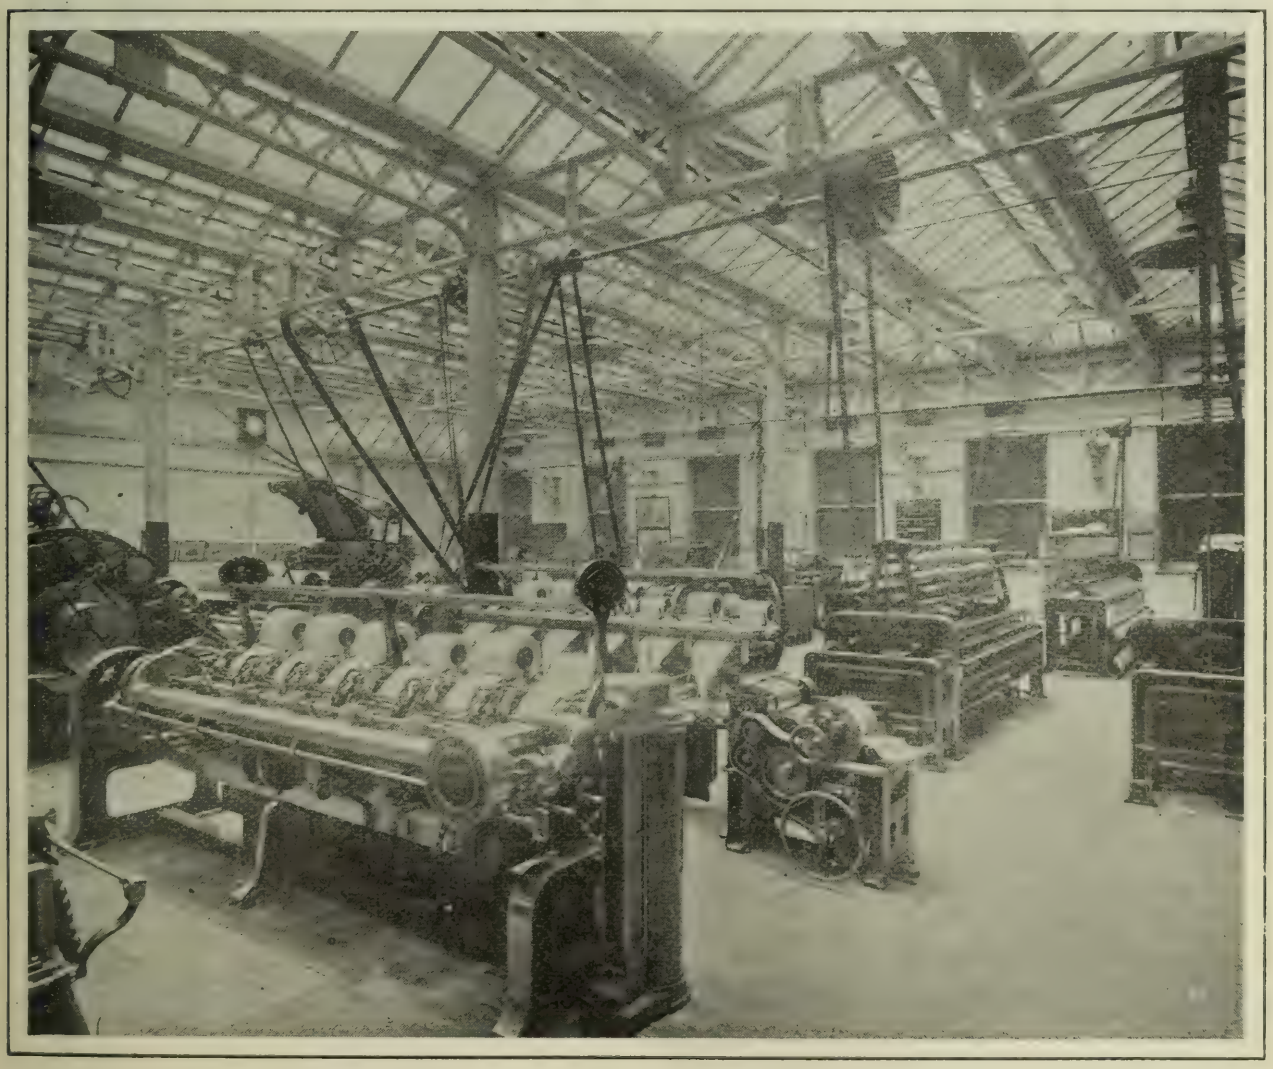
THE DYEING LABORATORY OF MANCHESTER UNIVERSITY.

dents; next in order are plumbers' work, cotton weaving, mechanical engineering, cotton spinning and sanitary inspection. A special building is devoted to paper-making and to the bleaching, dyeing, printing and finishing of textiles, with vats and machinery large enough so that processes can be carried out on a commercial scale for practice and experimentation. For here research goes hand in hand with training; investigations, for example, of the effect of twist in yarn on the strength of cloth and of the means of keeping the air of factories damp enough so that the thread will not break and still have it respirable to human lungs. Manchester has come to the stage where it is realized that investigation and invention are community matters to be carried out for public benefit. Does Cobden's law still hold true and will all England be thinking so tomorrow? The country has had its lesson and a severe one in this very matter of dyeing. Five years ago England had the melancholy satisfaction of celebrating the fiftieth anniversary of one of its lost arts, the discovery of mauve, the first of the aniline dyes, by W. H. Perkins. One of the most prosperous of German industries has been built upon the foundation laid by this English chemist, and the production of indigo in India suffers in consequence. The manufacture of sulfuric acid, that measure of civilization, is also leaving its native land for Germany, because the Germans worked out the problem of the platinum sponge by a steady, scientific siege, longer than the siege of Troy.

An ingenious plan of co-operation between shop and school has been in operation in Manchester for eight years, which might perhaps be adopted in American cities. A special course in engineering is given to selected apprentices employed in the engineering works of the city. The students are nominated by their respective firms and given their Mondays off, which they spend at the school from 9 a. m. to 6 p. m., with an hour for lunch. Reports of their progress are sent monthly to their employers. Strange to say, these picked students do not prove to be of as good quality as the general run of evening students.

So far Manchester has been very generous in extending its privileges to foreigners, but the taxpayers are beginning to grumble at paying for the education of their competitors. Japanese, for example, go back home and manufacture English goods, trade-mark and all; and the young Indians who in greater num-

bers come to Manchester to study textiles are not actuated by the, in Anglo-Saxon eyes, laudable purpose of getting rich personally, but intend to use their knowledge to throw off the British yoke. It is much more dangerous to teach a Hindu revolutionist leader to make cloth than to make dynamite.



But I am wrong in devoting so much space to the technological department. It is only a part and, in the opinion of the majority of the faculty, a very minor part of the University. To talk about it too much is as great an impropriety as it would be to call the University of Wisconsin "utilitarian" or to talk shop in Goldwin Smith Hall at Cornell. I hasten to add that the center of gravity of Manchester University is safely inside the faculty of arts and science.

The total number of students in the University of Manchester was 1,587 for the year 1908-9 and 1,657 for the year 1909-10. The students working for degrees in the former year were distributed as follows:

	Ordinary		Honors,	
	Men.	Women.	Men.	Women.
Arts	83	123	56	61
Science	82	23	190	20
Law	35	—	—	—
Music	3	—	—	—
Commerce	35	—	—	—
Theology	20	—	—	—
Medicine	327	20	—	—
Technology	63	1	—	—

Among the medical students are included those taking work in dentistry, pharmacy and sanitation. Not included in the total number of students are some 600 taking the evening courses and the lectures on railway economics and law.

It will be observed that the relative proportion of the sexes in the various

COTTON SPINNING ROOM.

This department of the Municipal School of Technology contains a complete plant for ginning, mixing, opening, carding, combing, spinning, roller covering, doubling, gassing, reeling, preparing and bundling cotton yarns, and for the spinning of waste cotton, the preparation of cotton and mixed yarns for the loom, the manufacture of cotton and mixed goods by hand and power, silk reeling, throwing, preparing and the manufacture of silk by hand and power; and for the chemical, microscopical testing of fibres, yarns and fabrics.

departments is much the same as in our coeducational universities, and is therefore to be regarded as about the normal free distribution under present conditions of society. Women were first admitted to take degrees in 1883, in the face of strong opposition and prejudice. The opposition and prejudice would doubtless have been greater if the immediate result had been realized. Mr. W. A. Shaw in his "Manchester, Old and New," describes it as follows:

"As a result, about four years later, when the women came up for degree exams., they simply trotted away with everything, and the authorities were brought face to face with the ghastly prospect of the discouraged, beaten and forsaken males losing heart, giving up and leaving them with nothing of the college but its walls."

THE KING VISITS THE UNIVERSITY OF MANCHESTER.

But, as in the United States, where the same result has been observed, the "discouraged males" decided to remain and make the best of it. At first the women were given separate instruction, but now they are admitted to nearly all classes together with the men, and the prejudice against them has almost completely died out. The only "coeducational question" I have been able to discover in Europe and America is essentially nothing more than the question of whether the young men will stand being beaten in the classroom by the opposite sex. Other issues are often raised, but this is, I believe, the motive for raising them.

In regard to religious education, Manchester University had the same problem as our State universities, and it is interesting to note that it is being solved in the same way, that is, by affiliation with independent denominational institutions. Since Owens founded the college to secure relief from Oxford narrowness he was emphatic in the prohibition of sectarian tests and control. The language of his will is rather sweeping:

"Nothing shall be introduced in the matter or mode of education or instruction, in reference to any religious or theological subject, which shall be reasonably offensive to the conscience of any student, or of his relations, guardians or friends."

The college suffered in its early days, like Cornell and the State universities, under the imputation of being a godless and anti-religious institution. But now the university has a theological faculty and grants the degrees of B. D. and D. D. Most of the work is given in the university buildings; for example, Comparative Religion under Prof. Rhys Da-

vid, Old Testament under Professor Hogg and Ecclesiastical History under Professor Tout, but special courses in doctrine and exegesis are given in denominational colleges of the vicinity, the Lancashire Independent College, the Hartley Primitive Methodist College, the Unitarian Home Missionary College, the Moravian College and Didsbury College (Methodist). These outside courses are listed in the University calendar and count to a certain extent for the degree.

The Medical School, incorporated into the University in 1872, was originally an independent foundation, the Manchester Royal School of Medicine, the oldest and for a long time, if not still, the leading medical school outside London. It was started in 1824 with a faculty of six, the chair of chemistry being occupied by John Dalton. It is now one of the best equipped and most prosperous departments of the University, altho not growing in numbers like some of the others. There is a falling off in the number of medical students in England as in the United States, owing to the overcrowding of the profession and the raising of the requirements. The medical course at Manchester was extended in 1891 from four to five years.

To correct the impression of excessive utilitarianism let me call attention to the School of English. This field was formerly neglected by Oxford and Cambridge, and English students had to go to German universities for their Chaucer and Shakespeare. It is chiefly thru the influence of the younger universities that the English language and literature is being given its proper place in British education. The opportunities for research work are exceptionally good at Manchester. Besides the University library of about 120,000 volumes, there are three others accessible, the Municipal Reference Library, the Chetham Library — the oldest free public libraries in Europe, and rich in seventeenth century books—and the Rylands Library. This last is enough to set a bibliomaniac crazy with joy. Think of being in an incunabula room, whose contents could not be duplicated for $12,000,000—a collection of 2,500 volumes, all of them printed before 1500 and two-thirds of them before 1480.

Chemistry and physics have been strong departments from the start. To show this it is sufficient to mention the names of Frankland, Roscoe, Schorlemmer, Gamgee and Thorpe, and of Balfour, Stewart, Reynolds, Schuster, J. J. Thomson and Rutherford, instructors or instructed in Manchester. Like our universities, Manchester received its ideals and inspiration from Germany. Professor Roscoe, now Sir Henry Roscoe, of London University, came to Owens College in 1858 fresh from Bunsen's laboratory, and zealous for pure science and research. Later came Dr. Carl Schorlemmer to occupy the first chair of organic chemistry established in England. Every chemical student in America knows the meaning of this partnership, for whenever he gets into trouble he runs, like a child to its mother, for the row of big brown volumes labeled "Roscoe and Schorlemmer," the first volume of moderate size; the second one doubled; the third, dealing with organic chemistry, stretching on across the shelf indefinitely, for the science grew so rapidly that the first volume had to be rewritten before the last appeared.

The University of Manchester has now seven special laboratories devoted to chemical research, not counting those of applied chemistry. One of them is a very unacademic building, looking inside and out like a handsome private residence, which in fact it is, being the laboratory and library of the late Dr. H. E. Schunck, bequeathed to the University and re-erected in the midst of the other University buildings. A new block of buildings for organic chemistry, built by the aid of Andrew Carnegie, was opened last year and contains, besides general laboratories, fifteen special research rooms.

In the most interesting and important field of physical research, that of radioactivity, no university in the United States can compare with Manchester. This is because the head of the department is Ernest Rutherford, lately imported from Canada. But it was not our fault that he was allowed to escape from this side the Atlantic. Several of our leading universities tried to entice him to cross the border when he was at Montreal, but in vain. In spite of all tempta-

THE MANCHESTER UNIVERSITY UNION.

This new building, opened in 1909, contains the Men's Union, with debating hall, reading room, billiard room, library, smoke rooms, chess and games rooms, committee rooms and cloak rooms; the Women's Union, with debating hall, reading room, drawing room, staff room, committee room and cloak room; and the Refectory.

tions to belong to other nations he remains an Englishman. He was born in New Zealand in 1871 and received the Nobel prize in chemistry at the unprecedentedly early age of thirty-seven. What is more remarkable, there was no one to question that he deserved it. A man who has solved the problem of the mysterious emanation, who has traced the heredity of the offspring of radium to the seventh or eighth generation, and who has caught and counted new born atoms one by one, deserves anything that is going in the way of scientific honors. But he is not the man to rest on his laurels, and the physical laboratory of Manchester will be worth watching for the next few years. I saw a little glass tube there which I had a great, but fortunately resistible, desire to smash, simply because it would be so awful to do it. A few cubic centimeters of water were all that could be seen, but dissolved in it was thirty-five thousand dollars' worth of radium bromid, invisible but unceasingly active, giving off heat and helium, decomposing the very water that dissolved it.

Working with Rutherford at the time of my visit was Professor Boltwood, of Yale, who has done more than any one else to redeem the United States from the discredit of inactivity in radio-activity, but who could not find in America the facilities he has in Manchester.

Curiously enough, this decomposition of the elements in a way undermines Dalton's atomic theory and even tends to disturb our faith in Joule's law of the conservation of energy. If now Lancashire should go for tariff reform, the three wise men of Manchester might frown from their pedestals upon the generation which dares to question the laws that they regarded as universal and immutable. But such is the law of progress, and there could be no better proof that Manchester is alive and thinking as of old.

The buildings of Manchester, tho too crowded on their present site, and nothing remarkable architecturally, are comparatively new and fairly adequate to the needs of the small number of students. Princeton and Leland Stanford universities, which are of about the same size, have more and finer buildings than Manchester, but most other American

institutions of this size are not so well off in this respect. The principal building, Whitworth Hall, contains a handsome auditorium, 130 feet long by 50 feet broad, with a roof of oaken beams and arches and stained glass windows bearing the arms of the merchant princes of Manchester who have endowed the college.

Whitworth Hall was opened on the occasion of the jubilee of the college in 1902 by the Prince of Wales, now King. From the record of the jubilee celebration I judge that Manchester made as much fuss over him as New York did over the visit of his father. It was just after Prince George had returned from his colonial trip and made his famous Guildhall speech, "Wake up, England!" This must not be confused with Blake's "Albion, arouse thyself!" which is on a different subject; at least I think it is. The Guildhall speech was not written by the Prince himself, but by a London journalist. So I was informed by half a dozen people in London who knew all about it. They told me the name of the journalist, too, but they all told me different names, which is confusing to a stranger.

This is not the only time the University has been honored by royal notice. It is duly recorded in the Calendar that in 1908 the King, being in Manchester on other business, drove by the University and "consented to receive an address, which was read to Their Majesties at the University. The King read a reply, in which he expressed his appreciation of the work of the University." Photographs of this curious scene are yet sold on the streets of Manchester, and I reproduce one of them here. The addresses given at the jubilee read like the preface to the Bible. I must quote one sentence. The Duke of Devonshire, president of the University, after having enumerated all the instances he could think of when the King or any of the royal family manifested any interest in any university, goes on to say:

"And altho I do not think that the name of His Royal Highness, the Prince Consort, was ever directly associated with Owens College, yet I feel sure that its work, resembling in so many respects that of the great German universities with which he was so well acquainted, would have commanded his highest and deepest interest."

The English are much like their allies, the Japanese, in this respect; whatever they do themselves they ascribe to the virtues of the sovereign.

MANCHESTER UNIVERSITY QUAD.
The archway on the right is the main entrance from the street. The building in front contains the administrative offices and the museum.

The building on the other side of the entrance from Whitworth Hall contains the Manchester Museum, a miscellaneous accumulation of birds, fossils, shells, insects, plants and coins, originating in the collections of the Manchester societies of natural history and geology, and supplemented by many other gifts and bequests. In this way much valuable material has been obtained, but with many specimens dating from a time when museum art was not so highly developed as it is today. In fact one rarely sees in English museums exhibits as attractively and effectively presented as in, for example, the American Museum of Natural History.

The long cherished desire of Owens College to become a university was first realized in 1880, but not in the desired way. Owing to the jealousy of rival towns, the charter was not granted to Owens College, but to a new corporation, "The Victoria University," and it was provided that other colleges might be admitted on an equality with Owens. Two colleges outside Manchester came in under this provision, University College, in Liverpool, and Yorkshire College, in Leeds. But the combination was unsatisfactory to all concerned, and finally the royal charter of 1904 made the Victoria University of Manchester free and independent. The two other cities, as well as London, Birmingham, Sheffield and Durham, have now got universities of their own, resembling Manchester in form and spirit, just as all our State universities resemble the first of them, Michigan. This opened a new era in British education. The ancient monopoly of Oxford and Cambridge was effectually broken and each locality was enabled to extend and complete its educational system as have our States. The new universities have already become formidable rivals of the old and have aroused in them a desire, tho not a determination, to reform. Such universities as London, Birmingham and Manchester have no difficulty in holding desirable students and professors even against the pull of Oxford or Cambridge. The result will be that Great Britain will eventually have, like Germany and the United States, a number of independent universities of about the same standing but of different character. This equivalence of rank will be promoted by the admirable custom of advertising vacancies which prevails in England. Such notices as the following are common in English periodicals:

Situations Vacant.

THE UNIVERSITY OF MELBOURNE.

APPLICATIONS are invited for the CHAIR of ENGLISH LANGUAGE and LITERATURE.

CONDITIONS of appointment are obtainable from THE AGENT-GENERAL FOR VICTORIA, Melbourne Place, Strand, London, W.C., with whom applications should be lodged before 31st MARCH, 1911.

SALARY £900 per annum.

DUTIES commence MARCH 1, 1912.

GREY UNIVERSITY COLLEGE,
BLOEMFONTEIN,
O.F.S. PROVINCE, SOUTH AFRICA.

Applications are invited for the PROFESSORSHIP OF PHILOSOPHY at the above Institution. The Professor appointed may for a time be required to give assistance in the Department of Classics. The salary offered is 600*l.* per annum, with an annual increment of 25*l.* till it reaches 650*l.*

Applications, accompanied by the necessary evidence as to qualifications and experience, will be received until JANUARY 31, 1911, by THE REGISTRAR, Grey University College, Bloemfontein, from whom any further particulars may be obtained.

Applicants should further state the earliest date at which they could take up duties.

UNIVERSITY OF MANCHESTER.

The COUNCIL invite applications for the post of ASSISTANT LECTURER in CLASSICS, vacant owing to the appointment of Mr. J. F. Dobson, M.A., to the Professorship of Greek in the University of Bristol. Salary 150*l.* Duties to commence JANUARY 11. Further particulars may be obtained from THE REGISTRAR, to whom applications should be sent with one copy of testimonials not later than DECEMBER 10.

It seems to me that this custom should be adopted in America. The "still hunt" system in vogue in this country tends to favoritism and inbreeding because it is not generally known that a chair is to be filled until the appointment is announced. It often happens that some one eminently fitted for a certain position is not considered by the president, dean, or committee of the trustees or faculty who are charged with the selection, because he is in a distant institution, or teaching, unwillingly, in another department. A man who is anxious to change his berth for personal, pecuniary or academic reasons is usually anxious that his dissatisfaction should not be prematurely known. Cases have been known where a head professor, holding that the interests of his university were superior to those of an individual, has failed to mention his most promising assistant to an inquiring delegation from a rival university.

The provincial universities, of which Manchester is the type specimen, resemble in some respects our State and in

others our city universities, so they have a double interest for us. They differ most conspicuously in not being supported at public expense and free to students. The University of Manchester proper receives only insignificant appropriations from Manchester and its twin city, Salford. The Municipal School of Technology owes much to America for both incentive and methods. The Royal Commission, which was sent to Germany and the United States to inquire into the causes of increasing foreign competition, reported that the real cause was in the main "the efficiency of foreign educational means and methods, both general and technical." The work in manual training in Manchester was modeled after our schools. The principal of the Municipal School, Mr. J. H. Reynolds, recently made a tour of inspection of American institutions, and his report contains valuable observations and criticisms. But Manchester has so far bettered our instruction that all who are interested in industrial education, either factory or domestic, should visit it when abroad. Those who cannot will find the fully illustrated calendar of the Municipal Schools of Technology and Art (costing 10d. in England) a very suggestive and inspiring volume. City school boards will also find profitable reading in the annual reports of the education committee of Manchester. But, as I said, we Americans are tired of hearing about Manchester.

HOW THE CHEMICAL LABORATORY LOOKS TO THE COLLEGE CARTOONIST.

NEW YORK CITY.

The Lesson

BY L. M. THORNTON

My train speeds on, o'er ways I cannot trace,
The night flings back my shadow, in my face,
  Yet I can smile, because, thru smoke and dust
  And fog and mist and darkness, still I trust
The whirring wheels, the panting steed of steel,
The men who watch and work, nor tremor feel,
  Shall bring me safe, if I but trust their power,
  To my appointed place, at my set hour.

And so remembering, that in this maze
Of things terrestrial, I have followed ways
  I could not see, nor thought to voice a fear,
  My trust grows stronger, and my faith more clear.
Against the time when I, with face grown white,
Must pass into another, deeper night,
  A traveler, too brave to fear or cower,
  To my appointed place, at my set hour.

WAVERLY, N. Y.

A GIFT OF THE KAISER TO MR. CARNEGIE.

On the presentation of $1,250,000 by Mr. Andrew Carnegie as a German "Hero Fund," for the purpose of honoring and rewarding acts of valor and self-sacrifice in time of peace, the Emperor of Germany addressed a letter to the ironmaster expressing, in the name of the German people, "his warmest thanks," and also presented to him the medallion portrait, which is now reproduced for the first time. Mr. Carnegie's fund will be disbursed for the amelioration of distress caused within the German Empire and its waters by the death or disablement of the heroes of peace. As we stated in our issue of January 5, Mr. Carnegie has now given, in all, eight and a half million dollars to establish Hero Funds in this country, France, Great Britain and Germany.

A New Parliament and Other Novelties

BY JUSTIN McCARTHY

THE election struggle, which was proclaimed in anticipation as a destined national convulsion, has ended in practically nothing. The Liberal administration has returned to office with, on the whole, an increase of some four or five in the number of its registered members thruout the kingdom, and Mr. Asquith, the brilliant legal advocate, is once again at the head of the Cabinet. The almost universal expectation when the former Parliament was dissolved was that the result of that dissolution must be a national convulsion, and the only difference of opinion or conjecture was as to the possible nature of the anticipated convulsion. On this not altogether unimportant subject there were indeed the widest and the most irreconcilable differences of opinion. One set of men were firmly assured that the revolutionary Radicals would be wholly extinguished as a political power and would pass into the comparative oblivion of mere history, just as the Whigs of a former generation have already done. But the impartial observer, after passing out of the companionship of a set of apparently reasonable Britishers who firmly maintained this opinion, came into chance association with some gathering of ratepayers and electors seemingly alike reasonable and well informed, who were satisfied that the elections must end in the utter extinction of the Tory principles and the Tory party, and the setting up of an English Parliament inspired by a passion for the foundation of a republic. And now the whole struggle is over and we have a Parliament which, as the entire civilized world already knows, has a Liberal majority rather larger than that which was the possession of its predecessor. It has to be added also that the general election was for the most part the dullest and dreariest electoral performance that has been seen and endured in these islands during the present generation. The result of the contest has also been distinctly to the advantage of the genuine Irish National party, the party led and represented by my old friend and parliamentary comrade, John E. Redmond, and to the disadvantage of the small body of eccentrics, as the All for Ireland associates might well have described themselves. I need hardly tell my American readers, therefore, how entirely satisfactory has been the result of this great struggle to the writer of this present article.

One of the most remarkable events of the contest was the fact that Mr. T. M. Healy—Tim Healy, as he is described in popular parlance—lost his seat. Now, Tim Healy has been for many years one of the most conspicuous and in his own way one of the most successful members of the Irish National party. He is a man of great and original capacity, and those who know him as well as I do, however often we felt compelled to differ from him and to deplore some of his political sayings and doings, could not help liking him and yielding to a friendly feeling toward him all the same. Despite, however, such startling incidents as Healy's defeat, the recent election was for the most part almost unprecedentedly dull. The main reason of this dullness is to be found in the fact that from a very early stage in the course of the contest it became perfectly evident and obvious that the polling was not likely to bring about the entire change of conditions which the supporters of the Tory party were everywhere proclaiming in advance, and which too many of the outsiders on the ministerial side were feebly disposed to accept as inevitable. From the earliest days of the pollings the results seemed to come out exactly as if they had been dictated by the decrees of a despotic Liberal administration, or as if the anti-Ministerialists had no longer any means of maintaining anything like a respectable contest. There appeared to be no use for either party to go thru the mere form of voting in a predestined struggle, and therefore no incitement for taking superfluous trouble to get up superfluous argument, denunciation or ridicule. An-

other event, altho of a very different kind, which added to the importance of the general election in public opinion, was the fact that one of John Redmond's sons was a successful candidate for a Nationalist constituency. This is, if I remember rightly, the first time a son of his has been offered as a parliamentary volunteer in the service of his country, and if the son inherits, as he may be fairly expected to do, anything like his father's political and parliamentary capacity, we may safely assume that the country will be all the better for this addition to the House of Commons. The close of the elections dropped us, if I may employ such an expression, into the very midst of the Christmas preparations. Now, I do not think that a general election contest is the mechanism best suited for preparing the heart of ordinary humanity to get itself into the temper for giving a becoming and a thoroly Christian reception to the great Christian festival. You know in the United States how completely we in the British Islands endeavor to bring our minds and our hearts, our digestions and our purses, into the proper condition for welcoming and celebrating the principal days of our great annual festival, and that the usual fierce elements called into fire by general elections are not exactly the most seemly elements for lighting up the tapers upon such altars.

There has come to me from your side of the sea a book that has delighted me very much. It is the "Song Lore of Ireland," by Mr. Redfern Mason. It is a most instructive, enthusiastic and illuminating study of the great treasure of Irish song. It is written by an Englishman who seems to be very deeply and sincerely in sympathy with Ireland's literature and with Ireland's history, and its appearance as a book is appropriate at a time when Ireland and her people have occupied so prominent a place in political controversy. A book like Mr. Mason's, admirable in itself, and a most valuable addition to all that has been written upon its theme, is doubly welcome to me from the fact of its author's nationality. But this is a sentimental reason; more practically I can say that the book deserves the attention and will, I think, gain the commendation of every serious student of a great literature that was for long unjustly neglected.

The list of honors to be conferred by the Crown on the opening of the New Year has just been published by the metropolitan newspapers and will soon be spread all over the world. It does not contain the announcement of any new peerages, but I suppose that, under present conditions, it would hardly have been thought a becoming year for the nomination of new dukes, marquises, earls, viscounts and mere lords. I have heard the new list commented on with very severe disparagement from many quarters, but if we are to have such state honors conferred at all and conferred only on the arbitrary recommendation of each succeeding ministry to the reigning sovereign, I do not really see how the duty could have been on the whole more fairly accomplished. Many or indeed most of the newly created baronets and knights and the men endowed with this or that order of merit are unquestionably men who have rendered distinct services to the political life, the arts, the letters, the sciences and the public service generally of their country and the world, and there do not seem to me more than a very few among the number whose endowment with such honor from the Crown could call for a serious protest from any section of independent public opinion.

London has just now been wholly absorbed in the sensations caused by a disturbance in the Hounsditch region, one of the lowest quarters in the East End of London. This disturbance carries us back to the ancient days of what may be called the professional outlaw, when the robber proclaimed himself as a hero and received much laudation and glorification from the poet and the romancist and the dramatist. My American readers will have heard the whole story long before this article of mine appears in THE INDEPENDENT, and will have become thoroly acquainted with the facts that a conflict took place for more than a whole day and night between a robber gang in the East End of London and all the forces that the Government could bring together in that region and at such hasty notice to subdue the disturbers of order. The robber gang had their headquarters

in the house to which the authorities at last laid siege, and by firing their well-loaded revolvers incessantly from the windows of the house, they succeeded in slaughtering several of those who were endeavoring to enforce the authority of the Crown and the law. The whole struggle was spread over intervals. Three policemen were killed a fortnight ago, and then the central authorities had to find out where the citadel of the disturbances was located, and then followed the employment of the military in the attack upon that house, the setting fire to the house itself, and the slaying of its lawless occupants. It has now been made certain that this gang of robbers were all foreigners, outlaws from foreign countries, and many of our newspapers are insisting that these recent events give an ample justification for the introduction of a new Aliens Act, which shall prevent any stranger from forming a home in the British Empire unless he is able to prove that there is nothing in his past history to disqualify him for such a settlement. Many Liberal journals, however, protest against making even these horrible outrages a justification for the introduction of legislation which would subject with every year thousands of the most deserving and the most welcome strangers to a rigid police examination before being allowed to set up a home for themselves in the British Islands. I must say that I entirely agree with this view of the situation. Surely the magistracy and the police authorities of London, even of East London, might have exercised thru the police vigilance and authority enough to find out what this particular gang of lawbreakers were engaged in before there was time for the murder of the three policemen and the subsequent resistance to the forces of the Crown.

LONDON, ENGLAND.

The Japan of 1910

BY J. H. DE FOREST

NOT since the war with Russia has there been a year so loaded with significant facts as the one just now closed.

Prince Ito had fallen. But the trial of his assassin was one of the first events of the opening year, and the fairness with which it was conducted and the freedom of speech used in behalf of the prisoner show the courts of Japan at their best. Two lawyers were summoned to Port Arthur to defend the assassin, and since I have seen no translation of their plea, it seems worthy of a place in THE INDEPENDENT. The prisoner's counsel said:

"To inflict the extreme penalty is contrary to the purpose of the law as it is conceived today. The crime comes from ignorance and the force of circumstances. The policeman who tried to kill the Russian Crown Prince when visiting our land was not executed. The assassin of Stevens got only twenty-five years. And if we appeal direct to the heart of Prince Ito, even he would plead for generous treatment of his enemy. For didn't he himself, when young and under the same feelings as *Anjukon*, advocate the assassination of those who wanted to open Japan? And wasn't he one who himself helped attack and burn the English Consulate at Shinagawa? Just suppose he had been executed for this! Then didn't Prince Ito, in an address before representative Koreans, say that this swarming of rioters thru the land came from a sincere purpose to serve their country, only their methods were wrong? How can you condemn this man to death without shaming the great Ito? He would weep in his grave. Your act would make him small in the estimation of the whole world. From every point of view, three years would be enough."

The prisoner freely gloried in his act as that of a true patriot, and looked forward without fear to what he regarded as a martyr's death. By his execution Korea lost a misguided patriot, and we may hope the last of the old school of assassins to rectify the wrongs of one's country.

The courts of Japan have a far more serious matter on their hands now. The recent arrest of twenty-six men, mainly

young, on the charge of conspiracy against the Imperial House, and their being found guilty by the Preliminary Court, have profoundly shocked the people of Japan. That any Japanese should plot against the benevolent and almost divine Imperial House horrifies every loyal subject. And it fills us with regret that the leader in this appalling plot apparently got some of his anarchistic ideas in San Francisco, tho Russia is primarily to blame for furnishing anarchistic literature. That their sympathizers in New York should announce their plan to petition the court of Japan not to inflict the death penalty on these men reflects no credit on our land of boasted liberty. And why the United States should take the ground, as it has repeatedly, that "its Executive has no authority to take cognizance of individual opinions, even when taking the shape of revolutionary and seditious expressions alleged to contravene the laws of another land," is an enigma to the ordinary Japanese mind. Truly, the cost of international intercourse is frightful, indeed, when contemplated solely from its evil consequences.

Secretary Knox's circular letter to six powers concerning the neutralization of Manchurian railroads aroused a great wave of suspicion here. The papers reported that Count Okuma called the proposition "unreasonable;" Viscount Hayashi said it was like "a bolt from the clear sky;" Baron Goto, of the Cabinet, said it reminded him of "the interference of Russia, France and Germany after the war with China." Others spoke of it as showing "a vastly aggressive spirit."

Whatever motive was behind the proposition (we may believe it was meant to be in the interests of peace and good will) the method of issuing it exposed the United States to the suspicion of having unfriendly designs toward Japan. For it absolutely ignored the spirit of the Takahira-Root convention, which says that in case of any change in the *status quo* "it remains for the two governments to communicate with each other, in order to arrive at an understanding as to what measures they may consider it useful to take." With the ink of this agreement hardly dry, for Secretary Knox to issue his plan simultaneously to four other governments with no sufficient preliminary communication with the two powers intimately concerned, Japan and Russia, seemed almost like a purpose to bring world pressure to bear on Japan. Why was not a party so primarily interested fully consulted? One is reminded of President Taft's words when blamed for taking railroad men into open conference at the White House: "It seems to be in the minds of some gentlemen that the people who are to be consulted are not those directly affected."

Secretary Knox also overlooked the profound sentiment with which Japanese regard their hold on Manchuria, which they gained at vast losses of life and treasure. They cannot lightly relinquish this costly gain at the call of what seems to be the money interests of the United States under cover of the peace of the world. "The government that would listen to such a proposal could not retain power for a day!" was a thought freely expressed in high circles. This marked change from the Root diplomacy, which was wholly open and frank, has produced a feeling that United States friendship is not so reliable as it used to be. It seems as tho the high moral tone of our diplomacy had somehow weakened. Anyway, from the standpoint of this part of the East, it seems as tho the Knox proposal was a large diplomatic blunder.

Whether it is a distinct result of this neutralization scheme or not, Japan and Russia soon afterward made a new convention, "engaging to maintain and respect the *status quo* in Manchuria." And since Japan takes no such steps without consulting her ally, England, it is safe to say that England is convinced that the *entente* will not only keep the commercial door open, but will facilitate making a real world route of the Manchurian railroad.

There have been other useless woundings of this true friendship on the part of the Japanese toward us. Such irresponsible speeches as are occasionally heard in our Congress, openly asserting the certainty of war with Japan in the near future; such anti-Japanese utterances as Schiff's, Shaw's, Bell's and Evans's delivered in responsible places; such persistent misrepresentations of Japan by such brilliant writers as Millard and

the less brilliant Cloud and Straight; and even the voice of our President calling for the fortification of Panama instead of boldly advocating its neutralization, cannot but tell adversely in the long run on the general fund of good will toward the United States. So that the Japanese Diet now has its Takekoshi to match our Hobson, using the same tactics to stir up Japanese jingoes that Hobson uses for securing more gunboats.

I am occasionally asked, "Why these repeated expressions of war between Japan and the United States?" "What possible reason can there be?" asked a general on the staff, "for this perpetual war talk in your country?" I told him that there are vastly more people of influence who do not believe any such nonsense, and whose friendship is just as strong and active as heretofore, and that the visits to Japan of such men as Melville Stone, President King, of Oberlin, and Dr. F. E. Clark, furnished ample evidence that the heart of the American people is true to the historic friendship.

One of the ablest preachers of Japan, in a published sermon on "The Golden Rule," sized up the situation in this open minded manner:

"The Golden Rule is in operation between individuals and households, and finally its expansion will take in the wide relations of nations. But a people of low national character can't obey this rule. I think the highest national character in all the world is that of England, the leader in the actual practice of this rule. Of course, America should follow this standard, but among her eighty millions are Italians, Bohemians, Germans, and all sorts of people. Tho their President is a man of world wide sympathies, in California and other places there are attempts at anti-Japanese legislation, and this is a matter of profound regret on the part of the better class of citizens. Just when good citizens want to extend the Golden Rule to international affairs, in jump the bad ignorants and break up the plan."

Leaving now these outside affairs for internal matters, it is evident that Japan is putting her house in good financial order. Many readers will recall the exaggerations with which certain Western writers have shown up the profound poverty of Japan, how unbearable the huge national debt, and how cruel the taxes. One writer in *Leslie's Weekly* stated:

"Until the great war debt is paid, that alone will compel the tax collectors to wring from every subject of the Emperor about $63 a year!"

Even so sober a journal as the *New York Evening Post* said: "Japan's foreign debt is $1,650,000,000 at a high rate of interest, and that taxation is $31.50 a head of population!" What nonsense! One collection of $20 a head would wipe out the entire national debt, domestic and foreign.

To be sure, Japan is relatively a poor country and taxes are very high, but nothing like bankruptcy is in sight. Her financiers are able men and know what they are about. Among them stands Marquis Katsura, soldier, statesman and financier. In these three distinct departments of national life he stands out a bold and successful leader. For years he has studied deeply into financial matters, with this remarkable result, that he has converted some 500,000,000 yen ($250,000,000) of domestic debt into low 4 per cent. bonds, thus driving up Japanese bonds held in foreign lands from 90 to 95. Then he carried his conversion scheme to London, where he secured 107,000,000 yen, and to Paris, where he took a larger slice, 174,000,000 yen, both at 4 per cent. In these recent domestic and foreign conversions he has saved the country some 30,000,000 yen of annual interest, and he has already begun the annual redemption of 50,000,000 yen of the national debt.

Just at this juncture came the greatest national calamity that Japan has known for many decades, in the shape of floods that extended over the larger part of Northern Japan. River banks broke, turning prosperous lowlands into enormous lakes, submerging whole villages, carrying off houses and bridges, burying thousands of acres of rice land deep under sand and denuding other thousands of all soil; breaking up miles of railroad and rendering travel impossible thru whole provinces. Several weeks after the floods I went into one of the ruined regions and was amazed at the wide desolation. Total statistics now give 1,400 deaths by landslides and drowning; 12,286 homes demolished, 538,093 houses flooded, 75,000 acres of arable land swept of all crops.

The misery and suffering that have befallen millions of people cannot be esti-

mated. The money loss to the nation may be reckoned by hundreds of millions. Local needs, however, are already provided for on a famine scale. River banks and roads will provide work for all in sore need, and even old women and boys and girls under twelve will work bravely thru the winter with the men. Taxes are remitted for all whose crops are lost. Government money will be loaned on easy terms to every village that needs it.

But behold, in the face of these vast calamities piled up on top of the swollen debt, the Premier rises ever smiling, and announces that the Government proposes to appropriate over 500,000,000 yen, spread over a series of years, to riparian works, to railway extension, and the development of Korea. The entire line from Tokyo to Shimonoseki is to be rebuilt in the standard gauge in thirteen years at a cost of 250,000,000 yen, the rivers are to be tamed by an outlay of 180,000,000 yen, spread over twenty years.

Marquis Katsura has held the Premiership longer than any other man, and the outs are hungry to get in. As the Diet opens, the usual newspaper agitation has begun, demanding the overthrow of the Katsura Cabinet on the ground of the "total failure" of one of the most successful financial movements of modern times! Had the United States only had a Katsura or a Matsukata in power, there would have been no such *debacle* in the money market as occurred three years ago, when I heard Mr. Wanamaker announce to his Sunday school class of adults with profound seriousness: "Since Lincoln's assassination there has been no such anxiety in Washington as is felt there today over our financial situation."

The Marquis can doubtless hold his own, but the gritty man who made the treaty of peace at Portsmouth, Count Komura, Minister for Foreign Affairs, has had a large problem on his hands ever since he gave out last March that in the revision of the tariff England need not be considered, "as she has a free trade policy there is no room for a convention with that country." As Japan is now, for the first time in her intercourse with outside nations, on the verge of recovering full tariff autonomy, the question has assumed large proportions thru the greater part of the year.

Especially her attitude toward her ally has excited much questioning in England, where it is feared the new tariff will almost cripple certain branches of trade. The new tariff became the law of the land (to take effect July, 1911) at the last Diet; but now the dilemma is, whether to change the law in order to maintain the good will of her ally, or to go ahead at the risk of offending England and thus losing the alliance. The seriousness of this question is seen in the fact that it, together with the financial problem, seems to threaten the stability of both the Katsura Cabinet and the alliance with England.

That the alliance is becoming unpopular with a section of the English people is very evident, and such people are not unwilling to use the new tariff with which to inflame the dislike. In my opinion it will be a sad day for the peace of the East if the spirit of political friendship, as seen in this alliance, is weakened. And we may be sure that such statesmen as Katsura and Komura have ample resources up their sleeves for the safe handling of this alliance, even tho they have to modify their tariff law. It remains to be said that this same tariff question is due in the United States, only it is postponed one year by the decision of our Government to regard the old convention in force for one year longer.

Then the annexation of Cho-sen! Viscount Terauchi is known in military circles as the successful Minister of War during the struggle with Russia. He was formerly a major-general in command of the Sendai Division. Paralysis of his right arm might have been a serious obstacle to promotion but for his rare quality of carrying organization to high limits. "What is there in that man to make him the Minister for War?" I asked an army officer several years ago. "Oh, he's got a head on him, even tho he has only one arm," was the reply. That his head is extraordinary is seen in the success with which he has united Japan and Cho-sen into one empire, without assassinations, with no uprising on the part of the people, and with no protest from the dethroned Emperor and his

followers. This one act of far-reaching consequences to 10,000,000 people and to the future of the East entitles Terauchi to a high place among the statesmen of Japan.

Instead of doing it as a soldier riding over the historic throne of Cho-sen, and placing the whole peninsula under martial law, and exasperating the feelings of an outraged people, he is able on the one hand to report to his Emperor that the work was done "without the use of a single soldier," while on the other hand disaffected Cho-senites are being won over, as is shown by the following translation of an address delivered in a public school on the first celebration of the Emperor's birthday in Korea:

"The Emperor of Great Japan in two wars with China and Russia has firmly established the peace of the East. O my people, do not stir up evil feelings over this union of the two peoples. Our taxes are lessened one-fifth; to relieve the people of suffering 17,000,000 yen have been bestowed; industries encouraged; and the education of the entire people planned. There is indeed nothing to say but that we are moved to tears by His Majesty's gracious favors. On this auspicious occasion let us officials and people express our sincere congratulations and take oath with earnest Banzais that we will loyally repay His Majesty's kindness."

Thus the end of this year sees Japan facing the wholly new experience of anarchists plotting against their illustrious Emperor; going resolutely thru her financial difficulties with the confidence of the world in her integrity; with Manchurian problems rendered simpler thru a better understanding with Russia; facing flood disasters with a bold purpose to render impossible their future occurrence; looking forward to tariff autonomy without endangering her invaluable alliance; and with the peace of the East secured by the annexation of Cho-sen. And I may add that Japan is learning to estimate at its proper value the war talk that emanates from the brains of a few of our Congressmen and navy officers, who fail to estimate aright the great worth of Japan's friendship for us. And because they live in nineteenth century conditions of thought, they also are unable to see the power of the enormously advancing world opinion that the days when nations can lightly even think of war are virtually ended.

SENDAI, JAPAN.

How to Save the Woodcock

BY DWIGHT W. HUNTINGTON

[This article has all the more authority, coming from the author of "Our Feathered Game," who is, also, one of the founders of an association whose object it is to experiment with game on farms near New York and to demonstrate the practicability of fostering our indigenous game birds in giving them practical protection.—EDITOR.]

ONE of our most valuable wild food birds, which is especially interesting to sportsmen, does not lend itself to hand-rearing or the artificial methods of increase known to gamekeepers. It is quite impractical to feed the woodcock as the upland game birds and the wild fowl are fed on game farms and preserves. Altho it is an easy matter to restore the grouse, quail and many of the most desirable species of wild fowl and to make them more plentiful than they ever were on suitable ground, it is impossible to purchase woodcock and turn them down in the covers where they have been extirpated. Many naturalists and sportsmen seem to believe that nothing can be done to save this interesting bird excepting to enact additional laws restricting the sport of cock shooting and prohibiting the sale of the birds as food; some entertain the opinion that the woodcock is doomed to extinction.

In the year book of the United States Department of Agriculture for 1901, Dr. A. K. Fisher, the ornithologist of the Biological Survey, discussed "Two Vanishing Game Birds—the Woodcock and the Woodduck"; and his article was widely distributed by the department. Unless strong protective measures are soon adopted, we are told, the woodcock and the woodduck, two popular and valuable game birds, will become extinct. "In many places," Dr. Fisher says, "where twenty-five years ago a fair shot with a

good dog could secure forty or fifty birds in a day's hunt, it is doubtful if 10 per cent. of the former bag could be obtained."

There are thousands of suitable covers from Maine to the Mississippi Valley and as far west as Eastern Kansas and Nebraska where not a single bird can be found today at any season of the year, and the places where the small percentage of birds named can be obtained are comparatively rare.

I have seen the woodcock as plentiful as Frank Forester says they were, but younger sportsmen cannot imagine how abundant they were a few years ago in the Mississippi Valley, and, in Forester's time, in the immediate vicinity of New York City. Writing of the shooting in Orange County, N. Y., Herbert says: "The numbers I have seen are incredible." In 1839, shooting with Mr. Ward, of Warwick, who weighed above 300 pounds and shot with a single barreled gun, they bagged in three successive days 57, 79 and 98 cock over a single brace of dogs, not beginning to shoot until it was late in the morning. The following year, shooting with a friend from New York (with muzzle loading guns, of course), the bag contained 125 birds the first day and 70 birds the second morning, before noon, when the powder and caps gave out.

Altho it is a bird of moderate fecundity (the eggs seldom number more than four), I believe that it is possible to make the woodcock as abundant as they ever were, and that this will be done in some localities within a few years. The prohibition of summer shooting has undoubtedly produced good results, since it has checked the rapid disappearance of the cock; but the shooting of an ever-increasing army of guns undoubtedly will prevent any rapid increase of the game if it does not cause a steady reduction in its numbers, unless we change our methods of game handling. And, furthermore, in places where the wet woods are drained, the birds must vanish. It is well known, also, that where any species of game becomes scarce its natural enemies tend to become superabundant. The result of such conditions are disastrous even in the absence of any shooting. As the country becomes settled the domestic enemies of the woodcock, dogs, cats and rats, are added checks to its increase; and Nature's balance is upset in the wrong direction. Dr. Fisher, in the bulletin cited, says it is probable that the cat, red squirrel, sharp-shinned hawk and mink are among the most important natural enemies of the woodcock. To this list should be added some of the other hawks, the crow, weasel, skunk, raccoon, jay, snakes, and, probably, the owl. Dogs also, running at large, sadly interfere with the nesting of game and destroy many young birds; and rats are regarded by all gamekeepers as among the worst pests.

I am told repeatedly that the natural enemies of woodcock and other game were abundant when the game was most plentiful. This is quite true, but it does not disprove the fact that when the guns and the cats and other domestic vermin are added to the ordinary checks to its increase, the game must diminish in numbers rapidly. Mr. H. W. Clement, of Vermont, told me recently that he saw a cat bring a woodcock up to the porch. My cat brought in robins and a flicker, or golden woodpecker, last summer, and was very active until it lost its life on account of the flicker. Cats have an open season thruout the year, and the destruction of birds by these animals is appalling. Their depredations can be stopped, however, and they will be when it pays to do so. The wilder enemies of the woodcock also can be controlled, partly at least (they have never been fully checked even in England); and the result of such control will instantly become evident. "To destroy vermin is to preserve game," is an English axiom. Thousands of woodcock are shot every season in England, but the birds are increasing, or at least hold their own.

A few days ago I went to visit a game preserve, a few miles from New York City, where the wild ducks are tremendously abundant, thousands of these birds having been hand-reared by a Scotch gamekeeper last spring. It was an inspiring sight to see great companies of mallard flying about, often high overhead, and to observe them swimming on the lakes and preening on the shores. As a result of the protection given to the ducks the woodcock have returned in

good numbers, and they nested in perfect security last season in the little swamps all over the preserve. The gamekeeper, in order to show that a setter which he had been breaking was well trained, took him into a little alder brake not far from the house, and he pointed one woodcock after another in fine style. A dozen or more birds were flushed on a very small area. One of the birds was shot to prove that the dog would retrieve it handsomely, which he did. I am quite sure there would not be a woodcock on the place were it not for the practical protection afforded. The region is thickly settled and in the absence of a gamekeeper the ground would be overrun with stray dogs and cats, to say nothing about trespassers. The place would be untenable for nesting birds and if any stopped to feed in the autumn they would be shot to the point of extinction. At the present rate of increase the birds on the preserve soon should be as abundant as they were a little to the northward, where Forester made the best bags I have mentioned. Sportsmen should remember that in all probability there would be no woodcock on the ground for any one in the absence of practical protection (for this reason no one is damaged); and a good number of the birds reared will migrate and afford sport on free territory. As the game commissioner of Colorado well said, writing about the benefits of the preserve system, which is encouraged by the Colorado laws, many guns shoot on the preserve which otherwise would shoot on the public range, and this is beneficial to the public game.

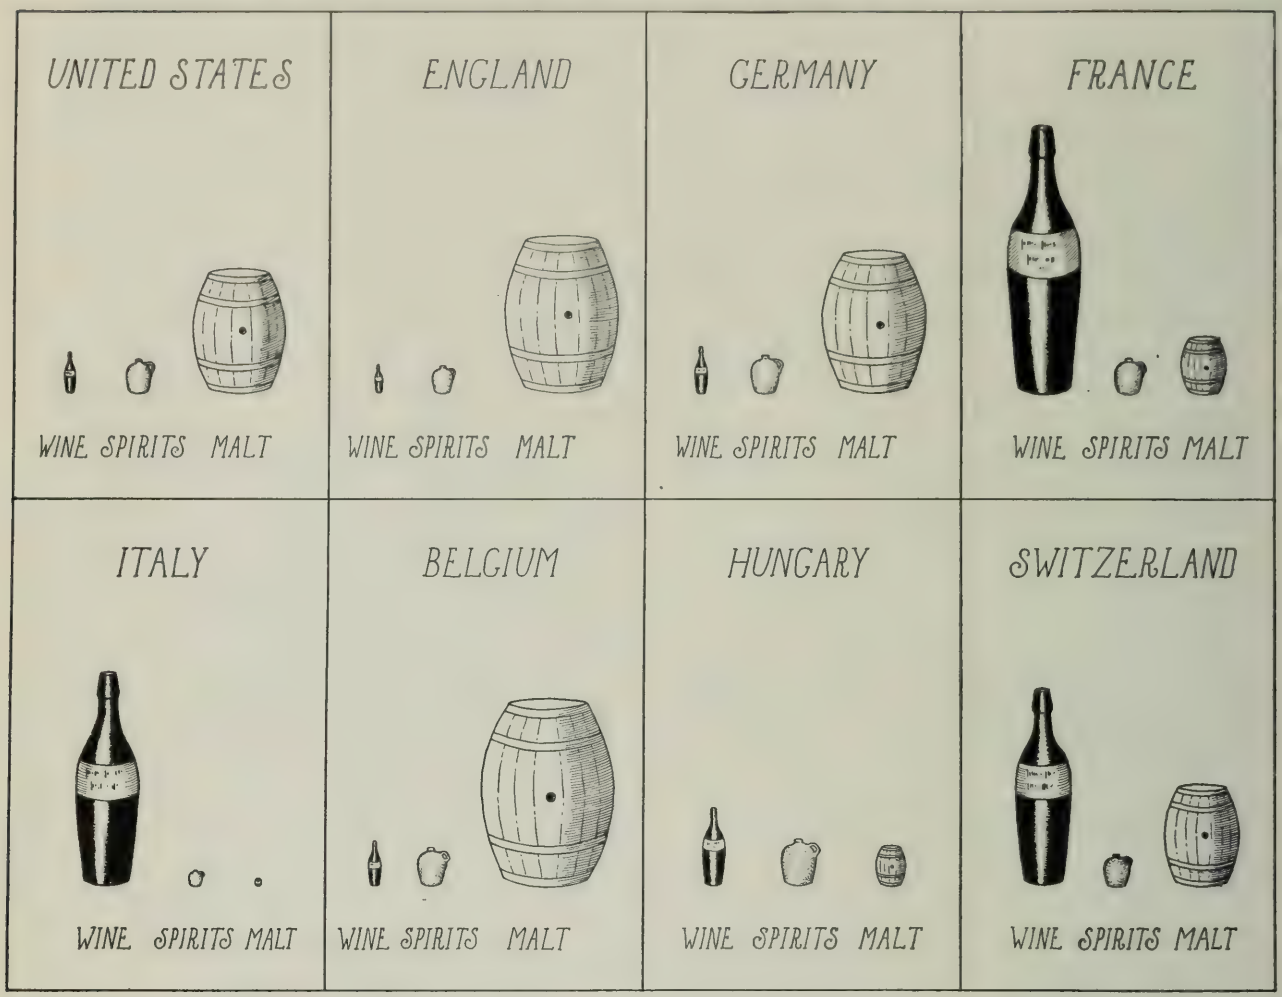
On some of the Western duck preserves I found the woodcock, snipe and other waders, breeding abundantly, because of the protection given to other game. A woodcock, flying across the track, was killed by a train in front of the club house of the Redden Quail Club in Delaware, while I was sitting on the porch. At the duck clubs I noted that woodcock, snipe, yellowlegs and other waders seldom were shot, since the owners of the preserves are duck shooters.

On a nut plantation in Connecticut both quail and woodcock breed every year because trespassers are kept out and the vermin is partially controlled by the nut grower, who formerly was an ardent sportsman. The posting of the farms has done more to save the game than the restrictive game laws have done, but there will be no appreciable increase of the game even on posted farms until the natural covers and foods are restored and the natural and domestic enemies are controlled.

Woodcock, like snipe, are not found in the depths of large forests, and the reduction of vast forested areas to small wooded tracts, many of which contain swampy places, where the food of the woodcock abounds, increases the area suitable for cock shooting. There is room enough in America for every one who is willing to look after the game to have good shooting.

The earth worm is the staple food of both the snipe and the woodcock, and altho, as I have said, it is not practical to feed the woodcock, I can furnish a useful hint for those who may undertake their practical salvation—the natural food of the woodcock can be increased.

Often I have observed that the Wilson's snipe were plentiful in pastures and on the wet prairies where cattle were feeding. I was inclined to believe that the tramping of the cattle made the ground especially suitable for the boring of the snipe in their search for food. I now believe that the manuring of the ground causes an increase in the number of earth worms; and this fact seems to have been proven by a California duck club, which transformed a salt marsh where there were no snipe into a good shooting place by damming out the salt water and manuring the ground. The food for woodcock in small brakes might be increased by the use of manure. If the wet woods were enclosed with a wire netting and pools made, it would be an easy matter to introduce the other "vanishing bird" mentioned in Dr. Fisher's bulletin, the beautiful woodduck, and to make it abundant on the same ground with the woodcock. The place should be kept absolutely quiet during the nesting season and all vermin should be controlled. Arrangements have been made for some very interesting experiments with these birds next season on some good woodcock grounds near New York.



I believe both the woodduck and the woodcock soon will be restored to our bill of fare.

New York City.

Consumption of Alcoholic Beverages

BY WILLIAM B. BAILEY

ASSISTANT PROFESSOR OF POLITICAL ECONOMY IN YALE UNIVERSITY.

STATISTICS of the per capita consumption of any commodity are always misleading, and this is particularly true with regard to the consumption of intoxicating liquors. In one community there may be a moderate consumption of intoxicants by all the adult members, while in another community a large proportion of the adults may be total abstainers, with a small proportion of excessive drinkers. It might easily happen that the per capita consumption in the community in which there was general moderate drinking would be considerably greater than that of the community in which there was injurious and excessive drinking by a large number of persons.

The principal value of this chart, therefore, lies in the comparison which is made possible of the classes of intoxicants consumed in the different countries. France, Italy and Switzerland are pre-eminently wine drinking nations. The United States, England, Germany and Belgium are pre-eminently beer-drinking nations. The United States has joined this group since 1850. Hungary has the largest consumption of spirits of any country included in this list, followed by Belgium and Germany. The drinking habits of the different sections of the same country vary greatly. Thus in some sections of Germany there is a larger consumption of beer than anywhere else in the world, while in the provinces along the Rhine wine is drunk to a considerable extent.

There is an attempt being made at present on the part of the authorities in France to combat the drinking of absinthe and other spirits by the favoring of wine drinking, and it is hoped to reduce the injurious effects of the consumption of alcohol by the substitution of a beverage containing a small proportion of alcohol for one containing a large proportion.

Literature

Memoirs of a Noble Woman*

WHAT Mr. Carnegie called the "two foulest blots" on our nineteenth century civilization were the owning of man by man and the killing of man by man—slavery and war. Slavery has been abolished from the world, but the scourge of war remains. It is a significant fact that the two greatest books that have been written against slavery and war were the novels of two women—"Uncle Tom's Cabin," by Harriet Beecher Stowe, and "Die Waffen Nieder," or "Lay Down Your Arms," by Bertha von Suttner. Mrs. Stowe is dead, but her work is accomplished. Baroness von Suttner still lives. She has yet more to do.

Bertha Kinsky was born at Prague in 1843. She was a descendant of a long and distinguished Austrian military family. Her father, who died before her birth, was a retired major general in the Austrian army. Bertha was brought up by her widowed mother in much the same manner as are all European gentlewomen of the upper classes. Tho in no sense an infant prodigy, she appears to have been an unusually intelligent and fun loving girl, with a talent for music inherited from her mother. As she came into her late teens she was evidently brilliant, beautiful and fascinating, for the inevitable romances and offers of marriage ensued. "The right one," however, did not yet appear. In the meantime her voice had been highly praised by several great singing masters, and she determined on an operatic career. After a few years of heroic efforts, however, she realized that she did not have the divine spark of genius.

Her musical education had been such a drain on her mother's slender income that Bertha now resolved to support herself. She accordingly took a situation as instructor and companion to four grown up daughters in the baronial house of Suttner in Vienna. Living at home with his parents and sisters was Artur Gundaccar von Suttner, then a youth of twenty-three. Tho Bertha was twenty-nine, a friendship soon sprang up between them which rapidly ripened into love. The four sisters were in the secret, but "Papa" and "Mamma" Suttner were not told, as an alliance, from the Suttner point of view, was absolutely out of the question. Finally the parents learned of the affair and Bertha was requested to leave. Having come across an advertisement which read, "A very wealthy, cultured, elderly gentleman living in Paris desires to find a lady of mature years, familiar with languages, as secretary and manager of his household," she applied for the position.

A favorable reply was received from Alfred Nobel, then forty-one years old, the famous inventor of dynamite. Bertha started for Paris after a tearful farewell from her lover. She began her new work bravely, but the "unendurable agony" of separation had the same effect it had had ten thousand times before. Bertha left the Nobel establishment, returned to Vienna and eloped with Artur. The parents would not forgive, so the brave young couple went to the far distant Caucasus, where for nine long years they lived in happy and blissful poverty.

Here began a marriage as beautiful as that of the Brownings, which ripened with the years and was broken only by the death of the beloved husband in 1902. During the period of exile the happy pair supported themselves by giving lessons in music and languages and by writing. The products of their pens were soon in requisition in all the leading papers in Germany and Austria. Finally the parents relented and they came back to spend te rest of their days under the ancestral roof. From now on the devoted couple's chief object in life was to promote the cause of universal

*MEMOIRS OF BERTHA VON SUTTNER. The Records of an Eventful Life. Authorized translation by *Nathan Haskell Dole.* In Two Volumes. Boston: Ginn & Co. $5.

peace. "Lay Down Your Arms" had already made the Baroness known all over Europe. Our readers will remember that in our issue of February 1, 1906,

BARONESS VON SUTTNER.

appeared her article, "How I Wrote 'Lay Down Your Arms.'" It was her study of war in preparation for writing this masterpiece that brought her into the peace movement. She organized the first Austrian Peace Society nearly twenty years ago. She and her husband were accustomed to attend every year the meetings of the International Peace Congresses and the sessions of the Interparliamentary Union. She became the editor, with Fried, of the leading Austrian peace organ, and that brought her into correspondence with many of the greatest writers, philanthropists and statesmen of Europe and with all the peace advocates of the world. During this period she had kept in correspondence with Alfred Nobel, and it was she who suggested to him the founding of the great yearly prizes in peace, literature, physics, chemistry and medicine which bear his name. Later she was herself crowned with the Nobel Peace Prize, the only woman yet to have received it. Since the death of her beloved husband she is still carrying on the work to which they both consecrated their lives.

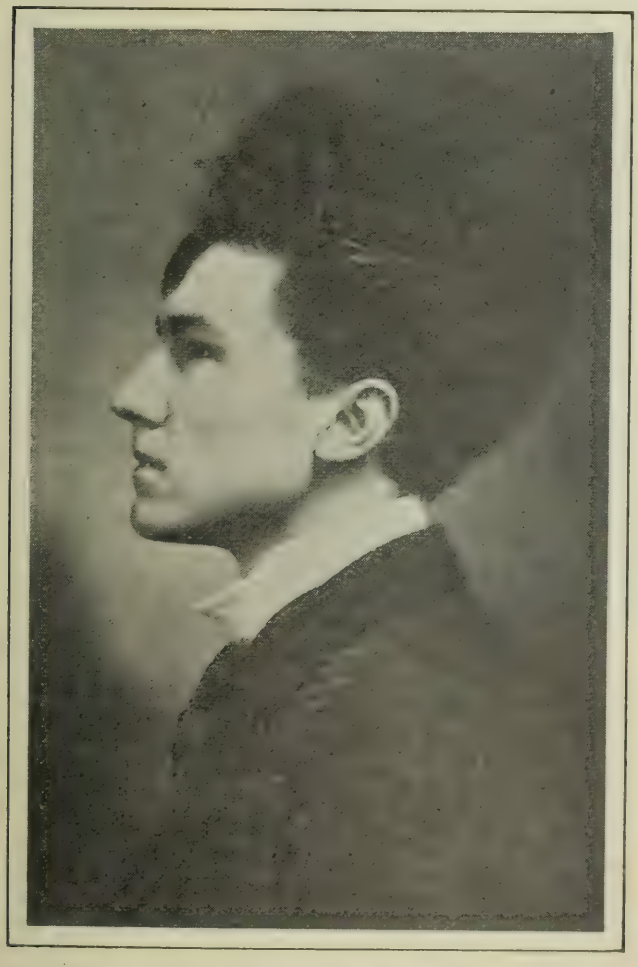
This, in outline, is the life of Bertha von Suttner. Not very dramatic or sensational for one of the world's most beloved heroines. Her life is simply the life of a generous and noble hearted woman, giving herself more and ever more to her home and the world. But that indefatigable devotion to all that is best in life has brought its reward, for now she is universally recognized as one of the greatest of her sex. Her fame will rest on her two supreme qualities, her beautiful love for her husband and her unswerving devotion to the cause of peace.

The two volumes are written with candor, sincerity and charm. Possibly some of the long letters from friends and celebrities should have been abridged, as they are not likely to have much interest outside of peace circles. But the Memoirs as a whole are a distinct addition to the world's enduring autobiographies and we unreservedly recommend them. We would especially advise, however, those who have not already done so to read first "Lay Down Your Arms" if they would enjoy these Memoirs to the full.

Some Native Verse

It was greatly daring in Oliver Opp-Dyke to put into the very first lyric in his *Lure of Life* the lines

> And I cannot tell its meaning grand,
> Nor why he did begin it.



The temptation is too much for your staidest critic. Yet one really mustn't succumb. These be *Lyrics of the Zeitgeist,* by the author of "The Unfathomable Sorrow!" Besides, Mr. Opp-Dyke's verses are far less affected than his title page has the air of making them.[1]

Why is it, indeed, that our poets will not content themselves with merely writing poems? Why must they wear the habit of esoteric philosophers, or disguise themselves as mere scholars? This last is the pose of Mr. Pound—a new arrival; likewise an American. He has published a prose essay, "The Spirit of Romance,"[2] and seems to be entitled to call himself scholar. The wonder of it is that he

[1] The Lure of Life: Lyrics of the Zeitgeist. Boston: Sherman, French & Co. $1.

[2] See the notice published in The Independent, Vol. XLIX, p. 1095 (November 17, 1910).

should care to do so. After all, poetry comes first. Then why overload with footnotes, or what sometimes seems pedantry itself (we use the ugly trisyllable), the music of his Muse? As for the poems which he offers his fellow Americans —for we understand he has already "published," in London, more than one slim volume—these are singularly, wilfully uneven; yet perhaps it is only the unevenness of youth, after all. But how times change! A century ago an Ezra Pound would have tossed his *Provença* onto our reading table with the scornful remark that he had done them all at school during recess. But Byron, whose manner he would have imitated, did not study old French and Renaissance Italian; Byron was a mere poet. He excelled Mr. Pound in facility, to be sure; but Browning has lived and littered in the meantime. Mr. Pound makes much of rhythm —in his criticism; takes surprising liberties with it in his verse. We are rather sorry for it. Just as painting monstrosities, whether before or after seeing Matisse, seems to us bad art, so does cruelty to rhythm.[3]

MR. EZRA POUND,
Author of "Provença" and other volumes of verse and criticism.

One is not sure that the phrase, "cruelty to rhythm," does perfect justice to one who, like Francis I. Maule, writes "weird Alaskan tales" in doggerel.[4] The fact that the illustrations are photographs is in a sense symbolical. Photographs are often admirable—and may be "art" as much as anything else. Here they are—just photographs. At least the versifier's concern is to write something American. He expresses a healthy tendency, even in "hitting it up" to Skagway. But why attempt verse?

For Mr. Maule is less felicitous than the novelist, Mr. Bacheller, some of whose ballads and narrative poems *In Various Moods* justify his breaking into poetry;[5] and very much less so than Sharlot M. Hall, tho the latter *is* Official Territorial Historian of Arizona. Mr. Hall's *Cactus and Pine* is announced by the publishers to have caught "the spirit of the West": loneliness of windswept prairies, majesty of snow-peaks, scars of cañons; "virility and tenderness, passion and pity, bravery and deprivation."[6] The order is large, but, tho the publisher's exaggeration does not make it so, so is the atmosphere of this verse. Evidence might be submitted in the quotation of stanzas from the poem "Spring in the Desert" or "In the Bracken." In quite another vein is the daintiness of "A Forest Lullaby." The Kipling inspiration is to be remarked here and there, as in "The Song of the Pine," but Mr. Hall is no mean imitator.

Another truly "American" among our American poets is Mr. Oppenheim, who, in his "Poetic Drama in Two Scenes" entitled *The Pioneers,*[7] "strikes a note" finely masculine and admirably parabolic —to swap figures. The action all passes in the interval between the two more or less metrical conversations, called scenes,

into which the piece is divided. Yet in the prolog we read that when the little play was acted for the first time, at Lanier Camp, on the banks of the Piscataqua, State of Maine, at eight o'clock of a dark August night,

> "Several hundred people of the countryside, bewitched by the wind, the flames, and the night, were kind to the unprofessional players and the little play."

"A native poetic drama which shall go straight home to the people of America rather than to a fit few in a private theater is . . . my dream," continues Mr. Oppenheim. "Hence, what a rich joy it was to throw a plain tale of '49 into simple rhythm and find that the folk of Southern Maine were stirred to tears." The essay was sincere and Mr. Oppenheim seems to have been fairly rewarded. We fancy that the militant suffragists among his readers will applaud the speech in which Margaret ("a young woman, . . . an outdoor woman") declares what is the "newer kind of woman":

> "Athletic, sinewy, . . .
> . . . With the world to range,"

and most exacting as to her mate:

> "Marriage is not the all of woman's life."

American, but less stridently contemporary, is the volume of *Indian Legends and Other Poems* collected by Hanford Lennox Gordon; being all of his poems that the author "cares to preserve."[8] Equally historical and patriotic is the volume entitled "An Epos of the Northwest," by Theophilus Middling, who was named, or has named himself, with fine discrimination.[9] The affliction called *cacoethes scribendi* is no longer confined to the Effete East, it doth appear! But we must hold over the rest of our poets for another occasion. To quote from Florence Isabel Chauncey's little volume of *Songs*,[10] a humble offering, but in every sense a welcome one:

> Pleasure is our motor-car,
> It goes so fast;
> Boredom is the donkey-cart
> We just flew past!

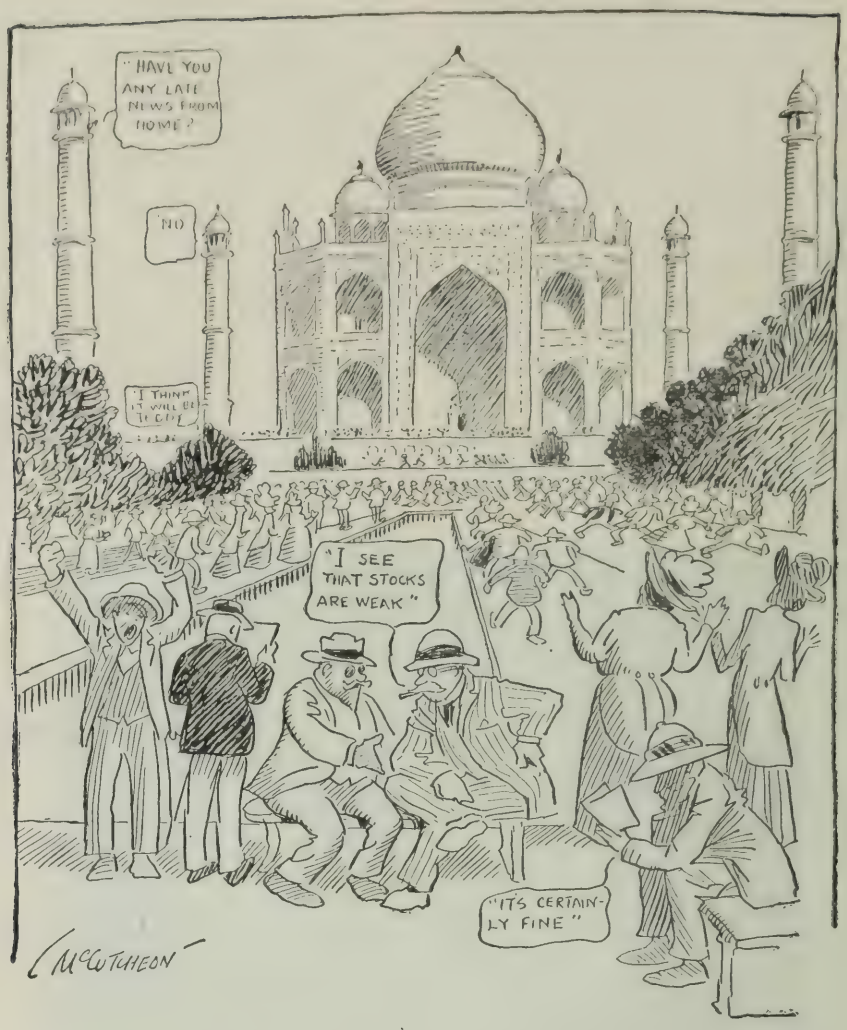
A History of Education. Vol II. By Frank Pierrepont Graves. New York: The Macmillan Co. $1.10.



Dr. Graves has followed his "History of Education Before the Middle Ages" with a second volume, *A History of Education During the Middle Ages and the Transition to Modern Times,* in the same spirit of careful research and open-minded discussion, that marked the first part of his work. No doubt, in a future volume, he will treat the subject of modern education, and he will bring to that topic a judgment ripened by his present studies. The Middle Ages, according to Dr. Graves, were a period of assimilation and repression. The fusing of such discordant elements as German barbarism, Graeco-Roman culture and Catholic Christianity was a mighty task not to be done in a century or so, and we are often inclined to underestimate the magnitude of the real accomplishment of medieval civilization. The chapter on the work of the Monastic schools is very interesting; especially the discussion of the wisdom of the Benedictine rule in introducing manual labor as a monkish requirement. The three ideals of the monastic education were: obedience, chastity and poverty, and most of its perversions have arisen when the Church and its schools have swung away from one or more of the ancient vows. During most of the period treated in this volume, education was practically in the hands of ecclesiastics; at first Catholic and, at a later time, Protestant clerics taught the children of the Middle Ages the little that they were to know. The point is not so much whether it was well or ill done, as that, without them, it had not been done at all. Dr. Graves is generous in his praise of the monastic schools. Even the "Palace Schools," founded by Charlemagne, and Alfred the Great, were taught by clerics, and many of the universities that arose later grew out of church or cathedral schools. The treatment of the rise of realism and the transition to modern times is full and scholarly. Each reaction against pedantry and formalism in education, as the ardor that produced it cooled, hardened into a new formalism. But the author insists that each new form was a progressive movement, and that something was gained by it for the human race.

The Winter Queen. Being the Unhappy History of Elizabeth Stuart, Electress Palatine, Queen of Bohemia. A Romance. By Marie Hay. Boston: Houghton, Mifflin Co. $4.

Most of us know the works of M. Georges Lenôtre, historian of Paris. In a review of one of them, published just before the novelist-critic's death, Edouard Rod declared that the art of biography is an art *nécessairement fantaisiste.* Why find fault, then, because M. Lenôtre informs his reader just what conversations historical personages exchanged, the precise sentiments animating them, the state of the weather at the time, and the exact temperature centigrade? No one denies that M. Lenôtre has made a careful examination of the records of the Observatoire. As for the present author, who presented us on earlier occasions with accounts of "A German Pompadour" and of "Dianne de Poitiers," whether or not she has studied the meteorological conditions of Elizabeth Stuart's lifetime no one need care. Perhaps the records do not exist. They manage these matters better in France. Besides, the period is rather remote, for Elizabeth Stuart was daughter of the first James. The essential point is that the author of the chronicle has made a thoro study of matters more important, from a human standpoint, than weather can be. She has studied her documents carefully enough to produce a conventional biography. For some reason she has not cared to do this. How much she gains by writing a "romance" and allowing herself corresponding freedom it is for each reader to decide for himself. Certainly she reproduces a picturesque background and tells a moving story; albeit some would not look to this period of religious warfare and political intrigue for their romance. She succeeds, besides, in revivifying a char-

McCUTCHEON'S IDEA OF THE INNOCENTS ABROAD.
From "In Africa." (Bobbs-Merrill Co.)

acter full of charm and wayward grace. Elizabeth's charm, like Mary Stuart's, is more potent than mere description, limited to half a dozen words, knows how to suggest. It is like her beauty, that seems to have been subtler than the painter's art. The English scene is reflected in this volume anent *The Winter Queen,* and the German scene directly represented; both with skill. The manner of the romancing biographer is sometimes florid, and almost Teutonic in taste; it is only just to add that the style improves as the writer warms to her subject, and the critic finds, at the last, only matter to praise. Perhaps the story would have gained in more ways than one if the story-telling had progressed more rapidly: over four hundred pages, and generous pages, are yielded to it. But those were generous times. Who hastened then?

"The banquet lasted long, for in 1617 a feast meant solid eating and drinking. The dishes were over a hundred and eight in number, not counting the sweetmeats; for it had been considered shame to a kitchen-master had he omitted the serving of any beast, bird or fish to be procured in the countryside."

The writer's method sometimes follows that of the *chef de cuisine.* But what matter? It is a pathetic story, told with no little sympathy and scarcely less of zest, and with none of the German grossness the menu might connote.

In Africa. Hunting Adventures in the Big Game Country. By John T. McCutcheon. Indianapolis: Bobbs - Merrill Company. $2.50.

We know of plenty of people who can draw prettier pictures than Mr. McCutcheon. We could give the names of several if modesty did not forbid. There is at times to be seen in Mr. McCutcheon's work a certain unconventionality of outline and an indifference to the rules of perspective that would prevent its being hung on the line at any well-regulated academy. But we do not know of any pictures, inside the academies or

out, that we had rather look at than Mr. McCutcheon's, or that we derive more profit from looking at. If he had remained in Africa and gone on the staff of the *Uganda Gazette* or *Mount Kenia Tribune,* we should have subscribed for it in order to get his daily cartoons. Fortunately, it was not necessary. He came back from the Dark Continent, bringing his sketches and skins with him, and his book challenges comparison with Mr. Roosevelt's in size, subject and interest. Mr. Roosevelt was, in fact, one of the lions he was hunting in Africa. The account of their meeting, however, reads very differently from Stanley's account of "How I Found Livingston." Even Africa is becoming tame and accessible. If in the heart of the continent one keeps up with Mr. Dooley's latest, and knows who discovered the North Pole as soon as anybody or sooner, and has canned asparagus and mushrooms for dinner, what is the use of going there? One might as well stay at home and read the book. We shall.

Literary Notes

....The Biddle Press (Philadelphia) issues John Russell Hayes's verses *In Memory of Whittier* (50 cents). The little volume is illustrated, and is a heartfelt tribute to a fellow Friend.

....A small but ambitious periodical, entitled *Junge Erde, Deutschamerikanische Zeitschrift für Kultur,* issues its first number in February, price 5 cents. Its chief contributors are Otto Sattler and Clara Ruge, and its office is 8 East Eighty-fifth street, New York.

....The reminiscences embodied in Captain James H. Wood's book on *The War* (Cumberland, Md.: Eddy Press) refer, of course, to the great civil conflict, and come from a soldier who wore the gray. Tho lacking somewhat in literary style and historical perspective they possess the interest of personal experiences.

....Sidney Lee is the editor of the new supplement to the "Dictionary of National Biography" now in preparation (New York: The Macmillan Co.). Persons who have died between the death of Queen Victoria on January 22, 1901, and the end of 1910 will be included

....*Who's Who* is too old a friend to require introduction (The Macmillan Co.; $2.50). In its 1911 reincarnation the biographies run to 2246 pages—a gain of 84. This is the sixty-third year of issue. Especially in the inclusion of the most important foreign names, has there been an improvement in recent years.

....Prof. Shailer Mathews has published in a handy volume his Haverford Library Lectures on *The Gospel and the Modern Man.* (Macmillan, $1.50.) He argues very cogently for the need and availability of the old spiritual verities translated into new forms adapted to the changed conditions of modern life. The book is worthy of careful reading.

....Rider Haggard, who used to write sensational romances of the order of "She," has found nearer home a theme quite as sensational and romantic as those of his African tales. His latest volume, *Regeneration,* deals with the work of the Salvation Army in London from an external tho sympathetic standpoint, a record for the most part of personal observations told in an easy style. (Longmans, Green & Co.; $1.)

....One of the most thoughtful and stimulating writers among English liberal evangelicals of the scholarly sort is Dr. Percy Gardner, of Oxford. *Modernity and the Churches,* a volume of the Crown Theological Library (Putnam's), contains, besides the address which furnishes the title to the volume, essays on "The Essential Nature of the Christian Faith," "The Function of Prayer," "The Basis of Christian Doctrine," "Liberal Anglicanism," and papers on a number of other subjects of current religious interest.

....In 1909 Charles M. Bishop, D. D., delivered the Cole lectures at Vanderbilt University "in free speech" after the preparation of extensive notes. The pressure of pastoral duties has delayed the preparation of the work for publication, but it now appears as *Jesus the Worker* (Revell; $1.25). The discussion of the character, acts, purpose and ethics of Jesus is earnest and scholarly, based on material from the Synoptics only. The author considers some of the historical problems but always from the conservative point of view.

....It was the exprest wish of the late Dr. Philip Schaff that his *History of the Christian Church,* which covered the first ten centuries of Christian progress, together with the Swiss and German Reformation, might be carried thru the fruitful period from 1050 to 1517, thus making a continuous work. This task, undertaken by his son, Dr. David S. Schaff, is now completed by the publication of Part II of Volume V (Scribners, $3.25 net), which gives the history from Boniface VIII to tht Reformation. The whole work is in eight large volumes.

....One of our correspondents desires to know the "latest monograph" on the Institutional Church. The "latest" is not always the best, but we are sure that any one seeking information about the purpose, organization, methods and results of Institutional Church work could not do better than consult the book published not long ago by Harpers, entitled *The Administration of an Institutional Church* ($2). It is written by Dean Hodges, of the Cambridge Theological School, and Mr. Reichert, clerk of the Vestry of St. George's Church in New York City. It contains many illustrations, and gives an admirable survey of the work done in connection with St. George's under the leadership of Dr. Rainsford, that prince of Institutional Church directors.

....Franklin H. Giddings, Professor of Sociology in Columbia University, writes the introduction to the fourth edition of R. L. Dugdale's sociological classic, *The Jukes*, long out of print (Putnam; $1.50). Professor Giddings writes that Mr. Dugdale's investigations establish that

"The factor of 'heredity,' whatever it may be, and whether great or small, always has the co-efficient 'environment.' . . . Two or three rather important tentative conditions are: Illegitimacy as such does not invariably entail viciousness or criminality in descendants; crime is correlated with the crossing of vicious blood with a more vigorous outside strain; pauperism is correlated with close inbreeding of a vicious and weakened strain."

....At a recent dinner in Philadelphia, Dr. S. Weir Mitchell, the novelist, delivered a speech about Robert Burns. He repeated a little-known story of the Scottish poet's project to emigrate to the United States. Dr. Mitchell said that Burns had even packed his trunk and engaged passage—but did not explain how it came about that he did not, like the Irish poet, Moore, actually set foot in America. Dr. Talcott Williams, another of the diners, completed the story. It seems that the generosity of Dr. Mitchell's grandfather provided means for Burns to live on in Scotland, and that was the explanation. "Dr. Mitchell is too modest to refer to the good deeds even of his ancestors," was the Philadelphia journalist's neat conclusion.

....A maiden lady of Hanley, England, who died at the age of more than ninety years, asked shortly before her death that her love letters be buried with her. Her relatives found several letters, dating back some of them to the '30s, with the ink almost faded. Her last request was complied with. So, at least, we read in the *Evening Standard*. They order these matters differently (we do not say better) in France. Love letters, above all, love letters dating from the '30s, are documents to be cherished, and, after a discreet interval, brought out with notes by M. Troubat or M. Séché. Then they are plagiarized by English writers whom we could not think of naming, and Americans import them. Apparently the maiden lady of Hanley was old fashioned in her taste—or perhaps her correspondents were as obscure as their letters must now remain.

....*New Code of International Law* by Jerome Internoscia. (The International Code Company, New York) is a ponderous and encyclopædic volume of over 1,000 pages, printed in triple columns with English, French and Italian texts. It is an attempt to create, down to the last detail, an ideal code of international law by which the world may hereafter govern itself. Like most attempts to particularize the future, it is stimulating and suggestive, but unconvincing. The author, who is a Canadian lawyer, gives evidence of possessing prodigious industry, and considerable learning, but his philosophy is not profound and his opinions are often whimsical. He has caught the glimmer of the dawn of universal peace and the way it is to be ushered in, but the task is yet too great for any man. The code is a brave attempt, but it will make no lasting impression.

....Miss Rose Elizabeth Cleveland, a sister of President Cleveland and for some time mistress of the White House, has for several years been known as a student and writer of merit. Her latest publication is a new translation of *The Soliloquies of St. Augustine* (Little, Brown & Co.; $1.50), which she has supplied with a fine introduction and copious notes. The translation is not only more accurate but expressed in much better English than the only other one made directly from the Latin, that found in the library of the Nicene and Post-Nicene Fathers. Written just after St. Augustine had finally embraced Christianity, these soliloquies are full of a fresh, spontaneous outburst of thought and devotion from one of the greatest minds of the Christian centuries.

Pebbles

DEAR SIR—I hate to take up your time, but the question is keeping me awake nights these days: "Does 'holy smoke' come from a church canon?"—*Chicago Post.*

"WHAT do you charge for your rooms?"
"Five dollars up."
"But I'm a student——"
"Then it's five dollars down."—*Cornell Widow.*

"WHAT's the difference between a haunted house and a handsome man about to kiss you?" asked she coyly.
"I give it up," he murmured, growing interested.
"Why, you can't let a haunted house."—*Princeton Tiger.*

TO ANY MAGAZINE.

Dear Editor:—I'm glad to send
  My check for a renewal.
Your magazine my family find
The very finest of its kind,
  A treasure trove, a jewel!

We really could not do without
  Its high-class advertising.
For now we know what soap to use,
What mattress it were wise to choose,
  And other things surprising.

Its pages daintily portray
  What's best in bathroom fixtures.
Each month, how bravely they declare
The highest type of underwear
  And fancy table mixtures.

If for a pancake we should yearn,
  Or waffle, for that matter,
Your magazine will quickly show
The proper flour to buy, and lo!
  With what to mix the batter.

And for the literary part
  We're really much your debtors.
The little reading matter used
We need, to keep Grandma amused
  And teach the baby's letters!

—May Kelly, in *Puck.*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

The Trade Agreement with Canada

It was generally expected that the reciprocal trade agreement with Canada would relate to only a few products. Therefore there was some surprise on each side of the boundary when it became known that several hundred were included. In the free list alone there are 116 items. That is to say, the negotiators of the agreement have undertaken to cancel the tariff duties imposed by each country upon 116 products. There is a much longer list of duties which are reduced. The new free list, if accepted, will affect in some measure the cost of living. Duties on all kinds of grain, cattle and all other live animals, fish, potatoes and other vegetables, dairy products, eggs, hay, fresh fruit, rough timber, tin plate, wire and cottonseed oil are among those which are removed. The reductions affect the rates on meats, farm machinery, cutlery, building stone, clocks, watches, automobiles, lumber, coal and cement.

While the effect of such tariff changes cannot be measured by the revenue involved, it may be pointed out that Canada's customs receipts would be reduced by $2,560,000, and our own by $4,849,000, upon the basis of the reports for the latest fiscal year. The value of the imports transferred by Canada from the dutiable to the free list was, last year, $21,908,000; the reduction of duties affects $25,870,000 more of her imports, and the total is 36 per cent. of her import trade with the United States. On the other hand, the proposed free list includes $39,811,000 (or 76 per cent.) of our imports from the Dominion. To this is added $7,521,000 for imports under reduced duties, making a total which is 91 per cent. of our import trade with our neighbor on the north. The average of Canada's tariff rates is much lower than the average under our present law.

At the suggestion of Canada's commissioners, the two Governments will seek to make this agreement effective, not by means of a treaty (the ratification of which would require a two-thirds vote in our Senate), but by the enactment of bills, for which a majority vote is sufficient. The acceptance of it by Canada's Parliament is predicted with confidence. The support of the Laurier Government's majority there is expected. Reciprocity in trade is demanded by the farmers of the rich and growing Northwestern Provinces. It has been opposed by an association of manufacturers, but their protective duties, as a rule, suffer little if any reduction in the agreement, and they gain something in the reductions which affect raw materials.

The fate of the agreement at Washington cannot be foreseen. It will be opposed there by a number of Republican legislators from New England and the border States between Lake Ontario and Montana. In Massachusetts, the Gloucester fishermen assert that free fish will ruin their industry. Northern New England is unwilling that pulp wood and wood pulp shall come in free. Such admission of these products is covered by the agreement, but it depends upon the removal of certain restrictions which have been imposed by the Provincial Governments of Canada. In Michigan and Wisconsin there is objection to the free importation of dairy products, vegetables, grain and timber; the Dakotas would retain the duties on Canadian wheat. Many Democrats in Congress

are inclined to approve the proposed changes, and some think the needed bill will be enacted only with the help of their votes. Outside of the border States there is some opposition, upon the ground that our farmers' interests would suffer by reason of the Canadian competition. It is said that if farm interests are to be affected by the free-listing of all farm products, there should be some compensation for our farmers in a reduction of duties that support the prices of manufactured goods which they must buy. But Canada has few manufactures, and in a reciprocal agreement with her there could be no provision for such compensation. Our farmers should know that the so-called protective duties on their products have mainly been ineffective.

This agreement should be accepted and put in force by Congress. If enforced by law, as it ought to be, it would mark the beginning of the removal of artificial trade barriers which never should have been erected. We are separated only by an imaginary line 3,000 miles long from a people like our own, with whom trade should have been without the restrictions of import taxes. Our treatment of Canada with respect to international trade has been unnatural and unwise. A liberal and manly policy on our part (if we consider only the purely material side of the question) would long ago have given her market almost exclusively to our manufacturers. In resentment and in self defense, Canada turned to manufacturers elsewhere and also sought by tariffs and bounties to build up manufactures of her own. Many examples could be cited to show the absurdity or economic folly of existing tariff duties. Both countries have a duty on bituminous coal. New England's industries need the coal of Nova Scotia; Ontario needs our coal and buys much of it; at the western end of the boundary the need and the supply are shifted again, and our Northern Pacific States have been taking the coal of British Columbia. Among the duties repealed by the agreement are those on fresh vegetables. What has been the revenue received from these duties? Last year it was $257,000 for Canada, and $242,000, or almost an equal sum, for the United States. Why should there be such tariff duties? It is unfortunate that the agreement provides for only a slight reduction of the duty on coal.

The adoption of the changes now recommended by the representatives of the two Governments would be mutually advantageous. They are approved, we think, by a very large majority of our people, even in New England, where some opposition has been shown. Those New England legislators at Washington who are denouncing the agreement should recall the recent elections in the Fourteenth Massachusetts District, in Maine and elsewhere, and the arguments which appealed to voters with the greatest force. They were arguments relating to the tariff, to the cost of living, and to reciprocity with Canada. New England voters who turned against the Republican party at the polls are not to be moved now by the protests of the Gloucester fishermen or the pulp-makers and potato-growers of Maine.

While no domestic industry should be wrecked wantonly by tariff legislation, it sometimes happens that a few must be placed at a disadvantage in order that the many may be benefited. The President says his purpose was to make an agreement that would be truly national in its scope. It is national in its character and effect, so far as conditions would permit. It could have only a slight direct relation to the broad field of protected manufactures, for a reason already mentioned, and, as a beginning, it could not go so far as the advocates of more freedom in trade along the boundary would like. But its benefits would be confined to no one State or section. The whole country needs the natural products of Canada. Our own supply, whether in the forest or on the farms and ranches, is not keeping pace with the demand. We should not obstruct, but rather should invite, the movement of Canada's surplus toward us. For example, unrestricted imports of Canada's timber, lumber and wood pulp would promote conservation of our own natural resources and at the same time like the reception of other Canadian products named in the agreement, tend either to reduce the cost of living or to prevent a further increase of it.

We hope not only that the bill required

by this agreement will be enacted at Washington, but also that successful attempts will soon be made to enlarge the scope of it. There should be an effort to remove the tariff barriers, both for the reason that removal would be mutually beneficial, in an economic sense, and because it would promote friendly intercourse with our intelligent, honest and well-governed neighbors on the north. Owing to unjustifiable and even absurd tax burdens on trade from one country to the other, a hostile or unfriendly feeling may exist in place of that brotherly regard which should characterize the relations of the two peoples.

The Islands of Big Turtles

MANY years ago we became convinced of the importance of annexation of the Galapagos group, and we are glad to see that our Government is now making an effort to acquire it by either lease or purchase. None of the objections usually raised to projects of expansion apply in this case. There are no inhabitants to object to the transfer or to taint the purity of the American race. Even the big turtles which gave the islands their name cannot kick about it, for they were in the soup long ago. Ecuador derives no profit from the islands and is never likely to except by their sale. They are 700 miles from the coast and there is no communication with them. Ecuador could not defend them, so in case of war they would fall to the strongest and the promptest. Their strategic importance is evident from a glance at the map. They lie right in the center of the reentering angle formed by the South and Central American coasts, and directly opposite the entrance of the Panama Canal. On the Atlantic side of the three Americas there are plenty of islands, scattered up and down the coast, from Newfoundland to Terra del Fuega. On the Pacific side there are very few and none of any size except the Galapagos.

The combined area of the fifteen Galapagos Islands is somewhat larger than Delaware and somewhat smaller than Porto Rico. They are the same distance southwest of Panama as Porto Rico is northeast, so the two together make an ideal combination for commercial and political purposes. It is not often that islands happen to be just where we want them. The objections which have been urged, and we believe rightly, against the fortification of the canal do not apply to the acquisition by the United States of islands commanding its terminals, for this would aid in the protection of the canal without interfering with its neutrality. It would not do us much good, however, to have control of one end if some other nation had control of the other. There are two dozen keys to the front door in hands of half a dozen different nations. There is only one key to the back door, and it should be in our hands. England, France, Germany and, recently, Japan have tried to get it. We came near getting it once, but the bargain slipped in the making. An offer of $35,000,000 for a ninety-nine year lease is a generous one. It is more than we paid for the Louisiana purchase of a million square miles, but land has risen since then. Besides, we got Louisiana cheap because there was a flaw in the title. The boundaries were not defined and the seller, M. Bonaparte, could give only a quit-claim deed because he had never paid for the property.

It is hardly likely that any other nation will bid higher for the Galapagos Islands, and Ecuador would do well to take up our offer. The only thing against it is the purely sentimental objection that it is unpatriotic to part with any territory, however useless it may be to the owner.

Academic Efficiency

OUR universities are beginning to teach business methods. Perhaps in time they will begin to learn them. Is university work of so unique a character that we cannot apply to it the new form of organization which has revolutionized our methods of production and distribution of material things in recent years? That is the question which has been raised and it cannot be put aside by calling it an attack of commercialism on the last strongholds of sweetness and light. The colleges are always asking for

money. It is natural that those who give should, on their part, ask what is being done with it. The patrons of our colleges, whether capitalists or communities, have not, on the whole, been unduly dictatorial as to the aims and policies of the institutions they support. They want to see that their money is not altogether wasted, but they are not more narrow-minded as to the legitimate purpose of education than some educators. They demand value received, but they are ready to admit many different values. They show a preference, it must be acknowledged, for hard cash, for things tangible and practical, but they are readily persuaded to take their pay in more abstract coin, in nebular hypotheses, Greek art or radium emanations. Astronomy, least useful of the sciences, is exceptionally well endowed in this country. Funds are more easily obtainable for archeological and paleontological expeditions and museums than for researches in chemistry and evolution that are quite sure of producing profitable results.

The demand that has come upon the colleges is, therefore, not that they shall change their ideals, but that they shall live up to them. The colleges are still at liberty to define culture in any way they choose, but they are being asked the embarrassing question, "Are your graduates cultured?" This is followed up by another, equally legitimate and equally embarrassing, "Can't you give a little more culture for the money?"

The second of these questions was somewhat emphatically put by Bulletin No. 5 of the Carnegie Foundation for the Advancement of Teaching. Mr. Cooke, an industrial engineer, was sent to eight of our most prominent institutions to investigate the department of physics from the standpoint of modern business methods. His report has been taken in almost every possible way except the way he would have it taken, that is, as a basis of reform. Scorn, indignation, contempt, ridicule and incredulity are the dominant tones in the reviews. There is much in his criticism that is pertinent and important, but this received less attention than some wild educational theories that he incidentally introduced.

We may differ among ourselves about what constitutes good teaching, but we cannot deny that there is a great deal of poor teaching. We may differ about how much work a student ought to do and yet we may agree that many students do too little. The difficult point is to find out who are the delinquents. The Briggs investigation at Harvard was the first serious attempt to find out whether faculty and students were doing their work. A similar inquiry has just been concluded in the University of Chicago, and the results, published in the December number of the *Magazine* of the University, bring out many interesting points. In regard to the time spent in the preparation of lessons, it was found that 46 per cent. of the students average one and one-half hours in study for each class period; 42 per cent. spend over two hours, and 12 per cent. less than one hour. This is a better showing than was made by the Harvard students. Two-thirds of the students admit to have taken courses requiring practically no time outside the classroom, but four-fifths of these say they found such courses valuable. On this point the investigating committees make the pertinent comment:

> "It does not follow that the courses in question might not be even more valuable if there were more active work performed by the student in connection with them."

The courses which are commonly condemned by the students as unprofitable and inefficient are chiefly those given by the lecture method, and on this point the conclusion of the committee is clear and decided:

> "Lectures as the principal means of instruction, particularly for elementary classes, are, in the opinion of the great majority of instructors, alumni, and undergraduates, unwise."

The most important recommendation of the Chicago committee is that there should be a special officer to keep watch over the undergraduate work, to see that one instructor does not demand too much of his students and another too little. This is in accordance with the recommendations, made quite independently, by the expert of the Carnegie Foundation, and will be generally acknowledged as one of the needs of our large universities.

But after we discover which are the good teachers, the question arises, How

can we keep them in the profession? It is more important to keep up or improve the quality of the faculty than to introduce new pieces of educational machinery. This can only be done if salaries can be raised in proportion to the increased cost of living. Yale has recently devoted a large fund to this purpose and we are glad to learn that Amherst College is on the point of announcing gifts of half a million dollars for its endowment, the income of which will be devoted wholly to increasing the salaries of its teachers. This is in response to one of the kindly suggestions offered by the Class of 1885 in a letter addressed to the trustees.

Elizabeth Stuart Phelps Ward

SINCE the death of Julia Ward Howe, Elizabeth Stuart Phelps, who continued to write under her maiden name after her marriage to Herbert D. Ward in 1888, has, with Harriet Prescott Spofford, led the elder generation of women authors who were contemporary with Mrs. Stowe and Gail Hamilton. She died of heart disease last Saturday in her sixty-seventh year. There is no parallel that occurs to us to her early maturity. She began to write for the press at thirteen, and was but twenty-five when "The Gates Ajar" made her famous. Her genius was inherited on both sides. Her father was the distinguished Prof. Austin Phelps, of Andover, and his father was a clergyman of much mark. Her mother was an author of much note in her day, and her maternal grandfather was Prof. Moses Stuart, who did probably more than any other man to introduce German learning to this country thru his books on theology and exegesis. The author of many books, Mrs. Ward was remarkable for her earnestness and intensity, and whatever she wrote had a purpose somewhat beyond the mere desire to amuse or please. Indeed, her heart was more in her efforts for the benefit of sailors or the rights of women or the cause of antivivisection than for her own literary fame. While most of her writings were in the form of tales, of which many, like "Avis," "The Madonna of the Tubs" and "A Singular Life" are known to everybody, her verses were also of marked quality, and "The Struggle for Immortality" proved her to possess a philosophic mind. Indeed, for pure ability as well as for literary power, she stood, notwithstanding her lifelong invalidism, at the head of our women writers.

It is more than a literary fellowship, it is a personal affection which a multitude of our readers have had for Elizabeth Stuart Phelps, because of the fellowship of heart which they have for one whose writings have turned their thoughts outward and upward. We can do little better here than to reprint one of her poems which opens the mysteries of love and destiny, and which asks the question now sadly answered:

WHICH?

BY ELIZABETH STUART PHELPS.

Which shall it be?
For thee? Or me?
Oh, who shall be the first to hear
The distant voice approaching near;
The sound that blasts the happy day;
The ringing call that rends away?

Which shall it be?
Cometh to me
That awful order: "Henceforth miss
The dearness of the daily kiss.
Await the step that does not come.
Be desolate. I smite thy home."

Which shall it be?
Is it for thee—
The summons and the setting forth?
Eyes lifted to the icy North,
Hands crossed, head bowed, heart frozen numb,
—Of protest, and of message dumb?

Which shall it be?
Is it for me
To see the mist precede the rain
In eyes that watch o'er mortal pain?
To say, when sunset fires the sea:
"There's dawn for him, but night for me?"

Which shall it be?
Unto me? Unto thee?
Which of us twain shall be the one
To rise, to rest, to weep alone?
Which first in fate's dark school shall have
The education of the grave?

Which shall it be?
Great God! to Thee
We leave—nor wrest from Thee—the choice,
Since Thine the call, since Thine the Voice,
And thine the old and awful art
That tears two clasping lives apart.

Thus let it be—
To thee, or me.
Hush! Let Him do the deed He must;
Nor ask Him why, nor when, but trust.
For love is old as God, and strong
I think, as He; and lives as long.

Our Vacation Number

NOT every city street is clear of snow. Yet we are already thinking about vacation:

"no matter where its
Direction be, so 'tis but in a hurry."

Many another head of a family is equally proleptic, and, no doubt, the steamship offices have already booked hundreds of passengers for June and July sailings. But our own vacation is not what we have in mind. We are only thinking about our Vacation Number.

Now and again, in reading editorial articles, even the meekest of our readers must have wished that he might "answer back." Sometimes, in a "letter to the editor," he has yielded to temptation. But how much more agreeable for the naturally loquacious reader to make of THE INDEPENDENT, just for once, precisely what he would like to have it—if not all the year round, then at least for one particular issue—the first issue in June.

It is our readers' coöperation which we count upon to make that issue a distinguished one. We know the value of their coöperation, for we have had it in years gone by. We want to receive both text and pictures from our subscribers; also from friends who are not subscribers yet. And now for details.

In the first place, the photographs. We want a good many for actual reproduction—twenty or thirty; and more yet to choose from. We offer a first prize of $15 and a second of $10 to prove that we really do want good pictures. And after these prizes have been awarded, we shall make a uniform payment of $2 for each of the photographs which fails to secure a prize, but which we want our readers to see, notwithstanding.

What we wish to illustrate in this Vacation Number is, specifically, the over-sea territory of the United States—Alaska, Hawaii, the Philippines, Guam, Samoa, Porto Rico. We make bold to include the Panama Canal Zone, which is at least a province of American enterprise. We want travelers' snapshots, where those snapshots are interesting; above all, we want photographs taken by readers of THE INDEPENDENT who are or have been resident in faraway islands of the sea, as missionaries, teachers, or Government functionaries. For if we are proud of one part of our subscription list, in especial, it is that part of it where American names appear with exotic addresses. Some of our foreign readers wait a month to receive copies of THE INDEPENDENT; the date on the cover is three months past when others receive it from the native postman. And we want our American readers whose America is perhaps thousands of miles distant from our home America to enter into the making of this Vacation issue.

Whether you passed your last vacation in one of the places just named, or within a few miles of our own windows, we hope that you at least had some amusing or profitable experience in the course of it. To express our appreciation of well-told stories we offer prizes for the best accounts we receive of our readers' vacation experiences of the same amounts as we do for their best photographs: $15 as the first prize, $10 as the second. Be didactic or humorous, as you please: better yet, simply tell a good story. And do not try to put too much into that story; just imagine that you are telling it to a neighbor, and you will understand what we mean. Also, do not forget to write your name and address plainly, so that we can read it; just as, in sending us pictures, it is essential that the address be given on the back of photographs. As for your theme—if you are writing as well as sending pictures—let that be the Dolomites, or the Tennessee Mountains, or Chicago as a summer resort; or find some subject all your own, that we have not had half enough imagination to think of. If you can tell an interesting anecdote of travel, or residence in Alaska or non-continental United States, so much the better. Yet you are not restricted to such anecdotes. Let the spirit of your narrative be sentimental or scoffing, let your motive power be electricity, or horseflesh, or gasoline, or Shank's mare; all we really insist upon is that you throw yourself into the writing, without making concessions to what you think such a story "ought" to be. Furthermore, we must ask you to keep within 500 words as the outside limit—within 400 if possible. Send photographs with your story if you think that they will help. We will return unused photographs (if the name

and address accompany them), but manuscripts we cannot undertake to return. We offer for each vacation adventure we publish, but which fails to receive a prize, two subscriptions to THE INDEPENDENT for one year. You may, if you wish, have your own subscription extended free of charge for the two years; we should prefer to have you share your award with a friend.

Pictures and manuscripts received after May 1 will stand little or no chance of being used, however great their merits. A vacation number is not made in a day. Therefore, strike while the iron is hot, we counsel. The success of THE INDEPENDENT'S Vacation Number for 1911 now rests with you!

The Quitting of "Ed" Howe

EDGAR WATSON HOWE, the editor of the Atchison *Globe,* the paper that gets closer to the people than any other in the United States, has quit. The worries of editing have been too much for the "old man." At the youthful age of fifty-seven he retires to "Potato Hill" farm, a few miles out of Atchison, where on a high point of land overlooking the Missouri River he hopes to spend the rest of his life, in hearing the wolves howl by night, puttering about the farm by day, drinking buttermilk, and publishing *Smith's Quarterly: A Farmers' Magazine for Town People.* This magazine will be entirely written, set up, and printed by Mr. Howe. In it he proposes to say—at last—just what he likes, which he hopes will be "true, important, decent and respectable." "I am too old a man to have an ambition to become an iconoclast and too big a coward to have any ambition to give people an occasion to shoot me."

"Ed" Howe can be taken either seriously or not. Both points of view are correct. When he prints in the *Globe* the illuminating fact that he has a "bum digestion" or the irrefutable proposition that "everybody makes a fool of himself at a picnic," the irreverent smile and all the exchanges copy it next day. But "Ed" Howe is more than a chronicler of the trivial. He is the great American philosopher of common sense. He is the Poor Richard of this generation. He writes in simple, direct English—such as a child can understand and a professor admire—about the things that make up the sum total of life, not the things that absorb the average editor.

In all his life he was never in a stew about politics.

All politicians look alike to him. Their fortunes, he holds, were about as much use to the average man who has to make a living as those of a book agent or a dramatic critic. He was not one of the editors who sit in the sanctum and issue "clarion calls" to the State or the nation. His office was on the pavements of Commercial street. Every day the "old man" walked up and down the streets soliciting news, subscriptions and advertisements. Every reporter on the *Globe* did the same. The barber who shaved him, the "disgustingly fat dog" around the corner, the mule hitched to the post and the girl with the big pompadour, all furnished an "item" or an epigram for the afternoon edition. Nothing was too trivial for a generalization, nothing too great for an irrelevance.

Yet Ed Howe was not frivolous. He merely salted his paragraphs with the wit of the West. (Is there any humor produced in the East now?) The great things in life did not appeal to him. But a child's cry or a trifling act of kindness brought the tears to his eyes. He loved Atchison. He thought her people were the best in the world. He served their interests so well that no rival paper has ever thrived in the town. In no other community of the size has such a monopoly been so long maintained.

Twenty-five years ago he wrote "The Story of a Country Town," a lugubrious novel of early Kansas pioneer life, which W. D. Howells characterized as the best American piece of fiction since "The Scarlet Letter." A few years ago he took a trip around the world with his daughter. He recorded his impressions every day in a letter to the *Globe.* These letters have since been published in two volumes entitled "Daily Notes of a Trip Around the World." In our review of them we said they were the best literature on travel we ever read. Last year he visited the West Indies and Panama, and a similar volume, "A Trip to the West Indies," has just come to our desk. It, too, is a Kansas classic.

Thus retires from newspaper work

one of the most interesting figures in contemporary journalism. Our Pebble column is in mourning, tho Edward Bok, Henry Watterson, George Harvey, Arthur Brisbane, S. S. McClure and Hamilton W. Mabie remain.

Ed. Howe has quit, quit ere his prime
Old Edgar Howe, and hath not left his peer.

An Extra Session

When our thirteen colonies adopted the Constitution and passed from the condition of separate independent governments to that of one nation, nothing else so completely made them one as the breaking down of tariff divisions. There then was actually one country, with absolute free trade between all its parts. Now New York cannot shut out Massachusetts products. Much the same would be the effect if we could break down all tariff walls against Canada, just as we have abolished all forts and navies of defense along our common border of lakes and latitude. We are the same sort of people, speak the same language, have the same sentiments, and everything possible should be done to make us feel as if we were one, as, in fact, we are, except politically. But as soon as our statesmanlike President has negotiated an agreement partly lowering the wall that ought to be completely removed, then even the insurgents who were a little time ago shouting for a lower tariff begin to cry that it was not such a reduction that they wanted but one that would hit the other fellow. We advise the present Congress to ratify it before March 4, or there will be an extra session and the Democrats will get the credit of the reform.

Women as Prize Winners

All American colleges furnish their quota of students who dote on the stage, and almost all of them furnish student-actors. Harvard has of late years had a certain distinction in turning out more professional playwrights than the rest, and also in finding plays of student authorship for the student players to present. Last spring, for example, they interpreted the new "Tragedy of the Ridiculous," called by its author, Mr. MacKaye, "The Scarecrow," a fact which was mentioned in the course of an article on the Harvard dramatists published in THE INDEPENDENT at that time. There is, then, a certain piquancy in the news that a Radcliffe College girl has beaten sixteen Harvard undergraduates, and won the prize of $250 offered for dramatic composition by John Craig, the actor. This is the first year that the prize has been awarded, and Miss Florence Agnes Lincoln, of Charlestown, Mass., is the winner. Her play is in three acts and has for title: "The End of the Bridge." In winning prizes, women do not seem to labor under as many disabilities as in some departments of modern life. Josephine Preston Peabody's $1,500 prize play, "The Piper," after having been presented last summer at Stratford by Mr. Benson, is to be seen this week at the New Theater.

Phonetic Decay

They have been discussing phonetic decay in the London papers, and it is time they did. There are signs enough of phonetic decay in this country, but it is not so evident as there. Phonetic decay means the prevalent lazy, indefinite pronunciation of consonants and vowels. Pretty much all changes of pronunciation come by reason of laziness, and the only way to prevent them is by careful school instruction. In the old and better way of teaching spelling by syllables, b a ba, k e r ker, baker, the child learned the value of each sound, and the unaccented syllables were fully enunciated. Nothing else has done so much as this practice from Webster's spelling-book to give our people an identical pronunciation. So far has the decay gone that first-class orthaepists in England discard completely the sound of *r* in such words as *lord, corn,* while in this country dictionaries are ready to indicate that the vowel has an indefinite and indistinct sound in very many unaccented syllables. Children learned better when they were taught to spell by syllables. Then they would not give us *solumn* for *solemn,* or *purental* for *parental.* Then the ear and voice would distinguish between *idol, idle* and *idyl,* a nicety we are now losing, but which a nice speaker never loses. A trained tongue can be best recognized by the distinct yet not exaggerated vowels of the unaccented syllables; but laziness can

never achieve this ideal. To prevent phonetic decay everything depends on teachers. Still we are in better condition than the British cockney who says, "Lidy, you've mide a mistike."

The acceptance of the call to the pastorate of the Fifth Avenue Presbyterian Church by the Rev. J. H. Jowett, D. D., of Birmingham, will bring to New York one of the foremost preachers of England. Dr. Jowett has for a dozen years or more filled with distinction the pulpit of the Carr's Lane Congregational Church, made famous by the late Dr. R. W. Dale. He has a superb command of the choicest English diction, and in his reading and speaking shows no trace of a distinctly "English accent," which so frequently characterizes preachers who come to us from across the sea. Dr. Jowett will receive a cordial welcome to our country, where his work is well known and his published sermons are widely read. His coming will add measurably to the force and high qualities of the American pulpit.

When any one says that money spent for some great religious purpose could have been more wisely spent for the poor, somebody always reminds him of Judas and the alabaster box; and that is the answer of Dr. Stires to Dr. Holmes, who said the millions which the new Episcopal Cathedral in this city will cost had been better given to societies for the social betterment of the poor. We do not like to find fault with givers who must follow their own wisdom or fancy in their gifts, and not all objects of equal public value. The cathedral will have its uses, religious and social, and will be an ornament to the city and a glory to its denomination. Others prefer libraries or universities or hospitals. All are good, and every man to his taste.

The strides made in aviation are rapid and immense. The second year opens with a Frenchman carrying five passengers; but the greatest advance is that by Mr. Curtiss, who has built an aeroplane without wheels to rise from the water. And why not? Geese can rise from the water, and why not a man, who ought to have more intelligence than a goose. The advantage of such a flying machine is that it does not have to seek a safe place to alight; the whole sea or lake is before it, and it can fall without a jar. It may be that for the seaboard, or by a river or lake, this new style will be very convenient, and we shall have to provide docks for aeroplanes as we do now for vessels.

The growth of Protestant missions in China is remarkable, but it is far surpassed by the growth of Catholic missions, according to the statements of the Jesuit missionary, the Rev. J. F. Kenally, now visiting this country. He is one of the only ten English-speaking Catholic missionaries in China, and the only one in the province of Shanghai. In all China there are, he says, 1,500,000 Catholics, led by 45 bishops and 1,000 priests. For five years there has been an increase of 100,000 converts a year. In the province of Shanghai there are 160 Jesuit priests and 40 native Chinese priests, with 200,000 converts, as many as Protestant missions have in the whole empire.

The present movement in the Prussian Protestant State Church, aiming at breaking up this Church by breaking away from it, began in the year 1903, when 1,600 declared in the courts that they had severed their connection with that Church and would cease all connection with Christianity. In 1906 this number had increased to 10,007; by the end of 1908 it was 14,648 in a total of 18,781,661 Protestants. The movement is confined to Berlin, with 9,472 who went out, the Province of Brandenburg with 2,145, and Westphalia, with 852. In the other nine provinces the agitation is practically non-existent.

The Federal Council of Churches of Christ in America is a most important body for advancing Church union and Church usefulness; and the meeting of the executive committee, held in Washington last week, marked no little progress during the past year. And yet we wonder if it was not with some trepidation that its members went to pay their respect to the President, considering that the body of churches of which he is a

member was refused membership in the Council. He was generous enough to praise its "teamwork for a better humanity."

The Aeronautical Society of Great Britain has quite got ahead of us Americans in issuing a little dictionary of aeronautical terms with definitions. We particularly like its choice of *shed* rather than *hangar;* but we wish it had given us the English *airman* instead of the Latin *aviator.* But they say we must not call an aeroplane an *airship,* a term which belongs only to a dirigible, and we suppose that ruled out *airman.* Yet in a few years there will be no dirigible balloon, and it will be necessary to call a big aeroplane an airship.

With a fair show of reason the distinguished Catholic scholar, Mgr. Duchesne, was charged with Modernism in his late volume, "The Christian Origins." It has now appeared in Italian with the full approval of the ecclesiastical authorities, but with the omission of one paragraph of ten or eleven lines, and the modification of about a score of words elsewhere. It seems absurd to compel so distinguished a scholar to make even these changes, but we remember that a few years ago British orthodoxy required similar deletions and changes in the translation of Maspero's history of the ancient world.

Among the things not easy to understand is this, why some of our religious teachers who are so much pleased that in this country Church and State are separated, should grieve when separation is decreed on the Continent of Europe. Thus *The Catholic World* in its December issue, describing very fairly the changes in Portugal, says:

"Other measures are proposed which in no way deserve the name of reforms: Church and State are to be separated," etc.

We would like to be told why what is so much valued here would not be a reform there.

Naturally, when Persia needs foreign advisers in her financial straits, she looks to the United States. She cannot look to Russia or Great Britain or France or Germany, for they have political interests to consider, but the United States has none. There are needed five men, of whom one will be a General Treasurer and another a Director of Taxation. They will have a hard task, but hard tasks are what we ought to be willing to undertake. It might be the salvation from partition and extinction of this most ancient nation.

We do not imagine that Japan will easily consent that in the new treaty with that country there should be any provision excluding Japanese from our shores; and yet the Pacific Coast politicians will not consent to have the bars let down. Japan very much wishes her surplus population to go to Korea and Formosa or to Manchuria, but her pride ought not to allow her to consent to any humiliating provision with us, nor ought we to insist on it.

The laws of various States for the prevention of corruption at elections allow an expense for carrying voters to the polls. But there were cases in Pennsylvania in which a candidate paid for transportation $10 per voter carried to the polls. It is evident that here was corruption barely disguised. The laws allow money to be spent for the dissemination of information, but for neither purpose is the amount limited, as it ought to be by law.

Congress rejects the plan of the Postmaster-General to issue separate stamps for Government free delivery mail. They do not want it known how much is the cost of their franking privilege. If they have ceased sending their laundry and their household furniture by mail we do not see why they should not be willing to let it be known what their legitimate mail, their letters and their distribution of seeds, cost.

Madame Curie was defeated in the vote for membership in the French Academy of Sciences, by a vote of 28 to 30. She lost by a very small margin, and anti-femininism will fail next time.

The Independent

VOL. LXX NEW YORK, THURSDAY, FEBRUARY 9, 1911 No. 3245

Survey of the World

Canadian Reciprocity and the Tariff Board

Canadian reciprocity dwarfs other issues at the Capital. The President receives many letters testifying to popular approbation of the Knox-Fielding agreement, and certain Republican newspapers, even in Maine, where a letting down of the bars is anticipated with nervousness, consider that the first effect of Canadian reciprocity will be "such interchange of food products as will arrest speculation and manipulation." Leading newspapers in Iowa, Nebraska and Minnesota express sympathy with the administration program, in spite of the fact that in the legislature of one of these States—Nebraska—resolutions denouncing reciprocity are pending; and in spite of the hostile attitude of several representatives of the Northwest in Congress. On the other hand, the machinery of the National Grange, which claims a membership of one million farmers in thirty States, has been set in motion to defeat the measure. And Republican Senators like Messrs. Brandagee (Conn.) and Root (N. Y.) see "very little chance of the proposed agreement being acted upon by the Senate at this session." It is, none the less, likely to reach the Senate: its passage by the House is looked for this week, in spite of Speaker Cannon's skepticism and the division in the camp of the Republican insurgents, even, on this issue.——The Canadian Conservatives (the Opposition party) have not arrived at a decision in regard to their parliamentary attitude. The lines of division are likely to be geographical rather than political. The introduction of the measure by Minister Fielding provoked unparalleled enthusiasm. Details of the agreement, such as the failure to place agricultural implements on the free list, are bound to excite criticism, however. Also, the Canadian Manufacturers' Association has issued a hostile manifesto setting forth that under the most favored nation treaties made by Great Britain Canada must grant the same tariff concessions to other nations as will be granted to the United States if the reciprocity agreement be enacted into law. These nations are Argentina, Austria, Bolivia, Colombia, Denmark, Japan, Norway, Russia, Spain, Sweden, Switzerland and Venezuela.——The House of Representatives having passed the tariff board bill, unamended, shortly before midnight, January 30, by a vote of 186 to 93, the fate of this administration measure now depends upon the United States Senate. Its passage is, however, desired, even by reactionary Senators, who hope to placate the President in enacting this bill, while rejecting that providing for Canadian reciprocity. Senate Democrats may, however, prevent, thru filibustering, its enactment.

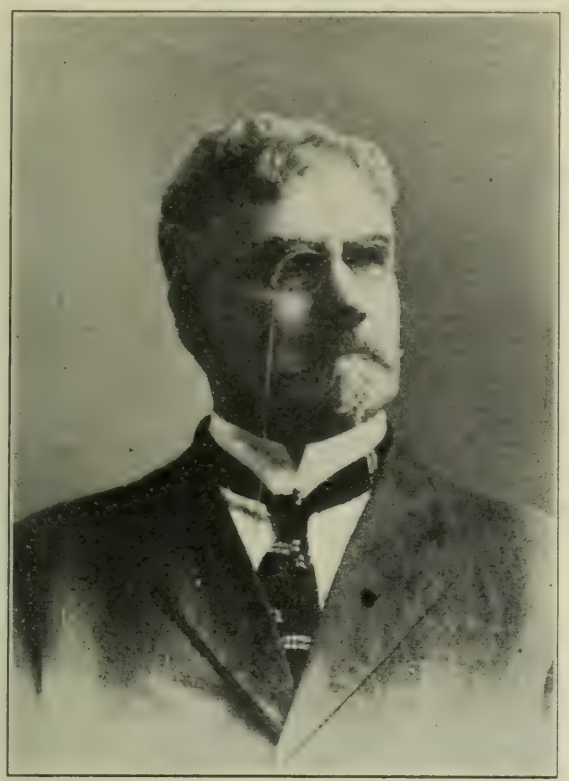
Ship Subsidies and Other Issues

The Senate passed, February 2, the ocean mail subsidy bill, authorizing the Postmaster General to enter into contracts for carrying the mails to South America, the Philippines, Australasia, and the Far East at the rate of $4 a mile on the outward voyage to vessels of the second class and $2 a mile on the outward voyage to vessels of the third class. The amount of the subsidy to be paid in any one year is limited to $4,000,000, and must not exceed the sum received on account of foreign mails. On two separate roll calls the vote on this bill was a tie, 39 to 39. The Vice-President then cast a deciding vote—the first

exercise of this prerogative since Vice-President Hobart cast the vote against the Bacon resolution, providing that the United States should not retain the Philippines, in 1898. The House will undoubtedly reject the bill providing for mail subsidies, whose passage by the Senate marks the culmination of many years of effort.——The Senate in executive session (February 1) ratified the Pan-American arbitration treaty, a convention providing for the submission of pecuniary claims to arbitration, signed on August 11, 1910, by the delegates of the United States and South American states at the Fourth International Congress of American States.——The Senate Committee on Post Offices and Post Roads has practically agreed to a limited parcels post. An amendment will be inserted in the bill authorizing the Postmaster General to expend at least $100,000 in establishing a limited service. Postmaster General Hitchcock declares that the postal bank experiment recently inaugurated is already a proved success.——A Senatorial vote of February 3 indicates that the advocates of the constitutional amendment providing for the direct election of Senators are in control and will pass their bill at this session. The test came on a motion by Mr. Penrose, of Pennsylvania, intended to postpone action on the bill. His motion was voted down, 40 to 36. The majority on this vote was composed of Democrats and of Republican insurgents. —— House Republicans held a caucus on the evening of February 2 to formulate a plan of party action on a bill apportioning Congressional representation in accordance with the 1910 census. Of 215 Republican members only 125 attended, and "regulars" as well as certain insurgents now give notice that they refuse to be bound by the caucus resolution indorsing a measure providing for a House of 391 members, as at present. Such reapportionment would involve a gain in representation by eleven States, as follows: California, Montana, New Jersey, New York, Oklahoma, Oregon, Pennsylvania, Texas, Utah, and Washington. The following States would lose in representation:

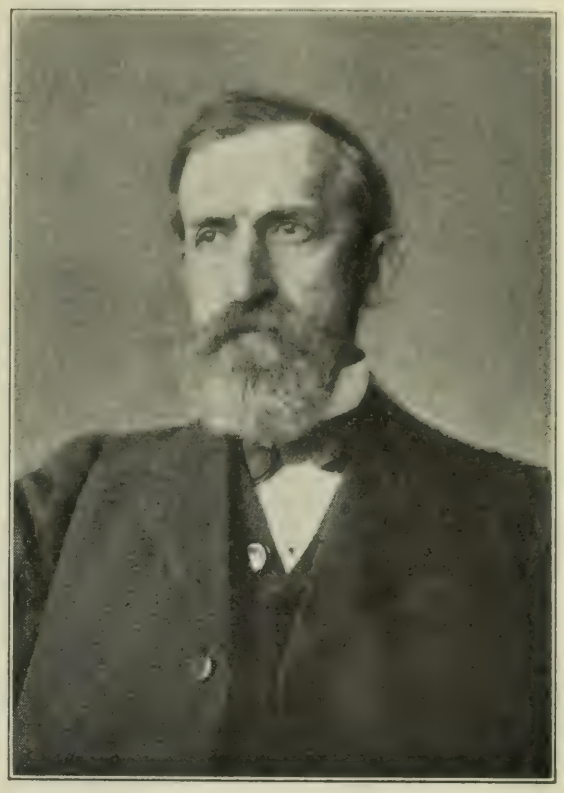
Illinois, Indiana, Iowa, Kansas, Kentucky, Maine, Missouri, Nebraska, North Carolina, Ohio, South Carolina, Tennessee and Virginia.

Senator Root on the Lorimer Case



The event of a busy week was, so far as the Lorimer case is concerned, the two-hour speech in which Senator Root (Republican) opposed the majority report of the Committee on Privileges and Elections "whitewashing" the man from Illinois. The junior New York Senator declared with great earnestness that Lorimer's election, regarded from whatever standpoint, was obviously produced by corruption.

"It cannot stand," exclaimed Mr. Root, "or if it does stand the Senate cannot stand; or if the Senate does stand with its members holding their places by such a tenure the Government of the United States cannot stand."



That Mr. Root would oppose the seating of Lorimer was known in advance, but it had been hoped in the latter's camp that he would confine himself to legal technicalities. The effect of the speech actually delivered was electric. He said that the deduction of seven votes, admittedly corrupt, from the 108 votes cast for Lorimer left the Senator from Illinois with less than a majority of the votes actually cast, and invalidated his election. He denied as a fallacy the contention of Senator Bailey and other members of the committee that the seven votes could not be deducted from Lorimer's majority without being deducted from the total vote cast.

"I make another proposition," said Mr. Root. "It is that without counting the additions and subtractions of votes we have in this testimony such general, comprehensive and undisputed proof as to the character of the entire control by Lee O'Neill Browne over the thirty members of his band of robbers whom he led to vote for Lorimer that we are bound to reject an election based upon all of them."

Earlier in the week Mr. Brown, of Nebraska, spoke against the seating of the Illinois Senator. Brown also threatened to block the passage of appropriation bills unless action at this session was taken on the following matters: Lorimer investigation, permanent tariff commission, direct election of Senators, general service pensions.——Between fifty and one hundred indictments are likely to be returned when the grand jury makes its first report on the Vermilion County bribery cases. A bill against corrupt practices, recently introduced in the Illinois Senate, is favored by reformers, but fails to pro-

Four Newly Elected United States Senators

vide for ante-election publicity.——The committee of the New Jersey Legislature, in continuing its probe of Atlantic City electoral conditions, has heard interesting testimony. One witness swears to having seen money paid to fifty voters after they left the polling place, directly opposite his office, on election day. He added that an employee of the city comptroller's office had informed him that 308 votes had been bought at the last November election in a single election district. The committee announces that it will protect any witness who may appear and speak the truth concerning the election. Bribery seems to have been openly practised by Republican officeholders.

Various Items

After months of discussion, in and out of Congress, the House of Representatives has voted in favor of San Francisco on the question of the Panama Canal Exposition site. The exposition is planned for 1915. New Orleans was San Francisco's rival, and the final vote was 259 to 43. The Pacific coast city received the news of its selection with cheers, steam whistles and the explosion of bombs.——The sentence of Fred D. Warren. editor of the *Appeal to Reason,* a socialistic newspaper published in Kansas, has been commuted by the President. Mr. Taft strikes out the imprisonment clause (six months) and reduces the fine from $1,500 to $100. In commuting the sentence the President arraigns the editor in severe terms; but says that, while the law is clear, the penalty was excessive. ——The Senatorial deadlocks in Iowa and New York continue unbroken. Charles F. Murphy, the Tammany leader, declares that there will be no compromise in New York. Meanwhile the legislative committee headed by State Senator Merritt, the Republican leader, appointed at the last session to investigate the Allds scandal and legislative corruption, has brought in its disappointing report. One recommendation is the passage of a bill compelling members to report at once every attempt to bribe them, under penalty of $5,000 fine or imprisonment for ten years, or both. ——The Baltimore ordinance providing for the segregation of negroes has been declared invalid by the Criminal Court, before which prosecutions for violation had been begun.——Twenty-five tons of dynamite in process of transference from Jersey Central freight cars to a lighter in the North River, at Communipaw, near Jersey City, exploded at noon, February 1, and shook everything within a radius of 50 miles. Window glass in lower New York was broken by the concussion. Tho few bodies have been found, the number of dead is estimated at thirty. The property loss is estimated at $1,000,000. The Jersey Central railway station was greatly damaged, its trainshed roof falling in upon the passengers and trainmen, and its walls strained and shaken. The immigration station at Ellis Island suffered much damage. The dynamite exploded was being transferred without permission from the Jersey City authorities. The disaster has brought out the fact that extreme carelessness prevails in the daily handling of high explosives along the New York water front. More stringent regulations are promised by the authorities, and stricter enforcement, and a bill to regulate the handling of explosives has been introduced in the New York Legislature. Seven officers and employees of the Jersey Central Railroad and the Du Pont Powder Company, and the owner of the two lighters destroyed, to which transfer of the dynamite was being made, have been arraigned on the charge of manslaughter, criminal negligence and the violation of a city ordinance.——The Coroner's jury which has been holding an inquest into the death of thirteen persons in the explosion at the Grand Central Terminal, in New York City, December 19, failed to agree, and has handed in two verdicts. Nine jurors considered the accident was unavoidable; three placed the blame on the "company or companies in charge of the terminal."

The Volcano in Luzon

It was thought at first that the eruption of the Taal volcano, 34 miles south of Manila, had caused no loss of life, but it is now known that from 700 to 800 Filipinos were drowned or fatally burned. The volcano, about 1,000 feet high, stands in the center of Lake Bombon. Immediately after the beginning of the eruptions, on the 28th ult., there were

severe earthquake shocks, the island sank several feet, and the water of the lake, rising in a tidal wave 10 feet high, swept over the coast, destroying several villages, and in some places going a mile from the shore. Hundreds were drowned and many others were killed by the falling shower of scalding mud, hot stones and ashes. The crops for 20 miles around were ruined and 5,000 families are destitute. A remarkable electric storm accompanied the first eruptions. At the end of last week the volcano's activity had been diminished only a little. Ashes were still falling over a wide area, and ships entering Manila Bay showed a coating of them. This volcano had been active eight times since 1709. Its eruptions in 1754 caused great loss of life and property. Luzon's other volcano, Mayon, remains dormant, but the people fear it will be awakened by Taal. Four hundred lives were lost during the eruptions of Mayon in 1897. On Saturday, at Manila, 913 shocks, due to Taal's eruptions, had been recorded.——To Congress the Philippine Assembly has sent a resolution, adopted in December, protesting against the sale of large tracts of the "friars' lands" to corporations. Such a disposition of the lands, the resolution asserts, is hostile to the interests of the Philippine people. The protest was suggested by the sale of large tracts to persons connected with the Sugar Trust.

Mexico's Revolutionists

Juarez, the city across the river from El Paso (Texas) was the center of interest, last week, in Mexico's revolutionary movement. There was little activity elsewhere. On the 29th ult., a small party of insurgents, led by a Socialist from Los Angeles, named Bartholdt, captured Mexicali, a town near the southern boundary of California, taking the custom house, with its funds. The chief officer of the place was set free, on payment of $500, which he borrowed from friends on the other side of the boundary. In Chihuahua, south and southwest of Juarez, the Government troops were inactive. They had suffered reverses. General Navarro was said to be locked up in the mountains; General Luque's force had been divided and surrounded. Railroads had been crippled by the destruction of bridges, or were controlled by insurgents. General Orozco, the young insurgent commander (he is only twenty-eight years old), decided that he must have Juarez, with its customs revenues. He moved against it, with 800 men. The Government had only 400 at that place. On the 2d, he was only twenty miles away. Many residents fled across the river to El Paso. Public offices were closed and public records carried into Texas. The defenders of the city did not expect to be aided by reinforcements. There were United States troops in El Paso, and the expediency of sending them to Juarez, to protect American property, was considered at Washington, but the Mexican Government said it did not need help and had not asked for it. After one or two skirmish engagements ten miles away, Orozco decided to wait for 400 men who were coming from the West. On the 4th he gave warning that his attack would soon be made. He sent this message by a courier to our Consul in Juarez, and the Consul at once published the warning in a proclamation. Orozco offered to permit the Government troops to march out with their side-arms and remain at liberty, but the offer was not accepted. At the capital, Minister Creel said that if Juarez should be captured it would soon be retaken, as the Government had the situation well in hand. There were only 1,200 insurgents in the field, he added. It was expected in Juarez that the attack would be made on the night of the 5th. But Colonel Rabago, with 300 Government soldiers, was making his way to the threatened city. On the night of the 4th, the train bearing his troops was ditched by the insurgents at Bauche, ten miles south of Juarez. Then the fighting began. Rabago suffered heavy losses, but forced a passage to Juarez, entering the city on the 5th, in the evening. It was then said that Navarro was sending 400 more, and that Orozco would be driven away.

Bonilla Winning in Honduras

President Davila's commander at Puerto Cortez asked the revolutionists to delay their attack forty-eight hours, promising to take his troops out of the city. The time was given, he and his men departed, and then Bonilla controlled the entire Atlantic coast of Honduras.

But the real masters of Puerto Cortez were 200 marines landed from American and British cruisers. The American naval commander had warned both the revolutionists and the Government's garrison that there must be no fighting in the town. They would be permitted, however, to fight on the beach. Puerto Cortez was evacuated on the 1st. It became known on the 4th that President Davila, on the 29th, asked President Taft to intervene. Thereupon our Government took measures to prevent fighting in Puerto Cortez and to obtain Bonilla's consent to an armistice. At the end of the week he was considering the proposition, which had been made by President Taft in order that the good offices of the United States might be proffered for mediation. It is said that Davila would like to get out of the country safely, taking his wealth with him. Bonilla will probably insist upon his resignation and a new election. Thus he will become President. The agreement concerning the New York loan of $10,000,000 was rejected by the Honduran Congress, on the 2d, owing mainly to the uncertain political situation and the approaching downfall of the Government by which it had been negotiated. It will be submitted to Congress again. Bonilla, the revolutionist leader, is committed to support of it.——Following the advice given by Secretary Knox, Hayti and Santo Domingo have withdrawn their troops from the border and have accepted the good offices of the United States for a settlement of their quarrel by arbitration.

Ecuador to Keep Her Islands

Owing to the continued protests of the people, by riot and otherwise, President Alfaro, of Ecuador, announced on the 31st ult. that negotiations for leasing the Galapagos Islands to the United States would at once be discontinued. Reports from Washington indicate that the advances were made by the Alfaro Government, because Ecuador needs the money; also that other Governments, as well as our own, were approached. It is said that our Government does not greatly desire possession of the islands, but is quite unwilling that they shall be leased to Great Britain, Germany, France or Japan.——Referring to the recent clash with Peru on the border (which may cause war), Ecuador declares that, while Peruvian troops were involved, Ecuadorian troops were not, because in deference to the request of the three mediating Powers, Ecuador has recently had no troops on the border. It is reported that Peru recently bought in Germany 55,000 rifles of the latest pattern, paying a high price for them.——Dispatches from Colon say that the three provinces, or States, of Cauca, Bolivar and Magdalena are on the point of seceding from Colombia. These are Colombia's richest and most progressive provinces, and, in combination, are stronger than the remainder of the country. In sentiment they are at variance with the interior, and there is said to be complaint that the interior provinces, with a dominant political ring at Bogota, have fattened on their revenues.

English Affairs

The new Parliament is the first of the new reign, and confronts so many grave and perplexing problems that the Government is likely to ask for the whole time of the House until Easter. Besides the veto bill and possible action on the reorganization of the House of Lords and on Irish home rule, the question of tariff reform will doubtless come up in some shape, thru our proposed reciprocity agreement with Canada. Another important question of imperial politics is the proposed regulation of commerce in time of war in accordance with the Declaration of London. This was drafted by the representatives of the Powers meeting in London in 1909, to provide a code for the guidance of the International Prize Court of The Hague in time of war. Australia and other British colonies and the commerce and shipping interests of Great Britain have protested vigorously against the approval of the declaration by the naval prize bill which the Government was to introduce into Parliament this month. The most objectionable clause is that which would permit a belligerent to declare food supplies conditional contraband if consigned to a fortified place or any other place serving as a base for an armed force. Since the British Isles are entirely dependent on other countries for

food supply, a strict enforcement of a blockade based upon this clause would starve out the country within a few weeks.——The rumor of a youthful marriage of King George has been disproved by the very unusual step of a suit for criminal libel brought in the name of the King against Edward F. Mylius, the London editor of a radical republican paper, *The Liberator*. This is really printed in Paris and managed by Edgar Holton James, a nephew of Henry James, the novelist, and William James, the philosopher. In a scurrilous article in *The Liberator* it was charged that the Archbishop of Canterbury, in officiating at the wedding of Prince George with Princess May of Teck, had connived at bigamy, for the Prince had been married in Malta to a daughter of Admiral Sir Michael Seymour. At the recent trial Admiral Seymour and Mrs. Napier, the lady whose name had been involved in the scandal, appeared as witnesses. It was proved that during the whole of the time that the Prince spent in the Mediterranean (1886-88), Lady Seymour and her two daughters were in Vancouver or England. Mylius demanded to be confronted with his accuser, the King, but this was refused, as illegal. He thereupon declined to plead, and was found guilty of libel.——The annual conference of the Labor party, held at Leicester, devoted much of its time to the consideration of means of opposing the advance of militarism. The Labor members of Parliament will oppose further increase in the expenditure for the navy. James Kier Hardie favored a resolution for a universal strike in case of an impending war. This, however, was rejected by the conference of leaders having the matter in charge. It will be remembered that the Socialists of Germany have also declined to adopt such a measure, believing that it would be impossible to get the workmen of both countries to strike at a time when war was imminent between them.

Preparation for War

The movement for increase of armament is spreading to all the leading countries, and plans of campaigns against neighboring nations are discussed with slight disguise in European parliaments and with no disguise at all in the European press. The Dutch defense bill is at present in abeyance, but the question raised by it, the right or duty of Holland to fortify Flushing, is the subject of many learned articles written from strategical or juridical viewpoints. It is argued by the Russian papers that the fortification of Flushing would in itself constitute a violation of the neutrality of Belgium because it would interfere with the freedom of the Scheldt and the use of this river for the protection of Belgium by the Powers pledged to its preservation. Certainly Holland has no apparent object in going to the expense of fortifications at Flushing except as aid to Germany in case of a war with France or England—or both. If the British troops could be taken up the Scheldt and landed near Antwerp they could make an embarrassing flank attack on a German force invading France. But should Holland refuse to oblige Germany by fortifying Flushing, there is danger that in case of a war it would meet the fate of Schleswig-Holstein. Holland, unlike Belgium, is not formally under the protection of the Powers, nor has Holland ever assumed any responsibility for the neutrality of Belgium, altho it has recognized that neutrality. Germany is prepared to put 3,000,000 men in the field at short notice and estimates that the cost of keeping such a force under arms will be $4,500,000 a day. Over $100,000,000 is to be spent on the German navy next year, and the reconstruction of the fleet on the Dreadnought basis is being pushed with feverish rapidity. Austria is suddenly possessed of a desire for a big new navy of sixteen Dreadnoughts, altho there is no apparent reason for a great increase of its sea power. The Austrian military and naval estimates for the coming year call for nearly $110,000,000, of which about $25,000,000 goes to the navy. This is about $18,750,000 above the ordinary appropriation. The total cost of the naval program will be $70,000,000 or more. The Government holds it to be of the highest importance that four first-class battleships of the Dreadnought type be completed by 1913, or 1914 at latest. On account of this haste two of them were begun at the shipyards in Trieste without waiting for the authorization of the expenditure by

the Delegations of Austria and Hungary. Besides the four vessels of over 20,000 tons, there will be constructed three cruisers, twelve torpedo boats and six submarines. This naval project is being energetically pushed by the heir apparent, Archduke Francis Ferdinand, who presented the program to the Delegations in person. The Government also wishes to increase the army at the rate of 50,000 more recruits annually and to establish a system of two years' military service. It may be surmised that Austria-Hungary is looking forward to an active interference in Balkan affairs, and possibly a war with Italy. At least that is surmised by the Italians, who are making strenuous efforts to get their first squadron of Dreadnoughts ready by 1913.—— The French Government has decided to ask the Chamber for large accessions to the navy.——The Swedish Government has prepared a plan for the reconstruction of the navy and wants $1,110,000 a year for the next three years to build the first battleship of the new type. It is proposed also to extend the period of compulsory military service to one year.

Persia and the Asiatic Question

The embarrassments of Persia, internal and external, continue to increase. Great Britain has demanded that the Persian Government maintain better order in the south and protect the trade routes. Otherwise the British gendarmerie will be organized for policing the country. Russia refuses to withdraw her troops from the northern provinces on the ground of public insecurity; but, in order to organize and equip the necessary military force for overawing predatory tribesmen, money is necessary and loans must be negotiated. Financial assistance, however, as experience has shown, may be used as a means of political control. Therefore the question of where Persia should seek its financial advice has become of immediate importance. Russia and Great Britain favor the appointment of advisers from Switzerland or some other small neutral state. Sani ed Dowleh, Minister of Finance, proposed French advisers, but Parliament voted finally to appeal to America and ask our Government to recommend five American experts to undertake the reorganization of the financial system. The appointment will be for from three to five years. The dissensions aroused by this question resulted in the assassination of Sani ed Dowleh February 4, as he was returning to his home from a session of Parliament at Teheran. The murder was committed by two Armenians, who have not yet been captured. Sani ed Dowleh was one of the most able of the leaders of parliamentary Persia.

Curzon on the Future of Asia

The address of Lord Curzon of Kedlestone on assuming the position of Lord Rector of Glasgow University is certainly of unusual interest and may be of considerable importance. Instead of taking an academic subject, as the occasion would suggest, he took the opportunity to discuss the Asiatic situation, on which his lifelong study and his service as Viceroy in India enable him to speak with authority. He called attention to the fact that Asia contains already nearly one-half of the population of the world. The increase of population is very much more rapid in the East than in the West, and the gain will be greater, now that famine, plague and wars of extermination are being eliminated. He suggests the possibility of a British protectorate being extended over tracts coterminous with our own boundaries either from force of circumstances or by agreement with other Powers, altho he regards even this limited extension of responsibility as improbable.

"Arabia, he says, is the least likely to be disturbed by the West.... Persia, in the throes of a Constitutional struggle, which it hardly as yet possesses the stamina or cohesion to carry to a successful issue, is hemmed in by Western Powers, whose interests it is difficult to reconcile. There are not the materials for such a renaissence there as has been witnessed elsewhere in Asia, altho no one who knows its nimble-witted and light-hearted people can wish them other than success in the effort. Asia Minor will probably remain Turkish, but may accept some form of foreign protection. Afghanistan is still safeguarded by treaties which render it safe from attack, and is becoming more formidable owing to the importation of firearms. The future of all these regions may be revolutionized if they are traversed by railways, providing trunk lines of communication between East and West. They constitute, in any case, that part of the East in which the West still has a considerable part to play, and which will prolong the unfinished drama for the lifetime of the youngest among us."

Men We Are Watching

BY A WASHINGTON JOURNALIST

Lafayette Young.

A CURIOUS coincidence caught the eye of the watching world this session when two week-end members, like shooting stars, flashed on the Senate for a few days each. "The meteor flashed and in the flame expired," but they were worth watching, not for the time only, but because with each there were serious symptoms of a relapse at no distant day. Each in his way made a distinct mark in the Senate during his few days' term, leaving the suspicion that something worth while will be doing if the chance chances and he comes back.

The Hon. Lafayette Young was one of them—Laf Young, every one calls him, which is a good sign—a dyed-in-the-wool protection, stand-pat editor of Des Moines, Iowa, appointed by the Governor to fill a few days of the unexpired term of the late Senator Dolliver, before the State Legislature elected his successor.

Dolliver was fast getting himself recognized as the heavyweight champion of the insurgents. Cummins, his colleague, bulging with insurgency, holds with pride the title of "Father of the Iowa Idea," which is insurgent to the limit, and Iowa, not neglecting the Legislature, is largely likewise. So that when the Governor appointed Laf Young, even for a few days, every one wondered. But they were not kept wondering long.

Senator Young took himself and the whole situation as a joke—all but his mission. He had a mission and about that he was in right good earnest. It was the rights of the farmer in tariff legislation. He grasped the golden opportunity in both fists. The moment he could get the floor he was on his feet in the Senate, hammering home hard facts, with all the freshness and vigor of the West, and proclaiming the theory that prosperity must reach the farmer as well as the manufacturer to be a national benefit; that if protection spells prosperity for Eastern industries, it spells it no less for Western agriculture. That was all. With that one hour Laf Young was satisfied and disappeared. But there be those who look for a sequel—in Iowa as well as in the Senate.

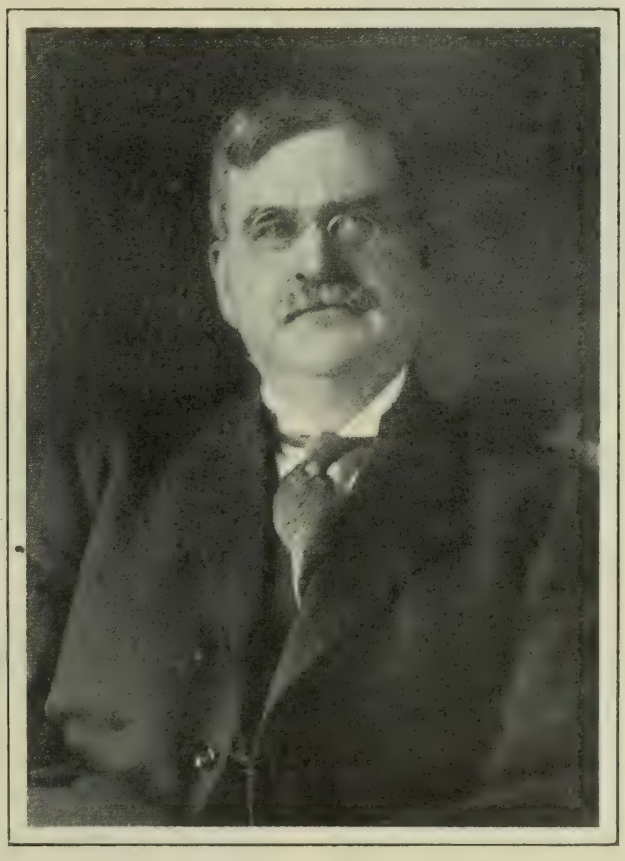

Photo by Harris & Ewing.

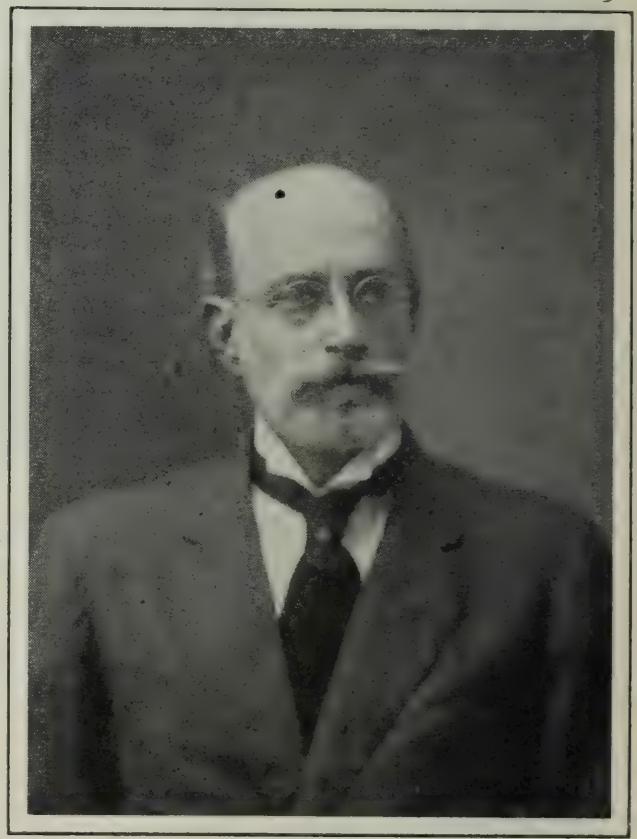
HON. LAFAYETTE YOUNG.

Appointed to succeed the late Senator Dolliver as Iowa's representative, Senator Young is a candidate for the long term. He contributed an article on the question of Reciprocity from the Farmers' Standpoint to THE INDEPENDENT of January 26, 1911.

Senator Young was born in Iowa some sixty-two years ago—but many a man of fifty has less of youth and vital energy. He has a vigorous shock of iron-gray hair, with heavy eyebrows and mustache, a rugged face full of courage and kindness, both of which are emphasized by remarkably fine eyes. He has a hearty, democratic way with him which instantly tempts one to like him. He has a quick, keen sense of humor and a



HON. DAVIS ELKINS,
Appointed to succeed his father, the late Senator Stephen B. Elkins, of West Virginia.

ready wit in making effective use of it. For forty years he has been editor and publisher of leading Iowa newspapers and twelve years in the State Senate. He is refreshing, interesting and earnest, a good advocate.

Davis Elkins.

The other one was the Hon. Davis Elkins, son of the late Senator Stephen B. Elkins. With West Virginia gone Democratic and Senator Scott down and out next 4th of March, the shock of Senator Elkins's death was intensified. Of course, the West Virginia Legislature, as soon as it could organize, elected a Democrat to fill the unexpired term, until March 3, 1913. But for the few days' interim a surprise was sprung—a very graceful compliment — when the Governor appointed Davis Elkins, son of the late Senator, to succeed him temporarily. It was like, "The King is dead. Long live the King," when the young Senator took the oath.

Being only thirty-five, he is one of the youngest men who ever occupied a seat in the United States Senate; but with almost infinite possibilities and exceptional environment he has made so much of life and already gone so far, that his apparent youth is most misleading. He has a peculiar face, distinctly strong and agreeable, bristling with the characteristics which made his father famous, with something of his grandfather, whose namesake he is. Senator Elkins is not as tall as his father, but has the same solid, vigorous build, the same energy and self-reliance in speech and motion, the same good-will and courteous consideration. It is easily obvious that he is among the few with multi-millions from the cradle who have been instigated instead of injured by the atmosphere of gold. All he lacks is what experience and bumps alone can give, to assume at thirty-five, in politics and finance, the position which his father gained much later in life. For this he has been deliberately preparing himself from the start. He took a special engineering course at Harvard to fit him for effective work in his father's great coal and railroad interests, and

HON. TULIO LARRINAGA,
Congressional Commissioner from Porto Rico.

entered upon the task at twenty-five. More and more his father turned over to him the management of his extensive enterprises. He is already president of the Morgantown & Kingwood Railway Company, president of the Elkins Coal Company, vice-president of the Farmers' and Mechanics' Bank of Morgantown, president of the Union Utilities Company, director in the American National Bank of Washington, and prominent in the Davis Trust Company, of Elkins, W. Va.

He effectively showed his mettle during the Spanish War. He has still retained much that is youthful, however, in general appearance, and is thoroly cordial, unassuming and agreeable. It will be easy for him to make and hold good friends and everything indicates an important future—a position of leadership in the political and financial world. He already has the pleasant distinction of having presided over the Senate, as he occupied the chair for an hour.

Tulio Larrinaga.

If giving one's life for his country is heroic, there's surely one hero in the House of Representatives. But he doesn't feel that way. In fact, he feels fagged, discouraged, disappointed, and only his intense patriotism keeps him stil' at it—and will keep him at it to the end. After that—long years after it, perhaps —he may be well enough remembered even to stand in bronze somewhere in the picturesque island, with the line, "He lived and died for Porto Rico."

It is Tulio Larrinaga, Commissioner (delegate) from Porto Rico to the Congress of the United States. He occupies a room in an obscure corner on the fourth floor of the House Office Building, and there he works and plans and thinks till some relevant bill is up, when he appears on the floor, where he has a voice but not a vote, and with eloquence, ardor and patriotic devotion, he urges and begs and pleads with a not very deeply interested legislature for some kind of attention. He knows perfectly well what Porto Rico needs—no one doubts it for a moment—and no one could present those needs more concisely and clearly. But there are big money interests centered in America exploiting things Porto Rican pitted against him, and Larrinaga is growing older without accomplishing very much of what he longs to obtain. He is emphatically giving his life for his country; but the common people of Porto Rico do not count for much in Congress against the energy of American capital invested there.

Nevertheless, and notwithstanding his long and little profitable struggle in this particular field, take it all in all and Tulio Larrinaga has probably done more for Porto Rico than any other one man, living or dead. He is sixty-four, a gentleman from top to toe, small, frail, dark, with iron-gray hair and beard, with eyes that flash and blood that boils, and earnestness which knows no limit when his cherished hopes are broached. He was born in Porto Rico, college-bred there, educated in civil engineering at the Polytechnic Institute of Troy and the University of Pennsylvania. For practical experience he worked at his profession under Badger & Co., then returned to Porto Rico. He was city architect of San Juan, built the first railroad, was chief engineer of the provincial works, and erected most of the important public structures on the island. He was one of the founders of the Atheneum of San Juan, of the society for the education of young men of the poorer classes, and of several other features of the intellectual uprising which played an important part in the development of Porto Rico. He is honorary member of the Engineers' Club of Rio de Janeiro, was Assistant Secretary of the Interior under Spain, and for some time after American occupation, and chief engineer of the harbor works at San Juan. He was several times elected to the House of Delegates of Porto Rico.

Since coming to the United States as Commissioner, to keep the needs of Porto Rico before Congress, Larrinaga has been appointed by the President as one of the delegates to the Pan-American Congress of 1906, to the Interparliamentary Congress at Berlin, 1908, and to the National Irrigation Conference in 1909. Some day, if Larrinaga is patient —and immortal—he may succeed in rousing Congress to yield to Porto Rico all of the home government which he considers means so much to her.

WASHINGTON, D. C.

Dr. Hempl's Discovery

BY ANDREW LANG

JUDGING from the short stories in our cheap magazines, nothing interests readers more than tales of ingenious detectives. "Give us a puzzle," is the demand, and the supply is abundant: "The Clue of the Boot Lace Tag," "The Clue of the Missing Cigarette," and so forth. I confess to being no less intensely interested in the puzzles of the past, the many mysteries in the lives of dead men and departed races. For example, what language was spoken by the mysterious white race who occupied the Isle of Crete when Israel was in Egypt, and who were in many ways the most modern of all ancient peoples?

It has always been my own opinion that many of these sea-rovers of the Mediterranean spoke Greek; for I cannot imagine a people neither Greek themselves, nor instructed, as we are, by the remains of Greek art, being capable of producing the best of the prehistoric Cretan paintings, gold work and sculptures. However, nobody knows for certain what language was spoken in Crete about 1600 B. C., but Dr. Hempl, of Stanford University, believes that he has solved the mystery.

Five or six persons in the present place of my residence, the university town of St. Andrews, have been deeply moved by Dr. Hempl's article in *Harper's Magazine* for January, "An Ancient Riddle Solved." He conceives himself to have discovered the "values" of the characters on each side of a clay disk, perhaps of about 1600 B. C., found by the Italian excavators at Phaestos, in Crete. Each group of characters or pictographs is enclosed at either end by a line, and seems to stand for one word. If so, there are thirty-one words on one side and thirty on the other of the disk.

For reasons, which he gives, Dr. Hempl reads from right to left. He finds the writing to be a syllabary, a set of syllables, as *ba, ka, tu, oi, ro* and so on, like the Cyprian; but the characters of the Cyprian writing are not pictographs, but conventional forms, as in our alphabets. The signs on the disk are not written in pen and ink or incised on clay tablets, like the other writings in Crete, undeciphered, found by Mr. Evans. The signs on the disk are printed with stamps on the clay. Again, they do not represent people dressed as in the ancient art of Crete; the woman has not a wasp waist, like the Cretans, nor have the men. The crested man's head and the round shields of some of the Northern invaders of the Delta are represented as seen in ancient Egyptian wall paintings; the ship is not a Cretan ship; the bow is like the Homeric bow; and, in the hut, Mr. Arthur Evans recognizes architecture of Southwestern Asia Minor. I do not think that there is proof that the disk is of Southwestern Asia Minor; however, that appears to be Dr. Hempl's view.

Now, when any one professes to have discovered something new in any science, the scientific are always up in arms against him. Each says to his own soul: "It is not likely that this fellow has succeeded where I have failed," especially if "this fellow" be a foreigner. Then awakens the cold dread of the scientific man lest he should be allured by ideas which may prove to be mistaken. They are timid about risking their "scientific reputations." They dislike originality above all things. These are merciful provisions of nature, and the scientific gentlemen, by bringing forward every conceivable objection to a novelty, are most useful in stamping out erroneous theories.

For my own part, I have no scientific reputation to lose; I adore novelty, and would always prefer to find that a new idea is true. Moreover, I want to believe that these old Cretans did speak Greek. Nevertheless, one must not be in too great a hurry. There are manifest objections to parts of Dr. Hempl's method and to some of his results. I may state those which at once occurred to me, and which, I find, have seemed much more forcible to better scholars.

First, mere guesswork there *must* be. But guessing is too easy, it is said, if

you find on the disk an unknown character, which, to suit your reading, should be, say, *la,* or *so,* or *nu,* or *pe,* and represents a known object; and next, hunt in the Greek dictionary for a name and the object which begins with the letters that you need. Thus Dr. Hempl found reason to think that a picture of a man walking at top speed meant *la,* and then he found that the Greek word *labropodes* meant "walking rapidly." But the word occurs only (as far as we know) in very late Greek, and seems a half comic compound. Then, for lily, the Greek word *souson* is probably late and foreign, and there are other such cases; while in a language so rich as Greek you can hardly miss finding a word for anything beginning with the syllable you want. But, on the other hand, out of the forty-five characters on the disk, I reckon at least seventeen which correspond to the initial letter or syllable of the usual Greek name of the object which the character represents. Thus:

Hawk	*hierax*	(hi. v-i)
Horn	*keras*	(ke or ka)
Dabchich or lesser grebe	*kolumbis*	(ko)
Flute	*surinx*	(su)
Man	*aner*	(a)
Boy	*pais*	(pa)
Woman	*gunê*	(gu or ku)
Tunny fish	*thunnos*	(tu)
Sheep's head	*oi's*	(o)
Hog's head	*hus*	(u)
Horse's foot	*pous*	(pu)
Moth	*ses*	(se)
Hide	*derma*	(de te)
Dirk or Knife	*machaira*	(ma)
Bow	*toxon*	(to)
Yoke	*zeuglê*	(ze)
Ship	*naus*	(ne)

There are others more doubtful; figures which stand for a lyre, a jug, a cabinet (?); others are symbols; others are flowers or sprigs not easily identified; others are conventional symbols. But at least, out of forty-five characters, here are seventeen pictures, each representing an object, while the first syllable of the Greek name of the object is taken to be represented by the character. But in only one case out of the seventeen (namely, tunny, which is derived from the Greek *thunnos*) does the English name of the object begin with the right syllable. Comparing Latin, or French, you will find almost as little correspondence between the object represented and the initial syllable of its name in these tongues.

In these circumstances I do think Dr. Hempl had a right to look further for more Greek words designating objects less familiar. He guesses, of course, but he guesses not half so widely or wildly as did the discoverers of the meanings of the Egyptian hieroglyphs. You have only to read any account of that great discovery and you will see the shifts to which the learned resorted.

So much for guessing.

Next, a scholar of the first eminence tells me that the text smelted out of the characters by Dr. Hempl "is not Greek." Emphatically, save for not a few words, it is not the Greek we know; but then we do not know the Greek of six centuries before Homer. As to the grammar, the grammar, most assuredly, is not what I am accustomed to! Thus, *apo leistore* ("from a robber") is all right, with the genitive; but in the very next words *apo* takes the dative. It can do so in the dialects of Arcadia and Cyprus (the most ancient), but in the inscription it should stick to one case or the other! I need not here go further into the grammar, but it is very odd indeed. Thus the article has a feminine form, but the feminine article, in the genitive, is supplanted by the masculine!

Next, Dr. Hempl says that the dialect is Ionian, and thinks that the document is from Southwestern Asia Minor. But Homer (say 1000 B. C.) says nothing of any Greeks in that region, and the migration of the Ionians to Asia is usually dated about 900 B. C.

Of all this (tho the objection at once occurred to me) I think little. There is no *proof* that the disk is from Asia Minor. Moreover, in the age of migrations, say 1600 B. C., there may have been Ionians on the southwestern coast of Asia Minor, tho, six hundred years later, Homer may have had no tradition to that effect. Plainly, we need not be scholars to discover the futility of this objection.

Again, the preposition *apo* ("from" or "of") occurs in at least a third of the words on the first side of the disk. This looks odd; but, if we grant that the words *are* words, the oddity is equally

great, whatever the sense of the two first syllables (read *apo*) may be. Thus the difficulty has to be faced by every decipherer, whether he takes the language to be Indo-European, Semitic, Finnish, Aztec or Choctaw.

A Semitic scholar, again, told me that, in a syllabary, there would be no vowels. I replied unto him that vowels there are in the Cyprian syllabary. A Greek scholar averred that the word rendered *apotethnasi*—"have been put to death"—was impossible, as Homer never used *apo* with *thnesko*. The answer was easy —Homer *does!*

It seems plain to me that if Dr. Hempl's reading of the characters be wrong, then, when applied to the second side of the disk, of which he has not yet published his translation, they cannot go on producing recognized Greek words. But they do!

A friend of my own, whose contributions to literature have been scanty in number, and in subject confined to the history of golf, has deciphered, on Dr. Hempl's lines, with two or three emendations, the second side of the inscription. Like the first, it is in a form of verse, but ends in what seems to be a brief prose summary of the topics. The reading produces several perfectly familiar Greek words, germane to the matter, and even (if correctly read by my friend) contains the signature of the slave maiden who printed the inscription! Of course, this amateur reading may not be that of Dr. Hempl, and may be wrong. But about the presence of perfectly familiar Greek words produced (slightly disguised, as in Greek which is taken from the Cyprian syllabary—in the *syllabic,* not *alphabetic* character of the writing) there is no possibility of doubt.

I have examined, in a work on the Greek dialects by the learned German scholar, Dr. Thumb, a number of Greek words from the Cyprian characters, nakedly stated in syllables in the Roman character. So stated they look as like Finnish as Greek, in some cases; in others any one can see the Greek thru the disguise. The phenomena are the same when this queer syllabary of the disk is written out in Roman characters. For example, I read a word as *te-se-me-ne,* and could only think of "disseminate"! But the words are *te semne,* "to the holy woman." In the first part of the disk she appeals to *a-te-ne* (Athene, the goddess), and *that* is Greek.

It seems to me that if Dr. Hempl's interpretations of the syllables be fantastic and erroneous we can only account for the results in producing Greek words by sheer luck, by fortuitous coincidence. The mathematician may calculate the odds against a *series* of such coincidences.

Roughly speaking, the case stands thus: We find, somewhere, a document containing forty-five characters, mainly representing actual objects — swords, bows, arrows, ships, men, women, children, jugs, axes, boots, bolts or dowels, cats, swine and so forth. We suspect that, in this method of writing, the first syllable of the name of each object is indicated by its picture. In English, following the words as just given in order, we have *swo, bo, ar, shi, ma, wo, chi, iu, ax, do, ca, swi.* Using these as a basis, we work out the meaning of more characters, and then try them on the words as they come in the Cretan disk. For the first word they yield *ma-sh-fl-waan.* For the fourth word they yield *ca-ca-mo.* For the fifth, *ma-sh-pe-gothu.* Clearly this will not do! The inscription is not English. But, if we try the idea that the language is Greek, we do get Greek words. Any one may try the experiment with Phenician or any other Semitic language, but he must remember that in 1600 B. C. no Semitic people known to us wrote in pictures, while the Egyptians did not write in the pictures of the disk.

However, there remains the chance that the language is an unknown language, apparently Indo-European, which, we are aware, was extant in Crete in historic times. In that case we do not know the names given to objects, bows, arrows, cats, men, ships and so on, so we come to a deadlock. We seem to be thrown back on the Greek hypothesis. If that yields almost incredible grammar, perhaps the decipherment may be improved on reflection. If it yields, as it does, very poor stuff, so do many very early inscriptions in verse.

St. Andrews, Scotland.

A New and Dangerous Proposition

BY THOMAS H. CARTER

U. S. Senator from Montana.

THE election of Senators by direct vote of the people has long occupied a prominent place in the public mind. It is a question which has been well considered and upon which we are well informed. The proposition is plain, simple, popular. It contemplates a change which has long been desired and demanded by many, so that there was very general satisfaction when, in the early part of the present session of Congress, the matter was put in shape and brought to the front, in the form of a resolution providing for the submission to the various State Legislatures of a proposed amendment to the Constitution of the United States providing for the election of United States Senators by direct vote of the people—as members of the House of Representatives are elected.

But after giving the resolution consideration the Committee on the Judiciary, to which it was referred, has reported it back to the Senate for action in an amended form which embodies the subject matter referred to, and the change so much desired by the public, but attaches thereto an additional proposition of very grave importance which when called to the attention and carefully considered will, I believe, prove highly objectionable to many; for the resolution came back to the Senate from the committee with an unobtrusive little "rider" which for the first time suggests another amendment to the Federal Constitution striking at the very vitals of the parliamentary body called upon to consider it.

This new proposition is wholly apart from the original resolution. It was not in the remotest degree suggested by the original resolution, and involves it with a vital question reaching to the very root of free government; for when you deprive an elective parliamentary body of the power to keep the channel between the voters and the legislative chamber free from obstruction or pollution by fraud, violence or corruption, you condemn that body to degradation and death. Why was this new proposition attached to the proposal to submit to the States the question of electing Senators by direct vote of the people?

The Constitution says: "The times, places and manner of holding elections for Senators and Representatives shall be prescribed in each State by the Legislature thereof; but the Congress may at any time by law make or alter such regulations, except as to the places of choosing Senators."

The place must, of course, be where the Legislature meets, while Senators are elected by the Legislatures, but Congress is empowered to make or alter regulations as to the times or manner of choosing the Senators. The amended resolution annuls that power, and by placing it exclusively in the States forbids its exercise in any manner by Congress or the Senate, in these words:

Amendment proposed: "The times, places and manner of holding elections of Senators shall be prescribed in each State by the Legislature thereof."

Congress will still retain all its constitutional rights to control the election of members of the House of Representatives, but if this resolution as it stands should pass from Congress to the States and be accepted as a constitutional amendment, Congress would be unable to make any law or regulation for the protection of Senatorial elections against fraud, violence or corruption.

Suppose, for example, that a State desired to avoid accountability to the Senate under the Fourteenth and Fifteenth amendments. It would, of course, choose United States Senators at special elections to be held at such times and conducted in such manner as the State authorities might see fit, to accomplish their ends. The right of a person to a seat in the Senate could not be challenged on account of fraud, violence or corruption at the polls, regardless of the extent to which citizens had been denied equal protection of the law or the right

to vote. To preserve the power of Congress to prescribe concerning members of the House of Representatives and to emasculate it in that respect as to the election of Senators, presents a sad spectacle of pitiable indirection. If the limitation of Congressional power to enforce the last two amendments of the Constitution by denying seats in the Senate Chamber claimed by violators thereof is the end in view, let us approach the subject openly and without concealment. Let us know what we are doing and what the result of it will be.

Can any one explain why Congress should have less power over the election of Senators by popular vote than it has over the election of members of the House? There is neither logic nor justification for any such position. It is new and startling. It demands very close scrutiny. The proposal to submit to the States a constitutional amendment to provide for the election of Senators by direct vote of the people is popular, well considered, widely desired. But here there is added to it, inseparably, the proposal to submit an amendment to deprive Congress of the right to enact appropriate laws to guard the election of its members against fraud, violence or corruption. This proposition was never brought to the attention of the American people until the joint resolution was reported to the Senate, the middle of January, 1911.

The resolution proposes two separate and distinct amendments to the Constitution, and unites them in such a manner that they cannot be divided at the polls nor in any legislative assembly. A voter or legislator in favor of one and opposed to the other will be compelled to vote for both in order to secure the one he favors, or against both to defeat the one he opposes. The amendment presents two independent questions upon which both electors and legislators will inevitably disagree. Full and free consideration of either one of the propositions does not in any way require consideration of the other; but uniting the two as in the presented resolution precludes the fair consideration of either.

It may well be taken for granted that an overwhelming majority of the voters and legislators of a State might favor the election of United States Senators by popular vote and at the same time stand unalterably opposed to the permanent disfranchisement of the colored man in such States as might think proper to deny him a voice in the selection of United States Senators. And in the absence of any known reason for the sudden appearance of this curiosity in the list of legislative jockeys, those in quest of some assignable cause for its presence are driven to look for the impelling motive behind it. It was manifestly used as a float to bring the rest of the amendment out of the committee room; but those who accepted that mode of transportation had more zeal than wisdom, for if the float does not serve as a sinker in either branch of Congress, it will surely prove a deadly weight in more than one-fourth of the State Legislatures —even tho it must kill for the time being the widely desired amendment providing for the election of Senators by direct vote.

It is a matter demanding plain speech and forbidding evasion. Thru a curious variety of State constitutional provisions and legislative devices, in certain parts of the country success has been obtained in suppressing the negro vote. Now, the effort is being made to absolutely deprive the general Government of all power to guard, control and protect the election of members of the Senate, not only from the consequences of these provisions and devices, but also from such fraud, violence and corruption as may, at any time, taint a Senatorial election, North or South. In the disfranchisement of the negroes in the Southern States we now passively acquiesce, but in this amendment we are asked to actually strip Congress of the power to question the election methods and actions in so far as the election of United States Senators may be concerned, as an inducement for cooperation in the adoption of a constitutional amendment providing for the election of United States Senators by direct vote of the people. This was made plain in the admonition that the amendment would fail if the Senate restricted it to the election of Senators by direct vote; indicating that the limitation of the power of Congress to supervise elections is of primary importance in the minds

of some who are advocating the measure. I do not doubt it is so considered in some quarters. But it would be far better to allow time and a tolerant public sentiment to aid in the solution of certain problems rather than to invite the country, in this way, to give constitutional sanction to deplorable expedients which every patriotic citizen must earnestly pray may not long be deemed necessary, even in the South.

If any change whatever is to be made in the constitutional provision which I quote, instead of withdrawing any power, the limitation in the last line should be withdrawn—"except as to the places of choosing the Senators." This was reserved to the States, in the Constitution, because the Senators were to be elected by the Legislatures, and it was deemed improper for Congress to determine the place of the meeting for a State Legislature. Under an amendment transferring the election of Senators from the Legislature to the polling places, the reason for even this limitation disappears. Withdrawing this limitation would leave the power of Congress over the election of members of the House and of the Senate uniform, and would be eminently appropriate to the resolution; but the complete abrogation of the power of Congress on Senatorial elections is intolerable. For if Congress is deprived of the right to legislate on the times and manner of election, the States will possess the supreme power in the premises, and the Senate will not be authorized to go behind the returns. On the adoption of this amendment all national laws regulating the time and manner of holding elections will cease to apply to the election of United States Senators. Each State may fix a different date, and not only that, but different days for elections in different parts of the State. There will be nothing to prevent a State from electing one person for ten terms in the Senate, or ten persons for one term each, at the same election. A party so earnestly devoted to a policy as to see only dire disaster in its overthrow will go far to safeguard the cherished cause against the mutations of political fortunes of the future. With power to elect Senators of the United States for an indefinite number of terms at one time, the way would be made clear for the passage of embalmed passion, partisanship, or sectionalism from one generation to another. It would open a verdant field for the boodler and the demagog, for with the Legislature and the State officers under control—however that control was secured—a bunch of Senatorial germs could be secured just as easily as one. You may say that no State would ever pass such a law, but I reply that no State should ever be invested with the power.

When Senators are elected by popular vote it is highly desirable that the elections occur on the same day in all the States. This can only be assured by reserving to the general Government the right to fix the time. The proposed amendment not only deprives Congress of this right, but it also deprives it of any voice in the manner of conducting the elections. Violence and corruption could disturb and pollute the way to the Senate unchallenged by any authority beyond the limits of the State. Members of the House of Representatives being elected by popular vote, Congress has plenary power not only to control the election, but to control everything connected with it, even to the punishment of a State officer for the violation of a Federal election law. With the present election of a Senator Congress can only go back as far as the Legislature. In case an amendment for popular vote for Senators should be adopted, the power of the Senate to control elections among the people at the polls should be identical with the power now inherent in the Government as to the elections of members of the House. The very existence of the power today goes a long way to compel wholesome regard for the Fifteenth Amendment to the Constitution, and when Senators are also elected by popular vote that power will be still more potential than at present, because it will be competent, if necessary, to inquire whether or not the election of a Senator was secured thru the employment at the polls of means and methods in violation of the Fifteenth Amendment, and to deny a seat in the Senate when found to have resulted from such violation.

Those who urge the adoption of this new amendment manifestly desire to remove the election of Senators from Federal scrutiny, so that questions involving the equal protection of the laws, as

guaranteed by the Fourteenth, or the right of citizens to vote, as guaranteed by the Fifteenth Amendment, may no longer remain subject to any Federal examination, in so far as the election of United States Senators is concerned. A certificate of election properly certified by the legal officers of the State would have to be conclusive on the Senate as to all questions save and except those touching the qualifications of the person named in the certificate to hold a seat in the Senate. The adoption of the amendment would either paralyze or imperil the most efficient agency at the command of the Federal Government for the protection of the rights of citizens under the Fourteenth and Fifteenth amendments to the Constitution. It is the power to protect citizens in their rights guaranteed by the Constitution that it is proposed to strike from that instrument by the latter part of the pending resolution, which the country at large understands is confined solely to the one question of electing Senators by direct vote of the people.

The two propositions are in no way related, necessarily. Why can we not be permitted to vote upon the question for which the country has been calling for years and years—almost from the beginning of the Government? It was mooted even in the Constitutional Convention. A distinguished representative from Pennsylvania insisted then that Senators should be elected by direct vote of the people. Only after long continued debate and much doubt as to the method to be employed, the Legislature was invoked as a method of expressing the sovereign will of the State. The whole country today understands the amendment providing for popular election; but we will search in vain for any call from any source, consult as we may all of the avenues of public expression, for an emasculation of the power of the Congress to control the election of United States Senators.

All history shows that the continuance of parliamentary government requires that each house of parliament should have the right of control over the election of its members. In every State Legislature that right is inherent. In the British Parliament it has been exercised from the beginning. In every parliamentary body in Europe—I might say, broadly speaking, in Christendom—the right to prescribe rules to govern the election of its own members exists, and never has been seriously challenged until this joint resolution for the election of Senators by popular vote was brought into the Senate, with a "rider" depriving the Senate of the United States of that universal power and right. No matter how much we desire the election of Senators by direct vote, we must not and cannot adopt the resolution if the price now asked is still demanded. I believe that it would be useless to submit it to the States. I am sure that more than one-fourth of the States of this Union would indignantly repel the suggestion which in effect would constitute a sanction of the disfranchisement of the negro. I do not believe that, as a nation, we can be or ought to be coerced into the support of such a measure in order to secure some other amendment.

The time seems to be close at hand when the demand of the people will be heard and Senators will be elected by direct vote, but I do not believe that to obtain it we should be forced to deprive the Congress of its power to control the election of its members. If this new proposition is insisted on at this time I believe that the whole question will be lost, as it should be, and that we shall have to wait for another opportunity to place the proposal to submit an amendment to the Constitution before the Senate as a distinct question unencumbered by any such rider as the pending resolution presents.

WASHINGTON, D. C.

The World Peace Foundation

BY EDWIN GINN

[Mr. Ginn, who gave a million dollars to advance the cause of peace, is at the head of one of our largest publishing companies, and illustrates the real fellowship which may exist between commercialism and idealism, business and peace. This article gives his reasons for the gift and his belief as to the work to be done.—EDITOR.]

SINCE my establishment and endowment of the World Peace Foundation, formerly known as the International School of Peace, I have been frequently asked for an expression of my views regarding the most pressing problems in connection with the present war system, and the means which, in my judgment, are most practical and hopeful to bring about the peace and better order of the world.

During the last ten years I have given much thought to the war system of the world. My efforts have been directed mainly to the active work that seemed to me necessary before any considerable change can be effected. Writers and speakers have said much about the evils of this system, but have not given as much attention to the proper remedies that must be adopted to remove them. They have worked largely thru conventions and publications, endeavoring with their limited means to bring about a different state of things. We need to avail ourselves, with larger resources and better organization, of every avenue of education and influence in the great work.

First among these is the schools. Here is our greatest opportunity for impressing upon the young minds—those who will soon undertake the responsibility of the world's work—the true principles that should govern international affairs. It is not possible for us to engage special teachers to instruct the children in the innumerable classrooms of the world on this subject; but we may to a large extent be able to reach them by addressing the regular teachers assembled in large bodies and arousing their interest, so that they will carry the word to the scholars.

Our attention should be directed especially to the course of study in the schools, in order that we may improve conditions there. In times past, when fighting was the main business of the world, literature was largely made up of the story of conflicts, and much space and time were taken up by these descriptions in histories. There still remains too much that is a pernicious influence upon the child, altho fortunately recent historians show a marked improvement. Is it surprising that our children should receive the impression that war has contributed cardinally to the development of mankind when so large a part of our histories and so much of the literature studied in our schools are devoted to the details of the battlefield, and so little to the more real things of life—the things that are constructively developing the nations? We desire to have it made very plain to what extent civilization has been hindered by these misfortunes. The study of history should dwell largely upon the peaceful pursuits of life—agriculture, trade, commerce, schools, science. These are the things that the children should give their chief attention to, and not the collisions of the nations.

Then there is the preacher, who comes into contact with all classes and conditions of men, young and old, the world over. Here is a tremendous influence that should be taken into consideration. Our directors should meet these ministers in conventions and awaken their especial interest in these matters, so that they will take up the work with their congregations.

The press is a most powerful influence in this educational work and the one that the world responds to quickly. Our directors will come into touch with its great leaders, personally and in conventions, and endeavor to impress upon them the kind of work the cause needs in the magazine and the daily journal.

Another great body of men of highest significance are the merchants, the manufacturers, the bankers and financiers of the world. They hold within their grasp the means for carrying on war, and we

should see that they have the fullest information bearing upon this subject, in order that they should withhold their support from a system that is exercising such a baneful influence on the world.

It will take many millions of dollars to carry on this work successfully, and the funds given by a few generous people will be wholly inadequate for it. Moreover, it would not be well for the people to feel that this responsibility had been taken off their shoulders and that the work could be accomplished without their assistance. They must be made to realize that it needs world-wide co-operation. A person is interested in that in which he has an investment, either in time or money, and it is this investment, this responsibility, that the friends of peace must take upon themselves if this problem is to be solved.

For trustees of the World Peace Foundation we have secured able men, some occupying executive positions at the head of leading colleges, others prominent business men. They are: President A. Lawrence Lowell, of Harvard University; President W. H. P. Faunce, of Brown University; President Joseph Swain, of Swarthmore College; Prof. Samuel T. Dutton, of Columbia University; Miss Sarah Louise Arnold, dean of Simmons College; Rev. Edward Cummings, of Boston; Hon. Samuel W. McCall, of Winchester; Mr. George A. Plimpton, of New York, of the firm of Ginn & Co., treasurer of Barnard College and trustee of Amherst College; Mr. George W. Anderson, of Boston, the well known lawyer; Samuel B. Capen, of Boston, a prominent merchant and president of the American Board of Commissioners for Foreign Missions.

The first qualification in the men sought to serve as directors, who will be responsible very largely for the execution of the work, was a strong desire to devote themselves to the cause. The next was experience in international affairs and the ability to labor successfully in this field. It is gratifying to be able to say that we have secured just the men we started out to find. They have not only accepted the call, but each has expressed a devotion to the cause as the one thing in the world which he has primarily at heart.

The board of directors consists of President David Starr Jordan, of Stanford University, who has been chosen chief director; Edwin D. Mead, the secretary of the Foundation; James Brown Scott, long connected with the State Department, and editor of the *Journal of International Law;* Rev. Charles R. Brown, formerly of Oakland, Cal; John R. Mott, who has met with such great success in organizing student bodies; James A. Macdonald, of the Toronto *Globe,* and Hamilton Holt, of THE INDEPENDENT. All are men of marked individuality. That is the kind of talent necessary for any great work; and each will find himself helped by contact with every other. It is the merging together of these strong qualities that we are aiming at rather than the domination of any single personality. We want the greatest individual freedom in thought and action consistent with a broad and all round development of the work. It has been my aim to specify only the general outline of what we hope to accomplish, leaving to the officers who should be chosen the formulation of details.

We have also been fortunate in securing a large and representative advisory council.

Our headquarters will require no costly building; good accommodations already in existence can be rented at moderate expense. Our funds must be husbanded carefully for the efficient work of able men and women.

One of our duties will be to dissipate the many illusions prevalent concerning the value of a great navy in securing the commerce of a nation. This has been powerfully discussed by Norman Angell in his new book, "The Great Illusion." Among other facts he mentions the mercantile fleet of Norway, which is larger in proportion to the population than that of Great Britain; even in the British colonies like Canada England is losing a part of her trade to Swiss and Belgian merchants. Nor are these large armaments needed for the security and happiness of a small nation. For example, the 3 per cent. bonds of Belgium are quoted at 96, while those of an all powerful military nation like Germany are quoted at 82. Norway's 3½'s are quoted at 102, while Russia's 3½'s are quoted at 81.

The same relative disproportion is true of the private individuals as of the nations. It is reported that in the small nations the individual lives as a rule more comfortably than in the large one, for the reason that his burdens of taxation are not as heavy on account of military expenses. To quote from "The Great Illusion":

"Dr. Bertillon, the French statistician, has made an elaborate calculation of the relative wealth of the individuals of each country. The middle-aged German possesses (on the established average) nine thousand francs. The Hollander, sixteen thousand."

There seems at this moment to be a naval fever extending all over the world, each nation vying with the others in the pride of military glory. A few years ago Chili and Argentina erected a statue of Christ high up on the Andes as a monument to perpetual friendship and peace between those nations. They intended to disband their armies and navies and rely wholly upon the good will of the people for their security. Hardly had the monument been dedicated when our flying squadron was sent around South America to the Pacific on its spectacular cruise; and all South America was in excitement. The statue on the Andes was quickly forgotten; the navy craze took possession of the people, and they forthwith proceeded to build battleships. Those who felt that this sailing of our fleet was a peaceful message to the nations made a great mistake. It only aroused in them a more intense desire to match our magnificent fleet. What it did in Brazil and Argentina it also did in Australia.

The question of fortifying the Isthmian Canal is now before us and is likely to have a strong bearing upon international affairs. If we feel that it is necessary to fortify this canal in order to protect ourselves from encroachment, it will show to the whole world a distrust of others that they do not show toward us. Can we, one of the most powerful nations on the globe, afford to put ourselves in such a situation? It is not so much the fifteen or fifty million dollars that will be worse than wasted in such fortifications, nor the constant expense of keeping them up, that I deprecate, as the showing in such a pronounced way our distrust of other nations.

A fundamental duty with all peace workers today is to secure a reduction in the armaments of the world. It is, of course, a mistake for the advocates of peace to cry "Disarm! Disarm!" without supplying a rational substitute for the present armaments; for the people of the world have been running so many years along the present track that they will not give up what they feel is necessary for the safety of the nations until something else is put in its stead that will in their judgment accomplish the same end at less expense of blood and treasure.

The economic conditions of the world must be studied in all their bearings. We should catalog the amount of treasure that has been spent and the number of human lives sacrificed in the past in this war system. We should set forth in forceful language the effect of these losses upon the development of the world. The cost in dollars and cents is the smallest loss. The human lives sacrificed are the main thing—the bright young men in the strength of early manhood sent into camps to die there or on the battlefield, or to be returned to their families after years of the corrupting influences of camp life. This loss to the world cannot be calculated. The human family needs its best blood for its future development. Research should be carried on along biological lines, as has already been so well begun by Dr. Jordan; and we should ascertain from the nations that have suffered most what effect war has had upon them.

Our cause has suffered greatly because we have not urged more forcefully the substitute for large armies that shall give the needed protection. Each nation has heretofore been looking for its own advancement without regard to the effect it may have upon others. The peace of the world is no longer a national problem. It cannot be solved selfishly and independently, but requires the coöperation of all nations. The world has advanced to such a stage that it is no longer possible for one nation to suffer without involving others in a similar loss.

My idea is to bring constantly before the people the advantages of coöperation, adopting the policy of taking a portion of the present armaments, say 10

per cent., and establishing an international army and navy. In taking such action we should avoid any discussion concerning the proportion that each nation should contribute to this international force. The advantages of such a readjustment are these: It will cost practically nothing, and by posting sections in the places where trouble is most likely to occur adequate protection will be secured. The establishment of this force would not interfere with the present military organization. That would go on as now, relatively as strong; so that each nation could safely enter upon this experiment which might, and in my judgment probably would, result in the beginning of permanent disarmament.

The establishment of an international power would be the natural beginning of a world congress, and the completer development of the international court would follow. Until these three branches of international organization are perfected there will continue to be great loss of life and property, which should be devoted to the natural, peaceful development of the human race.

When these organizations are established, the border lines between the nations will practically disappear except for local needs, and all the nations will be as free in the interchange of activities as are our different States. Already these boundary lines are vanishing, as will be seen by the various international organizations which are considering the well being of all without regard to nationality, such as the International Institute of Agriculture, the International Medical Association Against Warfare, the Permanent Committee of the International Congresses of Chambers of Commerce, the International Congresses of the Press, International Congresses of Science, the Red Cross Society, and scores of other organizations.

The advantages coming from a closer intercourse among the nations cannot be overestimated. We have done something in the exchange of professors, in the visiting of representatives of churches, boards of trade, etc., one country with another, but we have hardly made a beginning. A systematic effort should be made in every direction to bring people of like callings in the different nations into association with each other, in order that they may become better acquainted. The governments themselves should lend a hand to this fraternization. Even a small proportion of the amount now spent on military appropriations would yield a much richer return in mere security and defense. It is simply because the peoples do not know each other, and see the seas alive with battleships and the frontiers bristling with cannon, that they distrust each other.

It is the consideration of such problems as those I have thus briefly stated which prompted me to establish our World Peace Foundation. It will be the aim of the workers in our Foundation to go into the field and impart to various circles their own enthusiasm and sense of responsibility. The people must be awakened to the necessity of taking a vital hand in this work. Especially must our young men be enlisted, young men in colleges and elsewhere. The future success of the work depends largely upon the coöperation of vigorous young men who wish to devote their whole lives to carrying it forward, and who can inspire in others the same feeling, until every preacher, and every teacher, and every editor, and every important business man in the whole world is brought into active service for the cause.

BOSTON, MASS.

A Semi-Centennial View of Secession

BY ENOCH MARVIN BANKS, Ph.D.

[The semi-centennial of Abraham Lincoln's accession to the Presidency is also that of secession. The author of the following article is Professor of History and Economics in the University of Florida. He was born in Georgia in 1877, was graduated from Emory College, and has always lived in the South, except for the few years when he was studying at Columbia University and the University of Pennsylvania. He has frequently contributed articles to the magazines and reviews on Southern topics.—EDITOR.]

FIFTY years ago Abraham Lincoln was elected to the Presidency of the United States and secession was precipitated in the State of South Carolina. Before the inauguration of Lincoln six other Southern States had followed the example of South Carolina in passing secession ordinances and had co-operated with that State in forming a confederacy, with its temporary seat of government at Montgomery. Lincoln, upon assuming the duties of President, pronounced as distinctly in favor of the integrity of the Union as the seceding States had pronounced in favor of its dissolution. Since the two governments were thus holding and acting upon contradictory theories of the situation, it was inevitable that a clash should soon occur unless one side or the other should modify or surrender its position. The clash did occur, as is so well known, at Fort Sumter, when, upon the refusal of the National Government to evacuate, the fort was bombarded and reduced by order of the Confederate Government. Lincoln immediately issued a call for 75,000 volunteers, four other Southern States, rather than aid in a policy of coercion, joined the Confederacy, and thus was inaugurated the great and tragic civil struggle in American history.

Since the South was the prime mover in those stirring events, it seems a fitting thing for a Southerner who belongs to an entirely new generation and who has abounding faith in his section's future as well as in his country's destiny to write a short semi-centennial view of that movement, in the hope of being able to estimate in the calm light of history the wisdom of secession and the meaning of the great conflict which its trial precipitated. In a certain sense, to be sure, the wisdom of secession was tested and found wanting in the war itself; but there are those who urge that superiority of resources and numbers may triumph for a season over what is right and best in principle. Again, the writer is, of course, aware that historians from other sections of the country and from other parts of the world have passed judgment upon the Southern movement of the sixties, and their judgment has been on the whole unfavorable to its wisdom and righteousness. On the other hand, the people of the South have very naturally been inclined to repudiate such interpretations as arising from sectional prejudice or foreign ignorance, and while acquiescing in the results of the war, they instinctively feel that their fathers and grandfathers were willing to make the tremendous sacrifices that were actually made only in behalf of a righteous and altogether splendid cause.

To be sure, it is not the purpose of this paper to effect a direct alteration of this Southern conviction, since such pervasive popular convictions do not usually undergo great modification at the instance of a slight magazine article. Nevertheless, such an article may serve the purpose of showing that conditions are changing, and that the South is becoming more tolerant of a free discussion of its past and present policies. It is well known that this section is undergoing a remarkable expansion of industry and commerce and is greatly enlarging its educational facilities, and is thus paving the way for a liberated intellectual life. This new spirit of liberality toward opposing views when exprest with sincerity and befitting decorum is perhaps the greatest incipient triumph of the twentieth century South. Such a spirit is doing much toward making the section an integral part of the nation, and it will do more as the years go by toward making it, in hearty union and

co-operation with other parts of a great nation, an important factor in the advancement of world civilization. A free estimate of our past and a frank realization and acknowledgment of its errors, where errors are found, will place us in position to assume the responsible duties that lie in the immediate and more distant future. In such a spirit of intellectual integrity and freedom this article is written.

Large movements in history usually involve some important principle of government, or liberty, or economics, or religion, or what not, and the triumph or defeat of the principle or principles, for there may be more than one, gives meaning to the movement. These larger aspects of a struggle are, of course, not always distinctly envisaged by those who take part in the struggle, since such participants are oftentimes impelled by more immediate interests and passions, and it is only with the passing of years that the real significance of the movement in relation to human progress is generally seen, tho, to be sure, there are usually some leaders who are gifted with a larger vision and foresee more or less distinctly the meaning of the movement they are directing.

It requires no very acute powers of analysis to see—and indeed it is generally recognized by students of American history—that two large principles were involved in secession and the Civil War. One was a question of political science and concerned the nature of our union. The war itself was prosecuted with avowed reference to this principle, the South taking one attitude toward it and the North taking the opposite attitude. The other question was antecedent to this, in that it operated to cause the two sections to take divergent attitudes on the question of the nature of our union —or, to speak more specifically, it caused the South to attach continued importance to the idea of State sovereignty, it caused eleven States of the South to attempt secession, as the State sovereignty theory declared they had a right to do, and it thus caused the Civil War itself. That fundamental cause of secession and the Civil War, acting as it did thru a long series of years, was the institution of negro slavery. These two questions, therefore—that of State sovereignty primarily and directly, and that of negro slavery secondarily and indirectly—were the supreme questions involved in the American Civil War. Was the attitude of the South in relation to these two questions right—in the highest and best sense of the term right?

The ablest defense of the South's position on State sovereignty is perhaps to be found in Alexander H. Stephens's "Constitutional View of the War Between the States." Moreover, Stephens's attitude on the eve of secession demonstrated a breadth of statesmanship on his part that was only too rare in that emergency. He made a clear distinction between secession as an inherent constitutional right and secession as a policy to be put into operation in 1860, defending with considerable acumen, along lines marked out by Calhoun, the right of a State to secede under the Constitution of 1789, but combating the notion that the existing evils in the Union at that time justified a resort to so drastic a remedy. In his great union speech delivered before the Legislature of Georgia just after the election of Lincoln, he deliberately declared and urged that the South was not suffering in the Union, and that the section was not likely to suffer under the administration of Lincoln. Moreover, he calmly told his fellow countrymen that in case they withdrew from the Union without greater provocation than then existed, the verdict of history would be made up against them. Every careful student of our history can appreciate the wisdom, the statesmanship and the patriotism of this speech, as well as the courage and correctness of Stephens's attitude in opposing secession a little later in the Georgia convention. I venture to think that if the lower South had possessed a few more leaders of Stephens's ability and influence, secession would not have been precipitated by the election of Lincoln, except possibly in the case of one State. Indeed, such States as Virginia and North Carolina, altho believing in the right of secession, had the wisdom to defeat the secessionist movement until after the outbreak of hostilities, when they were called upon to aid in "coercing" their sister Southern States.

It is beyond the scope of this article to discuss in detail the circumstances and grievances which convinced the people of the South, contrary to the better judgment of Stephens and some others, that they could no longer remain with honor and safety in the Union. It is sufficient to say that the two sections had divergent economic systems, and that the institution of slavery, which was the South's peculiar economic heritage, was the prime factor in begetting grievances. There arose a disposition on the part of the North, which in some instances took an aggressive form, to discredit the institution of slavery on moral and religious as well as economic grounds. The severe criticisms of the institution that were thus made, particularly after 1830, naturally aroused a feeling of resentment in the South against those who would interfere in a matter with which, from a Southern viewpoint, they had no direct concern. Since the people of the South were on the defensive with regard to slavery, and since they were Southerners also, they became peculiarly restive under the adverse criticism that was directed against their institution, and sensitive to a degree that prepared the soil for a rich harvest of supposed grievances.

Moreover, since slavery was legalized and regulated by the State governments and not by the National Government, and since any enlargement of the powers of the latter might operate, thru the increasing preponderance of Northern and Western influence in that Government, to interfere with the institution of slavery at the time of the admission of new States or otherwise, the South was led to attach exaggerated importance to the doctrine of State rights, and to revive a political science that was becoming obsolete. Since it was recognized North as well as South that the National Government could not directly molest slavery in the States where it already existed, the warmest debates in Congress concerned the powers of the National Government over slavery in the Western Territories, the debates over this question being particularly acrimonious from the time of the war with Mexico down to 1860. The momentous election of that year centered upon that issue.

The extreme Southern party, in harmony with the famous Dred Scott opinion, had advanced to the position that neither Congress nor the Territorial Legislature itself could debar slavery from a Territory, and that slavery could be abolished by the people of a Territory only after the Territory had passed into Statehood. This view declared slavery legal in all the national domain and declared Congress altogether impotent in the matter—in other words, only a State in our system of government could make and unmake slaves, and where States did not exist to exercise that function our public law would presume slavery to exist and assume the protection of such property. On the other hand, the extreme Northern attitude, as exprest in the Republican party, was the exact opposite of the ultra Southern position on the vital question of slavery in the Territories. The party of Lincoln held that Congress under the Constitution had complete powers of government in the Territories, and that it should exercise these powers in behalf of freedom. Lincoln upon several occasions very tersely exprest the difference between the sections on this question in this wise: "We of the North think slavery is wrong and should be restricted, while you of the South think slavery is right and should be extended," having reference, of course, to the restriction and extension in the Territories. It is a great popular error on the part of the people of the South to suppose that it was in the program of the party of Lincoln to directly interfere with the institution of slavery in the States where it existed. The Republican party recognized and declared it had no right to do that, and Lincoln hesitated long before deciding that the exigencies of war warranted a resort to the emancipation proclamation.

Those opposed to the extension of slavery won in the election of 1860. The South interpreting this as the beginning of the decline of her dominance of the National Government, in a series of impetuous acts which the wisdom of Stephens and others could not restrain, repudiated that Government and inaugurated one of her own. Students of history can easily see the reasonableness and the correctness of the Republican attitude on

the main issue in dispute in the election of 1860, and it is a matter of regret that the Southern leaders of that day were unable to see its wisdom in the light of a true philosophy of progress. However, in passing judgment upon their action we should recognize that we have the advantage of perspective and that they were in large measure the victims of circumstances not altogether of their own making. Moreover, the notion of an evolutionary order of things in morals, in governments and in all manner of social institutions is an idea that was by no means as familiar to them as it is to us of the twentieth century.

The institution of slavery was becoming an anachronism in the nineteenth century. Other nations, such as England and France, had entered upon policies of emancipation in the early decades of the century, and the Northern position on the subject was merely in harmony with the dictates of an advancing civilization. Southern leaders, under the influence of apparent pecuniary and social interests, failed to understand this tendency, and to enter upon the work of formulating plans for harmonizing its policies with the currents of world progress. Moreover, being nettled as they were by outside pressure and in many cases undue criticism, they more and more concentrated their efforts in support of an antiquated order of things in morals and economy, and finally waged a four years' war with unsurpassed heroism and devotion in support of an equally antiquated order of things in government. Such in epitome is the tragedy of the South's past, and the tragedy of her present is that she does not yet fully realize it!

So far our discussion has mainly concerned the wisdom of secession regarded as a matter of practical politics, with no particular reference to the question of its legal validity under the Constitution of the United States. We have reached the conclusion that calm history will not justify, however much it may explain, the secessionist movement of the sixties—a conclusion which, as we have seen, accords in the main with the position of Stephens on the eve of the secession of Georgia. Stephens, however, ardently advocated the right of a State to secede under the Constitution of 1789, and we may infer that he regarded a union of States severally sovereign to be the best form of union. Most intelligent Southerners would now concede that for our country a confederacy with the recognized right of secession is not the best form of union. On the other hand, they would entirely agree with Stephens and with the great body of his fellow Southerners of the sixties in claiming that the right of secession was then inherent in the nature of our Union. If indeed the right of secession existed, we may safely conclude that the counter right of resisting secession by force of arms did not exist—a conclusion which would place the North in the wrong in waging the war, even tho the South may have acted precipitately and unwisely, and therefore wrongly, in resorting to secession without greater provocation.

The dilemma just suggested may easily be avoided by placing the argument upon a plane distinctly higher than one concerned with the merely legal questions involved in conceiving our Union to be the static outcome of a contract between independent sovereign States. Indeed, we may well admit that our Union was generally regarded at the time of its formation and for some decades thereafter as a union of sovereign States. At any rate, it was a union made possible at the time thru compromises—the greatest of which had reference to the relative importance of national and State authority. The Union thus established upon the basis of compromises was in reality a great victory for the integrating forces moving in modern times in the direction of nationalism. Moreover, it was to be expected that as the interests of the people of the several States became more and more interdependent and harmonious a spirit of nationalism would increasingly pervade the Union and assert its potency, unless some disintegrating influence should thwart its development. The normal integrating influences worked in the direction of national integrity in all parts of the Union except the South, where the institution of negro slavery operated as the main influence to counteract its development. When, however, the particularistic spirit attempted in 1861 to put into practice its principle of separatism in order to

defend the South's cherished institution, the spirit of nationalism in other sections of the country had grown strong enough to assert its validity.

It was as much the function of the statesmen of 1860 to interpret the nature of our Union in the light of what it ought to be as it was the duty of our fathers in 1787 to act in harmony with the demands of progress in their day. Right and wrong are neither absolute nor static conceptions, but on the contrary they are decidedly relative and dynamic descriptions of conduct—conduct being right or wrong according to the degree in which it tends to promote or retard human welfare. Those who consciously and sincerely align themselves with the forces working for the best interests of an advancing civilization are in the right in the highest and best sense of the term right, while those who align themselves with causes less beneficent in their fruitage are relatively in the wrong, tho their sincerity, devotion and otherwise elevated type of character may command a lasting measure of admiration.

Viewing the great civil conflict, the semi-centennial of whose inauguration this year marks, in the light of these principles and in the light of a broad historical philosophy, we are led irresistibly to the conclusion that the North was relatively in the right, while the South was relatively in the wrong. Lincoln for the North became the champion of the principle of national integrity and declared the time ripe for a vindication of its validity; Davis for the South became the champion of the principle of particularism as exprest in State sovereignty and declared the time ripe for its vindication. The one advocated a principle of political organization in harmony with the age in which he lived and in accord with the teachings of history; the other advocated a principle out of harmony with his age and discredited by the history of Europe during the past thousand years. The one was a statesman of the highest order, deserving to be ranked with such of his European contemporaries as Cavour and Bismarck; the other was a statesman of a distinctly inferior order in comparison, since the cause which he championed with so much ability, heroism and devotion ran counter to the true course of political and social progress.

The Mother of Theseus

BY EDITH LANE

A LITTLE lad tugged at a mossy stone,
And day by day his strength and cunning grew,
Till sudden moved the rock, and then were shown
His father's sword and sandals. Yea, she knew.
O little lad whose life was all my goal,
Whose baby needs were compassed in my arms,
The yearnings and the swellings of thy soul
Have burst the bonds of childhood. With alarms
I see the man's full strength. Each noble trace
That marks thy father's son I do adore,
But oh! it leads thee to that dangerous race.
And have I lost my child for evermore?
Nay, every act and every thrill of thine
Forever mine and his, and his and mine.

YORK, PA.

The Nationality of Our Immigrants

BY WILLIAM B. BAILEY

DOWN to 1820 no statistics with regard to the immigration of foreigners to this country were ever collected by the Federal authorities, but from 1820 to 1910, inclusive, 27,894,293 persons have been reported as entering this country. The net addition to the population of this country was less than these figures would indicate, because the statistics of returning emigrants have been gathered only within very recent years. It would seem to be a conservative estimate to place the net immigration to this country since 1820 at 20,000,000, because those races which enter this country for the sake of accumulating a few hundred dollars to take back with them to the home country have come to this country in large numbers only within recent years. The Italians and some of the races from Austria-Hungary comprise a large proportion of these birds of passage. The English, Irish, Scandinavian and German immigrants who formed such a large percentage of the total down to 1885 entered this country in order to make this their permanent home. Therefore, a larger proportion of the immigrants before 1885 stayed in this country than is the case with those entering since this date.

Down to the Revolutionary War the population of this country was predominantly English. There was a large number of Scotch-Irish who came from County Ulster after the English Government made life unprofitable and unpleasant for them in Ireland. These were of the pioneer type, or frontier settlers, and formed a very desirable addition to our population. Large numbers of Germans from the Palatinate and provinces along the Rhine settled in Pennsylvania before and during the war of the Spanish Succession. There was a small number of French Huguenots who emigrated after the revocation of the Edict of Nantes and of Scotch Highlanders who came

WHERE OUR IMMIGRANTS CAME FROM IN 1880.

WHERE OUR IMMIGRANTS CAME FROM IN 1910.

after the battle of Culloden. From 1790 down to 1840 most of the immigration came from the British Isles, but never amounted to a hundred thousand in any one year. In 1847, as a result of the potato famine in Ireland and the revolution in Germany, the immigration jumped to over 200,000. From this period dates the real immigration movement.

From the middle of the century down to about 1885 our immigrants came almost entirely from England, Ireland, Germany, Norway and Sweden. In 1885 the immigration from Austria-Hungary, Italy and Russia combined was less than half as great as that from Germany alone. In 1910 the immigration from Austria-Hungary, Italy and Russia was more than twenty times as great as the immigration from Germany and more than four times as great as the combined immigration from England, Ireland, Germany, Norway and Sweden. In the charts reproduced herewith, each dot represents a thousand immigrants. A hasty glance will show how the distribution of the immigration has changed within thirty years. At the earlier period it was almost entirely from Northwestern Europe and is now very largely from Southeastern Europe. From the statistics gathered in 1880 it was not possible to distribute the immigrants by races, since only the country from which they came was given, and in 1910 it was decided to follow the same practice. It is probable that a considerable proportion of the immigrants from Germany, Russia and Austria were Poles, but since it was necessary to employ the distribution by country in 1880 it seemed best to follow the same plan in 1910, instead of attempting to introduce a racial classification in addition. The immigration in 1910 was considerably larger than in 1880, but the fact of most interest to the American is that those countries which furnished us with most of our immigrants down to 1885 contribute a continually decreasing proportion, while the volume of the stream is more than maintained from Southeastern Europe.

New Haven, Conn.

Occupational Diseases

BY WILLIAM LUDLOW CHENERY

THAT people are a "natural resource" is generally agreed. Society, however, which has begun to feel with the great force of an elemental emotion the necessity for "conserving" the trees, the rivers, the lands and the mineral deposits of the nation, hitherto has given but small thought to the protection of the people in a number of their relations. Work, for example, is the most significant relation in the lives of the vast majority of people. No other factor enters in so overruling a manner into the determination of destiny. Yet, in spite of the tremendous meaning of work and of the conditions of toil in the lives of most workmen, few things in society are so little understood as the influence of the factory, of labor in general, upon men.

Millions of men and women enter daily into thousands of factories scattered thruout the United States. Sometimes almost the entire family spends the whole working day within factory walls. We know fairly well what men do to things: the larger processes of transformation whereby crude material becomes the manufactured product are almost common property. The reverse process, however, the action of the product on the producer, the influence of the tools and the machinery on the workmen, the effects of the thing on the man, are but little understood. Consequently, it has never occurred to the average man that such a thing as the "conservation of people," the protection of the human resources, is in any way necessary.

In a large number of trades men work with substances which are known to be poisonous. What effects have these "industrial poisons" on the men and women who use them in the factory and elsewhere? There are thirty poisons which enter commonly into a large variety of manufacture and which are used in many trades.

Just what effect do these substances have on the people who work with them? What happens to the men who work in arsenic factories? Do the manufacturers of paint, the men who handle the deadly white lead, live normal lives and die the deaths of the average? Phosphorus is an excellent poison. It also is the basis of the manufacture of the old style match. What effect does phosphorus have on the makers of matches? The substances named are but few in the long list. The number of workers employed in the trades and manufactures connected with these few are numbered in the hundreds of thousands, if not in the millions, in the United States. The problem would seem to be worthy of the answer.

It is a kind of commentary on the American conception of things that no one thought of investigating these situations until about three years ago. We were too busy to think of the human factor of industry; the thing, the product, was the end and object.

Dr. George M. Kober, a member of Theodore Roosevelt's Homes Commission, was stung into action by the criticism of the German authority, Dr. E. J. Neisser, who stated in one of his books that Americans had not taken the trouble to concern themselves with the welfare of their wage earners. Dr. Kober made a report on "Industrial Hygiene," covering in a general way the conditions in a number of trades in 1907. Nothing very definite was learned, however, until Governor Charles Deneen, of Illinois, appointed a State commission on "Occupational Diseases," in June, 1909. This commission, consisting of a professor of sociology, two economists, a settlement worker and several physicians, began to study the lives of the workmen in a number of industries and trades in Illinois, and to some extent in the adjoining States.

A rather alarming state of affairs was discovered in a number of places, a state of things in which very subtly and very unobtrusively thousands and hundreds of thousands of workmen annually were being poisoned. Very generally the work-

men were unconscious of their danger, and less often the factory managers themselves did not realize the situation.

What white lead does to American workmen was studied by Dr. Alice Hamilton, chief investigator for the commission. White lead is used in thirteen trades and in twenty-six branches of manufacture. The number of persons employed in these trades and industries is almost impossible to estimate. That the number is very large may be inferred from the fact that there are 30,000 painters in Illinois, and the painters are only one group affected.

What white lead does to some painters is best told by hospital records and the "sick benefit" books of the painters' unions. Every one has heard of "painters' colic." To the relatively innocent "colic" the investigation adds paralysis, loss of weight, "a slowly increasing disease of the blood vessels, of the liver, kidneys and heart," insanity, senility, and sometimes death.

A menacing list of evils! But no less threatening than the reality. The effects of white lead were found, not from any spinning of theories, but from visits to the county hospitals, from visits to painters, and to family doctors. From the time of Theophrastus, the Greek, who wrote about 300 B. C., and Pliny, the Latin historian, men have guessed about white lead and people. Governor Deneen has the picture of a Chicago painter. About the first of every month this man is seen almost crawling thru the halls of the dingy, smoky home of union labor on La Salle street, in Chicago, just opposite the palace where Joe Leiter fought for the control of the world's supply of wheat ten years ago and lost to stronger men, and where more recently "Jim" Patten fought the same battle and won. The painter stoops, apparently, with the weakness of eighty and more years. In his eyes is seen the watery blear of decrepit old age, his flesh is withered, and his hair is the cottony yellow-white of age and disease. The man is forty years old. For twenty years—until he was thirty-five years old—he followed his trade. Day by day he absorbed white lead. White lead meant senility for him. Every time he ate without washing the paint from his hands, every time he cut a piece of tobacco, every time he rubbed or "sand-papered" a painted surface, the flight of time was spurred on for him. And he never knew it.

The case is not isolated. Of course, all painters are not prematurely senile. The susceptibility of people to lead poisoning varies tremendously. Many painters work with it for a lifetime—all good American paint is made on a white lead foundation—and are not affected. Some, on the other hand, suffer immediately on being exposed to it.

Another picture in the Illinois Art Gallery of Industrial Diseases is to the point. It is the picture of a German painter who worked for twenty-five years in his own country. He weighed 205 pounds when he came to the United States. After working here for one year and a half white lead poisoned him. The effects in his case were emaciation—he lost 50 pounds in weight—and double paralysis of the wrists. Other cases are shown in the Illinois report where poisoning set in in a few weeks or even in a few days, and thus thruout 578 records of disaster.

The freedom of the German painter from the baleful effects of lead while working in Germany and his illness in America are illustrative of our general conditions. Dr. Hamilton states that men are poisoned either by breathing the dry dust of paint or else by eating with paint-covered hands. In Germany neither one of these things is possible.

The Government provides in the first case that there shall be no dry rubbing of painted surfaces in enclosed rooms. In the United States the surfaces of all railroad cars and of all automobiles are rubbed by men working in air-tight rooms. The rooms are kept sealed so that the paint dust will not settle on other damp surfaces. In Germany and in practically all other enlightened European countries* dry rubbing is unknown on account of the injury to workmen. Yet no one thinks that foreign automobiles are less well made than American machines. Further, the German Government provides that the contractor shall furnish his painters a warm place in which to change their clothes and to

*Page 34 of report of Illinois Commission on Industrial Diseases.

wash before eating. The result of the method is typified in the story of the painter which is told above.

Painters are only a small fraction of the number of workmen who are victims of lead. Printers of all kinds, stereotypers, linotypers, plumbers, tinsmiths, electricians, workers in storage battery factories, cut glass workers, pottery workers, and even artists are sufferers. Worst of all are workers in the white lead factories. "I had supposed that the amount of disease in the United States was far less than in England and on the Continent generally, because of the fact that American workmen shift more than Europeans do," said Dr. Alice Hamilton, who has visited not only a large number of the lead works in the United States, but who also studied the workers in the English and European factories last summer. "I found," she continued, in summing up her impressions:

"that in America there is far more lead poisoning—that we are even blind to the effects of the disease. We use no more machinery than Europeans do and we employ foreigners or negroes between whom and the foreman there is the barrier of race or language. In Germany or England or France the foreman must know his men. In American factories the foreman may never have a verbal communication with his Polish or Italian laborers. The instructions are givin in pantomime. Shifting here is a disadvantage, too, because without a steady force no rules will be obeyed."

In the process of making the white lead powder the laborers are almost necessarily exposed to the flying dust or to absorbing the poison in their food. In almost every European country, both by the adoption of chemical and mechanical devices whereby the workmen are protected and by the rigid enforcement of Government regulations, men are not poisoned by the lead.

Contrast the European and the American systems:

"In one English white lead factory employing 182 men careful medical inspection failed to discover one case of lead poisoning in the year 1909-1910. In an Illinois factory employing 142 men partial inspection revealed 25 men suffering from lead poisoning last year. In another English factory employing 90 men no case was found for five successive years. In an Illinois factory employing 94 men, 28 per cent. of all employees have had lead poisoning and 40 per cent. of all employed in the dustier work."

The conditions described are typical. The conditions found are not remarkable when the ignorance of American factory managers is considered. In the first place, the process generally used in the United States is dangerous, far more dangerous than that used in England, France or Germany. It is also said to be cheaper. Consequently, cheapness of production being our American industrial ideal rather than the welfare of the workers or of the community,* we will keep to the present method. That this is unnecessarily dangerous is due to the ignorance of all concerned—State, owners and workers.

The general attitude of the factory managers to the subject of poisoning was stated by an interviewer to be as follows: "First, there is no such thing as poisoning." "Granted the fact of poisoning, the extent of the damage is much exaggerated." "Then you can't trust the doctors; they will say anything against the company." "Oh, the smaller factories are undoubtedly bad, but we are all right!" And after some specific cases in the factory at hand are pointed out comes the final refuge: "Well, what are you going to do with these 'Polaks' or these 'dagoes,' anyhow? You couldn't drive them to washing with a stick!"

The attitude is not permanent, however, and as soon as possible measures of prevention are explained, and when, too, the probability of State legislation is pointed out, safety devices are promised. The extent of the menace at the present time is very great in this one industry. In storage battery factories the dangers are as great.

The real pathos of the situation is that the weakest classes in the community are compelled to bear the entire burden of suffering and weakness which our community ignorance and carelessness have entailed. It is the humblest and the poorest who have to resort to the "dangerous trades." The humblest and the poorest are usually also the most ignorant and always the most defenseless.

What lead does to men has been the burden of this story. The reason is that its effects are best known "of all industrial poisons."

But lead is not the only "industrial poison," the effects of which upon Amer-

*Since this was written one of the largest lead companies, having factories all over the United States, has exprest its willingness to adopt all safety devices suggested by Dr. Hamilton.

ican workmen have been carefully traced. The same Illinois commission undertook to learn the place that brass plays in the lives of the workers in brass factories, to discover something of the ills which affect workers in arsenic factories, in plants where mercury is used, to learn the diseases which affect workmen in factories where acid fumes exist. The relation between the man and the thing, the direct causal connection between the poison and the disease, the scarcely less immediate connection between the faulty or imperfect methods of factories and the budget for poor homes and county hospitals, is pointed out with a scientific exactness.

Dr. John B. Andrews, of the Bureau of Labor, issued in 1910 a report on "Phosphorus Poisoning in the Match Industry." Phosphorus poisoning comes almost entirely from the use of white phosphorus in the manufacture of "parlor matches." The effects of phosphorus upon the workers have been known for two generations.

As long ago as 1848 Böttger invented the safety match, in the composition of which none of the dangerous phosphorus is used. For more than five years matches containing no poisonous phosphorus have been made and used in the United States. Almost since the invention of the match the "phossy" jaw of match makers, the decomposing bone of the lower jaw, has been commonly known. As to the reason for the continuance of the use of an object which inevitably means disease, Dr. Andrews is very clear:

"The manufacture of matches in the United States beyond any other industry presents an opportunity to improve conditions and easily to make a most dangerous industry entirely harmless. Peculiar to this industry is a disease which, without a great expense, without a long struggle against poverty, indifference, ignorance and neglect, may be eliminated absolutely by the prohibition of the use of white phosphorus. A harmless substitute from the poison is commercially practicable and readily available.

"Why then do our manufacturers not use this substitute? Many would gladly do so, but it costs just a little more to make non-poisonous matches. Competition is so keen that a single manufacturer cannot place himself at a natural disadvantage in business.

"In the leading countries of Europe the governments have come to the aid of both workers and manufacturers by requiring all manufacturers to discontinue the use of the poison. In these countries the manufacturers are all on an equal footing and the danger of phosphorus poisoning is entirely eliminated."

The situation in this country is complicated by the fact that one of the match companies has the patent rights for the use of sesquisulphide or safety matches. The company has, according to Dr. Andrews, consented to the use of its patent by other companies on equal terms if the Government prohibits the use of white phosphorus. The evil of the match industry is so well known that President Taft in his last message recommended the limitation of the use of the poisonous methods.

White lead, phosphorus, arsenic, brass, merely touch the fringe of the group of things which unnecessarily hurt people. Out and beyond the category of "industrial poisons" there are industrial conditions which are equally baleful in their effects. Bad ventilation in stores and factories, dust in shops and outside, dirt in the street, the abnormal temperatures, both hot and cold—these things and others in a thousand different ways influence for ill the lives of uncounted people. In many cases it is easy to effect the saving changes. In them all it is possible. More government regulation is needed. An employers' liability law which would provide compensation for "industrial diseases" would be effective in bringing on reform. More important still is a better general understanding of the workman in the relation to his trade; for after all is said, master and man are each in their kind human and to some extent regardful of others. As already recent knowledge has brought even more recent improvements in the lead industry, so it will be in other industries; greater knowledge will mean greater care and the prevention of suffering.

And to some extent, perhaps, with the increase of knowledge the national emphasis will be shifted from the integrity of property to the welfare of people; the protection of men and women who work will demand a bigger sympathy, will call into play a nobler set of emotions than those already set into operation by the very righteous appeal that "natural resources be conserved."

Hull House, Chicago, Ill.

Literature

China from Within

THE growing importance of China and the greater interest taken in it is shown by the increase in the literature of the subject. In the past year twenty-five or more books relating to Chinese affairs have been published. There is a marked improvement in the quality, too; less of a disposition to regard the people as mere ethnological curiosities and more of an effort to understand their religious, social and political ideas.

The distinguished professor of ethnography in the University of Leyden, the successor of Schlegel and the author of a half dozen works showing prodigious scholarship in Chinese, has reprinted his lectures, seven in number, on *The Religion of the Chinese,*[1] given at Hartford Theological Seminary, and furnished the volume with an index. He insists rightly that Chinese religion, tho its origin is lost in the night of ages, is a spontaneous product, spontaneously developed in the course of time. It had its patriarchs and apostles, but no founders comparable with Buddha or Mahomet, and has developed itself under the influence of the strongest conservatism. He distinguishes sharply between native and exotic or Buddhist elements. We need not expect a popular work from Dr. De Groot, nor one of easy reading, but if one wants thoro and accurate information, and can enjoy penetrating views and philosophical explanations, this is a book worth mastering. The author treats clearly of universalistic animism and polydemonism. More than any other writer, he shows forcibly the incubus under which China labors in her perpetual struggle with specters. He treats luminously of ancestor worship and also of that vast conglomeration of text, commentary, tradition and social ritual called Confucianism, which occupies toward the original religion, which the scholar Kung formulated in literature, very much the same relation which the Jewish Targums do toward the Old Testament, or the popular religion of Southern Europe does to the New Testament. One chapter is given to Taoism and two to Buddhism, and in these latter the author of "The Code of the Mahayana in China" is clear and convincing. Possibly had English been his vernacular, Dr. De Groot's style might have been more flexible and suggestive, but as it is, this work bears the unmistakable stamp of clear vision and thoro scholarship. The author's convictions may be summed up in his judgment, given on p. 61: "If it is the will of God that man shall have a religion in order to be happy, the Chinese religion is certainly no religion shaped by God."

Dr. Underwood, known as a veteran missionary in Korea, translator of the Bible, author of an excellent Korean grammar and dictionary, and as an alumnus of the New York University, was appointed to the Charles F. Deems lectureship of philosophy. He delivered six lectures on Taoism, Shinto, the Shamanism of Korea, Confucianism, Buddhism, and in conclusion made comparison of the foregoing theisms with that of the Old and New Testaments. His book, *The Religions of Eastern Asia,*[2] contains little of original research or freshness of presentation in these lectures, but in treating of Korean Shamanism the author shows that he has observed and reflected. It is tautology to add the word "ism" to Shinto. Dr. Underwood's contention, that Korea "possessed originally, in all probability, a pure monotheism," lacks proof, tho it is certain, as he says on page 135, that the national Korean faith still holds sway. This work is probably better fitted to win popular readers than is De Groot's.

In his thirty-seventh publication on things Chinese, *Studies in Chinese Religion,*[3] the veteran professor at the Vic-

toria University of Manchester gives us his ripe thought and last word on the spiritual life of China. As one might expect, who knows the author's great merits and his pronounced limitations, his best chapters are his first in order, for here he deals with the life of Old China, as reflected in the books and as surviving and tested by the life of today, both of which this former and famous pedestrian, functionary and indefatigable inquirer knows so well. Professor Parker's books are not for the general reader, few of whom will get beyond the initial chapter—best and most comprehensive and illuminating of all. To the critical reader and patient inquirer, however, the other chapters are as mines of gems and gold. His method is comparative. He makes clear just how the Chinese absorbed, digested and expressed, not only the old spiritual life of their ancestors, which Confucius printed, as it were, from a stereograph of his own making, while Lao-tsz kept it in "living" or movable type, but he shows also how Buddhism, Islam and Christianity came and in what measure influenced the Chinese mass. With many a radium-like bit of scholarship, and sometimes with wit and even cynical comparison with Anglo-Saxon stupidity and love of ruts, this is set forth. The latest critical literature of the subject is also compared, criticised and digested for us and an index is furnished. Apparently, the Chinese, in his way, is also "incurably religious."

In *China Under the Empress Dowager*[4] Messrs. Bland and Backhouse present a view of the late Empress Dowager of China which is new in the Occident, but old to many, who, like the reviewer, have held to the belief that this woman of rare abilities acted with the one idea of "China for the Chinese," and, within the limits of her light and knowledge, was a noble patriot. So astounding are the facts in the life of the last female occupant of the Dragon Throne that Mrs. Fraser, for example, insists that there were two lives and two women, instead of one; youth, vigor and a new feminine personality succeeding without public knowledge of death or removal the original imperial widow. This violent hypothesis resembles that which attempts to prove that the alleged Queen Elizabeth of England was not a woman, but a man. All internal evidence and the undoubted scholarship of the authors of this book, which from copious translation of native documents reconstructs the true life of the late Empress Dowager, show that in this volume we have a work of first importance for understanding China's modern history. Besides copious text and pleasant style, there are well chosen illustrations and a good index.

It is to be hoped that the example of Clark University will be followed, and that, whether for the celebration of anniversaries of foundation or the quickening of the departments of history, other conferences, such as were held in Worcester, will be called. History is none the less scientific when vitally coordinated with the present; for, as says the Japanese proverb, "In the past read the present." In such a book as *China and the Far East*,[5] containing twenty-two essays or addresses, wherefrom the omission of an index is atrocious, we must look for names rather than subjects as giving credentials and worth to the volume. Here certainly we have them, for all the writers have studied their subjects in the laboratory, among the living people. In the case of Japan two native and very eminent scholars, Drs. Asakawa and Takamine, are represented. Sixteen of the papers relate to China. World politics, international relations, American policy, trade, money, the Manchurian situation, opium, the army, the student abroad, the new learning and Christian missions are treated by varying men and minds. Such publicists and scholars as Coolidge, Holcombe, Williams, Millard, Morse, Foord, Jenks, Straight, Wright, Swift, Wilder, Merrill, Sheffield, Beach and Moore, whose names to those interested in the subject carry weight and suggest power, here present their best thoughts. In such a volume there is of necessity some inequality of style and ability to pass beyond statistics to great facts and gen-

[4] CHINA UNDER THE EMPRESS DOWAGER. *By J. O. P. Bland and E. Backhouse.* 1 vol., 8vo, pp. 525. Illustrated.

[5] CHINA AND THE FAR EAST. Clark University Lectures. *Edited by George H. Blakeslee.* New York: T. Y. Crowell & Co.

eral truths, while it is certain that impressions rather than demonstrations dominate some of the writers. Yet on the whole we rank this volume as one of the very best of its kind.

The Russian Road to China[6] is the book we have been waiting for. We have read much about the great Siberian railway, Irkutsk, sledging thru Transbaikalia, Russia in Evolution and the other subjects handled in the nine chapters of this book, but here in text and picture we have what we want to see and know. The author's style is bright and snappy, and the story tells itself well. A good map helps us, but the author has lowered the value of his book by neglecting an index. Here are graphic representations in word and picture of the long duel between Cossack and Tartar. As we read the racy anecdotes and hear again the Russians' chat and gossip, realize the local prejudices, official opinions and subordinate notions, now that the war is over, we realize what a good traveling companion and story teller this American, now a prominent member of the New York Legislature, is.

In the Catskills. Selections from the Writings of John Burroughs. With Illustrations from Photographs by Clifton Johnson. Boston: Houghton, Mifflin Co. $1.50.

Wherever John Burroughs goes he carries with him the same inimitable company, that is John Burroughs himself, so that it makes little difference what ledge rock or moss covered stone wall he sits on, all that is interesting of the bird or animal kind at once makes up to him for a look into his sharp, genial eyes; skunk, hawk, oriole, or eagle, fox or bear, sit for the inevitable portrait, or he will know the reason why. Thus, in the present volume, eight essays of his best quality have been collected, the range of which is supposed to be confined to the Catskills, where he was born and pushed a plow, whetted the scythe and loafed away his youth—occupations which he understood thoroly, if his own word is to be trusted—and who wouldn't trust John Burroughs's word? He was diligent enough, when it was necessary to be diligent, but he could loaf. Speaking of a neighbor, he said: "That man hasn't a lazy bone in his body, but I have lots of 'em—lots of 'em." So in these eight essays he takes us back to his youth in Western Catskill farm life; but the plow and the scythe disappear; the oxen are gone, and we chase the fox over the border, with the sturdiest of keen-eyed naturalist hunters and trappers that have taken up the business of loafing in earnest among the undomesticated fowl and the untamed beast of the fields. Nature with him is never dead. Every part of it is alive. He loves it, and his love for it gives it life. Whether he is measuring the foot track of a hare or casting a seasonable fly for a speckled trout, he puts his heart into it, and the hare or the trout stays by to look on. "When you bait your hook with your heart," he says, "the fish always bite; they will jump clear from the water for it; they will dispute with each other over it; it is a morsel they love above everything." But it must be "a tender, unctuous heart," "with a pulse of feeling and sympathy to the extremity of the line."

The Other Side of the Rainbow. By Florence Bone. New York: Eaton & Mains. 85 cents.

This pretty, fanciful, fairy story, with margins appropriately illuminated with tall poppies and butterflies and fairy-rings, is dedicated to a little girl who has not forgotten how to wonder, and since there must be many little girls like her, the dainty book would be a pleasant one to put into their hands. Such delectable characters as the Fairy Wonder and the Poppy Goblin, the Pink Elf, the Lovesome Fairies, flit thru the pages and down the poppy-stalks; there are always plenty of marvels and flocks of fairies in "The Wood-That-Is-Not-There," as the author gravely assures us; the adventures of Old-fashioned Jane in her quest for the other side of the rainbow are depicted with a light touch like the brush of a thread of gossamer against the cheek as one walks thru a summer wood.

[6] The Russian Road to China. *By Lindon Bates, Jr.* New York: Houghton, Mifflin Co. $3.

Literary Notes

....*The Temple Bible Dictionary* (Dutton) costs $4 instead of $1 as we stated in our review of January 19, but it is worth it.

....We have made only the most casual examination of Ellen Chase's *Beginnings of the American Revolution,* in three volumes, but we can at least praise the work as an example of book making. The publishers are the Baker & Taylor Co., and there are numerous illustrations. The net price is $7.50.

....As a clue to that perplexing labyrinth of international interests and diverse nationalities once under Ottoman rule, Dr. William Smith Murray's *The Making of the Balkan States* will be of service. It is published as one of the Columbia University studies by Longmans, Green & Co. at $1.50.

....The translation into English of the views of the Swedish thinker Johan Gustaf Björklund on *Death and Resurrection* (Open Court; $1) will interest many readers because of their basis in the cell-theory; but few will assent to the central and necessary postulate that "biology discovers and proves the existence of that spiritual body which humanity has surmised since prehistoric times."

....We are glad to see the *Smithsonian Report* has fully recovered its normal corpulency after the lean years of 1905-6. Nowhere else can a public library get at so low a cost (the price of the volume is $0.00) such recent and authoritative information on all the sciences, and a librarian who knows what these 750 pages contain is prepared for a good many questions that would otherwise go unanswered.

....Many of the books from the library of the late E. C. Stedman, very recently sold at auction by a New York house, contain autograph inscriptions or inserted letters, or both. A copy of the earliest issue of the first edition of "The Story of a Bad Boy" bears this inscription: "This is one of an edition of twelve copies and is enriched by all the original typographical errors.—T. B. A." The book sold for $126.

....From E. P. Dutton & Co. we receive a number of valentines of considerable variety, both as regards color and feeling. These follow the folder, card, and post card forms, and among them are to be found offerings to suit the most fastidious. The old-fashioned valentines representing a church in the distance, and floating in several thicknesses of paper lace, are, it seems, no more. Art has become more sophisticated—albeit more simple.

....The following paragraph is taken from William Lyon Phelps's new book, *Essays on Russian Novelists* (Macmillan; $1.25):

"If we may trust the testimony of those who know, we are forced to the conclusion that the English language, compared with the Russian, is nothing but an awkward dialect. Compared with Russian, the English language is decidedly weak in synonyms, and in the various shades of meaning that make for precision. Indeed, with the exception of Polish, Russian is probably the greatest language in the world, in richness, variety, definiteness, and elegance. It is also capable of saying much in little, and saying it with tremendous force."

....*The Masses,* a new monthly devoted to the co-operative side of the socialist movement, made its appearance last month with original articles by W. J. Ghent, Eugene Wood and others and translations from Tolstoy and Chirikov. It is edited by Thomas Seltzer and published at 112 East Nineteenth street, New York, at 50 cents a year.

....Mark Twain's Colonel Sellers is known to the stage, and several of his short stories have been dramatized for the Grand Guignol, at Paris. But now "The Prince and the Pauper" is to make its appearance as a play at the Théâtre Sarah Bernhardt, in the same capital. Five acts and nine tableaus have been constructed by Vladimir Bienstock and Michel Caré out of the romance. M. Bienstock has previously adapted plays of Pinero and Tolstoy.

....*The Scientific American Cyclopedia of Formulas,* the latest edition of a work long known to everybody who makes things or mends things, contains 15,000 receipts in its thousand pages and there is no cooking in it either. It could be materially reduced in size and made more useful by more thoro editing, for many of the formulas are practically the same, the changes being unimportant or merely verbal, but as it is it is invaluable for shop or home (Munn & Co., N. Y.; $5).

....As the anniversary of Lincoln's birth draws near what more appropriate than to take up the volume, *Lincoln Centennial,* being a group of addresses delivered at the memorial exercises, Springfield, Illinois, February 12, 1909, published by the Illinois Centennial Commission? The speakers on that occasion included the French and the British ambassadors, Mr. Bryan, the late Senator Dolliver, and others. A poem read by Charles Henry Butler ("Our Leader") is here preserved.

....Janet Jennings has written in a compact volume a complement to her "Abraham Lincoln," in *The Blue and the Gray,* a tribute to patriotism whose precise value it is not necessary to discuss. The purpose of a slightly more ambitious volume in this same class, Francis Trevelyan Miller's *Portrait Life of Lincoln* (Springfield, Mass.: Patriot Publishing Co.), is to reproduce many of the treasures collected by Edward Bailey Eaton and others, and to reveal thru portraits the times and personality of the Emancipator.

....The *Life-work of Louis Klopsch (Christian Herald)* described by Charles M. Pepper, may well be called the "Romance of a Modern Knight of Mercy." Coming to New York from Germany when a small child, his life was essentially the product of American environment, and was characteristically American in its sphere of effort, its genius for seizing and even creating opportunities, and in its cosmopolitan sympathies. For more than twenty years as manager and editor of *The Christian Herald* he used all his resources for the relief of those in distress, from the despairing outcasts who visit the Bowery Mission to the orphans of India, the persecuted Armenians

and the famine-stricken multitudes of Finland, China and Japan. There was no relief work which did not seek his aid, and none worthy that did not receive it.

....In the discussions embodied in *Dogmatism and Evolution* (Macmillan; $1.75) Prof. Theodore de Laguna, of Bryn Mawr, and Dr. Grace A. de Laguna have in collaboration overhauled somewhat critically the principal theories and types of modern philosophy. While the studies have not the unity of a monograph, they indicate very well the main course of thought in its movement away from the old "dogmatic" assumptions inherent in both rationalism and empiricism thru the critical philosophy and absolute idealism into pragmatism, which the authors hold to be "the first whole-hearted attempt at an appreciation of the significance of Darwinism for logical theory." As such they welcome it, but claim that it has only half succeeded, and believe that a critical revision of some of its inherited notions will make it appear a far less iconoclastic movement.

....There can be no doubt that a false modesty and a misdirected desire to avoid exciting prurient thoughts in the young are largely responsible for the dense ignorance upon sex questions which is so prevalent still. And it is mainly due to this ignorance that social evils and diseases have grown to alarming proportions in our country. Unpleasant to discuss as such subjects undoubtedly are, the sorrow and suffering entailed upon individuals often innocent and the foredoomed weakening of the physical and moral fiber of society as a whole thru the ravages of preventable diseases admonish us against the neglect of proper instruction and a full knowledge of the facts concerning these matters. To combat existing evils and diminish somewhat the world's misery is the purpose of Dr. W. J. Robinson in sending out a third edition of his *Never Told Tales* (the Altrurians; $1), wherein are recited some of the tragedies and stories of lives wasted thru ignorant self-indulgence that have come under his own observation, all due, he claims, to "the thick shroud of ignorance that envelops the subjects which are of prime importance to the human race." *Four Epochs of Life* (Greaves Pub. Co.; $1.50), by Elizabeth Hamilton-Muncie, M. D., and *Plain Facts on Sex Hygiene* (Clode, New York), by Dr. W. L. Howard, also treat of sex questions, and are both of an educational nature. Dr. Muncie has put her information into biographic form, which sometimes makes it rather tedious, and tho too idealistic for most parents to follow, the book gives much that parents as well as children should know. Dr. Howard's book is praiseworthy in every respect. He goes at the heart of the problem, writes directly and fearlessly, is wise in his counsels, and presents his facts always in the light of their tendencies. A copy of this book in every home would result only in good. *We Young Men*, by Hans Wegener (Vir Pub. Co., Philadelphia; 70 cents) is a moderate and reasonable plea for a greater purity of life, a translation of a German work of which 85,000 have been sold. Of quite a different character, but possibly of equal power for spreading enlightenment and checking sex evils, is the revolting story of *The House of Bondage* (Moffat, Yard & Co.; $1.50), by Reginald Wright Kauffman. It constitutes a terrible arraignment of the traffic in human flesh and the conditions, political, social and economic, which produce and continue "the white slave trade." The author has arranged his material with some literary skill in the form of a life story of a poor, unfortunate creature, typical of her class, whose history he traces from her abduction, thru all the phases of her descent to the very bottom of the infernal pit of putrid social and physical existence. Mr. Kauffman declares that it is paralleled again and again in every great city, and recent revelations would seem to indicate the validity of his claims. Every one who has the stomach to read this disgusting, soul-harrowing tale will certainly have the courage to resolve to do his part in ridding society of such a canker. Perhaps it is needless to add that the first and last of these five books should be placed in the hands of adults only.

Pebbles

KNICKER—Jones has a bad memory.

Bocker—His mother never knew what were trumps, and his father couldn't remember anything on the witness stand.—*New York Sun.*

"WHAT'S the trouble in Plunkville?"

"We've tried a Mayor and we've tried a commission."

"Well."

"Now we're thinking of offering the management of our city to some good magazine."—*Louisville Courier Journal.*

THE COLD AIR FAMILY.

WE are s-s-sleeping on the roof,
We are b-b-bathing on the stoop,
We are d-d-dining on the lid
Of a b-b-backyard chicken coop.

We have t-t-taken up the rugs
And the m-m-matting on the floors;
We have knocked the w-w-windows out—
We are l-l-living out-of-doors.

In the snow upon the l-l-lawn
Sits the bubbubbaby fat and cool,
And the older chuchuchildren go
To the Fresh Air Public School.

We are fufufull of b-b-bounding health
Every momomoment of the d-d-day,
And the bubublizzards from the north
Find us sh-sh-shivering but g-g-gay.

And the neighbors envy us
As we gugguggather round the light
Of the street lamp out in front,
Reading in the air at night.

—*Newark Evening News.*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Congress and the Tariff

ALL other topics are overshadowed now at Washington by the tariff question, which comes before Congress in two forms: the proposition for the creation of a permanent tariff board, and the agreement for reciprocity with Canada. On the 30th ult. the bill for a tariff board was passed in the House by a vote of 186 to 93. All but 3 of the Republicans were counted in the affirmative, and with them were 30 Democrats. Among these Democrats were Mr. Clark, who is to be Speaker, and his party's representatives in the Ways and Means Committee. We had said, a week earlier:

"The next revision, whether made for revenue only or in harmony with the protective policy, should be made upon a basis of facts ascertained by competent officers. They should be ascertained by a good tariff commission. They are needed as much by revenue-only Democrats as they are by protectionist Republicans. The reception of such facts by a Democratic House majority would not bind that majority to apply the protective policy in legislation. Such a commission as ought to be established in Washington would not report as to tariff policy; it would only procure and report the information without which neither the protective nor the revenue policy ought to be enforced. . . . Democratic leaders should join the Republicans now either in making a good tariff commission or in promoting the work of the present Tariff Board; and should prepare their revision bill for use next winter with the aid of such facts as a commission or the board will be able to lay before them. We do not believe that the board should be regarded by the coming Democratic majority in the House, or by the present Democratic minority there, as in any sense a hostile body. Both parties ought to desire a basis of unquestioned facts."

It was not expected then that there would be Democratic support for the bill. We are glad that so many as 30 Democrats voted for it. "Democrats," said Mr. Clark, "do not object to information from any source." He believed that the President was a fair-minded man and would appoint good Democrats to fill the two additional places in the proposed board of five men. The bill had been so amended as to provide that the Democratic House may require the board to lay reports before it. The three present members (who, in all probability, will be retained) are not regarded as partisans. If their reports should be distinctly in favor of the protective policy, the force of them would be broken by the protests of the two Democratic members.

It is now predicted that action upon the bill in the Senate will be prevented by Democrats, with the consent of stand-pat Republicans. We hope the prediction will not be fulfilled. The bill ought to become a law.

The passage of the Canadian reciprocity bill in the House appears to be assured. A majority of the Republicans there will vote for it, several Democratic State delegations have decided to support it, and it may be that nearly all the Democrats will be counted in the affirmative. But a vote will be prevented in the Senate, it is now said, by the hostility of prominent Republicans there. There could be no greater political blunder at this time. Mr. Taft very earnestly desires that his agreement with Canada shall promptly be made effective. The required action will be taken in the Canadian Parliament, where the Government's loyal majority will be aided by votes from a divided Opposition. Public opinion demands that there shall be no delay at Washington.

It would be a serious political error for the Republicans of the Senate to prevent the enactment of this highly important and meritorious agreement. Failure to pass the bill in the Senate would un-

doubtedly cause the President to call an extra session. In that session a Democratic House would pass the bill (the passage of which by the present House will probably be announced in the near future), and the Senate, with a reduced Republican majority, would yield to the public demand. With the national election approaching, the Republican party would suffer much discredit by reason of the delay, while the Democrats would gain popular support for their tariff policy and their candidates.

This agreement, providing for the free admission of food, gives much of that for which the Democrats have been asking. They will vote for it. A great majority of our people want to see it in force. Republicans cannot afford to oppose it openly and actively, or by legislative devices for causing delay. Some of them seek to use the plea that our farmers will be hurt by the removal (at the Canadian boundary) of the protective duties on their food products. Many of these duties have been used in an attempt to deceive the farmers. As a rule, they have been ineffective, so far as prices are concerned. For example, the price here of wheat and corn has not been affected by the tariff duties on these products. Such benefits as the American farmer has enjoyed by reason of the protective policy have been due to other tariff duties rather than to those in which he has seemed to be directly interested. If the free movement of agricultural products across the northern boundary should promote the welfare of the country as a whole, and we believe it will, our farmers would share in the general gain. The agreement is an excellent one, so far as it goes. It was planned, not to satisfy the demands or desires of special or private interests, but for the public good. It deserves the support of both the great political parties, and neither of them can oppose it, or delay the legislative enforcement of it, without suffering loss.

Four Futile Resolutions

One of the most prominent ecclesiastics in this country is the Archbishop of Boston, and certainly one of the most active and ambitious. He is a favorite with the Pope, who passed over the choices of the priests of the diocese and the bishops of the province to appoint him as archbishop. In return he is an ardent admirer of Pius X and loses no opportunity to express his loyalty and devotion. He is putting his Church much to the front in his archdiocese, as is his privilege and duty. His last achievement is an immense meeting in Boston of the federated Catholic societies, at which eight resolutions were adopted, which, of course, he had prearranged, for nothing is allowed of priests or laymen which has not first had his approval. We may, however, venture to criticise, not being under his jurisdiction, nor under any other ecclesiastical control.

The first resolution began, properly, with "unfailing devotion and attachment to the Holy See." That will be grateful at Rome, for never has the condition of the Church elsewhere been so unhappy as under the present Pope, who has managed to disturb or provoke pretty nearly every Catholic country. Only in England and America does peace seem to reign. Yet this is more seeming than real. Opposition to Modernism is the trouble even here, however. We have not seen it in the papers, but it is a fact, nevertheless, that five priests have lately left the Paulist Fathers alone, because they could not in conscience accept the Papal commination of Modernists.

The first of the resolutions thus concludes:

> "We esteem it the proudest privilege to place first among our resolutions an emphatic demand for that independence of the Holy See which the Holy Father himself deems necessary for the free exercise of his spiritual worldwide dominion."

What does this "emphatic demand" mean? Has not the Holy Father at present all the independence anybody else has? Can he not go where he pleases, and say and do what he pleases in "the exercise of his spiritual worldwide dominion"? Has he not lately told his spiritual subjects what they shall sing, at what age they shall take their children to the mass, what seminary students must not read, what all must believe about the author of the Pentateuch, and has he not made every priest take a long, solemn oath to abjure Modernism? What more liberty, could he wish to exercise? We understand, to be sure, what the resolution means, and is meant to mean when

read in Rome: that the temporal power should be restored; that civil authority in Rome should be given to him such as was never exercised by Peter or Jesus. But that demand is as futile as its success would be unfortunate for the Church and the world.

The second resolution puts the federation of Catholic men squarely against the republic of France, the new republic of Portugal, and the liberal Government in Spain, and does it on a false basis. It expresses the warmest "sympathy with our fellow Catholics in France, Spain and Portugal who are waging a tremendous battle in defense of the liberties of the Church against an arrogant and anti-Christian faction." This statement is not true. The conflict in those countries is of a comparatively small faction of Catholics against the great mass of Catholics who are tired of tyranny, and who believe, correctly, that the ecclesiastical power has been in favor of monarchy and tyranny. The Catholics of these countries—and all not Catholics, Freemasons, Socialists, Jews, Protestants and unbelievers with them—have risen against tyranny, and have at times gone too far. There are always eggs broken for such an omelet, but unusually little wrong has been done. Nobody killed, only certain ecclesiastics expelled, just as in our Revolutionary War the tories were sent to Nova Scotia. It is sad to see in this country Catholic journals almost without exception lined up against the new civil liberty and the new freedom of religion. In all these countries the Christian people hold their old churches, carry on their training of priests, have the ministration of their pastors, all in the old way.

The third of the resolutions is extraordinary, and is entitled "Freedom of Education." It reads:

"3. We affirm our allegiance to the principle of freedom of education. We protest against the tendency to make the State the sole educator, as a violation of parental and individual rights. We call upon the State to be just and equitable in its dealings with all citizens, and to recognize that all schools which are contributing to the formation of good citizenship are deserving of its approval and support."

Now, if there is any place in the world where education is free it is in this country. We have free schools, free tuition, supported by the free vote of the people, free to all, and thus all free to establish as many other schools of any sort as they choose, uncontrolled, unsupervised. What more can they want? The State is not "the sole educator," and no "parental rights" are invaded. The State is just and equitable, allowing and protecting all schools of whatever sort, and supporting those which all can attend without any attack on their faith. We do not believe that the young men, brought up in our public schools, who are members of these federated societies, would break up the present system, notwithstanding this resolution imposed by the Archbishop.

The fourth resolution is an "appeal to the State for the total abolition of the evil of divorce," a pretty heavy contract for any government to undertake. The meaning is somewhat more carefully exprest in the demand for "erasing from the statute books the ill-advised divorce laws, which strike at the very foundations upon which human society is built." There are such ill-advised laws, which should be repealed; but what it means is to allow no divorce except for adultery, a measure which would not only be against the spirit and letter of Scripture, but a wrong and injury to the family itself.

The four remaining resolutions are good. They oppose indecent amusements, the publication of nauseous details of trials for murder and divorce, the desecration of the Sabbath, and they express in very general terms sympathy with labor. On these four points we can all thankfully agree.

The Schoolhouse for the People

At the meeting of the National Municipal League, held in Buffalo a few weeks ago, the School Extension Committee laid great emphasis on the fact that our social organization is at present seriously lacking in economy. It pointed to the fact that we have all over the land a remarkable distribution of public school plants, capable of serving the people in a hundred ways, but allowed to serve them in only one. This topic is not at all new to The Independent, for we have been among the few to demand the wider use of these public buildings, and we are glad to see this sentiment growing. We are quite of a mind with the committee when it points out that the public schools are at present the most easily available

nuclei of such a well-considered country social organization as is demanded for both moral, physical and educational purposes.

In a paper on public school buildings as neighborhood and civic clubhouses, Mr. Henry C. Campbell, president of the Milwaukee Federation of Civic Societies, said:

"It is no exaggeration to assert that making the schoolhouse the forum of the people is the chief hope of perpetuating our republic and perfecting its institutions."

It was urged that the schoolhouse become our permanent polling places, not only for the convenience of the voters, but as an educational movement affecting the sentiment of the children. This would save a city of the size of Buffalo $7,500 annually. Governor Hughes and Mayor Gaynor of New York, with Mayor Seidel insisted that the public school building, made use of as suggested, would not only bring the parents and children into closer relation, but would largely tend to bring the children into closer contact with public affairs, and teach them the practical affairs of civic life.

Dr. Goler, of Rochester, would make the public schoolhouse a base for carrying out a health program, while another speaker would require the town library and the school building to be one. A local branch library should exist in every school building in our cities; while Dr. Leipziger would have a public school lecture system universal, such as he has been efficient in establishing in New York City. There is, of course, nothing novel in demanding that our schoolhouses be centers of recreation, but when we pass by one that is locked and bolted out of school hours, as most of our schoolhouses are, we are reminded that the reform is very far as yet from completion.

The relation between the social center and the home can be very greatly intensified; in fact, the home and the school should be once more what they originally were, one thing, with one purpose. Professor Reber, of the University of Wisconsin, noted the various ways by which various communities, using their schoolhouses, may take advantage of their colleges and State universities, in the way of lecturers and libraries; while Rev. Richard Edwards, university pastor, showed how the schoolhouse stood right in the line of a rebuilding of religious power thruout rural districts.

The National Municipal League is not alone in demanding a wider and more liberal use of our schoolhouses. The Playground Association of America and the Federation of Civic Societies in many of our cities are calling attention to the opportunity which the public school plant affords for accomplishing far more than is now done, for the children, as well as the public in general.

Protected Exports

Our exports of iron and steel manufactures last year were larger than ever before. The value of them was $200,000,000. As a rule, these exported products were sold abroad in competition with products of the same kind that had been manufactured there. When sales were made in neutral markets, South American countries, for example, our manufacturers must have encountered and overcome the competition of the exporting manufacturers of Great Britain and Germany. Here at home they are protected against the competition of these manufacturers by tariff duties. When they make sales abroad they have no such protection, and in some instances they must pay ocean freight charges before they overcome the competition of manufacturers who do not have to pay such charges, their mills being near the place of sale.

If our manufacturers of steel, of railway rails, for example, can undersell the rail makers of Great Britain and Germany in foreign countries, after paying for transportation, why do they need a tariff duty for defense here at home against imported rails? The truth is that American rails and many other steel products are sold abroad at prices much lower than those which our own people are required to pay for them, and that the tariff duties enable the American manufacturers, by combination agreements, to exact the higher prices in the home market. For many years past the unvarying price of steel rails here has been $28 per ton at the mill, but American rails have been sold abroad for $18,

and even for $17.50. A sale of 20,000 tons to railway companies in Argentina was reported last week. Does any one think that the price was $28 per ton, plus the cost of transportation? Exports of rails last year amounted to $10,000,000.

The following was published in one of our trade journals a few days ago:

"Altho the absence of demand from the railroads for standard steel rails has made no impression on the steel companies' fixed price of $28 a ton, the falling off in demand for light rails has found response in a sharp reduction in prices for this class of steel product. To-day it was reported that 25-pound rails have been sold below $24 a ton, while a sale of 40 and 45 pound rails for Southern delivery has been made as low as $22 a ton. The low prices are the result of aggressive competition on the part of various producers for new business. Light steel rails are not regarded as a standard class of product, and no agreement to maintain prices exists."

We presume the cost of making these light rails is not less per ton than the cost of manufacturing the heavy ones. But with respect to them there is "no agreement." It is well known, even in the Department of Justice, that the price of standard rails has for years been fixt by agreement (to which all the American manufacturers are parties) and by allotment.

Is not this as unlawful as the agreement, with allotment of passenger traffic, on account of which the great Atlantic steamship companies have recently been made defendants in a prosecution by the Government for violation of the Anti-Trust law? Is it not a more objectionable agreement than the steamship "conference," because of the fact that the parties to it require American consumers to pay prices much higher than those for which the protected rails are sold to foreign buyers?

A Word to the Muck-makers

THE sale of a monthly magazine to a business enterprise which carries on a number of publications has given currency to a rumor that "the interests" are tired of being exposed and will quietly obtain control of all publications of radical tendency. The rumor is neither backed by evidence, on the one hand, nor inherently improbable, on the other hand, for the saying that "the fools aren't all dead yet," is still platitudinous.

We are almost disposed to hope that the rumor is true, and that the proposed policy will at once be carried out. This does not mean that we have any grudge against the muck-rakers. On the contrary, we esteem some of them, and we wish them all well. But from time to time we have dabbled in history a bit, and we have derived from it a strong conviction that about the most economical way to bring about important reforms is to get reactionaries to spend money in suppressing radicalism. The experts who take conservative cash for this enterprise are much like those healers of disease who operate thru advertisements and the mails. Further remittance is always advised.

Not to go too far back, or to carry the investigation into foreign parts, there was the attempt of respectable society down Boston way, in the early days, to "sit on" such people as Roger Williams and Anne Hutchinson. The radicals were put to some inconvenience, to be sure, but they never in the world could have paid out of their own pockets for the advertising they got free from the theocratic "interests." And what did "the interests" get? Not a thing but the sweet satisfaction of having served God in their own way, and so strained the theocratic system that it broke of its own weight, to be replaced by a strictly civil or secular social order.

Then there were the people who couldn't abide the abolitionists. There wasn't much in the way of "putting on the clapper" that they didn't think of. They broke up meetings, broke up schools and pied type, and they had a whole lot of fun, such as it was, in so expressing their feelings. But when they took inventory, a few years later, they didn't see their way to declare a dividend on investments.

Neither did the ecclesiastical "interests" succeed better, that, in still more recent times, undertook to stamp out evolutionism and the higher criticism. The more they stamped, the bigger their job grew. The other day we were looking over the stenographer's report of the trial of the Rev. David Swing, of Chicago, for heresy, and some of the denominational editorials which the proceedings called forth. What a fine tempest it was! Yet today it all sounds like incredible childishness. The whole world, religious and irreligious, has gone so far

beyond the positions which then were thought perilous, that it is difficult, even with the help of imagination, to get back to the old viewpoint.

The short-sightedness of "interests" always lies in their stupid belief that opposition to them is created by agitators. That they themselves create it by their own attempts to dictate, control or exploit is something which they never can get thru their fat heads. Were we of the betting fraternity, we would wager that not a dozen men controlling street railways, and other means of urban communication in the United States, understand why their fellow citizens do not regard them as public benefactors.

There is great and growing popular unrest in the United States, and there are shallow minds to explain it all as a product of the "assaults on wealth," the "appeals to class prejudice," and all that sort of thing in the cheap magazines. As we intimated at the outset, it might be a good thing if the promotors of this nonsense should learn better thru an expensive attempt to suppress the muck-rakers. Whether they make that attempt or not, they are destined to discover that the cause of our troubles has been *not the muck-rakers but the muck-makers*. If there is one thing absolutely certain about popular politics in America at this present time, it is that the people are no longer deceived. They are taking matters into their own hands, and whether attempts shall be made or not to put an end to exposures and to free discussion in the press, on the platform, in the pulpit, or from the teacher's chair, the exposures and the discussions will go right on. The mere muck-raking stage in our evolution is going by. The next concern of the public will be with the muck and the muck-makers.

Imagination in Archeology

It has often been remarked of late that in order to be a discoverer in science one must have and employ the gift of imagination. The same is true in archeology. Whether Dr. Hempl's solution of the riddle of the inscription on the disk of Phæstos shall prove true or not, the method employed gave great scope for the imagination. Andrew Lang, a very competent scholar as well as literary man, shows in an admirable article in The Independent that he believes our American scholar has reached the mark even if he has not hit the bull's eye. Yet other Grecians of St. Andrews are not so hopeful.

There are many illustrations of the fact that the imagination may lead archeologists astray if not strictly restrained: and yet great discoveries have come by this faculty. Among successes we may mention Champollion's clue to the Egyptian hieroglyphics, Rawlinson's deciphering of the cuneiform writing, and George Smith's solution of the mystery of the Cypriote writing; in the two latter cases with no more help from a bilingual inscription than Dr. Hempl has found for the Phæstos disk. But the cases of blank misleading failure are even more numerous, and are to be compared with the multitude of elaborate proofs that Bacon wrote the plays of Shakespeare.

The danger in such an effort as this of Dr. Hempl's is that of too easy uncritical acceptance of one possible clue after another, the whole giving a conclusion in the way of connected translation which has unwittingly followed reckless imagination instead of objective fact. One may see in a hieroglyphic character an object that looks like the head of a sheep or goat. He assumes that the language is primitive Greek, a pure assumption, and then out of a dozen or more words in the Greek language and its dialects he chooses one whose initial letter he imagines may represent the character, as *k* for *krios* ram, or *p* for *probaton*, sheep. So with another and another till he gets a succession of characters which by facile dialectic permutation give something suggestive of a Greek word, and this clue is followed with new guesses and new errors. It requires the greatest caution not to mislead one's self as so many have been misled.

The Hittite hieroglyphics have afforded striking examples of such vagaries of imagination. Prof. John Campbell, of Montreal, published two octavo volumes of decipherment. His field was large—for comparison, Japanese, Korean, and the Aztec of Mexico, and whatever else was needed. So he translated the chief

inscriptions, all imaginative and wrong. Captain Conder made a similar discovery. He called the language Altaic, and found his clues in Akkadian, Finnish, Turkish and Proto-Medic, again all wrong. Scholars now think the language is of Aryan stock.

A fine example of archeological imagination gone wild was presented in this country by the Cardiff Giant. Among the cities where it was exhibited was New Haven. There it was carefully examined by some professors and proved to be a late fraud, as shown by the chippings of the tools that had hewn it. But shortly afterward the Rev. Alexander McWhorter, of New Haven, published an inscription which he had discovered on the Giant's thigh. The inscription was in good Phenician, the letters correctly drawn for the date of the Sidonian sailors who had been driven—so the inscription said—by storm to these shores. It was perfectly plain that the statue was a fraud, but it was equally certain that no vulgar faker could have engraved that inscription. To the present writer the mystery was insoluble. He called on Mr. McWhorter, saw his copies and heard the story of the discovery, and found no clue. Just as he was leaving the house Mr. McWhorter asked him if he would not like to see a wax impression of the inscription. With great delight he re-entered the house, carefully examined the impression, and there was on it *not a single one* of the letters which Mr. McWhorter had seen on it. It was all imagination. He had seen a toolmark which looked like a Phenician letter, and his imagination had run away with him. He had unconsciously created the whole inscription and was sure he saw it there, when it was only in his own mind. Such pranks will imagination play, and such pranks ambitious scholars must be careful to escape. Similar unbridled imagination gives us new politics and new religions.

A Forest of Roses

The very name of Julius Rosenwald, of Chicago, shows him to be a Jew. Such names as his were taken when Jews were first allowed to assume a family name, but were forbidden to take any name already held by Christians. The number of poetical names like Rosenwald proves that those who chose them were not wholly sordid people.

Mr. Rosenwald, tho a Jew, has offered to add $25,000 to the gift of any city which will raise $75,000 for a Colored Young Men's Christian Association Building. The reason for the offer of such gifts is the sympathy he feels for a race which has suffered in this country much the same disabilities as the Jews have suffered in Europe. In this country the Jews have now come into their triumph, while he sees that for centuries the negroes here have not had a square deal, but have been refused the privileges and rights allowed to other races. He feels it a duty now to help this other race to rise as his race has risen. He finds no other organization which will so well give them opportunities for a better culture and healthy recreation as does this Christian organization, and so he chooses it for his benefaction. This is one of the most beautiful and memorable acts of beneficence that have come to our knowledge, given where it would not have been expected, and given out of gratitude for the escape of his own race from injustice such as he would help another race to escape.

The cities which we would have seek the advantage of this gift are those in the South. Conditions and laws will not there allow colored people to have the same rights as white people. They are not allowed to sit in the same rooms in the railroad stations, to ride in the same cars, to use the same libraries and public parks, to attend the same public schools, altho they pay the same taxes. Under such conditions they must, till civilization and Christianity have more nearly done their perfect work, have separate Y. M. C. A. buildings. But in the North this ought not to be necessary. Yet such division there is here in part largely by the insistence of imperfect white Christians, and by the assent of colored people who have established their own racial churches. We shall get over this one of these days, when the elevation of our colored citizens will make us ashamed of our meanness. We make no distinction among white people, intelligent and ignorant, Saxon or Slavic, but we draw the line at an almost imperceptible shade of color. It would be well if none of our

Northern cities, where no Jim Crow laws exist, where colored people ride freely in our street cars, where negro children attend the same public schools as others, and nobody hurt thereby, should ask for this gift because none should exclude their brother man from Christian associations.

Mr. Rosenwald's first gift is to Chicago, where a costly building is being erected, and where white men have matched the gift of the Jew; but the notable fact is that the colored people have themselves subscribed $66,000. Yet the most precious gift is that which comes from the Hebrew Forest of Roses.

Horace Greeley

The centennial of the birth of Horace Greeley calls to our attention how utterly the world has been revolutionized, and particularly our country, since his political public life began. Ours is an utterly new civilization, and he had some part in creating it. He made *The Tribune,* and made it a power by his forceful personality. The best part of his service was not for the Whig party, but for anti-slavery within that party, and later thru the Republican party, for he held on to the Whig party and its great doctrine of protection as long as he could. If he left to others the establishment of the Liberty party and the Free Soil party, he yet made it easy for the Whig party to be absorbed in the Republican party and to elect Abraham Lincoln. His *Tribune* was an immense influence in those days, and his quaint, strong simplicity made his personality known to all the country. He was no statesman like Seward, but his was a loud voice for the people. His simplicity was at last his ruin, when the discredited Democratic party so soon after the war persuaded him to be its candidate for President, and he scarcely survived his defeat. He was a favorite contributor for THE INDEPENDENT, but we could not follow him when he surprised all his old friends, who so loved him, by giving his aid to the party which had been wrong during the Civil War. At the beginning of the war he had made his first mistake in being willing to let misguided sister States go, but his cause of freedom won, and ours is a grander country for the success of that cause which was nearer to his heart than even that of the protection of home industries; and the sisters are now glad they were not allowed to depart in peace.

How the Wind Blows

In Wellesley College the teachers and scholars have voted for once, and it did not harden their femininity. Even the Freshman kittens voted, who are not of voting age. The question before them was whether women should vote or not, and the result was very instructive and prophetic. Of the Freshmen only 25 per cent. believed in woman suffrage. After a year's additional intelligence, the Sophomore percentage had arisen a little, to 33. The Juniors bettered the figure a little more, to 36 per cent.; while of the Seniors nearly half, or 44 per cent., believed that they ought to have the ballot. But even the Seniors are young, tho no longer children, and when the teachers came to vote the majority jumped to 80 per cent. who claimed the right to be represented in government. It is clear that growing intelligence is with the suffragists.

The Tariff Tax on Linseed

In the agreement for trade reciprocity with Canada, one of the products put on the free list is flaxseed, or linseed. Our duty on imported linseed is 25 cents a bushel. For two or three years past, the crop in this country, falling considerably below the normal yield, has not been sufficient to supply our own demand. Linseed oil, as everybody knows, is largely used in making paint. The price has risen. We find a trade authority saying that the price of seed at Duluth has advanced in the last three years from $1 to $2.70, and the price of oil at New York from 35 cents to $1 per gallon. We presume that those who pay for painting their houses have had their attention directed to the high price of linseed oil. The great increase of cost has caused some substitution of fish oil and other less desirable oils for the oil of linseed. To make good, in part, the deficiency due to the failure of our agriculturists to pro-

duce as much linseed as the country needs, we imported, last year, $6,430,509 worth of linseed from Canada, and the cost of it to the consumer was increased by the tariff tax of 25 cents a bushel. The price of American linseed was already extraordinarily high, the supply of it was only about half enough to meet the demand, and our consumers should have been permitted to import linseed, free of tax, from this adjoining country, which had a surplus to sell. There should be no duty on linseed imported from Canada or any other country.

"Rebellion" or "Civil War"?

Every little while, in Congress and out of it, but particularly in Congress, some apologist for the Lost Cause complains if mention is made of the Rebellion, and he insists that it shall be called "the Civil War." Rebellion it was, and civil war it was also; for what began as rebellion and continued as rebellion developed into a civil war. We generally speak of it in THE INDEPENDENT as the Civil War, simply out of courtesy, because those who were in rebellion, and their sons, do not like this word, and it is more civil to humor them. *Rebellion* is not a gentle word, and it stigmatizes one side, the side that failed by success to give it glory; while *Civil War* does not distinguish between the two sides in that momentous conflict. In this case courtesy is a considerate duty, for those who were in rebellion are now content to have failed, and they see that their section is the better for the failure, and those who were on the winning side ought to be generous enough to accept the present loyalty of the old soldiers in gray and their sons, and say nothing needlessly to offend them. We can meet in all friendliness, old soldiers in blue and gray, and pardon the more militant Daughters of the Confederacy. A late wordy fracas in Congress calls for these remarks.

Poets and Poems

It is some weeks since it was announced that a Poets' Association had been organized, and that among the elder and presumably silent members were John T. Trowbridge, 1827; Harriet Prescott Spofford, 1835; and John Vance Cheney, 1848; while among the more active youth are Henry van Dyke, 1852; Edwin Markham, 1852. Ella Wheeler Wilcox, 1855; Bliss Carman, 1861; Frank Dempster Sherman, 1863, and Hugo Munsterberg (who does not write poetry), 1863. They are organized "in a sincere effort to create a greater interest in poetry in America." So far as we can judge there is already a real interest in poetry in America, which would rise to enthusiasm if the poetry supplied were only great instead of merely good. We are surprised not only at the large amount of poetry sent to THE INDEPENDENT, but at the excellence of it occasionally. The trouble is that there are so few who can give both good thought and good form. And we are also surprised at the large proportion of poems copied from THE INDEPENDENT sent to us by the clipping bureau. We take it as a compliment that so many of our poems are copied by the journals. And yet we are sure that in none of our magazines can be found more acceptable verse than is purveyed by our columns. We wish the new society would begin operations.

Autographs at Auction

More interesting than book reviews are book auctions. The sale of the library of Edmund Clarence Stedman has yielded pleasure to many collectors and has had the result of making public a good many letters of important content. Such is one of Swinburne's (February 20, 1875), sold for $675, in the course of which the poet writes :

"Now when Whitman is not speaking bad prose he sings, and when he sings at all he sings well. Mr. Longfellow has a pretty little pipe of his own, but surely it is very thin and reedy. Again, whatever may be Mr. Emerson's merits, to talk of his poetry seems to me to talk of the scholarship of a child who has not learnt his letters. Even Browning's verse always goes to a recognizable tune (I say not to a good one), but, in the name of all bagpipes, what is the tune of Emerson's? Now it is a poor thing to have nothing but melody and be unable to rise above it into harmony, but one or the other, the less if not the greater, you must have."

While there can be no objection to the sale and reprinting of such letters as that which we quote, breaches of taste, at least, have been committed by those responsible for the sale of the Stedman library and manuscripts. Purchasers of

"association books" have been half pleased, and more than half shocked, to find enclosed letters of the most private kind—letters, often, from living persons, who sign their full names and lay bare their little souls. For it is a commonplace that the poet-banker was, above all men, kindly in his attitude toward youth. One remembers Oscar Wilde's verses "On the Sale by Auction of Keats's Love Letters":

These are the letters which Endymion wrote
To one he loved in secret, and apart.
And now the brawlers of the auction mart
Bargain and bid for each poor blotted note.
Ay! for each pulse of passion quote
The merchant's price: I think they love not art,
Who break the crystal of the poet's heart
That small and sickly eyes may glare and gloat!

It is two months since elected representatives of three Methodist denominations met in Baltimore and agreed to consider plans for unification. Two of them are episcopal in government, while the third is not. It ought to be presumed that the Northern and the Southern Methodist Episcopal Churches can find a plan of union. It would be a shame and grief if they cannot. Now, this calls attention to the other sectional division, that of the Northern and Southern Presbyterians. The Northern Church is ready; will the Southern Church still hold back on the miserable pretext that one former branch of the Northern Church, which no longer exists, adopted political resolutions during the Civil War? Such a union is a first duty; will not the younger ministers insist on it?

Thirty-one years ago a woman in this city took a religious vow never again to look on the face of a man. Last week her father died, but all these years she had never seen him, altho he lived only a few blocks distant from the walls that held her enclosed. During these years she had occasionally spoken with him, but with a thick curtain between them. The ecclesiastical authority which imposed and approves the vow lifted the interdict for her to attend his funeral. There is no religion in such a vow. It is unkind, inhuman, and therefore unchristian.

We should like to know who has been financing the revolutionists in Mexico and Honduras. Armies, even small ones, are costly. Madero had but little money, and it must have been spent long ago. Bonilla's resources were only enough to start the movement which is soon to make him president of Honduras. The Mexican insurgents' base of supplies is admitted to be on our side of the boundary; Bonilla and Christmas began their work in New Orleans. Both movements have already required the expenditure of large sums of money. A careful examination of the published record does not disclose the source of the funds.

It is just as well that Governor Baldwin withdrew his threat to sue Mr. Roosevelt for libel. It would not have been to edification, whether the Governor or the ex-President got the better of the suit, and it is not likely that the Governor could have proved the libel. Indeed, Mr. Roosevelt stands by his facts, and the Governor concludes that the ex-President meant no wrong.

It is a special task of the Harvard Observatory to take repeated photographs of the starry heavens. Professor Pickering reports that by referring to his plates he finds that the new star burst out between November 19 and 23, and that before it was detected December 30 it had declined two whole magnitudes. What a pity it could not have been then seen; and what a chance Mrs. Fleming, the Harvard expert, lost.

Professor Schaeffer, Superintendent of Public Schools for Pennsylvania, says that our system of education is developed into a quartet of "balls"—foot-ball, base-ball, evening balls, and "highballs." *The Catholic Standard* adds a fifth, the college yell, which is surely a *bawl.*

The country is indebted to Senator Root, tho not to him alone, for his plain, stern denunciation of the bribery which gave Mr. Lorimer his seat in the Senate, but which is too flagrant to allow him to keep it. He would do well to fly before he is forced out.

Insurance

Deaths by Accident

THE Chicago *Tribune* annually prepares a table of deaths from accidents during the year. The figures for 1910 just published are interesting both to the insurance companies and to the persons who are considering the taking out of accident insurance policies. The following is a list of the different causes and the numbers killed during 1910 in the United States:

Drowned	5,112
Burned to death	3,562
Railroads	3,520
Mines	1,004
Explosions	951
Automobiles	920
Storms	265
Asphyxiation	239
Lightning	199
Electrical	189
Elevators	112
Total	16,073

The record of death by accident of various sorts in foreign countries for the past year was very heavy. The earthquake which destroyed Cartago, Costa Rica, is estimated to have killed 1,800 people. During the floods in Japan 1,000 inhabitants lost their lives. Other heavy losses during the year were the fire at the Brussels Exposition, 300 killed; the cyclone and cloudburst near Naples, 200 killed; the cyclone at Milan, 60 killed; a mine explosion at Palan, Mexico, 200 killed; a shipwreck at Chindo, Korea, 210 drowned; a shipwreck at the Island of Minorca, 168 drowned, and the recent explosion in the barracks at Pinar del Rio, Cuba, where 100 persons lost their lives. To every individual it seems as if he personally bore a charmed life, and that accident insurance were a waste of money. These figures show how frequently and how unexpectedly the catastrophe comes. It is a wise man who has taken steps to provide for such a contingency.

PRESIDENT ASA S. WING, in his report to the policyholders of the Provident Life and Trust Company of Philadelphia, makes an interesting statement in regard to the relative popularity of life and endowment policies. Twenty years ago the proportion of life to endowment policies in Great Britain was about 13 to 1, and now it has changed to about 2 to 1. In the United States twenty years ago the proportion was about 3 to 1, and has changed very little since. In Great Britain it would seem that the endowment policy was slow in gaining popularity, while in this country it met with more immediate success. The endowment policy is undoubtedly the better of the two. Term insurance is of course better than none at all, but there is not the incentive to keep the policy in force which is afforded by the constantly increasing value of the endowment policy. The advantage of the endowment policy is that it not only protects dependent relatives against financial want in case of death, but also provides a capital that may be used when the insured retires from work in later years.

THE loss by fire in the United States and Canada for 1910 was $234,470,650, or an increase of more than $30,000,000 over 1909. December losses were exceptionally heavy, aggregating $21,528,000. Thirty-six fires caused a damage of $500,000 or more, and in ten the loss exceeded $1,000,000 each. In only three preceding years have the fire losses been heavier than 1910, one being the year of the Chicago and one of the San Francisco fire.

THE annual per capita fire loss in the United States is $2.47. In Europe the average is 33 cents, varying from 12 cents in Italy to 49 cents in Germany. Fire loss in the United States is one of our national extravagances.

IN 1905 the fire loss in California was $4,000,000; in 1906 it was $127,000,000, and in 1907 it was $5,000,000. Can any figures be a stronger argument to insure in a company with a strong reserve?

FINANCIAL

News Affecting the Market

FOLLOWING the announcement, on the afternoon of the 31st, that $75,000,000 would be expended during the next five years in double-tracking the lines of the Harriman system from the Missouri River to the Pacific, the stock market broadened and prices advanced. Net gains for the week were 3 or 4 points, and the total rose from 2,174,000 to nearly 4,000,000 shares. The stimulating effect of this railroad news obscured the report of the Steel Corporation (made known on the same day), which showed that the December quarter's net earnings had been only $25,990,978, or less by $11,000,000 than those of the quarter immediately preceding. The course of earnings for two years is shown below:

Quarters.	1909.	1910.
First	$22,921,268	$37,616,876
Second	29,340,491	40,170,960
Third	38,246,907	37,365,187
Fourth	40,971,309	25,990,978

It should be said, however, that the Corporation's business has recently shown marked improvement, orders for January having increased by one-third. This addition does not include the large new contracts for rails. Moreover, the transcontinental double-tracking will require 50,000 tons of rail annually for five years, with much steel for bridge work, etc., in addition. But what may be called the moral effect of the new plans of the Union Pacific and Southern Pacific was greater than the effect of a prospective larger output of steel products. These great companies, not waiting for a settlement of the rate controversy, undeterred by fear of legislation or any difficulty about raising funds, decide to go ahead, believing that they will be treated justly, and confident that the growth and development of the broad region which their lines serve will not be interrupted.

....Robert J. Hillas, who has just been elected president of the Fidelity and Casualty Company, in place of George F. Seward, deceased, was born in New York in 1859 and entered as an office boy the service of the Fidelity and Casualty Company in October of 1876, the very year the company was organized. Mr. Hillas became assistant secretary in 1880, secretary in 1888, treasurer in 1893 and vice-president in 1903. Accident, plate glass, boiler and burglary insurance, and insurance against loss by defalcation and against loss by defaults of principals under bond are part of the business of this company. The thirty-fifth annual statement shows a capital stock of $1,000,000, surplus to policyholders $2,945,695.84, and assets $9,895,430.25. The first president of the company was Thomas A. Davies, who was followed in 1880 by William M. Richards, and by George F. Seward in 1892. The board of directors, in addition to the president, includes such well-known gentlemen as William P. Dixon, Alfred W. Hoyt, George E. Ide (president of the Home Life Insurance Company), William G. Low, Frank Lyman, John G. McCullough, William J. Matheson, Alexander E. Orr, Henry E. Pierrepont, William H. Porter, Anton A. Raven (president of the Atlantic Mutual Insurance Company), John J. Riker and W. Emlen Roosevelt.

....The following letter from J. G. Wood, of the United States Land Office, Department of the Interior, Topeka, Kan., will be of interest:

"In your issue of January 5, 1911, you say: 'The Chemical was the one bank in the United States that did not suspend specie payments during the panic of 1857.' The verities of history should be sacredly guarded by each citizen, and with this in view I am pleased to inform your honor that the Monongahela Bank of Brownsville, Pa., now the Monongahela National Bank, did not suspend specie payments in 1857; and during the Civil War redeemed its notes in gold dollar for dollar. Its cashier from 1842 to 1872, the year of his death, was David S. Knox, father of Philander C. Knox, Secretary of State of President Taft's cabinet. The bank is today one of the soundest financial institutions in this country. I might mention in passing that the Bank of Pittsburg did not suspend specie payments during the panic of 1857. I would not take one jot from the honors due the Chemical Bank and its successor, but would simply remind you that there are others of equal ability and integrity in financiering."

"Very respectfully,
"J. G. WOOD."

The Independent

VOL. LXX NEW YORK, THURSDAY, FEBRUARY 16, 1911 No 3216

Survey of the World

The Reciprocity Pact

Delegates to the Pan-American Commercial Congress heard President Taft and Speaker-elect Champ Clark announce, on Monday, that they favor reciprocity, not with Canada alone, but with South and Central America. Informal discussion of the terms of a Mexican agreement has already been entered upon by members of the State Department and the Mexican Ambassador. Mr. Clark declared: "I am in favor of reciprocity with all the nations." "So am I," said the President, and proceeded to discuss concrete cases.——The President has hinted to Senators that the reciprocity agreement with Canada must come to a vote, or there will be an extra session. The House Committee on Ways and Means has favorably reported it and passage by the House was expected to take place February 14. Previously the Democratic members voted to ratify the agreement. In the Senate, Mr. Beveridge fired the first gun in the fight, declaring for the Administration measure; welcoming the compact as the first concrete evidence of the establishment of relations such as he thought we should maintain with a people so near to us geographically, in kinship and in interests. The details of the agreement he regarded as of small significance in comparison with the principle involved. "Progressive" Senators may follow, reluctantly, Mr. Beveridge's lead.——President Taft, addressing a joint assembly of the Illinois Legislature, February 11, declared that the very principle of protection was menaced by those who persistently oppose reduction aimed to reduce the cost of the food supply. He also spoke of the benefit to American millers that must follow the free movement of wheat. The President has made other speeches in favor of reciprocity at various Illinois, Indiana and Ohio towns. At Columbus he declared that reciprocity would benefit farmer and manufacturer alike, not forgetting the railways. He is optimistic in regard to the outlook for the agreement. Secretary of Agriculture Wilson, in an open letter addressed to the legislative committee of the National Grange of Concord, N. H., defends the agreement against the charge that it opens our markets for meats and grains to the Canadians, with nothing in return. "We get into the Canadian woods for timber products," says the Secretary, "ninety millions or more of us. . . . Southern States have a new market for their cottonseed oils. . . . Canada opens her doors to our fruits," he added. At Ottawa, indeed, a large delegation of Ontario and Quebec fruit growers and vegetable men has waited on the Government to protest against just this circumstance. The Saskatchewan Grain Growers' Association, on the other hand, representing 8,000 Canadian farmers, has unanimously endorsed the agreement. In the Dominion Parliament Mr. Monk, leader of the Nationalist wing of the Opposition, moved for a delay in order to permit members to confer with their constituents. The proposition was overwhelmingly lost. The long historical address by Mr. Borden, leader of the Conservative Opposition, which tended to show that the present agreement negatives Canadian efforts to build up trade east and west lines instead of north and south lines, failed to made a deep impression. The Government has denied that the agreement would adversely affect "imperial preference" and British trade. "The range of manufactures affected is comparatively small,"

says Mr. Fielding, Minister of Finance; "and in most cases the reductions are small." Mr. Fielding also cabled to the Canadian High Commissioner in London a statement that the reciprocity agreement has been misconstrued by Unionist press and politicians.

Other Votes by Congress

The Sixty-third Congress will have 433 members—an increase of 42. The Crumpacker bill, providing for reapportionment on this basis, was passed by the House, among scenes of disorder, February 9. "It will be easier to maintain order if we increase the size of the House," remarked Mr. Olmsted (Pa.), with obvious sarcasm. Previously, a substitute bill offered by Mr. Campbell (Kan.), proposing to maintain the membership at its present total, was voted down, 131 to 171. Democratic members opposed the Campbell bill, and so did many "regular" Republicans, who disregarded the caucus action reported in the "Survey" of February 9.——The Senate has passed the army appropriation bill ($93,678,582), involving the creation of a corps of army dentists, and has concurred in the House amendments to Senator Cullom's bill providing for the erection in Washington of an appropriate monument, costing $2,000,000, in memory of Abraham Lincoln. The bill now requires only the President's signature to make it a law.——The House has passed the Lowden bill, providing for the purchase of buildings for American embassies and legations abroad, a measure sure to go thru the Senate. Representatives Lowden and Longworth earnestly advocated the measure, to carry out whose provisions $5,000,000 will eventually be required.——The Panama Pacific Exposition of 1915 will surely be held in San Francisco, for, following the example of the House, the United States Senate has voted in favor of the California city. The resolution now goes to the President.

The Election of Senators

Mr. Borah has served notice that he will keep the constitutional amendment for the direct election of Senators before the Senate from now on. Three important speeches were made on this subject last week. Mr. Root (N. Y.) opposes the joint resolution on the ground that it weakens the State legislatures at the moment when they most need strengthening. "I fear," he said,

> "the breaking down of the Federal Government, thru the accumulation of demands upon it, and the failure of State Governments to do their part. . . . The policy of a century is against such a change."

Senator Root added that few of the amendments actually made to the Constitution had worked out as had been anticipated. Mr. Lodge's opposition to the measure is based on the allegation that its passage would mean having two Houses of Representatives and no Senate, and would be, not a progressive, but a retrograde step. Mr. Bristow (Kansas), in reply, asked how the Massachusetts Senator could hold such a position when

> "there are, in a number of States, deadlocks in pending Senatorial elections, caused solely by the dogged and persistent determination of certain powerful interests to control the election of Senators from those States?"

He added:

> "Unless a change is made, not only in the method of electing Senators, but also in the manner of selecting delegates to the national conventions, the rising tide of unrest and dissatisfaction . . . will rapidly increase."

"I am not afraid of the mob," continued the Kansas Senator. As for present conditions:

> "The Illinois election . . . is but a sample of the legislative debauchery that has occurred in recent years in numerous Senatorial elections. During the last forty years the Senate has had under consideration fifteen cases where corruption was charged in the election of Senators, while during the preceding eighty-four years of our history there had been but one such case. This plainly demonstrates that the system adopted by the framers of the Constitution worked well till radical changes occurred in our industrial and commercial life, but that under present conditions it is breaking down"

Mr. Curtis, Mr. Bristow's senatorial colleague, takes issue with this view. ——The Delaware House unanimously voted, February 8, a resolution urging Congress to amend the Constitution so that United States Senators may be elected by direct vote. The resolution is expected to pass the State Senate also. The Iowa House defeated, on the same day, a bill for a special primary election to select a successor to the late Senator

Dolliver. Balloting for Senators from Iowa, Colorado, Montana, and New York continues to be indecisive.

The Illinois Scandals

Mr. Bailey, Mr. Lorimer's Democratic champion, recently criticised on the floor of the Senate the electoral record of Senator Cullom, senior Senator from Illinois. Mr. Cullom replied, February 8, both to the attacks upon himself and the slurs cast by various speakers upon the "fair name" of Illinois. Mr. Cullom was first elected to the Senate in 1882. He declines to commit himself in regard to the case of his colleague.——Senator Jones (Washington), regarded as a personal friend of Mr. Lorimer, has declared against accepting the committee whitewash, while holding that the Illinois boss was not directly implicated in the bribery of members of the Legislature.——Senator Fletcher (Florida), a signer of the majority report in this case, has defended the conclusions of that report in a carefully prepared address.——Senator Burton (Ohio) is persuaded that Mr. Lorimer should be excluded. In a speech in the chamber he said that seven of the 108 votes cast for him were corrupt; and 101 votes would not be sufficient to elect. Furthermore, the probability was that a larger number of corrupt votes was cast than is now conceded. From no standpoint, he concluded, was Mr. Lorimer entitled to his seat.——Senator Bailey renewed his defense of his colleague, Lorimer, February 13. He charged Senators Root, Cummins and Borah of misquoting the testimony in the case, and characterized Mr. Lorimer's first "defamers" as "hounds of hell." There was a large and interested gallery, but the Texas Senator's speech will have no practical effect whatever upon the controversy.——One great difficulty in the election fraud cases of Vermilion County, Ill., is that Danville is rent by factions. The so-called "Federal crowd" (the Speaker's friends), the other Republican group, called "the Young Turks," and the three or four Democratic factions, make the prosecutor's task a difficult one. However, the Grand Jury returned 216 true bills February 10, and requested that Speaker Cannon come from Washington to go on the stand. The indictments are based on perjury and subornation of perjury. They include bills against Frank W. Jones, City Attorney, and Hardy H. Whitlock, former County Treasurer. The latter is charged with embezzlement and malfeasance, and has been placed under arrest at his residence in Detroit, Mich.

Cuba and the Philippines

Madrid newspapers have been led to believe that the board of engineers superintending the raising of the wreck of the "Maine" has made a report to the effect that the explosion was of internal origin. They urge their Government to have this "exoneration of Spain" translated into all the languages of Europe, and to circulate 2,000,000 copies of it. Of course, no such report has been made. The chief of the board says that evidence as to the origin of the explosion cannot be obtained before the end of the present year. Owing to exhaustion of the appropriation, work at the wreck has now been temporarily interrupted.——Cuba's new Territorial Bank, for the promotion of agriculture by means of loans on easy terms to planters, has been opened for business.——A considerable increase of the number of Filipinos taking civil service examinations in English was reported for last year. Exclusive of the non-educational examinations for skilled laborers, the increase was 861, or 24 per cent.——The bill providing for the punishment of spies, which was suggested by the attempted purchase of plans of the defences of Manila Bay, has been past by the House, at Washington.——The transfer of the naval repair plant from Cavité to Olongapo indicates, it is said, a final decision by the Navy Department in favor of Olongapo as the main naval base in that part of the world. Such action has been opposed by the War Department for several reasons, one being that the land defense of Olongapo would be extremely difficult.

Suppressing a Revolution in Haiti

President Simon, of Haiti, has been suppressing a revolutionary movement by severe measures. The insurgents began their work by tak-

ing possession of two or three towns in the northern part of the republic. They were followers of General Le Conte, who, as Minister of the Interior under Simon's predecessor, was responsible for the summary execution of ten prominent residents of Port au Prince, two years ago. President Simon at once took the field, accompanying his troops to the northern towns. One after another, insurgent generals fell into his hands, were quickly tried by drumhead court martial, and promptly put to death. The first to be removed was General Montreuil Guillaume, who was captured as he was planning an attack upon Cape Haytien. This was on the 5th. Three days later, General Millionard, General Apollon and five more whose names are not given, were executed. Millionard had been a leader of much influence. On the 11th, General Chapuset, who had captured the town of Quanaminth, and General Codio, commander at Fort Liberté, met a similar fate. Then the bishop of the northern district protested against this kind of warfare, and Simon said it should be discontinued. At about the same time he was advised by our Government that such measures were not acceptable to the civilized world, and was urged to prevent the execution (during his absence from the capital) of the revolutionists or suspects in prison at Port au Prince. On the 11th, an official proclamation declared that the revolution was ended. All the foreign consulates were crowded with refugees. Le Conte had found shelter in the German consulate at Cape Haytien. Three French cruisers had come to Haytian waters from Martinique.

The Insurrection in Mexico

After Colonel Rabago had fought his way into Juarez and reinforced the small garrison there, Orozco, the rebel leader, refrained from attacking the city. It was said that he had quarreled with another commander, who had a smaller force about thirty miles eastward. There were skirmishes in the vicinity of Juarez, whenever Rabago went out with a few of his troopers, and the proceedings were watched with much interest by many Americans on the other bank of the Rio Grande. American reporters went over and interviewed Orozco, and some of them journeyed many miles south of Jaurez in automobiles. General Navarro, with 700 seasoned Government soldiers, was slowly and cautiously making his way northward to Juarez, building railway bridges and repairing railroad track as he moved along. At the beginning of the present week he was 45 miles from the city, and Orozco had not attempted to restrain him.——In Sonora a force of insurgents was beaten, on the 6th, and twenty-four of them were killed. Two days later, in Picachio Cañon, 50 miles southeast of San Diego, the insurgents were defeated with a loss of fifteen. On the other hand General Luque, attacking in two successive days the insurgents intrenched at Mulata (near Presidio, Tex.), was repulsed and lost twenty men. The insurgents were commanded by Francis S. McCombs, an American, of Seattle, a soldier of fortune who was in the Nicaraguan revolution. Bullets whistled over the heads of American cavalrymen on the other side of the river. On the 11th, Mexicali, in Lower California, was again taken by Bertholdt, the Los Angeles Socialist. Governor Vega (of that province) published a statement, saying there was no rebellion, but a disturbance due to Americans, "their newspapers and their Socialists." In Guadalajara, Governor-elect Gallardo (of the State of Jalisco) was reported to have said in a public address that the insurrection was supported by the United States, which was trying to do what it had done in Cuba. When complaint was addressed to the Mexican Foreign Office, he denied that he had said anything of the kind. ——On the 8th the Mexican Minister of War signed the following telegram:

> "The Mexican Government has never attached, nor does it now attach, any importance whatever to the present seditious outbreaks, which are confined entirely to the State of Chihuahua. The military situation is favorable to the Government in every sense of the word. Order will be restored within a very short time, in spite of the efforts of certain organs of the press to create distrust."

Upon complaint of the Federal authorities, a warrant was issued on the 13th for the arrest of Francisco I. Madero, the "Provisional President," who was

said to be in El Paso. This was done because letters from him, dated at El Paso on the 12th, had been found in the possession of Colonel Casillas, an insurgent officer arrested for violation of the neutrality laws.——In Honduras, President Davila and Manuel Bonilla agreed, on the 8th, to an armistice. Some delay had been caused by Bonilla's demand that he should be permitted to occupy Puerto Cortez. Davila finally yielded, and General Lee Christmas took possession of the port. In the conferences, which will be held on the gunboat "Tacoma," our Government will be represented by Thomas C. Dawson, Minister to Panama, who left Washington for Honduras on the 13th. No action upon the loan convention has been taken in our Senate.——Guatemala, desiring to negotiate a loan of $30,000,000, is considering the offers of three New York syndicates.

South America

Reports from Paraguay say that President Jara is about to close the session of Congress and proclaim a dictatorship, because Congress has declined to make an inquiry concerning the public funds. Jara seized the Presidency in January last, forcing President Gondra to resign.——Chili's naval construction program was affected, last week, by a rumor, current in Santiago, that Peru had bought two of our battleships, the "Iowa" and the "Oregon." This report followed the announcement of Peru's purchase of two submarines and 55,000 rifles. Our Government, it is officially declared at Washington, does not intend to sell either of the two battleships.—— Señor Herrera, Colombia's Minister of Foreign Affairs, says, in a signed cablegram, that the report about a secession movement in the three great coast provinces "is entirely without foundation." It is asserted by others, however, that the three Provinces, while they do not intend to secede, will demand a federal system, in order that they may have home rule instead of government by residents of the interior Provinces, sent to them from the capital.——Our Government is making an inquiry about Ecuador's negotiations with a French syndicate for a large loan.

The British Parliament

The new Parliament was opened on February 6 with the usual ceremony by King George and Queen Mary. The royal declaration was given in its revised form, the words offensive to Roman Catholics, alluding to the mass as idolatrous, having been eliminated, so it now reads:

"I do solemnly and sincerely, in the presence of God profess, testify and declare that I am a faithful Protestant, and I will, according to the true intent of the enactments which secure the Protestant succession to the throne of my realm, uphold and maintain the said enactments to the best of my powers according to law."

The King's speech was brief and remarkably non-committal. Evidently Premier Asquith was unwilling to disclose his plans until he was ready, for the only reference to proposed legislation was the following:

"Proposals will be submitted to you without delay for settling the relations between the two Houses of Parliament with the object of securing the more effective working of the Constitution. Measures will be presented to you in pursuance of the intentions already declared for carrying out and extending the policy initiated in previous Parliaments by securing permanent provision for old age pensions for persons previously disqualified by receipt of poor relief and by providing for the insurance of the industrial population aganst sickness and invalidity and insurance against unemployment of those engaged in trades especially liable to it. Bills dealing with other measures of importance will be introduced and proceeded with as time and opportunity allow."

No mention was made of Canadian reciprocity, but it became at once evident that the question would become the leading one of the session. It was raised by Mr. Balfour in the first speech of the Opposition in the discussion of the Speech from the Throne. He said that it would mean disaster to the British Empire if the proposed agreement between Canada and the United States were carried out. Mr. Asquith in reply said that he heartily wished that Mr. Balfour had not referred to the reciprocity agreement. It would not be wise for Parliament to criticise a matter which was to be carried out by Canada and the United States on their own responsibility. He would say, however, that it was as certain as the rising sun that sooner or later the United States would

have been bound to level the tariff wall separating them from Canada. At the next session Austen Chamberlain moved a resolution expressing regret that the persistent refusal of the Government to modify the country's fiscal system is imperiling the advantages at present derived by British commerce from the preference granted by the British dominions over the seas, has deferred closer commercial union of the empire, and deprived the country of the most effective method of inducing foreign countries to grant fair treatment to British manufactures. Mr. Chamberlain said that Great Britain was threatened with a great loss of trade. Premier Asquith, in his reply, asserted that the reciprocity agreement did not affect any article in which the United Kingdom was seriously concerned. The tariff reform proposals of the Unionists he characterized as one of the greatest and most disastrous political impostures of modern times. Under such a system of preferential duties as the Opposition proposed, the Canadian farmer would receive less for his corn and pay more for his agricultural machinery, which, under the agreement he was about to get cheaper from the United States. At the same time the British consumer would be compelled to pay more for the necessaries of life. Was that the way, he asked, to cement the empire? Even had the British Government entered upon the suggested bargain, what was to prevent the 90,000,000 people in the United States from toppling over the whole fabric by lowering their own tariff walls? It would take a long time, he thought, to kill the protective movement in this country, but he believed that the obsequies of imperial preference were now being celebrated. When the Chamberlain resolution was put to a vote the Government was sustained by 324 to 222. This is a very favorable showing for the first test vote of the new Parliament. The Irish Nationalists, who have hitherto abstained from voting on fiscal questions, went solidly for the Government, as did also the Labor members.——The English press is largely occupied with the reciprocity question. The Liberals are inclined to regard it with favor as a step in the direction of free trade. The tariff reformers of the Unionist party see in it a blow at the integrity of the empire comparable to the Napoleonic campaign or the German peril. According to them, the agreement would raise the cost of living in England while lowering it in the United States, and would open the Canadian markets to American manufactures while shutting out the British. But neither Liberals nor Unionists see what they can do about it.

The Constitution of Alsace-Lorraine

The bills for the establishment of a new form of government for the annexed provinces are still in the Reichstag and not meeting with a very favorable reception from any party. Chancellor von Bethmann-Hollweg refuses to be drawn into discussions of abstract theories on government and advocates his plan simply on the ground that it is the best thing that can be done under the circumstances, following the direction marked out by Bismarck. In reply to the criticism that he had proposed for Alsace-Lorraine a more liberal franchise than he was willing to grant to Prussia, he declared that Prussia occupied a peculiar situation in the Empire and must make its franchise according to its own needs:

"If Prussia, in accordance with Radical wishes, equipped herself with a franchise which gave the masses control over Parliament, and so control over the Government, if the Prussian Ministry, and with the Prussian Ministry the Imperial Chancellor and his representatives, were to change with the temper of Parliament, or, at any rate, with every turnover at the elections, if the presiding power and the direction of Imperial policy—for the direction of Imperial policy goes with the use of Prussia's votes in the Federal Council—were to be deflected now this way, now that way, according to the dictation of the Prussian Parliament, why, gentlemen, that would be equivalent to the disorganization of our Empire!"

——The proposed constitution is an ingenious combination of checks and balances. There are two chambers. The senate or upper chamber has a class representation. Half of its thirty-six members are appointed by the Emperor on recommendation of the Federal Council. The other eighteen are ex-officio members, consisting of the heads of the Catholic, Protestant and Jewish communities, three representatives each of the agricultural organizations, the chambers of commerce and the proposed new

labor chambers, a representative of the University of Strassburg and several members of the local government. The second chamber consists of sixty deputies elected by universal and direct suffrage with secret ballot, the franchise being extended to all subjects of the Empire over twenty-five years of age, provided that they have resided in their commune or constituency over three years, or hold land on which they have resided for one year, or pursue a permanent trade or agriculture on their own account, or hold public office, or are engaged in legal practice or in ecclesiastical or scholastic service. Two votes are allowed to electors over thirty-five and three votes to electors over forty-five years of age. The Governor is appointed by the German Emperor.——This measure was subject to attack from both sides of the Reichstag. The Conservatives objected to the democratic constitution of the lower chamber and the Radicals to the form of the upper chamber. The people of Alsace-Lorraine are disappointed that the Reichsland is not made one of the Federal States, with a representation in the Imperial Government. They do not regard the proposed constitution as an improvement, but rather as a step backward from the existing government. It would be, they say, a regime of Prussianization instead of Germanization. The disaffection in the provinces has caused a revival of French patriotism.

Famine and Plague in China

With thousands dying of the bubonic plague in the north and hundreds of thousands starving in the south, and the capital in a political turmoil, China is in a pitiable condition, and little can be done to relieve it. To carry a million people thru the next five months until a new harvest can be reaped is an impossible task even for the Red Cross Society, and as for the plague science is powerless to stop it and can check its spread only under favorable circumstances. No cure for it has yet been discovered. The serum treatment is ineffective against the unusually malignant form prevalent in Manchuria, where almost all cases prove fatal within a short time. The disease is conveyed mostly from rats to human beings by means of fleas, but domestic animals such as dogs and cats and wild animals like squirrels and gophers may harbor the germs and therefore the disease may remain latent in a locality without its existence being suspected. The present epidemic dates from 1894, when it appeared in the Province of Yunnan, China, and made its greatest ravages in India, where it caused some 6,000,000 deaths. In Harbin during the past few weeks there have been 6,000 victims, of which a thousand lived in the Russian quarter. The Russian physicians and nurses stationed there mostly deserted their posts on the outbreak of the plague and went back home. The insufficiency of the medical force and the impossibility of enforcing sanitary regulations in the Chinese quarter account for the spread of the disease. It is impossible to get enough men at Harbin to take care of the sick or to bury the dead, for the death rate among those engaged in this work is appalling. Stacks of bodies are burned daily outside the city. Outbreaks in other Manchurian towns are reported and the plague has invaded Siberia. At Blagovieshtchensk, just across the Amur from Manchuria, is reported to be infected, and Amur Territory, from Lake Baikal to the coast, is closely guarded, for if the disease should gain a foothold here it might easily spread by means of the Trans-Siberian Railroad into European Russia. The Crown Prince of Germany, who was on his way to the Far East, has changed his plans on account of the plague, and will return home. The Chinese Government had appropriated half a million dollars to the entertainment of the Crown Prince, but now this money will be used in fighting the plague.——The floods in the Province of Kiang-su have destroyed the subsistence of a large part of the population, and it is reported that a million or more are in danger of starvation. In several of our States the Governors have issued proclamations calling for aid, and Congress authorized the use of the transport "Buford" to carry food and clothing to the sufferers. The ship will sail from Seattle February 25, laden with the supplies collected by the American Red Cross Society.

A Solution of the Tariff Question

BY FRANCIS G. NEWLANDS

United States Senator from Nevada.

LIKE the poor, the tariff question we have always with us. It will not out or down. It is not only disturbing and distracting to the country at large, it is a constant menace to the party in power and a dangerous temptation to the party out of power. It is the pet of politics, yet politicians as well as the public earnestly wish that it might be forever put wholly outside the political arena. It is a constant perplexity which both parties are now engaged in efforts to eradicate.

In his recent message to Congress the President persists in urging a permanent tariff commission and advocates revision of the tariff by limited amendment to the schedules involved. To this suggestion senators of both the progressive and conservative wings of the Republican party have agreed, with the evident conviction that the country is dissatisfied with the present tariff bill and with the methods heretofore pursued by Congress in tariff revision. They realize that radical reform is demanded which will secure just and unprejudiced action without the disturbing conditions now accompanying tariff revision.

All seem to agree that the first step is to secure the services of a permanent, independent tariff commission to investigate the facts relating to the tariff, and some system which will insure decisive action by Congress upon such facts. And it is quite probable that at this session of Congress such a permanent commission of tariff experts will be provided for, with full power to investigate the facts. But whether they will be given the power of recommendation and the power of condemnation, under some rule fixt by Congress, remains to be seen. This, to my mind, is the cardinal feature; the point at which the construction of such a commission will turn either to success or failure so far as the hopes of the public are concerned and the salvation of the tariff question from its present position.

As to the way in which Congress is to be limited and restricted in tariff discussion there is great difference of opinion. The question has already been under discussion for some time on the floor of the Senate. Some insist that there should be a joint resolution binding both houses to deal only with the schedule under discussion for revision; others that it must be an independent rule of each house; and others that it is a waste of time trying to establish artificial rules for future Congresses, which can eliminate them at will, and that the only method is through concurrence and consent of the majority of each house, as the occasion arises. So that it is evident that upon the adoption of a rule to limit and restrict discussion and amendment there will be as much argument as over the tariff itself. There is not much to be hoped for from that quarter. It is contrary to the traditions of the Senate, where both parties have scrupulously preserved the freedom of debate. It would be equally useless in the house, for it is quite probable that a favorable action by the present Republican House would be reversed by the next Democratic House, and thus no progress will have been made.

All the indications show how difficult it will be to establish a method of procedure, yet without it the creation of the tariff commission as at present proposed will be practically without benefit; for if every recommendation by the tariff commission is to precipitate a general revision of the tariff it is clear that the business of the country will be in a condition of perpetual uncertainty and unrest, and the last state will be worse than the first; even if the commission is able to perform and perform well all that is expected of it. There will be one perpetual war, similar to that which existed while the late tariff revision was going on. There will be the same conflicts of sections and interests, the same objectionable methods of trading and compromise, the same

tariff tinkering. The tariff commission as proposed will be of no service at all unless from time to time it makes its findings of facts and recommendations based upon them; but this it cannot do under present or probable conditions without throwing open the whole question of tariff amendment and revision, thus keeping the country in perpetual, instead of intermittent ferment. The conditions will be peculiarly aggravated with a Democratic House and a Republican Senate in session and the usual partisan jockeying for the next presidential race.

If the Republicans of the present session of Congress press the organization of a permanent tariff board and schedule revision and such a measure is defeated by Democratic opposition, it will be incumbent on the Democrats, at the next session, either to frame a tariff-commission bill upon its own lines or to frame a tariff bill upon which, if defeated, in the Senate, it can go before the country. If, on the other hand, the Republican party should pass a tariff-commission bill at the present session without providing for schedule revision, we will then have, with every report of the commission, all the disturbance and unrest created by a general tariff revision resulting in the same unscientific adjustment, as unsatisfactory to the country as ever.

Now, there are four great questions before the nation to-day: The tariff question; the three branches of interstate commerce, namely, transportation, or the railroad question; trade, or the trust question; and finance, or the banking question. Of these the transportation question is nearest to a satisfactory solution, thru the organization of a bipartisan commission; quasi-judicial in character, vested with ample powers and acting decisively under rules fixt by Congress. Congress has the power, of course, if it chooses, to fix all interstate railroad rates; but realizing its incompetency to do this without expert aid, it turned the work over to a railroad commission, prescribing rules for its action. That first interstate-commerce act, passed over twenty-three years ago, was exceedingly guarded in its granted powers; but since that time, upon recommendations of the commission itself and as the outgrowth of experience, Congress has enlarged those powers, and altho every stage in the legislation was vigorously fought by the railroads themselves, with all the influence they could bring to bear, their managers now all declare that they consider the commission an instrumentality for good which they would not, to-day, willingly destroy. Thru a gradual process of evolution railway regulation has quit the field of politics and grown into a science.

Why should we not follow the same plan with the tariff, making a science of it by providing for a tariff commission with powers similar to those enjoyed by the railroad commission, taking the present tariff as a basis of action, and then giving the tariff commission the power, after hearings initiated by the complaints of shippers or by the commission itself, to condemn a rate of duty as unreasonably high and to substitute a reasonable duty therefor, pursuant to the rule prescribed by Congress, giving to such commission also full powers for examination, investigation of cost of production at home and abroad, and recommendation to Congress regarding free and dutiable lists?

The rule of guidance would, of course, be fixt by the party in power. The rule established by the Republican party, during the present session, would naturally be that any existing duty in excess of the difference of the cost of production at home and abroad, with a fair profit to the manufacturer added, should be reduced to such a standard. This would remain the inexorable rule until further orders from Congress. It would simply involve the ascertainment by the commission of experts of the facts, and the application of the rule to the facts, without any further legislation or action of Congress. It would be an infinite relief to Congress, as well as to the country, if we could only have the initiative courage to establish it.

If it is objected that some changes found necessary under such adjustment would be too drastic, after a long period of prodigious protection of a special interest, and it was thought desirable more gradually to bring about the reduction of excessive duties to the standard fixt by Congress, the law can provide for a limit to any individual reduction or that it

shall be made in installments extending over a period of years.

If it is feared that some reduction may be improvidently made, resulting in a flood of importations, to the injury of existing American industries, a safety brake can be provided by directing the President, whenever the importations under a reduced duty increase over a certain percentage, to stay the reduction, and report the same to Congress for action.

In this way we will not only have the ascertainment of the facts and recommendations thereon by a competent board, which all desire, but we shall also have, without further Congressional action involving a renewal of the entire tariff agitation, a scientific process of gradual tariff reduction on all duties which, judged by the standard established by Congress, are found to be excessive.

By creating a tariff commission with such powers Congress will in no way abdicate its own powers regarding customs duties. It can at any time, if it chooses, either with or without the aid of the commission, write a new tariff or revise the existing one, just as Congress can, to-day, if it chooses, make a schedule of interstate railroad rates for the entire country. The railroad-commission bill furnishes a model for the action of Congress in all matters involving minute and scientific investigation. Had we followed the same method regarding trusts that we followed regarding railroads, we should have made much better progress in trust regulation. The anti-trust act was passed twenty-one years ago, about the same time that the railroad commission was organized. The railroad question is practically settled; the settlement of the trust question has hardly been commenced. Had we submitted the administration of the anti-trust act to an impartial, quasi-judicial tribunal similar to the Interstate Commerce Commission, instead of to the Attorney General's office, with its shifting officials, its varying politics, its lack of tradition, record, and precedent, we would by this time have made gratifying progress in the regulation and control of trusts. As it is, with the evasive and shifting incumbency and administration of the Attorney General's office, oftentimes purely political in character, we find that the trusts are more powerful to-day than when the anti-trust act was past, and that evils have grown up till they are so interwoven with the business of the country as to make men tremble at the result of their disruption.

The helpless commission at present proposed, to investigate the tariff question, will not materially aid in the solution of the great difficulty and will have no effect whatever in removing the tariff from politics or relieving the country from constant possibilities of disruption; while the same commission granted the powers of the Interstate Commerce Commission—the powers to which I have called attention—would prove the immediate solution. It may not be possible, however, to secure this; for there is an unwillingness on the part of Congress to create commissions, arising from the false assumption that the creation of a commission means the delegation of legislative power, concerning which Congress is most jealously watchful. But no assumption could be more erroneous. Such commissions act as the servants of Congress to carry out its dictates and are its efficient instrumentalities in exercising its powers. The Interstate Commerce Commission has not only proved this, but has proved, also, a most valuable servant. The perpetual tariff commission will be no less efficient, effective and valuable to the whole country if it, too, can be granted authority to accomplish adjustments instead of simply reporting findings for Congress to discuss.

WASHINGTON, D. C.

Gary—A Creation

BY CHARLES PIERCE BURTON

"GOD didn't create Provincetown," said an old native of Cape Cod to the writer. "It washed there."

The same may be said with double significance of Gary, Ind., a new city which the United States Steel Corporation is creating southeast of Chicago. Topographically, it "washed there" out of the bed of Lake Michigan—a city built in a desert, where a caravan of camels would not seem out of place. It is an actual fact that a few weeks ago, when a moving picture concern wanted a series of views showing an attack by Bedouins on a caravan in the great African desert, camels, Bedouins and all the necessary paraphernalia were sent to Gary. There, adjacent to what in many respects is the most remarkable city ever known, scenes of desert tragedy were rehearsed before the camera.

Four short years ago the United States Steel Corporation, wielding a golden scepter of power almost infinite, looked out over these sands and "saw that they were good." This mighty man-made power then said in effect: "Let there be a great city, where wild fowl now gather by day and wolves howl by night." And there appeared in this wilderness broad, paved thoroughfares, lined with substantial buildings; gigantic mills, numbering their workmen by thousands, arose in wilds which before had been hiding places of Chicago's desperadoes; an electric street railway, phenomenal in its success, sprang into being; a river, which stood in the way, was picked up bodily and moved a half mile; the favorite haunts of sportsmen became thickly populated with human beings; and, lo! in four years, a modern city of 20,000 people, which seems as certain of outstripping Pittsburgh as that two and two make four!

Some philosopher has described Boston as a "state of mind." Gary is an economic condition. Steel can be produced more cheaply in Northern Indiana than in Pittsburgh, and the great distributing market, Chicago, is next door. This is the central idea, around which Gary is building. Therefore, gigantic modern mills. Therefore, conveniences for housing the thousands of employees. Therefore, a modern city, built to order, laid out in advance of any population, to accommodate 300,000 people.

According to a very pretty story that is told, a woman's smile delayed the building of Gary one hundred years. Early in the nineteenth century, it is said, a young government engineer was sent out from Washington to make surveys and locate a suitable harbor on the shore of Lake Michigan. Wolf Lake, a small sheet of water opening into the larger lake just east of the present city of Gary, was the site selected. Ideally situated for the purpose, it lies at the very head of Lake Michigan, the southernmost point of the greatest inland water way of the new world, twenty-five miles nearer the commercial centers of the country than is the city of Chicago.

There, Chicago would have been built, according to Hoosier tradition, but for the fact that a French trader, living at the mouth of Chicago River, had a daughter. The maiden was fair to look upon and the engineer was young. Moreover, she was the only white girl within many miles. From Wolf Lake to Chicago River was a long and tedious sail for an impatient lover. The engineer moved his headquarters and changed his recommendation. America's great inland metropolis was built up around Chicago River in Illinois, instead of Wolf Lake, in Indiana, and the truth of the old saying that "there is a woman at the bottom of it" received another demonstration.

Much was written and published about Gary soon after the start of this unique enterprise in the way of city building. Now, after four years, we are able better to understand the far-reaching plans of the Steel Corporation and to appreciate their significance in the world's economy.

In the first place, commercially speaking, Gary is practically Chicago, spilling

SHACK LIFE IN GARY, 1908.

over into Indiana, although the enthusiastic Garyites would scorn so base a suggestion. Within ten years, perhaps sooner, unless all signs fail, there will be one continuous city, or, rather, a series of cities, so closely built that it will be difficult to tell where one begins and another leaves off, reaching entirely around the lower end of Lake Michigan.

South Chicago, where are situated extensive mills of the Illinois Steel Company, one of the subsidiary companies of the United States Steel Corporation, is not inferior to Gary so far as nearness to the Lake Superior ore fields and the coal mines of the Middle West are concerned; nor with respect to the superb transportation facilities offered by the Great Lakes and the various trunk line railroads leading out of Chicago toward the East. Lack of cheap land and room to grow prevented the building of the proposed new plant at that point. Across the State line, in the wilderness described, were equal advantages for production and distribution, more favorable laws and huge tracts of unimproved land, good for nothing except manufacturing, which could be bought for a few dollars an acre.

It would be interesting and worth while if some one intimately associated with this unique work—perhaps Judge Gary himself—would record the psychology of the enterprise. Seemingly there has been a tremendous expansion of the original plans of the Steel Corporation, which began with the need for a new plant to take care of the Western trade. It seems evident also that this plan must continue to grow indefinitely as further possibilities of the project present themselves and the demand for steel continues to increase.

The city of Gary, of course, is a mere incident in the development of those plans, which contemplated the erection of large mills and the employment of thousands of men in a locality far from human habitation. Men must have houses in which to live, and they must be provided with the necessaries of existence. These mills, moreover, were planned to compete, in the employment of men, with similar industries in old and established cities like Pittsburgh. Unless the new community could offer the comforts and conveniences of a city the steel company would find it impossible to secure the right kind of men at the established wage, if indeed at any price.

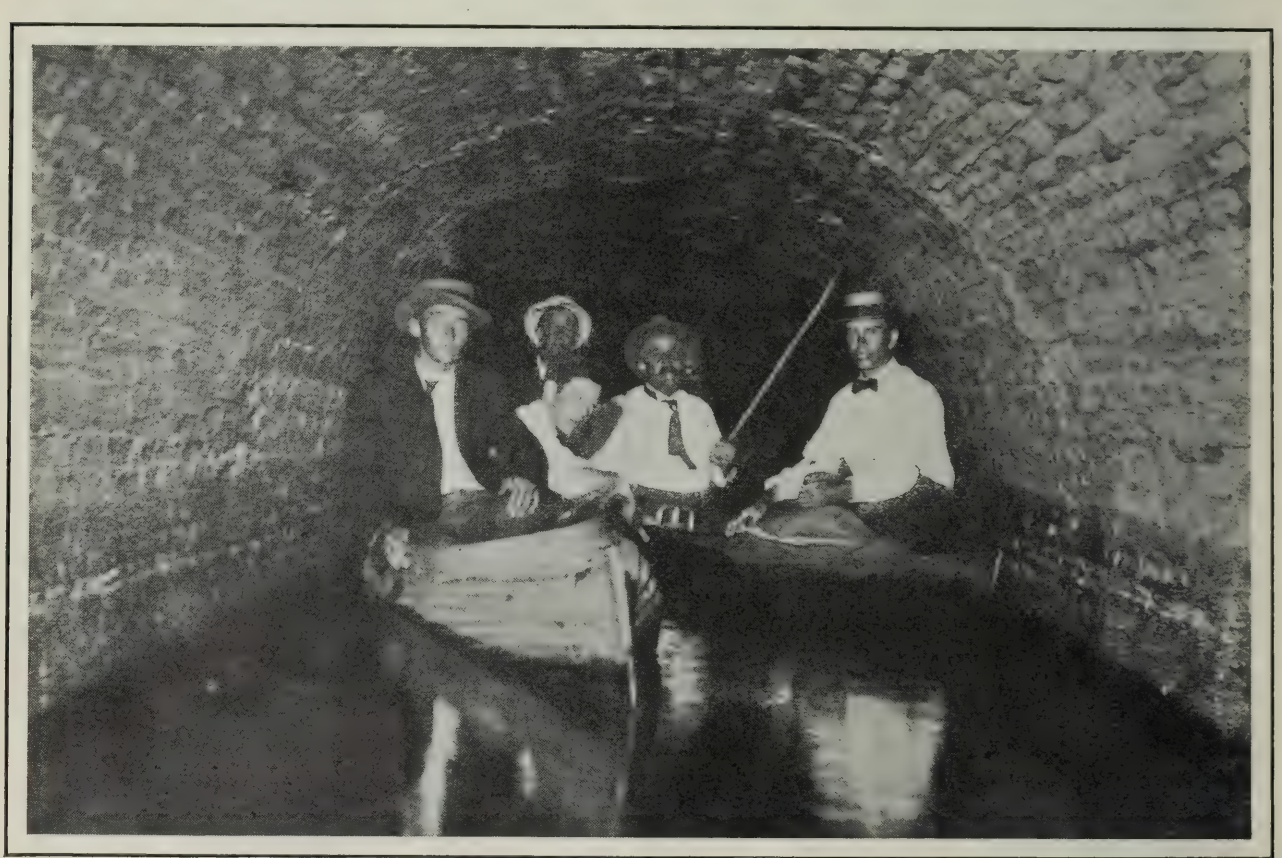
The site of the future city consisted

of ridges of sand from twenty to forty feet high, between which were ponds, or sloughs, famed for their water lilies and wild fowl. Across this desolate tract the Calumet River wound a sluggish course. flowing into Lake Michigan at South Chicago and giving its name to an industrial district which perhaps is developing more rapidly than any other spot on earth. All of the East and West trunk line railroads pass thru this region, paralleling the lake within a distance of a few miles. To these must be added the Chicago-New York Electric Air Line, which at the present time is building into Gary from towns to the east and proposes ultimately to give Gary and Chicago a high speed, electric trunk line service to New York.

Two square miles of this land were platted as the "original town of Gary," named for Judge Gary, chairman of the executive committee of the United States Steel Corporation. The steel company, thru its land holding company, proceeded to level the ridges and lay out a town, with paved streets, an elaborate modern sewer system, planned to accommodate a city of 300,000 people; a water system, with an intake from Lake Michigan sufficient for a city of 300,000 people, and a pumping station with a capacity of 20,000 gallons per day. Ample provisions were made for future extensions to the south, east and west. The land company obligated itself to pave every street in the sub-division. These streets were flanked by alleys, in which all underground work was placed, thus avoiding the necessity of tearing up pavements for gas, water, sewer pipes, etc. There was no population. The only building, the hunting lodge of a Chicago gun club, early gave way to the march of improvement. No better testimony to the far-reaching plans of the Steel Corporation can be cited than these enormous preliminary expenditures.

Two principal streets were laid out: Broadway, to extend south from the gates of the steel mills, one hundred feet wide, with handsome sidewalks of cement, eighteen feet wide, and Fifth avenue, extending east and west, eighty feet in width and with correspondingly broad walks. These pivotal streets of the proposed city were built first of all and given an elaborate pavement of cement,

GARY'S FIFTH AVENUE AS IT WAS FIVE YEARS AGO.



which Broadway and Fifth avenue, New York, for which they were named, well might envy. An unpaved strip was left in the center of the roadway for a future street railroad. There still was no population.

Among numerous picture post cards on sale in the Gary shops is one which shows the intersection of Broadway and Fifth avenue as it looked in April, 1906. Three men, one of them the present Mayor, are seen standing on a sand knoll which is covered with coarse grass. The only visible evidence of a city is an engineer's stake in the foreground, marking the intersection. Today that corner, covered with substantial buildings, is in the midst of a bustling city of 20,000 people, and is valued at $1,000 a front foot.

Sites for future parks, public buildings and schools were reserved and certain portions of the subdivisions were placed upon the market. Meanwhile a township organization was formed, the idea of the Steel Corporation being to build a self-governing community. The town of Gary was incorporated in July, 1906, and at the election for the first board of trustees forty-one votes were cast. Still there was no population practically except an army of workmen changing the face of nature.

To provide homes for some of the more important, permanent employees, whose presence would be necessary as soon as the mills could get in operation, the land company proceeded to build five hundred or more substantial and attractive houses at a cost ranging from $2,000 to $15,000 each, which were either leased or purchased by the men. Private enterprise was keeping pace with these activities, both in the steel company's subdivision and in the territory adjoining on the south, miles of which had been plotted in a perfect fever of speculation.

At the same time great mills were rising, as if by magic, to the north, between the Calumet River and the lake. Thousands of men were working like beavers, changing the topography of the country; elevating railroads and altering their course; moving the river out of the way, so that huge coke ovens might be constructed, and building, building, always building everywhere. First came a city of tents, looking like an armed camp; then a city of "shacks"—rough

THE TOWN BOARD INSPECTS THE SEWER.

THE OLD AND THE NEW.
Gary's original railway station and the new $250,000 structure.

board structures, covered with tar paper, and occupied by squatters or by the land owners temporarily until permanent buildings could be erected. Presently there appeared a substantial town of brick, stone and cement, with every modern convenience. Then, having outgrown a township organization, Gary became a real city, with mayor, aldermen, police and fire departments, etc., and an ambition to annex the entire county.

Gary has been four years in the building. It is not the purpose of this article to go into the details of construction, but to picture the city as it is today, and consider the meaning of what in some respects is the most interesting economic development of all time.

To understand Gary at all one must consider the industries which are making the city inevitable. During the past eighteen months portions of the steel mills have been in operation, construction and operation proceeding simultaneously. The first unit, comprising eight blast furnaces and the mills which will take their product, was fully completed by the last of December. The plans call for sixteen blast furnaces and are capable of indefinite expansion. These uncompleted mills already give employment to more than seven thousand men, and the operating and construction payrolls of the various subsidiary companies of the Steel Corporation in Gary approximate $600,000 a month.

On the lake front, east of the steel mills, a force of 1,200 men have rushed to completion 560 coke ovens, the first unit of one of the largest coking plants in the world. West of the steel mills more than 1,000 men have built the greatest tin plate mills in America, if not in the world. This will be the Gary plant of the American Sheet and Tin Plate Company, which when the various units have been completed are expected to equal in magnitude the steel mills adjoining. The site comprises more than two hundred acres of land. Twenty-three large buildings are being erected as the first unit, and the plant will be capable of indefinite expansion to meet the growing demands of the trade.

Farther west, two miles and a half from Broadway, several hundred men have been at work since April building the first two units of a huge plant for the American Bridge Company, another

GARY'S BROADWAY—HOMEWARD BOUND.

subsidiary company of the Steel Corporation. The shops will employ 5,000 men, and will be second only to the plant of the same company at Ambridge, Pa. Two additional units contemplated will give Gary the world's leadership in bridge construction.

Five miles west of Broadway are the Steel Corporation's cement works, at Buffington, the greatest producers in the world. This plant antedates Gary, altho it is now within the city limits. At the present time its capacity is being doubled. A large tract of land has been reserved for the American Steel and Wire Company, which is planning to build mammoth works in Gary, and another for the National Tube Company, whose proposed blast furnaces and mills will rival in size and importance those of the Indiana Steel Company themselves.

In addition to these, two large independent companies have purchased sites for Gary plants. The American Car and Foundry Company has acquired some two hundred acres adjoining the bridge works, and the American Locomotive Company one hundred and thirty acres east of Broadway. These concerns are customers of the Steel Corporation and are the first of a large number of closely allied industries which naturally will be attracted to the locality, in order to be near the source of steel supply. Each company has prepared plans for enormous shops which will give employment to thousands of men, enough in themselves to build up and support a good-sized city. When the car works begin to go up in the near future, poor old Calumet River will be moved once more and its banks will be straightened.

Hundreds of acres in various parts of the city have been reserved for innumerable smaller independent concerns, which the presence of the larger companies, together with many advantages, will attract. The first of these, the Pittsburgh Nut and Bolt Company will employ 1,000 hands.

These details are mentioned merely to show the reason for the city. The industries already planned, or under construction, eventually will give employment to 60,000 men or more, which would seem to make inevitable a city of 300,000 people as soon as it will be physically possible to construct it.

As for the city itself, it changes so rapidly that frequent visits are necessary to keep pace with the development. For example, a contract was let recently

for 210 houses, to be erected at once for employees of the American Sheet and Tin Plate Company. This one contract called for the expenditure of nearly a million dollars. The houses are entirely of concrete construction, poured one story at a time, something along the plans which Thomas A. Edison has been working out. They are of varied design, however, and very attractive. Steel forms for the liquid concrete were made at Pittsburgh. Fifty-seven train loads of material were required for this unprecedented feat in monolithic concrete construction, which will attract the attention of the entire world.

Work has begun also on from three hundred to five hundred houses for certain more important employees of the American Bridge Company, whose Gary plant began operating the first of the year. Where these houses are to be erected, west of the city, the same scenes are being enacted today which characterized the beginning of Gary four years ago. A second subdivision is being laid out in woods and swamp. A million-dollar sewer is being built. Streets are being cut thru and paved, and into this wilderness Fifth avenue is being extended at its full width. Eventually this handsome, modern thorofare will stretch entirely thruout the seven miles owned by the Steel Corporation.

Broadway is now a splendid business street, five miles long, and for a greater part of the distance is well built up. It boasts a ten minute street car service, five minutes during the rush hours, morning and evening. This street railway company, the Gary and Interurban, already is handling more than 3,000,000 passengers a year.

FOUR YEARS AFTER: BROADWAY LOOKING SOUTH FROM FIFTH AVENUE.

The portable schoolhouses necessary at the start have not been supplanted entirely, but there are several substantial school buildings which would be a credit to any city. The Emerson School, of which Gary is deservedly proud, cost $300,000, and is complete, even to a swimming pool in the basement. A replica of the building will be constructed this year in the south part of the city, where it is greatly needed.

THE RESIDENCE DISTRICT OF GARY TWO YEARS AFTER.
Vanburen street, looking north from Fifth avenue.

A passenger station, used jointly by the Lake Shore and Baltimore & Ohio railroads, cost $250,000. A magnificent hospital building, costing $500,000, was opened by the Steel Company last year. A $200,000 Young Men's Christian Association building, the gift of Judge Gary, is wellnigh completed. Congress has appropriated $125,000 for a Federal building, and the site has been donated. Andrew Carnegie has given $50,000 for a library building, a site for which also has been donated. The Steel Corporation is completing a $1,000,000 breakwater to protect its costly harbor. Thousands of trees and shrubs have been set out and the work of bringing in clay and loam to make lawns possible is far advanced. This improvement will cost $1,000,000 in the first subdivision alone. Fourteen miles of streets were paved last year.

Already Gary has fourteen churches. It has forty social organizations, seven banks and a clearing house, with clearings of more than $200,000 a week. One of several hotels cost $150,000. The people think in millions. New buildings go up on every side as if by magic. Families, the framework of whose houses was started in the morning, have been known to move in at night. One Saturday afternoon recently a church, 20 by 40 feet, was erected and equipped with one hundred folding chairs. The labor was donated. At 1 o'clock the volunteers went to work and in the evening sat down to a supper served in the completed church by the women of the congregation. The next day Sunday services were held. The pastor is a woman. Notwithstanding all that is implied by these activities, it is estimated that not more than half the people employed in Gary can find homes there.

The enormity of this expenditure hardly can be comprehended. It is appalling. What does it all mean? The United States Steel Corporation is not given to philanthropy. It does not expend $100,000,000 in experiment. Gary must be justified on purely economic grounds.

In the first place, it means that, in a way, Chicago was a glorious blunder. Every economic reason existed, and still exists, for the building of a great city at the head of Lake Michigan. Chicago is 26 miles farther from the commercial centers to the east and south, and only a

trifle nearer those of the west. Given equal harbor facilities and an even start, Gary would have been the western metropolis. It means rather a greater Chicago; a line of gigantic industries, bordering the lake from Waukegan on the north nearly to Michigan City on the east—a great beehive of industry and business, spreading 60 to 80 miles into two States.

It means that Pittsburgh, an inland city, farther from the ore supply, soon must take second place as a steel producing center. A local paper points out that by 1913, according to plans already formed, the Gary district, which includes South Chicago, will have eighty-six blast furnaces, and the city of Gary alone forty-six. The Pittsburgh district, with more than a half million of population, has fifty-six at the present time.

Gary means that, in the United States, commercial and industrial supremacy is shifting to the Middle West. Chicago is practically the center of population; it is the center of investments in manufacturing; the center of banking capital and of farm values. In ten years its bank deposits have increased more than 100 per cent. In ten years more this section will show a development of which the founders of this Government had no conception.

Gary is the culmination of the great economic movement toward consolidation and the elimination of waste in every form, which has characterized the beginning of the twentieth century. It means that the greatest inspiration toward beauty and cleanliness in municipal life will be economic rather than esthetic in its origin. Gary will be comparatively clean and in time beautiful, not because the United States Steel Corporation loves cleanliness and beauty, but because smoke and soot spell waste. Cleanliness is a by-product. Heretofore smoke has been considered inseparable from the manufacture of steel. Pittsburgh, with all her magnificence, is known as "the smoky city." The steel mills in Gary have been in operation two years and there has not been smoke enough to incommode the citizens.

The motive power of the mills is electricity, generated by means of gas engines. From central stations, costing millions, electric power will go out to all the subsidiary and allied industries. The water works are operated by electricity. Here are assembled the greatest dynamos and gas engines on earth, producing power which can be expanded indefinitely and inexpensively, for it is waste converted into energy. The gases, thrown off in the smelting of iron ore and hitherto to a great extent dissipated, are collected and converted into power and light. In like manner the enormous quantities of gas, which will be liberated when the hundreds of coke ovens begin operations, will be burned to make more coke and to make more heat, light and power. These coke ovens, nearly completed, will produce as a by-product gas enough to light the city of Chicago.

Surely in Gary we see the so-called trust at its best. The old order of things is passing away. Man, the conqueror, and man, the liberator, takes on new dignity and glory as man, the creator.

CHICAGO, ILL.

A Moral Axiom

BY KELLY MILLER

I HATE a cat, the very sight
Of feline form evokes my wrath,
Whene'er one goes across my path
I shiver with primeval fright.

And yet there is one little kit
I treat with tender kindliness,
The fondled pet of darling Bess;
For I love her, and she loves it.

In earth beneath, as Heaven above,
It satisfies the reasoning,
That those who love the self-same thing
Must also one another love.

Then if our Father loveth all
Mankind, of every clime and hue,
Who loveth Him must love them too:
It cannot otherwise befall.

WASHINGTON, D. C.

A Year of Aviation

BY HENRY WOODHOUSE

WHEN the year 1910 opened, the aviation world was proudly boasting of having reached a stage of progress where aeroplane flying could be regarded as "an actual thing," and for that reason there was enthusiasm and hoping, and prophets ventured to predict big things to come. The records for the year before, 1909, were indeed remarkable. In twelve months there had been made nearly 400 flights by over fifty different aviators, using twelve different types of aeroplanes; and these flights included such, then extraordinary feats, as Henri Farman's flights of over two, three and four hours; Lieutenant Lahm's flight of three hours; flights of over two and one-half hours by Delagrange, Paulhan, Farman, Rougier, Sommer and Wilbur Wright, and a number of one-hour flights by different aviators. Besides there were the electrifying feats of Count de Lambert's circling the Eiffel tower; Wilbur Wright's flights over the Hudson River and around the Statue of Liberty; Curtiss's circling of Governor's Island; Bleriot's crossing the English Channel; and cross country flights by Latham, Bleriot, Paulhan, Sommer and others. Then there had been the first international aviation meet at Rheims, where a dozen aviators, representing three countries, had introduced flying as a sport and had made remarkable records. How wonderful it all seemed! Only five years before, at the beginning of 1905, aviation was confined to two aviators, flying one single aeroplane, and the record flight was a flight lasting 59 seconds, covering a distance of 852 feet! Again, how wonderful! The progress made was amazing, to say the least. For that reason people smiled indulgently when enthusiastic prophets dared to predict that flying machines might soon reach a hight of 5,000 feet and be used in the army for scouting purposes. Of course, some believed that the aeroplane would eventually do these things, but most of them thought the time rather too far off to fully justify such a degree of enthusiasm, and the prophets were classed as dreamers.

But the prophets proved right. Indeed, their insight in things to be, in this respect, proved to be none too keen. Six months were hardly past and the record for altitude stood at over 6,000 feet. Latham, Paulhan and Brookins had climbed the heavenly stairs in birdlike fashion, and the record, Brookins's, in July, stood at 6,239 feet. This record stood for a month. As we were about to give our opinion that the very zenith of altitude had been reached and it were foolish to thing of going higher, Drexel, Morane, Chevez, Wymalen and Johnstone went each higher, the last making the record up to 9,714 feet! We had considered it unnecessary severity, nearly madness, on the part of the contest committee of the international meet to appoint a prize for grand altitude for the aviator who reached a hight of 10,000 feet or more; now we stood in wonderment and asked ourselves whether there was no limit to how high an aeroplane could go. Seemingly there is none, for Legagneux bettered Johnstone's record by 785 feet, then Hoxsey went over all, reaching a hight of 11,474 feet. How inconsiderable these records of a year ago look—from a hight of 11,474 feet!

Everything else progressed almost accordingly. At the aviation meets, at Nice, Berlin, Budapest, Rheims, Bordeaux, St. Petersburg, Lanark, Bournemouth, Blackpool, Montreal, Milan, Boston, New York, Baltimore and others; and at flying exhibitions all over the world, an increasing number of crack aviators of all nationalities broke and made records in quick succession. In speed Curtiss's record lasted but a short time, then Olienslager's record was smashed by Morane, who in turn had his record smashed by Leblanc, who developed a speed of nearly 68 miles per hour. In distance Labouchere bettered Aubrun, Olienslager bettered Labouchere, Tabuteau bettered them all, making a record of 365 miles.

Distance and duration kept pace with altitude and speed. The contest for the Michelin Prix, a prize of $4,000 given annually to the aviator whose machine has made the longest continuous flight over a closed course during the current year, brought out some marvelous records; 1908, by Wilbur Wright, American, who, flying at Le Mans, France, made the then astonishing flight of 76.5 miles, in 2 hours, 20 minutes 33 seconds. In 1909 it was won by Henri Farman, French, who, flying at Chalons, made a no less astounding flight of 144 miles, lasting 4 hours, 6 minutes, 25 seconds. To win the prize this year aviators had to beat last year's record. This they did over and over, carrying the records of distance and duration up and up until it seems that better records will mean the entree to the practical stage of aviation. Olienslager's, who first beat Farman's four hour record, flew for 5 hours, 3 minutes, 5 seconds, covering a distance of 244.043 miles, in July. This record was beat by Maurice Tabuteau on October 28, who covered a distance of 290.3 miles in 6 hours and 1 minute. Then the duration record was surpassed by Henri Farman, who made a continuous flight of *8 hours, 23 minutes!* His machine being slow, he failed to cover Tabuteau's distance by 9 miles. Next George Legagneux made a new record of 320.6 miles in 6 hours and 1 minute. Tabuteau tried again and carried away the Michelin Prix with a flight of *362.66 miles' distance,* lasting 7 hours, 45 minutes.

Thus at the close of the year the world's records stood:

Duration—8 hours, 23 minutes, made by Henri Farman on a Farman biplane.

Distance—365 miles, made by Maurice Tabuteau on a 60 h. p. Henri Farman biplane.

Speed—67.868 miles per hour, by Alfred Leblanc, flying a 100 h. p. Bleriot monoplane.

Altitude—11,474 feet, reached by Arch Hoxsey on a Wright biplane.

Again, how wonderful! The prophet's vision was surely outdistanced by the rapidity of the actual happenings.

Cross country flying ceased to be an experiment and became an incipient art. The feats of Paulhan and Grahame-White in the London to Manchester flight and Curtiss's flight from Albany to New York, were followed by the no less wonderful feats of Hamilton in the New York-Philadelphia flight, Rolls's double trip across the Channel, and Moisant's Paris-London trip; and were capped by the grand Circuit de l'Est, where Leblanc, Aubrun and Legagneux won their laurels. Then came the thrilling over-the-Alps flight by the unfortunate Chevez, wonderful, too; and the Paris-Brussels flight attempted by Mahieu, Legagneux, Parisot and others, and achieved by Wymalen. Finally came Brookins's flight from Chicago to Springfield; Hoxsey's Springfield-Clayton trip, and Grahame-White's clever flight to the Capital. These and other cross-country flights advanced aeroplane flying from the experimental to the professional stage. As the year wore on we realized that we had entered a new era and we found ourselves so nearly blasé that, especially in Europe, flying became monotonous unless there were actual contests or daredevil stunts attached to it. Flights under one hour became so common that it became impossible to count them, and possibly numbered more than 5,000 for the year. The licensed aviators increased to over 300 and the number of aeroplanes in use to nearly 2,000.

Nor were all the aviators men. Woman entered the field and counts now a score of fliers, five of them licensed. Their achievements, too—Mlle. Hélène Dutrieux's record flight of 105 miles, which won her the "Femina" cup; Miss Jane Harven's flight of 90 miles; Mlle. Marvingt's flight of 50 miles, and a number of other remarkable exploits by other aviatrices—are surely proof that aviation has passed the experimental stage.

Military aviation became an actual thing. At the French maneuvers, aeroplanes were employed for scouting for the first time and compared with other means used for the same purpose. The results were so satisfactory that all the Powers, big and small, fell to the lure of the aeroplane. Supremacy of the air is a popular cry and an aerial flotilla is an object of pride. France, who organized aviation corps last summer and tried their efficiency at the grand maneuvers, is envied by the other nations. The aeroplanes proved efficient for scouting beyond expectation. Thus France now

leads the world with a flotilla of fifty aeroplanes. Germany, who early last year led with a fleet of dirigibles, had to relinquish the leadership to France, the dirigible proving less efficient than the aeroplanes in the tests at the German grand maneuvers. But that country, seemingly bound to fulfil Jean Paul Richter's prophetic assertion that Providence has given to the Germans the empire of the air, is following France's example and has acquired twenty aeroplanes. Further, the new five years' military bill provides for two aviation battalions. Italy, whose Chamber of Deputies granted a sum of $5,000,000 last summer for the construction and maintenance of aeroplanes and airships, has organized an aviation corps and has eight aeroplanes. Russia, England and Austria have followed suit and are each organizing aerial corps. Spain, Turkey, Belgium, Mexico and even Australia are each planning the addition of aerial corps to their armies, and most of them have sent officers to France and other countries to learn aviation.

In America no addition was made to the military aeronautic corps, but numerous experiments were made at throwing bombs at dummy battleships from aeroplanes. Curtiss began in the summer at Atlantic City, bombarding a yacht with oranges. This was further carried on at the Harvard-Boston and Baltimore meets, where bomb throwing were regular contests with prizes for winners. At the Harvard-Boston meet the prize was $5,000 for the one who made most points hitting an outlined battleship with plaster bombs. The prize was won by Grahame-White, who succeeded in hitting inside of the "ship's" funnel. Further experiments at shooting targets with guns from aeroplanes while in flight also proved highly successful, the shooter hitting the bull's eye a number of times. Finally, an experiment was made at launching an aeroplane from a battleship. Ely started from the forward deck of the cruiser "Birmingham," in Hampton Roads, Va., and flew to shore, 30 miles away, landing without mishap.

In the contest between the biplane and monoplane the latter won. At every meet the monoplane carried away the honors, altho the biplanes contesting were always more numerous than the monoplanes. There were some doubts in the beginning of the year, owing to Curtiss's feat of the year before, when he carried away the Gordon Bennett Cup from Rheims, flying against the best Bleriot and Antoinette monoplane drivers. These doubts were still held later, even tho Morane had made 66 miles per hour with the new Bleriot fitted with the fourteen cylinder, 100 horse power Gnome motor. It was thought that Curtiss had a special biplane aside of great speed power, which he would use in the cup race. But these doubts were dispelled when the 50 horse power Bleriot contested against the best American biplanes at the Harvard-Boston meet and carried away the speed prizes. At the Belmont meet the accident to Brookins prevented the new Wright biplane from competing. This, it is claimed, may be speedier than even the 100 horse power Bleriot. The biplane did, however, close the year with the most of the world's records, Tabuteau, Farman and Hoxsey having made their records with biplanes.

Of motors, the Gnome showed a marked superiority over the rest and fitted to the Bleriot monoplane made the latter invincible and enabled it to make all the big records.

American aviation advanced greatly during the year, especially in the latter part. It was conceded at the beginning of the year that we were about two years backward. It was feared that at the international meet we would meet with total defeat. Fortunately this did not happen. The Wrights, if a little late, made valuable contribution. The feats of Brookins, Johnstone and Hoxsey were in every way equal to the best feats made by European aviators. The Curtiss team did not contribute much after Curtiss's Albany-New York and Hamilton's New York-Philadelphia flights, but their exhibit flights all over the country helped considerably to make the people familiar with the aeroplane. The timely intervention of Moisant and Drexel, especially the first, undoubtedly saved America from a partial defeat at the international tournament and contributed considerably toward making aviation popular in this country. Clifford B. Harmon, the champion amateur aviator of Amer-

ica, and Claude Grahame-White, the English aviator, did, without doubt, more than any of the rest of the individual flyers to convince the public that the flying machine is by no means a toy; and it was due largely to their combined activity that military and State authorities became enlisted in the big movement on foot to advance the science. The United States Aeronautic Reserve, the greatest aviation monument built in 1910, was the result of their combined activities.

The toll of human life was unfortunately large. Science in her march onward has claimed her martyrs in every age of the world. Le Blon, Delagrange, Michelin, Kinet, Watcher, Captain Matzevitch, Lieutenants Rivaldi and Lagliette, Blanchard, Haas, Peeters, Johnstone, Moisant, Hoxsey and a number of others who were sacrificed this year form an awful sacrifice; but, appalling tho it be, will not deter others from following the broadening path of science. There are big problems to solve, and, looking backward, while regretting the death of a martyr, we usually find that what was gained by the knowledge of the conditions that caused his death is of great benefit to the vast majority and to the advance of science.

It does not require undue optimism to be enthusiastic over the results of this year of aviation. Nor does it require much prescience to foresee bigger results still for the near future. The year 1910 started us on a great highway and 1911 finds us well ahead. For this year we have already booked some undertakings which, when compared with the things of last year, look big, and if carried out successfully, about which there is little doubt, will carry aviation a number of pylons ahead, toward the goal of practicability. Among the things planned are the Circuit International, a round trip Paris - Berlin - Brussels - London - Paris; the tour of France: Paris-Bordeaux-Toulouse-Marseilles-Lyon - Paris; the tour of England: London-Harrogate - Newcastle - Edinburgh - Sterling-Glasgow - Carlisle - Manchester-Bristol-Exeter-Newport (Isle of Wight)-Brighton - Tunbridge Wells - London. Also flights from Rome to Turin, Vienna to Berlin, Aix la Chapelle to Berlin, Munich to Berlin, and a trip across the North American continent. Skeptics say that these things are impossible. Considering the achievements of last year, they seem possible in every way. However, it is up to the aviators to "show them."

PITTSFIELD, MASS.

Secure

BY FLORENCE EARLE COATES

OUR single lives are circled round
  By an embracing sea;
Are joined to all that has been, bound
  To all that is to be;
The past and future meet and cross,
And in life's ocean is no loss!

We *know* there is no loss—and yet—
  Dismayed, perplexed—poor dupes of time—
  We see youth stricken ere its prime,
And, in our grief, forget!
But pitying Nature takes our part:
Slowly she heals the breaking heart,

And sorrow's self procures us gain;
  For in her steps ascending higher,
We come, at last, where waits nor pain
  Nor unfulfilled desire—
Finding the path lit from above,
That leads from love—to Love!

Nothing is premature with God:
  His are the harvest-time and sowing,
The seedling nestled neath the sod,
  The flower in beauty blowing,
The languid ebb, the eager flow,
The pulse of spring, the brooding snow!

GERMANTOWN, PHILADELPHIA.

The Story of a Book

BY CHARLES M. SHELDON

Author of "In His Steps," Etc.

The Author's Story

IN the first place, no one asked me to write this book. I wrote it because I wanted to write it.

In the second place, it was not written to please the critics or secure favorable press notices. I do not know personally more than two professional book critics, and if anything I have ever written has ever met the approval of either of them, it was a mistake on my part.

In the third place, I am frank enough to say that in the case of this particular book I did have some worldly thoughts concerning its sale and some pecuniary returns—enough perhaps to pay for the cost of getting the story typewritten. This confession on my part is necessary to account for some things found later in this narrative.

So much for the preface. Now for the plain tale.

After finding in my mind or my brain, which may or may not be synonymous, the main ideas of the story, I sat down one morning and wrote on a piece of paper the names of all the characters so far as they had become real to me. I then started on the first chapter, working toward a climax. When it was finished I had written about ten thousand words and had no idea in my head how the climax was to be taken up in the second chapter. The number of words written at a time averaged two thousand. It took ten days to finish the chapter satisfactorily, counting in the time spent in revision and changes.

After an interval of three days I began the second chapter, writing about 1,500 words a day for five days. Without knowing anything about the probable end of this chapter, I let the characters work it out among themselves, apparently without any help from me, and to my surprise they did it very well and managed to introduce three more characters that I had not thought of when I began Chapter I. When the book was finished I found I had seven characters in it that had not put in any appearance in the original drafting of the plot.

The whole book was constructed in the same general way as the first and second chapters. Most of the work was done between 9 and 12 at night, and the writing was made with a No. 2 lead pencil, without abbreviations.

When the book was finished I found I had twelve chapters of a story containing 128,000 words. It had taken me in actual time to produce this amount, counting in the time I spent working over the plot in my mind, something like the best part of six months of hard work.

At the rate of the wages received by a bricklayer in this country, 70 cents an hour, I ought to receive for my book $873.60; supposing, of course, that the book represented when finished a piece of work as necessary, or as well built, as the structure on which the bricklayer labored. If the bricklayer was building a saloon I think the book ought to fetch a little more, say 75 cents instead of 70 cents; and, by the way, the brick mason is paid at the end of the week—if not, he strikes.

After the lead pencil manuscript was finished, my next task was to get it into shape for submitting it to a publisher. It is an established fact that it is almost impossible to get a reading of any manuscript in a publisher's office unless it is typewritten.

I do not know how to use a typewriter, and was obliged to pay 25 cents an hour for having the work done. This was much less than a professional stenographer would have charged. It took 128 hours to typewrite and correct the entire manuscript, and cost me $32.

After some slight corrections of this manuscript, I deliberated over the next step, namely, the possible purchaser of my book.

A book is not like any other piece of property known to man. If a farmer

wants to sell a load of hay he puts it on a wagon, drives in to town, goes to the market, and sells his hay at the market price and takes the money home in his pocket. But if a man wants to sell a book, he looks humbly into the book market, submits his wares in complete uncertainty as to whether any one wants them or not, and then meekly lets the purchaser determine the amount and time of payment.

I took courage and finally sent the book manuscript on its adventurous way, under a *nom de plume*. It remained with the publisher three months and was returned with a printed note of rejection. Costs to me of postal charges both ways, $2.30.

I waited a decent season of mourning and again sent it on its quest. It is one of the insoluble mysteries of the United States postal department that author's typewritten manuscript is classified as first-class postage matter, at letter rates, while a printer's proof, which is the same thing in another form, is listed as third-class postage. There are things in this old world, outside tariff figures, which the average intellect cannot grasp.

After waiting four months for an answer from the second publisher, I received a letter saying if I would rewrite certain chapters and inject a little more romance into some of the love passages, the house might consider the publication. Otherwise it was not available.

As this would mean practically the same as writing another book, I meekly declined, and my manuscript came back. Among the things which can be depended upon to "come back" in this world are authors' manuscripts.

The third time, at a cost of $1.15, I sent off my manuscript, and, after a rapid examination of it by a considerate publisher, lasting, this time, only six weeks, I received my book back again with the regular printed rejection form.

I now waited ten weeks myself before making another venture, and repaired the damages on the manuscript. Also, I inflicted the story on my Sunday evening congregation. They did not run away from it, and even asked me when it was finished where they could buy the book for Christmas.

This encouraged me again and I submitted the manuscript to another firm, one high up in the business.

To my intense surprise, after waiting until I had almost forgotten the names of the characters in the book, an offer came from this firm accepting the book and enclosing a copy of an agreement between the publisher and myself.

This agreement had so many "parties of the first part and parties of the second part" and copyright technicalities in it that I have never tried to understand it. But one of the clauses in the agreement was in plain English and said that the publisher of the book would donate ten copies of the book on publication, to the author, free of charge, and also make a statement once a year, in the month of July, as to the number of copies sold, and four months after the statement the publisher would send me 10 per cent. of the net cash receipts on the books sold.

I accepted these terms at once, and after some correspondence relating to book cover design, illustrations, etc., an interval of two months elapsed.

I then received by mail proof sheets for correction and revision. It took me twenty-six hours all told to look over these proofs.

Finally the book was printed, and one day my ten copies arrived. I paid the express on them. Charges, $2.80.

I had the pleasure of making presents of these books to some of my friends who had heard the story read and did not care to buy the book.

When the book finally came out it was listed at $1.35 net. In reply to my earnest request that the publisher issue a cheap paper edition at 25 cents, within the reach of a large number of people, he replied that it was unheard of, and that cheap editions were not to be thought of until all of the high-priced volumes were sold. Submitting to the inevitable, I went my way and waited for sales and royalties.

Counting back from the time I first began to plan this book, twenty-nine months had rolled around, and my book had brought me in that much experience and an expense of $68.92. This includes paper, typewriting, and manuscript postage and postage on the proof. Some

pages of the manuscript had to be typewritten three times on account of being soiled, torn or crumpled in the handling.

In July the next year I received a statement from the publisher that they had sold 3,927 copies at $1.35. Four months later I received a check for $530.14. This gave me a net profit on my book of $461.22, after a lapse of thirty-eight months from the time the book was begun.

The life of the average book, so far as selling it is concerned, is about five years. At the end of five years, if this book continues to sell at the same rate as it sold the first year (a highly improbable event), I shall be able to accumulate $1,844.89 as the result of four years' profits. In other words, if I depended on writing books for a living and could write two a year at the same rate of wages received for this one book, I would receive annually $922.44, or $824.76 less than the bricklayer receives, at 70 cents an hour. But I had the fun of writing the book, and I am not complaining. Besides, I do not know how to lay bricks.

The Publisher's Story

I have been in the publishing business a good many years, and during these years I have printed and sold hundreds of thousands of volumes, mostly fiction. I am frank to say that during all these years I have never been sure in my mind concerning more than half a dozen books, as to their reception by the reading public. Manuscripts that have been rejected by a half dozen other firms as useless have been issued by us and have had large sales. On the other hand, books rejected by us have been issued by other houses and have run into hundreds of thousands of copies.

After forty years' experience in the publishing business I do not yet know what the public will buy and read. I think I know what they will *not* read; but even here I lack definite knowledge.

The average author thinks the average book publisher asks only one question when considering the manuscript, viz., Will it sell? And on that basis he thinks the decision is always made either to publish or not to publish.

This estimate of the publisher—that is, of any publisher of reputation—is far from just.

He must consider the good name of his firm and its dignity and general character. Some manuscripts that he is quite sure would make good sellers he rejects, because of their undesirability of style or subject matter.

The reputable publisher also often publishes books he is almost sure to lose money on, because he is honestly and truly desiring to give the public something worth while, even at the risk of losing money.

Again, the reputable publisher often, in his enthusiasm to issue a handsome or creditable volume, will pay more for plates, bookbinding and illustrations than any probable profit on the sale of the volume itself.

It is also a common error to suppose a publisher is influenced by well-known names, and that unknown writers have no chance for a fair examination of their wares. As a matter of fact, every publisher is anxious to introduce new writers to the public and give young and unknown authors a start toward recognition, if their manuscript has really any promise of real worth.

As an instance, illustrating all these points, I would like to take the reading public a little into my confidence, using as an example a book recently put out by our house. A manuscript came to us about eighteen months ago, bearing unmistakable marks of having been submitted several times elsewhere.

I was interested in the book from the start and took the manuscript home and did what I rarely do, read it to my wife.

She was very enthusiastic over it. I then turned the manuscript over to our best reader. After finishing it, he frankly and emphatically declared that in his opinion it was "unmitigated bosh." Our junior member then read it, and his judgment was that it would either fall flat or run up into the big list of sellers. One other reader confessed that he fell asleep over the book when in the middle of it.

My own judgment was rather doubtful. I was both attracted and repelled, but on the whole the book appealed to

me to such an extent that, against some protest from the junior member of the firm, I decided that we would accept the manuscript and make the author the usual trade agreement of 10 per cent. royalty.

Having committed myself to the book, I prevailed on the junior member of our firm to put out a very creditable volume. We determined on a first edition of 4,000 copies. For the plates and illustrations and press work combined we spent $1,500. Illustrations, five in number, cost us $800, furnished by one of the most famous illustrators in America. We put out 200 books free to reviewers and newspapers, and we spent on publishers' notices and other advertising, $1,000. After adding our discount of 30 per cent. to the trade on the $1.35 net book, and the expenses of paid book reviews by experts, we find on our books that the book cost us, before a single copy was sold for profit, $2,900.

When the first statement was rendered the author in July one year after publication, our books showed actual sales of his book of 3,927 copies. We mailed the author his 10 per cent. on $1.35 a volume to the amount of $530.14. Subtracting our expense from the profits leaves us $1,329 loss. In other words, we shall have to sell nearly 3,000 books more before we wipe out our first outlay and make the first dollar of real profit. Of course, if the book should prove to be a constant seller, or even if, as in some cases, it should prove to be phenomenal in its sale, we shall make large profits on it. But the public must remember we took all the risk of publication. The author did not incur a cent of this risk. We published the book in what may be truly called total ignorance as to its possible fate. The sale of 3,927 copies the first year is of absolutely no value to us in determining its future. Instances have been known of a book selling 50,000 copies the third year after it was put out. Other books sell steadily at the rate of four or five thousand copies a year for five, eight or ten years. Still other books sell almost no copies after the first year's sale. There is absolutely no criterion for the publisher. I honestly think there is a future for this book. That is the reason I was willing to spend what I did on it typographically. It is a handsome volume and has a striking cover design. We have boomed it for the trade by using the "puff direct."

The public must remember that twice as many books are printed in the United States now as were printed ten years ago. The competition is something tremendous.

The author of this book wrote us a very strong letter, urging us to put out a 25c. paper edition. His motive was good, but it displayed his ignorance. No publisher can issue a book of 128,000 words at 25c. and make it pay. There are secrets in the publishing business, which I cannot disclose, but it is not a secret that 25c. paper editions of novels are entirely out of the question unless the book is guaranteed to sell at least 100,000 copies.

I am much interested in this book and in its author. I am not acquainted with him. My wife says she is certain that he is a woman. So are several of our book reviewers. I certainly wish the book great success, both for the author's sake and our own.

The Readers' Story

Reader No. 1. [The "Puff Direct."]

I have just been reading "The Written Question," a new story by a new author, evidently writing under a pen name.

It is a singularly beautiful and fascinating story written in a most direct and persuasive style. The characters are silhouetted so clearly that the vivid illustrations in the book are almost superfluous. This comes the nearest to the great American novel of anything put out in the last decade. The motive of the writer is on a very high plane, but that does not interfere with the most sensational effect. Chapter five, for example, is superb in its power to hold the reader in a grip of breathless suspense. In fact, the climax at that point is so thrilling that one fears for the rest of the story. How can the writer successfully hold the attention of the readers after such a burst of *élan!* The genius of the author is shown in the fact that even after the amazing *tours de force* shown in chapter five he manages his situations with such skill that one does not lay the book down until it is finished, unless, indeed, in his impatience to know the *dénouement,* he

reads the last chapter before the others. We predict for this unique volume a record-breaking sale. It has already passed its second edition and is the talk of select literary circles in New York.

Reader No. 2. [A Book Reviewer.]

Every year the weary novel reader wonders at the insipid and banal output of the modern novel mill, which rests not day nor night in its grind of sour and wormy fruit. The last is worse than the first. The season's grist is topped off by a monstrosity called "The Written Question." Why it was written is about the only query the bored reader asks as he lays or throws the book down after a yawning attempt to wade through its dreary maze of 128,000 superfluous words.

This so-called book is the acme of senile twaddle. It sometimes rises to the hight of a low-cut hot summer shoe. What is intended as a climax in chapter five is in reality a stumbling into a bottomless pit, from which the author tries to extricate his characters by the use of such puerile devices as would make the red-headed dime novel look like George Eliot; and the wonder of it is that this *potpourri* is in its second edition already and is creating some stir in certain circles. The other wonder is that such sweepings of hack writers should have hypnotized a good publishing firm like ———. The five illustrations are in Coltwood's best style and the cover design attracts notice even among the season's aurora borealis display. The whole thing reminds us of Proverbs xi:22.

It is a melancholy comment on the taste of the public when books like "The Written Question" threaten to become popular. It ought to be excluded from the public libraries.

Reader No. 3.

To the Publishers of "The Written Question."

DEAR SIRS: I write to express my delight after reading "The Written Question." I am a minister convalescing in a hospital after a long and dreary illness. One of my nurses put this book in my hands two weeks ago, on the recommendation of one of the hospital doctors, who was enthusiastic over it. Not knowing the address of the author, I am taking this liberty to ask if you will forward this letter to him. I wish to thank him for writing this book. I have been touched by its pathos, instructed by its knowledge of human nature, and inspired by its high ideals. I can truly say that I have been made a better man by it. Not only has it helped to while away hours that might otherwise have been a dreary blank, but it has stimulated my mind and refreshed my spirit, fitting both for better service for God and man when I shall once more be permitted to resume my regular work. I am under deep obligation to the author.

Very cordially yours,

Told By the Book Itself

The first thing I can remember about myself was the coming together of some thoughts in the brain of the author of my being. I do not know just how long it took me to grow, but I suppose it was a sort of process that had been going on in the author for a good many years. Somehow I have a dim notion that it took longer for me to be born than I am destined to live. But I am not so much interested in that as I am in the fact that I am in existence now as a book and as such have had some very interesting and even remarkable experiences.

It took the author over six months to make me. I don't believe the general public understands very well what a lot of work I cost him. Many a time he stayed up with me until 3 or 4 o'clock in the morning, "licking me into shape," as he said. I heard him say one night that he must get me finished as soon as possible, so he could sell me and make some money to pay some of his college debts.

Another time when there was a good deal of trouble and sickness in the author's family he wrote the funniest chapter in me because it came along just then. I don't know how he did it, and I don't think he does either.

As soon as I was finished I started on my travels. At first I felt rather proud to go to so many cities, and have my fare paid both ways, but when I found out that every time I was sent back to my maker it meant that some publisher had rejected me because he thought I would not sell well, I grew indignant. After all, book publishers are nothing by the side

of authors. What is a cover design compared with a thought, or a stereotyped plate by the side of a climax in a love scene? The publisher—did he make me? He may sell me, but he could not make me.

After I had traveled back and forth across this country for nearly two years, I was at last bought by a publisher who put me into a new suit of clothes and then spread a rainbow-hued garment all over me, until I fairly blushed, sometimes for shame and sometimes for pride. And then I started on my travels again, and this time I went all over the country and even across the sea.

Many different people bought me—that is, my body; but no one could buy my soul. That belonged and always will belong to my author. Oh, and I must say the publisher paid a very small price for me. I felt so sorry for the author who made me at such cost of pain and travail.

I have fared in strange ways as I have fallen into different hands. Once a man in New York was reading me. He called himself a book reviewer and was paid by the publishers to tell the public what he thought of me. He said I was "unmitigated bosh," and then he threw me clear across the room into an open fire. I would have burnt to death, but just then the book reviewer was called out of the room and a servant who entered a moment later rescued me and took me down to the kitchen and read me there. I went from the cook to the iceman and they said they enjoyed me so much. I have never had much use for professional book critics since then.

Another time I was carried in a bag by a cowboy on horseback, and he read me lying on the ground by an open fire. My, but I was cold then! But when he got thru with me he passed me on to another cowboy and he to another cowboy and he to another one, and at last I was all worn out, and one night a forest ranger tore me to pieces to start just such a campfire as I had been read by. Not many folks have such experiences as that.

Another time I was being held in the hands of a woman who had buried her baby and all of a sudden she bent her head over me and something hot and wet fell on me and I felt annoyed because she was soiling my pages; and then I began to see it was tears falling on me. But they were the kind that do people good. The next day while she was reading the funny chapter she laughed aloud, the first time she had laughed since her baby died—the kind that does you good. Isn't that funny? My author cried over that funny chapter, he was having so much trouble at the time. And other people laugh over it when they are in trouble. There are some queer things in this book world.

Once I was in a lighthouse with two men who used to fight for turns at me. They said they were sorry I was so short. Another time I went to a penitentiary, and I thought I never would get out again. I have been shut up in bookcases belonging to rich people who bought me because I was the fashion, but never read me, and I have been handled roughly by the dirty hands of men and women who didn't have much time to read; but I would much sooner be read to death than buried alive in libraries or left to lie in state on the tables of fashionable society.

I am beginning to wonder how long I have to live. A short time, I suppose. My author says the average of a book is about five years. But I wonder if that is all. How long shall I live in the mind of the cowboys or the heart of the woman who lost her baby? And I am sure the author will never forget me. He did his best—in spite of the critics. He came to love me deeply at the last; perhaps it was because I cost him so much. And at any rate Time will be the Judge, who calmly outlives all the book readers and book publishers and book reviewers, and sets his mark on the ephemeral and the immortal; and with old Time, kindest and truest and best of book critics, I am content to leave myself; and when he is ready, he may write on my last page, "Finis."

TOPEKA, KAN.

The Needs of Porto Rico

BY TULIO LARRINAGA

Commissioner from Porto Rico.

THAT Porto Rico has been prospering for the last eight years—prospering from one viewpoint—is a fact which no one will deny. Porto Rico is a beautiful, prolific island, forty miles wide by one hundred miles long, lying on the verge of the tropics, with never excessive heat or cold, or rainy or dry seasons; capable of producing anything which can grow anywhere; a mine of health, and wealth, and happiness. Porto Rico has been exploited for eight years to develop her wealth producing qualities, for the benefit of large money interests. Porto Rico has prospered, from that viewpoint. Under the protective tariff of the United States the sugar and tobacco interests have been greatly enlarged. From 69,000 tons of sugar exported in 1901 the production increased to 284,000 tons in 1910. It is a suggestive fact, however, that whereas there were then 345 sugar planters, the number is now reduced to less than 200, showing a concentration which is very undesirable in any country. And the increase in the production of sugar marked a corresponding decrease in the production of coffee, then the most important production of the island—still more important because the coffee farms, like the sugar farms at the start, were all comparatively small holdings owned and managed by the local planters, to their own profit and the benefit of Porto Rico. If it were not for the little money from sugar making which remains in the island today there would be great suffering among the poor. For with the advent of America and the tariff, there being no protective duty on coffee, the small farmers found it impossible to live, and their little farms were sold by the hundreds for taxes amounting to no more than ten or twenty dollars, and were bought up by the large sugar interests. There was a law limiting the amount of land which could be bought by single interests, but there was no penalty affixed for disobedience, so no one cared.

No one denies the material prosperity, but the Porto Ricans are keenly alive to the fact that their political status, which should have kept pace with material progress, has been going down and that more and more they are losing their rights and losing their hold upon their island. In this connection one should not forget that Porto Rico has 1,100,000 inhabitants; that 100,000 children attend the public schools; that there are high schools, normal schools and a university in Porto Rico; that last year the exports of Porto Rico reached $30,000,000; that Porto Rico is more densely populated than any State of the Union; that we have a history and a Christian civilization centuries old.

During the past century, under the Spanish regime, the one aim of the Porto Ricans was to obtain political advancement toward their ultimate desire of self-government. Canada was their model. The English system in Canada was the goal of their aspirations. Toward this they made no mean progress. Several times during the past century they took real steps in advance—the promulgation of the Spanish Constitution. for example. In the first part of the nineteenth century they were granted representation in the Spanish Congress; a representation which made a brilliant record, in 1812, in the framing of the Spanish Constitution. In 1870 this representation was made permanent. Sixteen representatives and four senators were then allowed under the Spanish apportionment law. And with this as a fighting base they obtained several liberal reforms; such as an insular legislative body elected by a moderately restricted suffrage; in 1869 the abolition of slavery, and later the authority to make a loan to pay the slave owners; then the gradual suppression of the tariff was begun, which eventually was fully carried out, deducting every year one-tenth part of the duties on all goods exchanged between the colony and the mother country.

In 1887 the Autonomist party was formed and finally declared to be a legal party and admitted to an understanding with the Liberal party, then controlling in Spain. At last, in 1897, as a preparatory measure to the final establishment of self-government, the island was divided into two districts, and natives as well as Spaniards were appointed governors both of the North and of the South districts. In February, 1898, local self-government was at last granted, and besides there went with it the right to concur in treaty making with other nations thru special delegates chosen by the island for the purpose.

This was the status of Porto Rico at the time of the American occupation, and the arrangement was continued by General Brooke, the first military governor of the island, as established by his general order No. 1. But in December, 1898, General Brooke was succeeded by General Guy S. Henry, U. S. V., who began to introduce changes, and finally did away entirely with the autonomic organization. In April, 1900, an act of Congress established a civil government in Porto Rico, fashioned after the English system for their partially civilized colonies, such as the Fiji Islands. The act, commonly known as "The Foraker Act," granted a legislature composed of two houses. The lower house was to be elected by the people. The upper house, called the Executive Council, was formed mainly by the heads of the various departments appointed by the President.

This organization of an appointed, foreign body to make the laws of the country—a body whose members were at the same time the executive heads of departments—was naturally a great disappointment to the Porto Ricans. With the governor retaining the veto power and the Congress the right to amend or annul all acts of the local legislature, there could not have been any danger in leaving both houses in the hands of the people; nor could a better system have been furnished as a school for self-government training, if the advocates of the act were in good faith, in 1900, in their claim that we were not capable of self-government. Under the autonomic constitution which was taken away from us we had the right to name the major part of the upper house. They were simply to be citizens of Spain—and for thirty years previous we had been citizens of Spain; ever since the Spanish Constitution was extended to Porto Rico, when the colony was abolished and the island became a province of Spain. Now, after ten years of the Foraker Act, depriving us of the upper house appointments, why should we find ourselves given a legislature bereft of all power whatsoever, except that of amending criminal and civil laws already made? There was also added to the bill the provision that the legislature should not meet as often as it had. This was wise and, in the judgment of many, under such conditions it wouid have been still wiser to provide that the legislature should not meet at all.

Just a lower house, with practically no power at all, is a strange sop to hand to people who were enjoying almost complete home government, after they had been waiting ten years for the fulfillment of the early promises made upon American occupation. There are inconveniences, evils, injustices, wrongs inherent to a foreign executive council appointed by a foreign executive and responsible to no one in Porto Rico. Take the matter of granting franchises in the island, for example. The Porto Ricans have suffered several serious losses and great wrong in the granting of franchises to irresponsible people, for wildcat schemes known to be technically and economically impossible; to a bankrupt company, a company that was in the hands of a receiver. All these failures to protect the people of Porto Rico—the unjust and unwise franchises, the failure to keep the land from absorption by large foreign interests, and the rest—would never have occurred if the upper house had been elected by the people and responsible to the people. Members of the Executive Council now only await removal to go back to the United States, caring very little for what they leave behind. Some of them, indeed, have drawn salaries for long periods and have not been there half the time. There were members of the council in Washington for three or four months, their salaries being paid by the people of Porto Rico, while they carried on the

campaign which resulted in Congress deciding to take away from the people of Porto Rico the right to concur in appropriation bills for the expenditure of their own taxes, for the benefit of their own island. Now we have no power whatsoever. The Executive Council may go on from year to year, appropriating the money of previous years, and they can dispose of this as they please. There is something which the Porto Rican cannot fully understand in this persistent tendency to reduce his rights instead of fulfilling any of the assurances given him in the past.

The chief open contention of those who claim that the people of Porto Rico cannot as yet be trusted with self-government is that they are not prepared for the duties and responsibilities of the status. But every one knows that, in the first place, they have already proven their capacity, when, in 1870, the Republican form of government was established in Spain as well as in Porto Rico, and when they organized their insular machinery by popular vote; also in the organization of their autonomic government in 1898. But suppose such experience was not conclusive of fitness for self-government; how are they ever to gain or prove that fitness without a limited opportunity? It is true that Porto Rico has prospered in a material sense in the past ten years. But it is also true that Porto Rico would have escaped several serious wrongs from which she has suffered, and who can say that her material prosperity would not have been still greater had she been allowed a voice in the conduct of her own affairs and the expenditures of her own resources. Would the new States which were admitted to the Union several years ago have made the rapid strides which have marked their progress if they had been kept down, under the arbitrary rule of a limited number of men sent there from outside, with the sole authority to make their laws and administer their material wealth and resources? Many of the territories did not have at the time of their admission to the Union anything like the favorable conditions which Porto Rico presents, in simply asking for the right of home jurisdiction.

Porto Rico has a civilization centuries old; has a larger population than eighteen States of the Union; has a greater commerce and wealth than several of them; has a larger trade with continental United States than many of the nations with which they interchange commerce.

Those who demand colonial government for Porto Rico, and who realize that this first argument is absurdly weak, advance another which seems to be the only thing left upon which they can spread false accusations and incorrect impressions giving any apparent ground for depriving Porto Rico of the right of local jurisdiction. It is illiteracy. But even this cannot be taken seriously by one who knows anything at all about Porto Rico and is honestly trying to decide impartially in the matter. The proportion of illiteracy really existing is not really known. The only data upon which the argument is based are those quite inaccurately obtained and given out as the result of the first hurried census of ten or eleven years ago. But even supposing that the illiteracy of today is as high as 60 per cent., this, in the 1,100,000 inhabitants, will still represent a number of persons *not* illiterate, several times larger than there were inhabitants—with a degree of education or without it—in some of the territories admitted to the self-government of statehood in the United States several years ago.

Failing this, another, yet more absurd, argument is advanced. The large number of schools established and the many miles of good roads built in the last ten years—at the expense of Porto Rico—is used as an argument against any change in the present system of governing the colony. The Porto Rican feels that this progress is due mainly to his initiative and would direct attention to the fact that while the lower house retained the right of concurring in appropriations it readily agreed to every effort at progress. And if this co-operation and universal energy, under the present system, is to be used as an effective argument against improvement in their political status, then the Porto Ricans, with their industry and energy, are every day digging deeper and deeper into the grave of political oblivion. Why, upon this basis, they would be better fitted for

home government if they deliberately combatted every effort at progress.

Now, if the partisans and advocates of the *status quo* are honest, and so sure of the incompetency of the people of Porto Rico to take care of themselves, let them accept this challenge and settle the controversy by putting it to the test. The governor of the island will always retain the veto power and the Congress of the United States will always have the right to amend or annul whatever vicious legislation may be enacted. There could be no possible danger either to the United States or to the island. Indeed, there could be no question raised unless with some sinister motive by money interests profitably exploiting Porto Rico. And this constant refusal to give them a chance in self-government has created a sentiment among the people that the partisans of the *status quo* really attach more importance to their control of the island and the benefit derived from it by outside interests than they do to the people of Porto Rico and their welfare.

Even the bill passed by the House of Representatives last year—which was meager enough in favorable provisions for Porto Rico—has already been shorn of its more liberal points by the Senate Committee and was so reported to the Senate, to be acted on, the other day, to the great chagrin and disappointment of the Porto Ricans, who are at this moment in grave excitement and distress, despairing of ever seeing fulfilled the promises made to them at the time of the occupation of the island, or of redress in harmony with the American claims of justice and democracy.

WASHINGTON, D. C.

A Drama of the Skies

BY EDWARD TALLMADGE ROOT

I saw her, when the glowing west
Was fading into tints of rest,
A slender crescent on the breast
  Of starry-cinctured Night.
Too lovely, too ethereal
To face the ills which here befall,
  She slipped, how soon! from sight.

I saw her, when the sun had set,
Not far beyond the zenith yet,
Scorning the white clouds' flimsy net,
  A solid hemisphere.
I gazed, till in its shade profound
A counterpart appeared to round,
  Of dim-lit crystal clear.

I saw her, just as day was done,
Rise full-orbed, rival of the sun!
The homage of the stars was won
  By Night's unchallenged queen.
In loveliness elusive lay
The Earth, as if the golden day
  Had changed to silver sheen.

But in the fullness of her pride,
A somber shadow touched her side,
Grew, spread, and dared at least to hide—
  Nay, bathed her face in blood!
I stood aghast, until that shame
Vanished as strangely as it came,
  Retreating like a flood.

I saw her, 'twas the midnight hour;
Far in the east she seemed to cower,
As if she fled to hide the power
  Of some unclean disease.
Half-wasted, weary, weak and wan,
The saddest sight eyes look upon,
  Her grief none could appease!

I saw her not; but in full day
The light grew dim and died away.
An awful gloom on Earth there lay;
  The sun to darkness turned.
Was it revenge? Who, then, could be
The stealthy murderess but she
  Whose wrongs so deep had burned?

They saw it all, the men of old:
They saw it oft; and often told,
In myth and symbol manifold,
  The drama of the skies.
And still their myths control our ways,
Give months and weeks and sacred days,
  And shall give till Earth dies.

They saw her through her changes move,
And lifted hands in awe and love.
Let none of us their cult reprove
  Who sees and worships not!
Who never sees; or only sees
And asks not: "Who created these?"
  Or knowing, hath forgot!

PROVIDENCE, R. I.

Literature

Lord Rosebery's "Chatham"

SINCE the end of the short-lived and ill-fated Liberal Administration of 1892-95 Lord Rosebery, as the world knows, has followed his lonely furrow—at odds with his old political colleagues, out of sympathy with their present democratic aims, and not completely of the Conservative party. It is fortunate, however, that the lonely furrow and the making of non-partisan speeches in support of Unionist Parliamentary candidates, do not occupy quite all Rosebery's time. These concerns, even when done with all his thoroness, leave him a margin of time available for literary work—a margin that must be considerable, for since Trevelyan published his "Early History of Charles James Fox" thirty years ago, there has been no such ample and illuminating study of any British statesman of the eighteenth century as Rosebery's *Lord Chatham*.* In several respects there is a similarity between Rosebery's *Chatham* and Trevelyan's "Fox." In each case the biographer has traced only part of the career of the statesman concerned. Rosebery's *Chatham* comes to an end with Pitt's accession to office in 1756, when he became Secretary of State, leader of the House of Commons, and all but Premier in the Devonshire Administration, while Trevelyan, in his "Life of Fox," stops at 1774, the year when Fox was making a place for himself in the history of England and of the United States by his opposition to the American policy of North.

There are other obvious points of similarity between these two biographies. Both Trevelyan and Rosebery are steeped in the political literature and the political and social atmosphere and traditions of the eighteenth century; more so, perhaps, than any other British students of this period; and each of these writers has had great advantages which have not pertained to any other writer of recent years on the politics of the reigns of George II and George III. Both Trevelyan and Rosebery were of nineteenth century Liberal administrations. Both have been much behind the scenes in British politics; and what this means for the making clear and understandable of the intricacies, the jealousies, the intrigues and also the sordidness of eighteenth century political life, is obvious in nearly every chapter of these lives of Chatham and Fox. It marks Rosebery's *Chatham* even more than Trevelyan's "Fox"; for it is possible to read into some of Rosebery's comments on political conditions in the time of Pitt an application to aspects of political life in England of a very much later period—an application, in fact, to political conditions at Westminster in times quite near to our own day.

The eighteenth century is obviously a congenial period to Rosebery. Every book and every manuscript that can throw light on the youth of Pitt, on his family or on its associations, on his career in the House of Commons while member for the nomination boroughs of Old Sarum and Oakhampton, has been drawn upon with amazing industry. The Newcastle manuscripts, of which there is a carload at the British Museum; the Holland House manuscripts, and the Fortescue papers at Dropmore, have all been searched with the vigilant care of a student intent on a doctor's degree with a research fellowship at his command. The result in Rosebery's hands is not only a large addition to our knowledge of Pitt, and of the remarkable family into which he was born, and of his associates when he was started in his House of Commons career, but a picture of eighteenth century political and aristocratic social conditions, the like of which is not available within the covers of any one book which has yet come from the press.

England during the reign of George II was essentially, so far as government

*LORD CHATHAM: HIS EARLY LIFE AND CONNECTIONS. *By Lord Rosebery.* New York: Harper Bros. Pp. xii, 481. $4.

and politics were concerned, the England of the governing class. The men of this class were few in number, but powerful by reason of the privileges they had drawn to themselves, and usually they were at issue with each other not over political principles or measures, but chiefly over the spoils — highly paid offices, sinecures and pensions. The conditions Rosebery describes when he is sketching Pitt's political environment from 1735 to 1756 are often sordid and squalid, and Rosebery makes no apology for them nor any attempt to extenuate them. One value of his book is that he does thus describe conditions as they were, and that he shows also how Pitt's action was at times governed by the sordid political conditions into which he had thrust himself. "It is preposterous," he writes, "to depict Pitt as an angel of light. But yet, judged by the standard of his day, the only proper standard to apply, and indeed by the standard of any day, he must be held, even in his darkest hours, not to have compromised his historical future."

Students of eighteenth century British history are not the only people who are indebted to Rosebery for his vivid descriptions of eighteenth century political conditions and his characterizations of eighteenth century statesmen and politicians. His *Chatham* can be made to serve a purpose which it is scarcely possible that Rosebery had in mind when he began his task. Except in the literature of reform propaganda, which went on in England from the American Revolution to the downfall of Wellington and the end of the long Tory regime in 1829, there is nowhere a more vivid picture of governing class rule than is to be found in Rosebery's pages; and the England of the early years of the reign of George V needs only to be compared with the England of George II to realize how much has been gained by the three extensions of the Parliamentary franchise of the nineteenth century. Political life and social conditons in England have been bettered by the gradual approach toward democracy which has been the most marked feature in English history between the Reform Act of 1832 and the session of Parliament of 1911, which is to witness one more inroad on the privileges of the governing class by the establishment of the supremacy of the House of Commons over the House of Lords.

Home Life in Ireland. By Robert Lynd. Chicago: A. C. McClurg & Co. $2.50.

An Englishman in Ireland. Impressions of a Journey in a Canoe by River, Lough, and Canal. By R. Scott-James. Eight Illustrations. New York: E. P. Dutton & Co. $2.

"The truth is, there is a great deal of nonsense talked about the 'real Irishman' and the 'typical Irishman'—to mention two phrases common among thoughtless people. The 'real Irishman' is neither essentially a Celt nor essentially a Catholic. He is merely a man who has had the good or bad fortune to be born in Ireland, or of Irish parents.

"Political necessities—to give a flattering name to a bad thing—have led to every fault of Ireland's being seen as if thru a microscope, and to every virtue's being seen upside down or inside out till it seemed equal to two faults. . . . There is a nursery rhyme in Ireland which runs:

> Ulster for a soldier,
> Connacht for a thief,
> Munster for learning,
> And Leinster for beef.

"There is just as much sense in this as in most of the generalizations we hear about the different parts of Ireland—the dourness of Ulster, the dishonesty of Connacht, the idleness of at least the two other provinces. Almost all generalizations, I suppose, were in the beginning born of some seed of truth. Nearly all the generalizations about Ireland, however, have grown up into perverted and lying shapes, like monstrous light-hiding trees, and in their branches the parrots of the nations chatter innumerable foolish things."

It has seemed to us worth while to quote so extensively from Mr. Lynd's discreetly optimistic account of "Home Life in Ireland," because these paragraphs, found in the first ten pages, do, besides being interesting in themselves, tell the reader something of the book which they serve to introduce. First of all, they suggest that Mr. Lynd is himself an Irishman. Second, that he is neither an enthusiast nor a bigot—albeit he is born loyal and enthusiastic. Finally, that while he is sober as an expositor he is picturesque in description. Sympathy, understanding, literary skill: here are qualities which guarantee the success of a book in this genre. This particular volume includes, besides its illustrations from photographs, enlightening chapters on Farms and Farmers, Schools and Children, Priests and Parsons, The Irish Gentry, Town Life, Sinn Fein, Manners,

and the Arts. Even more vivid are the chapters devoted to "Characters," Marriages and Match-making, Stories and Superstitions, and Wakes and Funerals. *Home Life in Ireland* is an invaluable addition to a valuable series, whereas the second of the books about Ireland whose titles top this column is at least a very pleasant narrative of travel thru the heart of the Isle. Tho Belfast is given an almost enthusiastic chapter, the best thing about Mr. Scott-James's volume is its pages descriptive of canoeing and the country-sides which he viewed in the course of unhurried peregrinations. The traveler is a lover of out-of-doors. "We are vain enough," he writes, "to suppose that before Blake and Wordsworth and Coleridge the English world did not perceive the beneficent grandeurs of wild scenery. In reality, I suppose, the Romantics have only taught men to put themselves in an attitude of detachment from Nature; to recognize explicitly what before they implicitly felt. They have become spectators of what we call Nature, and to that extent have ceased to be a part of it."

The Readjustment. By Will Irwin. New York: B. W. Huebsch. $1.20.

"The city that was" lives again in Mr. Irwin's new novel, *The Readjustment,* which is a story of the old San Francisco which the author knew so intimately. The plot is slight. A coarse-grained hero, who insensibly reminds the reader of some of Jack London's bull-in-the-china-shop sort, falls in love with a refined and exquisite young lady. Her reaction to his primeval wooing is psychologically interesting, altho not described with any particular skill. Mr. Irwin's world, like that of many young novelists, is a man's world, in which he moves freely and easily enough, but upon the introduction of a woman into the scene he loses countenance, stammers and hesitates. He is timid in the presence of his exquisite ladies; he is more at home with the men, after the ladies have left the room. By which we do not mean that he shares his hero's coarseness—not at all. But he lacks, as yet, the art of making a fine character human and therefore lovable. And so Eleanor, fine as she is, is shadowy, and Kate, "the other girl, a golden, full-blown Californian thing," is much more fully realized. Well, a peony makes more of a show in a garden than does a tea rose, and it may well be likewise in a book.

The Story of the American Board. Account of the First Hundred Years of the American Board of Commissioners for Foreign Missions. By William E. Strong. 12mo, pp. xv. 523. Boston: The Pilgrim Press. $1.75 net.

Little more need to be said of such a history as this than that it is trustworthy, as nearly adequate as the space will allow, and that it is illustrated with a fair number of pictures and maps It is to be particularly recommended for mission study classes in Congregational churches. To be sure, the American Board, as it is familiarly called, was created a hundred years ago to guide the scanty foreign missionary activities of any churches that wished to help, particularly Congregational, Presbyterian and Dutch Reformed —and was therefore called "American," and has kept the name, altho the two first bodies have withdrawn from it. Being the oldest it is also one of the most important of all American missionary boards, and has had the honor of converting the Hawaiian Islands, and has exerted an enormous influence in Turkey, Japan, India and South Africa. This book ought to be in every missionary library and in every Congregational family that is interested in missions, as all ought to be.

Things Seen in Spain. By C. Gasquoine Hartley. New York: E. P. Dutton & Co. 75 cents.

"I regard the Spanish people as the living representatives of the Middle Ages," wrote Stendhal; and so, apparently, does the author of *Things Seen in Spain,* in spite of growing industrialism. It is the familiar charm of romance and courtesy that expresses itself in this compact little volume. The Moorish influence—Spanish dancing—the inevitable bull-fight—the *Feria,* or spring festival at Seville—the native art—Spanish cities and Spanish country-life: all these matters have their chapters in this brief but well-planned and entertaining handbook, recommendable to the intending traveler.

Literary Notes

....*A Dictionary of the Characters in the Waverley Novels of Sir Walter Scott,* published by Dutton, tangibly expresses the fertility of that author's imagination. No fewer than 2,836 characters find mention therein—including 37 horses and 32 dogs. It was neither Kipling nor Rostand who brought the inarticulate animal-world into fiction.

....Dr. J. W. Mackail, Professor of Poetry in the University of Oxford, is the author of an essay on William Morris originally delivered as a lecture at Birmingham, now published by Longmans, Green & Co. (one shilling). This is less a literary criticism than a cordial invitation to the reader to interest himself in the work and, above all, the man Morris.

....The twenty-first series of Cunningham Lectures at the Free Church College, Edinburgh, were by Principal J. Oswald Dykes, and are published under the title *The Divine Worker in Creation and Providence* (imported by Scribner, $2.25). They are an endeavor to restate the doctrines of Creation and Providence in the light of modern knowledge in science and history.

....*What to do at Recess* is the title of a slim booklet by George E. Johnson, Superintendent of Playgrounds, Parks and Vacation Schools, Pittsburg, Pa., (Ginn; 25 cents). From sand-box to folk-dances extends the range of this practical educator's suggestions. These suggestions are many: the only criticism to be offered is the want of directions as to their precise application.

....Prof. Gotthard Deutsch, of the Hebrew Union College, has just published a modest but valuable manual on *The History of the Jews* (Bloch, 60 cents). There is a brief outline of the early period, beginning about 600 B. C., and a fuller sketch of Jewish life during and since the Middle Ages, with its persecutions and achievements, is given with due restraint and appreciation. The account is characterized by accuracy and proper perspective. A select bibliography would have been a helpful addition.

....The stream of time is made visible and statistics are presented in line and color in *Croscup's Synchronic Chart of United States History* (New York: Windsor Pub. Co.; $1.50). By the use of graphical methods such as these comparative figures are immediately and vividly impressed upon the mind and produce a greater effect upon the mind than any amount of study of the tables. This excellent compendium contains, besides the long folding chart, a summary of history chiefly political and a large quantity of miscellaneous information on the progress of the United States and its territorial expansion.

....Messrs. D. Appleton & Co. will issue this month *Diaz: Master of Mexico,* by James Creelman. The career of the Mexican President has been long and varied, and should furnish material for a vitally interesting biography. Meantime, Houghton, Mifflin Co. are printing another impression of T. P. Terry's *Mexico*—a kind of home-made Baedeker to the interesting land of our neighbors.

....Little, Brown & Co. have undertaken the publication of "The Modern Criminal Science Series," under the supervision of the American Institute of Criminal Law and Criminology. The first volumes, which are published at four and five dollars, respectively, are translations of *Modern Theories of Criminology,* by C. Bernaldo de Quiros, and of Professor Hans Gross' *Criminal Psychology.* We hope to review these most important offerings at a later date.

....One of the very best helps in understanding the interdependence of the first three Gospels, and an indispensable aid to the English reader in studying any problem connected with the life and teaching of Jesus, is the large-page edition of *The Synoptic Gospels* (Frowde; $2.50), arranged in parallel columns by Rev. J. M. Thompson, of Oxford. The text is that of the English Revised Version, and by a careful use of italics the variations, additions and omissions of the different writers are made plain. The book should find a place on the desk of every student of the New Testament, even if Wright or Rushbrooke is happily already there.

....Lafcadio Hearn's *Japanese Letters,* edited by Elizabeth Bisland and published by the Houghton-Mifflin Co. ($3), are not to be dismissed in three lines, and we reserve them for leisurely reading and review. The first impression which they make upon the reader of Hearn's earlier work, his "Glimpses of Unfamiliar Japan," for example, is one of bewilderment at the writer's changed standpoint. "The illusions are forever gone," he wrote to Professor Chamberlain, one of his best friends, "but the memory of many pleasant things remains. I know much more about the Japanese than I did a year ago (i. e., in 1892), and still I am far from understanding them well. Even my own little wife is somewhat mysterious still to me, tho always in a lovable way."

....In the temple of Poseidon the questioner asked: "Where are the offerings of the shipwrecked?" The Bishop of Stepney, Dr. H. L. Paget, thinks that the same question might be asked of the modern home, into which we are born as our greatest and most hazardous adventure. *Home Life in England* (Longmans, Green & Co.; 75 cents) is an agreeable discussion of a life that does not differ so much from our own that his advice and crit-

icism are inapplicable to us. He is wise and tolerant toward the young questioners of authority; just to the troubled parents, among whom generous appreciation of a new era is rare; but it is necessary "to listen, to trust, to understand" the child for whom the home exists, whether in England or elsewhere, if we are to approach the author's ideal—" a busy, ordered and happy home."

....If all American doctoral dissertations commanded the reference-value and literary ease of Dr. Dudley Howe Miles's—entitled *The Influence of Molière on Restoration Comedy*—and were published in as attractive form (Columbia University Press; The Macmillan Co., agents; $1.50), there would be fewer complaints of their barren dulness. It is true that the author admits "that the Restoration would have produced a comedy not much different from the actual product even had Molière never lived"—in spite of the considerable borrowings and shameless larcenies. The study is none the less instructive as a bit of literary history; and, besides expressing in unmistakable terms the contrast in stage conditions in Jacobean times and under the Restoration (pp. 52-66). is interesting in reflecting the superficial imitations of all things French, in and out of the theater during the period treated.

....The most interesting literary centenary of the year will be that of Thackeray, on July 18. John Bright and Archbishop Tait were also born in 1811, on November 16 and December 22 respectively, but neither of these names is primarily literary. On September 30, 1811, died Bishop Thomas Percy, who owes his fame to his "Reliques." David Hume, most literary of philosophers, was born on April 26 (O. S.) 1711, so we may be celebrating his bicentenary. France has two finely antithetic anniversaries to celebrate—the death of Boileau, March 13, 1711, and the birth of Théophile Gautier, August 31 (according to other authorities, 30), 1811. France has, too, at least one half centenary to celebrate: that of Henri Murger, author of "La Vie de Bohème." A learned work by M. Miquet, published under the title "Recherches sur les familles des émigrants savoyards fixés en France en 1860," destroys the tradition that Murger was of German origin. In reality, the Latin quarter rhapsodist was Savoyard, son of Claude-Gabriel, tailor by profession, and of Hortense-Henriette Tribou.

....J. B. Lippincott Company are the publishers of a number of unusually attractive books for boys. *Missionary Heroes in Oceania* by John C. Lambert ($1.75) is one of the narrations that stirs the blood. *On Trail and Rapid*, by Dog-Sled and Canoe ($1) is the title given by H. A. Cody to the life of Bishop Bompas. The story is of service among the North American Indians and Eskimos. *The Romance of the Ship* is E. Keble Chatterton's account of the origin and evolution of the craft ($1.50); the work of an expert in his field. The illustrations here are especially striking and as valuable from the reader's standpoint as they are striking. All of the volumes we are naming are, for that matter, generously illustrated; and this applies, of course, to J. Kennedy Maclean's *Heroes of the Polar Seas*, a Record of Exploration in Arctic and Antarctic Oceans ($1.50), which has maps to boot and includes even a report of Lieutenant Shackleton's expedition. The final volume of these of which we are treating, Mark Wicks's *Mars via the Moon* ($1.50) goes even farther, so far as imagination is concerned, than any of the rest of them; tho the writer has more facts and suggestions from science to profit by than his forerunners in the popular field of astronomical fiction.

Pebbles

A YOUNG vestryman of a south side church was asked by a debutante: "Have you seen Mary Garden in 'Thaïs'?"

"No," he replied; "does she wear them?"—*Chicago Tribune.*

HENRY T. FINCK'S dying scholar, who regretted that he had been too ambitious during his life, studying all the Greek cases and not confining himself only to the dative, is outdone by the examining doctor at a medical college, who was quizzing one of the students. "In what will you specialize?" asked the medicus. "Diseases of the nostril," replied the youth. "Good," cried his instructor, enthusiastically; "which nostril?"—*Musical Courier.*

HE used to hate the idle rich,
And often spoke with dread
About the fearful dangers which
Were looming up ahead;
He saw a time when blood would flow,
And anarchy be rife;
But that was when his funds were low.
He had the luck a year ago
To get a wealthy wife.

He used to say the millionaires
Were blinded by their greed;
He thought the world and its affairs
Were managed wrong, indeed;
He saw the time when class and mass
Would wage a bloody strife,
When chaos would prevail. Alas!
Since then a change has come to pass:
He has a wealthy wife.

He cannot understand today
Why those who toil complain;
The ills he feared are cleared away,
No signs of strife remain.
Content to let things drift along,
He lives an easy life,
Forgetting, if sometimes the strong
Oppress the weak, that it is wrong:
He has a wealthy wife.

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

The Agreement with Canada

WHILE the leaders of the Republican majority in the House were reluctantly preparing, last week, for action upon the President's agreement for tariff reciprocity with Canada, the House Democrats held a caucus and decided that the agreement should have their support. Their first vote in caucus was 90 to 22. At the end of last week it was expected that the agreement bill would we passed in the House by a vote of about five to one, and that in the Senate final action would not be taken at the present session. It was thought that a majority of the Senators would vote for the agreement if they should have an opportunity to do so. But it was the avowed purpose of those who dislike the agreement to prevent final action in the session's few remaining days.

The attention of those who seek to kill the agreement by delay and obstruction has been directed by the President to the following words in it:

"It is agreed that the desired tariff changes shall not take the formal shape of a treaty, but that the Governments of the two countries will use their utmost efforts to bring about such changes by concurrent legislation at Washington and Ottawa."

If, after the passage of the bill in the House, there shall have been, at final adjournment on March 4, no action in the Senate, it will be the duty of the President to call an extra session of the new Congress. This is plain enough. He would not be using his "utmost efforts" to procure the needed legislation if he should wait for the regular session in December. Successful obstruction in the Senate, therefore, will be followed by an extra session.

The objections to the agreement which have been the most weighty, in a political sense, are those which have been raised by persons representing, or professing to represent, the American farmer. The legislative committee of the National Grange declares that the proposed changes would subject our farmers to unfair competition. "There must be," this committee says, "no reduction of duties on farm products, unless the duties on all manufactured articles are at the same time correspondingly reduced." That is to say, the admission of Canadian wheat, corn, vegetables, etc., free of duty must be accompanied by the free-listing of all manufactured goods. We presume that the slight reciprocal reductions of rates on certain manufactures were all that the representatives of our Government could induce Canada to grant. Mr. Taft says:

"The reciprocal free lists and schedules had to be fixed with regard to what both countries could do, rather than what one country might wish to do. This was especially true with reference to manufactured articles, in the present stage of industrial development in Canada. We were ready to admit at lower duties, or free, various manufactured products in addition to those included in the agreement, but Canada found herself unable to do the same, and her wishes had to be respected."

But would the free-listing of manufactures on both sides of the boundary promote the welfare of our farmers? The comparatively small and weak manufacturing industries of Canada would be crippled or destroyed by our unrestrained exports, which are very large even under present conditions. There would be substantially no imports of manufactures to affect prices and supply in our own market. If our farmers are to obtain the relief, with respect to the prices of manufactured goods which some of them think should be given to them by reciprocity with Canada, they

must look for it in agreements with other countries, or in a general revision of the tariff. The acceptance of this agreement may be a long step toward changes of the sort which they have in mind.

The complaint is based upon the assumption that our farmers really have been protected by those duties on grain and several other products which are reciprocally removed by the pending agreement. As we have said before, these duties of our tariff, as a rule, have been and are ineffective. They exist merely on the paper which bears the printed words of the statute. Our duty on wheat is of no account. Both countries export great quantities of wheat to Europe, and the price is made there. The two countries compete in the European market, but not at home. Our duty on corn is of no value to our farmers. A great surplus of corn is exported (part of it to Canada) either in its original form or in the form of cattle and meat. The free admission of Canadian cattle would serve our agricultural interests by facilitating the importation of grass-fed animals to be fattened here. Canadian fruit growers are protesting loudly against the proposed free admission of our fruit. The American farmer and fruit grower would be benefited if fruit should be put on the Canadian free list. Our agricultural interests would gain something by the large reductions on lumber and the free-listing of cottonseed oil. There is a movement of dutiable vegetables back and forth along the boundary. At some points the Canadian farmer has an advantage in price; at others the difference is in favor of the American. Representative Denby, of Michigan, whose district is on the border, said last week:

"During the recent campaign we bought in Windsor and in Detroit a long list of foodstuffs in order to find what difference in price there was between the two countries. As between those two cities, at least, we found the prices substantially the same on either side of the river, and I am therefore inclined to believe that the farmers of Michigan are mistaken in thinking that there would be a reduction in the prices of their products."

We believe that our agriculturists would not be injured, but would gain, by reason of the changes proposed, and that the whole country would profit by them. If our memory serves us, the National Grange, at its convention less than three months ago, adopted a resolution favoring "the negotiation of commercial treaties" that would "do away with tariff wars which now shut our farm products out of many foreign countries." Members of the Grange should read the long letter addressed to their legislative committee by Secretary Wilson, whose devotion to farmers' interest is unquestioned, and the President's recent speech at Columbus.

Ratification of the agreement may involve important changes in addition to those for which its terms provide. During the debate in the British House of Commons, on the 9th, Premier Asquith said:

"It is quite probable that the United States will say that, as a matter of treaty right, British goods will be entitled to enter the American market on the same favored terms as those accorded to the same class of Canadian goods."

He had been speaking of the "most favored nation" treaty between Great Britain and the United States, our interpretation of which was not, he said, in agreement with that of his own Government. We have similar treaties with several countries, and there is a difference of opinion at Washington as to the effect of them in a case of this kind. If Great Britain is entitled to the concessions made in the agreement with Canada, tin plate from Wales, wire rods and wire would be admitted free of duty, and the present rates on British cutlery would be reduced. Germany could fairly demand similar concessions. If it should be held at Washington that concessions like those made to Canada would not be granted, automatically by treaty, to several other countries (and it is said to be the opinion of Senator Root, formerly Secretary of State, that claims for such concessions would not be warranted by the treaties), Germany would probably be free to make new tariff agreements with other nations and to withhold the advantages of them from us.

It is to be expected that European countries would ask for the concessions, if claims could be based upon existing treaties. It does not necessarily follow,

however, that a fair interpretation of the treaties would support such claims, and it is held by some that claims of this kind are excluded by the recent agreements made under the maximum and minimum provisions of the Payne-Aldrich act.

This is a new phase of the question and it calls for some consideration. If there is no danger of a profound disturbance of the present tariff by the enforcement of treaty rights which have been overlooked, there should be a vote on the reciprocity agreement in the Senate before March 4. If there are no treaty complications, the Republican Senate majority cannot afford to oppose this good project of a Republican President. Such opposition would give the Democratic party fresh advantage at a time when the Republicans need all the credit they can gain by wise action.

The Dreamers of Peace

It was Senator Money, of Mississippi, leader of the Democrats in the Senate, who the other day made a long speech in favor of fortifying the Panama Canal. He has some strong men with him. The President of the United States would have it fortified. He believes in peace, but he also believes in making full preparation for war—he was for years Secretary of War, altho as Secretary of War he was mainly devoted to the arts of peace, to developing the new possessions of the United States. And Senator Root, a good friend of peace, is in favor of fortifying the Canal. Senator Money has strong backers in his contention.

On the other side, Senator Money tells us, are the impracticable theoretic visionaries. Thus he puts it:

"All these dreams of peace are the baseless fabric of a vision. They are a delusion. It will be necessary to eliminate from human nature every trace of greed and ambition before the ideas they suggest will be practicable. These people advocate the neutralizing of the Panama Canal with the best idea in the world. But they are for the most part bishops and clergy, professors, emotional writers and effete statesmen, who are not and never will be capable of taking advantage of practical business opportunities.

That is what they are, "bishops and clergy, professors, emotional writers and effete statesmen"—not a bad lot—count us with them! Are they incapable of "taking advantage of practical business opportunities"? We have heard of business opportunities in war, but we prefer the practical business which will save the country the waste of fifty million dollars to start with. The bishops and clergy and professors have not quite made a failure of it for this world, to say nothing of the next. It is they that have revolutionized ancient Japan, and have opened China and spread civilization more than we have seen war do in our days. Senator Money thinks it will be necessary to eliminate every trace of greed and ambition from human nature before war can come to an end. Cannot human nature be greedy for the chance to serve one's kind, ambitious to develop the arts of peace for the honor of one's land, as well as for killing people?

Senator Money has a strange notion of what our country resolved to dig the Canal for. He says:

"I do not suppose there is a man who believes that the Government undertook this great work, costing $400,000,000, for the sake of its commercial advantages alone. It was simply for its strategic value, and nothing else."

If that is his idea he is blinder than ever bat was blind. We can believe that some professional military man, whose whole life is taken up with a business, which if at times necessary, like the public executioner's, is the most unfortunate and most undesirable of all, should have thought first of the uses of the Canal in time of possible war, but such was not the thought of the people who determined to make the Canal. It was not for the uses of war, but for those of peace. When choosing a route the thought was not as to which could be best protected by forts, but which should be most convenient for the vessels steaming from New York and Liverpool. It was harbors, not fortifications, that were in mind; the advantages for commerce in escaping the dangers of the Horn. Furthermore, we thought much of the glory of the achievement by us, in which one nation had failed. Was it for defense in war that De Lesseps first attempted the Canal? It was for commerce, for commerce and glory only; and for commerce and glory we took it from him and assumed his task. For the Sen-

ator to say that it was "simply for its strategic value and for nothing else" is to falsify very recent history which we all remember.

Senator Money adds, and Senator Root assents, that in time of war treaties lapse. True enough. Treaties with the nation at war do lapse, but not treaties with other nations. If we made a treaty with Rumania that it should always have the free use of the Canal, that treaty would lapse if we went to war with Rumania; but if we made treaties with all nations that the Canal should be neutral in time of war, those treaties would not lapse in case of war with a single nation, any more than the international treaties as to the Suez Canal lapsed during the Russo-Japanese war.

But, after all, it is the new international conditions which we must consider. We are coming into a period sneered at some few years ago as Sunday school politics, still sneered at by Senator Money as fit only for bishops and clergy. Our plans are well advanced to put an end to war, the greatest curse of man. We will protect the Canal better by treaties, and sooner bring in the reign of universal Peace.

The Book Crop of 1910

Last year broke the record for book production in the United States. With a total of 13,470 we for the first time passed the English total of 10,804 and became a close second to the German, which, calculated on the same basis as ours, is probably about 14,000. France comes fourth in the list, with about 9,000. Taking into consideration the immense mass of our periodical literature, only part of which ever gets into book form, there is no doubt that we do more reading than any other nationality. About one-third of the books appearing in the United States are by English or other foreign authors.

If we hear any one boast nowadays that he reads "all the new books as they come out" it would be well to suspend credence until we examine into the circumstances a bit. If he lives near the Congressional Library and reads for eight hours every day, including Sundays (only devotional books on that day, of course), and keeps up an average rate of about five volumes an hour, there may be some truth in what he says.

If we compare the statistics of book production for 1910 in England and the United States as given in the *Publishers' Weekly* of January 28, 1911, with those for 1898 we find some interesting changes in the taste of the reading public. The classification is necessarily somewhat arbitrary, and unfortunately is not the same in the two countries. Nevertheless, the general trend of the literary movement is sufficiently apparent.

During the period 1898-1910 the number of new books annually produced in America increased by 169 per cent., in Great Britain by 50 per cent. There has been an increase in every department except classical and educational books in England. Fiction in England remains about where it was; in fact, has declined from 1906, when 2,108 new titles were recorded. In the United States the increase in fiction has not been half so great as the increase in non-fiction, and our high-water mark was passed in 1908, when 1,458 new novels and volumes of short stories were produced here. The rapid multiplication of juvenile books in this country has evidently no parallel on the other side of the Atlantic.

The greater attention being paid to country life and household economy in America shows itself in the high proportional increase in the number of new books on these topics (618 per cent), and the other useful arts have multiplied in almost as high a ratio (580 per cent.). Next to these comes philosophy, with a gain of 451 per cent. Our activity in physical science and our fondness for travel are apparently more than fourfold what they were twelve years ago.

"What the public wants" in the way of reading matter may be seen from the classification of the new books appearing in America during the past year. Setting aside the miscellaneous group called "Literature and Collected Works," the highest number is fiction, 1,303, to which might be added a large part of the 935 books for young people. Next in the order of popularity comes theology and religion, with 894 new works. We should, however, adopt the English classification and include philosophy, for it is impossible to draw a dividing line between these two groups of books and they ought not to be as separable as they sometimes are. The total number of books on theology, religion and philosophy is 1,078. It is the closest rival to fiction in both countries and is rapidly gaining on it. If we counted the total number of copies sold instead of new titles, the great and increasing demand for books of religion and philosophy would be still more conspicuous. The Bible is, of course, the "best seller" every year, and it not infrequently happens that a volume throwing some new light on the deeper problems of life crowds out a detective story or a problem novel on the "hot cakes counter" of the department stores. Books of a new genus, what might be called "the literature of optimistic suggestion," have become amazingly popular in recent years. They are often unecclesiastical in phraseology, but all teach what Professor James referred to as "the religion of healthy mindedness." If besides these we should include the literature of social reform, we should find that the books devoted to spiritual and moral welfare are the most popular as they are most influential of all the publications of the times.

Our First Gentleman Statesman

If "fools on fools still ask what Hamlet means," an equal host are inquiring at present what Roosevelt portends. Nobody, in America at least, has hitherto hit on the suggestion that he may be simply introducing into American life and politics an example of what might be termed the gentleman statesman—the public man, that is to say, who is not running for office, and is not running a machine, and has no immediate purpose in politics beyond what he esteems the common good. They have gentlemen cricketers in England, as distinguished from the professional cricketers; and so likewise they have public men, like, say, Lord Rosebery and Mr. Frederic Harrison, and Lord Cromer, and Mr. Stead, who are not in office, or expecting to be, and who have no responsibility to any party machinery, and who, nevertheless, from pure interest in public questions, from habit of thought, and by virtue of public services, of various degrees of eminence, claim a hearing on public issues, and "have that claim allowed" without question.

Why should it be insisted that Mr. Roosevelt must be intending to displace President Taft (whom he made President but yesterday, with a full and intimate knowledge, of course, of his public views and his personal equation), because the ex-President, in his characteristic zeal for divers good causes, finding those causes in jeopardy, accepts, say, about

one in a hundred of the pressing invitations that have poured in upon him since his return from his outing in Africa and Europe, and takes advantage of these opportunities to address his fellow citizens on the subjects nearest and dearest to his heart? Would he not be doing less than his duty if he did not? Would he not have subjected himself to equally well-founded criticism if he had maintained a crafty silence (as it would then surely have been characterized), allowing things to go from bad to worse, from the point of view of Mr. Roosevelt and his progressive party, to the end of becoming the sooner and the more necessary to the recovery of the lost ground?

Especially from the journals and public men who have won eminence as moral censors of our American political manners and customs does it come with a bad grace, to affect the shocked and scandalized tone toward Roosevelt's unconventional course, which, however, no one will pretend unnecessary or superfluous. It should have been left for the case-hardened machine bosses and senatorial stand-patters, and attorneys for "the interests," to call the rules of the game against this new and most hopeful and inspiring departure in our national politics. What our public life has always been most dismally deficient in, where our political life most unfavorably contrasts with the political life of Great Britain, is in this very matter of the independence and individuality desirable in the representative and leading units of great parties. The "gang" rules in the absence of men of large enough personality, experience and ability to be recognized and potent in authoritative leadership—men who do their own thinking and allow no party-steering cabal or kitchen cabinet council to decide what their thought, and especially their public utterance, shall be! Our politics have been measurably losing interest for thoughtful and intelligent voters, great as is always the need of their participation, because of the patent insincerity and corrupt complaisance in convention and congressional action. Even the indiscretions, the blunders, the foibles, the arrogance, the "platitudes," now that they are coming to be believed in as sincere, frank and courageous, come as a refreshing, life-giving change! The finest example of the true gentleman statesman in England, the late Duke of Devonshire, who in his early political life was known as the Marquis of Hartington, was most famous and most dear to the British public for what was called (in his case) his "you-be-damnedness." The latest intimation of the horrified moral censors who have joined Mr. Barnes, of Albany, in viewing Mr. Roosevelt as "the greatest danger," etc., is that in private life he has become profane! These charter members of the Holy Name Society!

Italy in America

SOMEWHAT utopian are the schemes of the "Segretariato Permanente per la Tutela delle Donne e dei Fanciulli Italiani all' Estero," the society entrusted by the Italian Government with the welfare of Italian women and children in foreign lands. The first step is reasonable enough; it is the establishment of a central bureau to publish the results of research and to bring about co-operation between all the institutions which carry on work in behalf of Italian immigrants in New York. A department of translation and information is included here. The second step (we risk a bull here) has already been taken: it is the establishment of a hygienic station, to instruct the people how to avoid disease, and to treat working mothers and their children. Such a hygienic station is in operation under the direction of Dr. Louis R. Kaufman, of the Flower Hospital. Assistance is promised by the Board of Health, and by the Italian Government. The third part of the program is concerned with the housing problem. The City and Suburban Homes Company offers to expend one million dollars for model housing accommodations, if Italians and their friends will raise a like sum. The new homes will be erected in the less congested districts; gymnasiums, reading rooms, and lecture halls are to supplement the accommodations of the tenements themselves; trade and industrial schools are contemplated; native masters are promised for these schools by the Italian Government.

Tho we have applied to this campaign the adjective "utopian," no scorn or

nt of sympathy dictates the applica-
n. It is by aiming high that men
ive at a reasonable degree of success;
agination is as necessary a factor in
rk looking to social amelioration as it
in the arts. And, while checks and
appointments are likely to be the por-
n of the "Segretariato Permanente"
less than of any other organization
pired with a great ideal, we wish well
the New York representative of that
ociation, the Contessa Lisi Cipriani,
l hope that her enthusiasm may prove
mmunicable. The Italians whom New
rk receives are by no means Black
nders for the most part; it is the ex-
tional Italian, even the exceptional
migrant, who ends his career by being
ested as a kidnapper. And yet, while
lian crime has been greatly exag-
rated by certain observers, it is clear
ough that the stream of immigration
ich we receive, for the most part from
ricultural districts, flows down hill
y too rapidly, particularly in the sec-
l generation. It has been suggested
t the American schooling received by
youngsters is to blame for this; the
ngsters' heads being turned by it, so
t they end by despising their simple-
nded parents and preferring poolroom
l saloon to church and tenement. Cer-
nly it is no less due to the circum-
nce that almost the only situation
ere the Italian in America finds him-
f at home—as a metropolitan day
orer, resident somewhere in the
wded tenement district—is a situa-
n debasing in its influences, physi-
ly, morally and socially. Further-
re, as a writer in the January
rum points out, "the better element
ve not as yet identified themselves
th the community." But that the
blem of these *déracinés* is more close-
studied and better understood, year
er year; that such organized endeavor
that of the society named is focused
on the sore spot; these are the en-
uraging signs which offer hope that
ly may, one day, be proud of her con-
bution to the making of a future race.
the meantime, the making of that race
our concern. The immigrant of the
er generation considers economic ques-
ns almost exclusively in coming to us;
is for us to supply some idealism here.
This much we can confer: they do not come to us blindly; they act on the advice of relatives already here; in cases where they do not plan to remain in New York, almost eight out of every ten have their railway tickets to carry them to their destination. If they are so business-like, why should not we be equally serious? For in one sense the United States is, economically speaking, very decidedly a gainer. In a five-year period, during which we admitted nearly 4,000,000 immigrants, principally from Italy and from Slavic Europe, the record showed that 82½ per cent. of them were between the ages of fourteen and forty-four years. Eleven and a half per cent. were under fourteen, and only 6 per cent. above forty-four. Thus has the United States acquired a great stock of labor during these five years; a stock of labor whose cost of producing we were spared.

Meanwhile it is well for us to remember that one test of our civilization is and ought to be: What does it do with the immigrants who flock to the Golden West?

A New Appreciation of Negro Schools

It is gratifying to note that there is a growing good feeling in the South on the part of the white people as a whole toward negro schools. Once there was what seemed to be an ineradicable prejudice against them. It was with difficulty that a desirable site could be secured for the location of such an institution. Often it had to be secured in a roundabout way. One such site was secured by a shrewd missionary for a "wool factory." Once established, the buildings were not always secure, but burnings have been of not infrequent report.

But now a change has set in. The Roanoke *Times*, replying to citizens of Radford, Va., who objected to the establishment of a negro school on the old site of St. Albans, said:

"Experience in other parts of the State has shown that the negro educational institutions are quiet and good neighbors. In one or two counties they have been of vast advantage by bringing up the negroes all around them to better standards of living and better understanding of their duties. The prejudice against negro schools is a relic of the time, now a

good many years gone, when a lot of Northern people came down here with their heads full of wild fancies and grotesque notions."

In corroboration of this the Charlotte *Observer* says:

"In North Carolina experience has shown exactly the same thing. Biddle University at Charlotte, Livingstone College at Salisbury, Shaw University at Raleigh—these, together with the State Agricultural and Mechanical College for Negroes at Greensboro, are as well governed institutions in their relation to the public as can be found anywhere. In fact, they are admirably ordered thruout. Immediate proximity to them is free from the exuberances which neighbors of institutions for boys or young men of the other race more or less good humoredly witness at times; for the negro schools, as our contemporary observes, are penetrated by an exceptional sense of responsibility. They seek to deserve the respect of the white people and to exert the best possible influence over members of their own race."

Not only does an industrial school like Tuskegee maintain good relations with its white neighbors, but also a school for higher education like Fisk, in which the white citizens of Nashville take special pride. In Atlanta, where there are six negro colleges, the whites had an ocular demonstration of the value of these colleges when the riot broke out in that city a few years ago. From these institutions came those educated negro leaders who co-operated with leading white men in restoring harmony between the races. The educated negro is the missing link to the solution of the race problem in the South, and our Southern white brethren are to be congratulated most highly on the recognition of this vital fact.

The Recall of a Mayor

The Western States have not introduced their novel political devices for mere show. The referendum is used for reference, the recall recalls, and the woman vote counts for something. Mayor Gill, who has made Seattle a wide-open town for the past eleven months, was removed from office by a majority of 4,000, which is 500 more than the majority that elected him. Two months ago he took a vacation voyage to Alaska, and in his absence Acting Mayor Wardall disclosed the existence of such an alliance between the political ring and criminal classes as is familiar to us in other American cities. But the people of Seattle had the advantage of being able to do something besides preach and scold about it. A petition was circulated for Gill's recall and a new election ordered, at which George W. Dilling, the candidate of the Public Welfare League, was elected in his place. Of the 71,000 votes registered, 22,000 were those of women, and it is recognized that their votes caused the overthrow of the régime of vice. This result is to be expected in all cases where a definite moral issue like this is presented, and the politicians of Seattle would probably not have attempted such a thing if they had known that the women were going to be enfranchised. The recall and woman suffrage introduce no new principles into government. They are merely practical applications of our fundamental principle of democracy. If the people are competent to select a man for mayor in the first place they are much more competent to decide what sort of a mayor he is after they have tried him a while. And if the people have a right to pass on such questions it is unjust to debar half of them from that right on the sole ground of sex.

Tammany at Albany

Certain independent Democratic newspapers in New York that very earnestly oppose the candidacy of William F. Sheehan for the United States Senate are urging Governor Dix to join them in this movement. Mr. Sheehan is the candidate of Charles F. Murphy, the Tammany Boss, who, one of these journals asserted at the time, controlled the convention which nominated Mr. Dix. Instead of trying to cause the withdrawal of Sheehan, the Governor, in frequent consultation with Mr. Murphy, is making appointments that promise to give Tammany a large interest in contracts for the expenditure of many millions of dollars, and is advocating changes in administration that would have a similar effect. Among these contracts are those to be made under the $50,000,000 appropriation for good roads. The Governor is told every day, in large type, that his course may be fatal to the Democratic party. One journal asks him whether Sheehan is worth the loss of the Presidency in 1912. Just how great Governor Dix's debt to Murphy and Tammany is, and how much he will pay in settlement of it, remain to be seen. The

situation is one that should engage the attention of Democratic leaders in other States and at Washington. What they ought to know is this: this Tammany is not a political party, but an organized appetite; that it cares little or nothing for the fortunes of the national Democratic party, but seeks, first, to gain all the possible profits of government in the City of New York, and, second, to enjoy all the similar profits which can be found by means of control of the government of the State at Albany. It is not interested in Presidencies or national policies. The action of Democratic leaders outside of the State, with respect to the present situation at Albany, should be determined by a conviction that such is the character of Tammany. Mr. Murphy and his associates are not getting much in the city now, but they have reason to expect that they will be very successful at Albany. The Presidency in 1912? There would be nothing for them in that.

Nulla Vestigia Retrorsum

The extension of the suffrage never takes any steps backward. We therefore warn the masculine voters of those States that are now preparing to give the right to women that if they once give it they can never take it back, and they will never want to. By overwhelming votes the legislatures of Kansas and California have voted to submit the amendment to their constitution and it is likely to be carried by the people. Meanwhile Michigan and Montana have, by their legislatures, voted in favor of the reform, but not by the requisite two-thirds majority. Slowly but surely the reform is moving eastward, and it is fated to cover the whole country. It can only be delayed, and its foes may be expected to work with all desperation, for they are sure to be beaten in the end.

Latin for Ladies

Some of us are old enough to remember when it was considered improper for a girl to study Latin, and one who attempted or desired it was regarded as "mannish." Nowadays more girls than boys are studying Latin, and in some of our high schools and universities a boy is apt to be called a "sissy" if he takes the classical course. This change is not due to coeducation, as some have claimed, for France shows the same tendency, altho the schools there are strictly segregated. In the French lyceums (secondary schools) for young women Latin has been allowed as an extra elective since 1897, and the young women have shown a liking and aptitude for the study, which is in strong contrast with the apathy of the young men. It is asserted that as much progress is made in three years in the feminine schools as is made in six years in masculine schools of the same grade. Consequently efforts are being made to induce the Government to make Latin a part of the regular curriculum and permit women teachers to conduct the classes. Mlle. Bastoul, professor in the Lyceum of Toulouse, puts forward an argument that may well be considered by the classicists of our own country:

"Not only would we welcome Latin, but we like to think that later when it shall have been banished from the rest of the school system by too exclusively practical preoccupation, it may find a refuge in our lyceums and academies, the last and inevitable asylums of a liberal and disinterested culture."

British Conservative Fright

The fright of the British Conservatives over the proposed agreement with Canada is a manufactured one and not serious. Its extravagance appears in the raving of *The Saturday Review*, which discovers in it a plot on our part to dismember the British Empire, and reduce Great Britain "to the rank of a Holland or a Spain." A challenge to the British Empire has come, it says, "from the most formidable of our rivals, the United States of America." Rival! We thought we were the best of friends. Just the other day a high naval officer of ours was officially rebuked for telling the truth a bit too frankly to be agreeable to other nations. *The Saturday Review* harks back to ancient history, says that in the war of our Revolution we asked Canada to join us, and that our purpose in reciprocity is the same now—to inveigle Canada into our national life before Great Britain and Greater Britain have had time to perfect their imperial federation. It is amazing, or would be if it did not seem amusing, or would be if it did not seem to them so serious. The fact is that nei-

ther Canada nor we have anything of the sort in mind. Canada prefers to be by herself, but she wants to make conditions as easy as possible by way of trade, and so do we. Canada's politics are controlled by her interests, not those of either Great Britain or the United States. Her main commerce would be with us, and we must be the best of neighbors.

Enlarged Membership

The House of Representatives votes to increase its membership under the new census to 435. The present membership is 391, which is quite as large as is consistent with good conduct of legislation. It was by a combination of States likely to lose membership if the present number of members were retained that the increase was voted. All the Southern States and all the Democratic members joined forces for the larger House. Of the forty-four new members this gives to the House only seven will come from the South. West Virginia, Florida, Georgia, Alabama, and Louisiana will gain one member each, and Texas will gain two. On the other side, New York will gain six, Pennsylvania four, California and Oklahoma three each, and even the Old Bay State is one of three Northern States to gain two each, and little Rhode Island gains one. This shows where growth and progress still are.

The little body of the Cumberland Presbyterians who stand out from union with the Presbyterian Church, in its newspaper gives a list of five particulars in which it is "a peculiar people." They are not exactly what Paul had in mind in the expression. One of them is, that it is "the first Church that has ever committed its foreign mission work to the noble and self-sacrificing women within its communion." Another is that it "is the only Church that has ever adopted as its policy, a white church for a white man and a black church for a black man." Surely that is not Pauline, if it is "peculiar."

Count Apponyi, the distinguished Hungarian statesman and advocate of peace, who is visiting this country, hesitates to say that war can be quite abolished, but thinks wars might be reduced to one in five centuries. We would not build navies for a war five hundred years hence. He says very wisely that the people want peace, and that it is the European nobles who insist on navies and armies.

We are supported as to the justice of our position on the proposed service pension by such a letter as this received from one who says:

> "It seems to me that it is a great shame that thousands of well-to-do and respectable old soldiers who do not need pensions take the attitude that 'We are entitled to all we can get,' and do not speak or invite objections to such legislation. I served three years and five months and have an honorable discharge as first lieutenant. I have never asked for a pension. My service benefited me I think, and made me more able to take up life when I came back."

But we have received a dozen letters from old soldiers protesting against our position.

On the first page of the Report of the Commissioner of Education we read:

> "A new attempt will be made to set forth some of the main features of the American educational programme, and to point out some of the places at which there is need of improvement."

One of those places is the "programme." It should be shortened by two useless and deforming letters.

The United States Government proposes hereafter not to deal so leniently with smugglers; they must go to prison. It would be as well if our judges and governors would cease to be so lenient with college students guilty of rioting. Prison is none too good for them.

Oregon has a fair right to take from Maine her motto of *"Dirigo."* All the States are getting ready to follow Oregon's lead in the new measures, and the last is the assured assent of Ohio to the Oregon plan for the direct election of Senators.

During the past week the daily papers have given great space to a wedding. A Miss Gould was married to an Englishman; but it was a matter of no importance. There are hundreds of weddings every day.

Insurance

Old Age Insurance

THE recent report of the failure of a United States Senator, advanced in years, to secure life insurance, has drawn attention to the regulations of the leading insurance companies in this respect. In answer to an inquiry on our part, the New York Life Insurance Company replied that it had been their rule for a great many years not to insure applicants over sixty-five years of age. A similar inquiry addressed to the Equitable Life Assurance Society brought a more extended statement, which we are glad to reprint herewith:

"There are several reasons why it is appropriate that life insurance companies should not offer to insure the lives of very old men. In the first place, the necessary charge is almost prohibitive, consequently the transaction would be foolish. Hence, it would not be sound policy for the companies to seem to recommend such injudicious transactions. In the second place, old men show physical deterioration. It is almost invariably the case that they are what the companies call impaired risks. Younger men exhibiting such symptoms would be declined, and it is impossible for the medical examiner to make any reasonable estimate as to the effects of these impairments on longevity in individual cases. Finally, very old men have, as a rule, passed the productive period of their lives, and are dependent on others, or are living on money accumulated by them when they were younger. In such a case, death produces no financial loss, and the aim of life insurance is to repair such a loss. The situation is reversed in a case where a young man is supporting his family on his earnings, for the family will sustain a pecuniary loss if he should die prematurely and these earnings should be cut off."

Most companies do not consider applicants over sixty-five years of age. The presumption is that a man in good health and prospect of life at that age would not desire insurance. The inference would, therefore, be that the applicant was attempting to conceal the true facts, to the disadvantage of the company. This situation merely emphasizes the desirability of taking out insurance early in life at a low rate, instead of waiting for the time when rates are prohibitive or when any insurance even is impossible to get.

THE rank of the leading fire insurance companies that have reported their total assets as of December 31, 1910, is as follows:

Home, New York	$30,178,913
Hartford, Hartford	24,363,634
Continental, New York	24,198,038
Aetna, Hartford	21,023,545
German-American, New York	17,170,112
Ins. Co. of No. America, Phila.	16,001,411
Fidelity-Phenix, New York	13,790,298
Liv. & Lon. & Globe, New York	13,745,408
Royal, Liverpool	11,261,179
National, Hartford	10,792,293
Springfield F. & M.	9,968,142
American, Newark	9,043,082
Queen, New York	9,025,888

WE have received from the Fidelity and Casualty Company, of 92 Liberty street, New York, a memorial of ex-President George F. Seward, who died on November 28, 1910. The memorial is in the form of a booklet, giving a sketch of Mr. Seward's life and tributes from his friends. The booklet is attractively illustrated with a photogravure frontispiece and numerous other cuts. The company has kindly offered to mail a copy to any reader of THE INDEPENDENT who sends them a request.

IN 1860 there were 47 legal reserve life insurance companies doing business in the United States, with 60,000 policies in force, for $180,000,000. By 1909, the number of active companies had increased to 200, the number of policies to about 28,000,000, and the amount of insurance in force to $15,500,000,000.

THIS has not been a profitable season for the plate glass insurance companies in the New York territory. Following the explosion at the Grand Central station, in which windows valued at $25,000 were broken, the recent explosion of dynamite in the harbor is estimated to have destroyed $50,000 worth of glass.

Financial

Colonial Trade

TRADE advantages associated with colonial possessions, or what the Bureau of Statistics calls our non-contiguous territories, should not be overlooked. Trade with Hawaii, Porto Rico, Alaska, the Philippines, Guam, Tutuila and the Midway Islands has been more than doubled in the last seven years. In the calendar year 1903 it amounted to $100,107,234; in 1910 it was $202,494,343. The increase has been largely in favor of the exporter from the States. That is to say, while the value of merchandise shipped from these possessions to the States shows an increase of 82 per cent., the gain in merchandise exported to them has been 139 per cent. From them we buy tropical products mainly (altho fish, copper and furs must be credited to Alaska), including $72,000,000 worth of sugar, and to them we sell foodstuffs and a large variety of manufactures, notably those of cotton, iron and steel. Hawaii bought last year about $750,000 worth of automobiles, for which there was a good market in all the islands.

Postal Savings Banks

DURING the first month of their existence, the deposits in the forty-eight experimental postal savings banks (all of them in comparatively small towns) were about $60,000. This is highly satisfactory to the Postmaster General, who says he would at once establish such banks in 500 additional cities and towns if the necessary appropriations were available. He has asked Congress for an appropriation of $1,000,000, to be available at once, for an extension of the system. The average of deposits in this first month, it is stated by officials of the Post Office Department, is larger than the corresponding average for the British system of postal savings depositories in 1908, that system's most successful year. It seems to us that additional postal savings banks should be established without delay. Such banks are of great service to many persons in places where no other savings banks exist, and in any place they are useful because they offer absolute security. Many are willing to pay something for this, in an interest rate considerably lower than that which prevails in the ordinary savings bank. All ordinary savings banks are not of the same quality. There are no banks of their kind safer than the savings banks of the city of New York, but not all the people of the country are served by institutions of this high character.

....Gross earnings of the railroads in the calendar year 1910, as compiled by the *Financial Chronicle*, were $2,825,246,281, or $229,500,000 more than in 1909. No statement of net earnings has yet been prepared.

....The National Park Bank has taken over the business of Wells, Fargo & Co.'s bank, of New York, whose deposits were about $3,000,000. Wells, Fargo & Co., the express company, owned 920 of the 1,000 shares of stock. The transfer is in accord with the express company's purpose, shown in recent years, to retire from the banking business.

....The United States Mortgage and Trust Company, of which John W. Platten is president, has published in a handsome volume of 383 pages the statements of all the trust companies of the United States, as of June 30, 1910, with names of officers and directors, dividend rates, etc. The aggregate resources of these trust companies are $4,610,373,111, their deposits amount to $3,308,287,170, their capital is $446,168,110, and they have $519,791,113 in surplus and undivided profits.

....William C. Poillon, formerly vice-president, who was recently elected president of the Mercantile Trust Company, was born in New York in 1872 and graduated from the College of the City of New York. In 1889 he entered the service of the Mercantile Trust Company, became assistant treasurer in 1895, treasurer in 1901, and vice-president in 1904. The capital of the Mercantile Trust Company is $2,000,000, and the surplus and undivided profits are over $7,300,000.

The Independent

VOL. LXX NEW YORK, THURSDAY, FEBRUARY 23, 1911 No. 3247

Survey of the World

Reciprocity Before the Senate

Representative McCall (Mass.) has notified Congress, speaking for Mr. Taft, that there will be a special session after March 4 in the event of the Senate failing to vote on the reciprocity agreement with Canada, as it probably will. Ahead of that measure, for consideration by the Senate, in addition to ten general appropriation bills, are measures affecting the popular election of Senators, the Lorimer case, the permanent tariff board, old age pensions, Congressional apportionment, and the fortification of the Panama Canal. Not one of these measures can be sidetracked without a contest. Back of each stands a group of Senators determined that a vote shall be taken before adjournment, and yet only seven and a half legislative days remain for its consideration, if it is reported out of the Senate Committee on Finance February 23. The House passed the Administration bill providing for reciprocity with Canada, February 14, by a vote of 221 to 92. Five Democrats and 87 Republicans voted against the measure. The Democratic leader, Champ Clark, emphasized the fact that the President and he agree as to reciprocity. However, the McCall statement, inspired, at least, by the President, conveys a plain intimation to the Democrats that President Taft will veto any tariff revision not in keeping with his own theory of protective principles. Mr. Taft, in fine, warns the Democrats that any attempt to tack the reciprocity treaty to a radical tariff revision measure in a special session would be blocked by executive action. Somewhat earlier, Mr. Clark very indiscreetly spoke of annexation as the next step after reciprocity. Mr. Taft's letter on this subject, addressed to Mr. McCall, we reproduce in part, in an editorial. We also refer there to Mr. Bennet's resolution requesting the President to enter into negotiation with the British Government "to secure the annexation of Canada." The resolution was referred to the Committee on Foreign Affairs, of which Mr. Bennet is a member, where it received his vote alone. Mr. Bennet's move was made with a view to discrediting the reciprocity agreement in Canada, by means of stirring up fear of American jingoism. Canadian opposition is, indeed, active, whole page advertisements calling upon the Premier to "save Canada" appearing in the press. An association of Canadian manufacturers pays the bills. The Washington correspondent of the Montreal *Star* declares in a despatch that "a large fund has been raised [in the United States] to secure endorsement of the pact," and that the plan is "to bribe certain Canadian newspapers." The Legislature of British Columbia has voted its condemnation of the reciprocity agreement. Sir Wilfrid Laurier and his Ministers insist, none the less, that the measure will be pushed thru as fast as the rules of the Dominion Parliament permit; this in spite of the fact that eighteen of the Prime Minister's most influential and richest supporters—merchants, bankers and newspaper publishers—have issued a manifesto urging Canadians generally to oppose reciprocity.——The Secretary of State, speaking at Chicago, has declared his belief that the people favor and that Congress will enact the tariff agreement, denouncing, also, the annexation bogey. Mr. Knox read part of the letter which he was authorized by the President to write, after the conclusion of the agreement with respect to the

minimum tariffs of the Payne-Aldrich bill, to Mr. Fielding, Canadian Minister of Finance, which letter opened the negotiations for the more recent agreement, now before Congress. Mr. Knox's speech before the Chicago Association of Commerce was followed by a speech by James J. Hill, the railway president, who began by asserting:

"There ought not to be one vote in Congress or one voice in the country against an arrangement worth more than armies and navies. . . . For nearly half a century trade reciprocity, the birthright and manifest destiny of both, has been denied. In both nations today a thousand interests are calling for a closer and more definite commercial compact."

Another railroad president, W. C. Brown, of the New York Central, stated that tho the immediate effect of the reciprocity agreement "will be adverse to the farming interests of . . . the Mississippi and Missouri valleys," this injury will be "slight and temporary." We need and will increasingly need Canadian wheat, he continued; furthermore:

"The reduction or wiping out of the duty on the output of our factories, in my opinion, will fully compensate for any loss present and prospective, giving this country a diversified industrial life, which is a better foundation for a permanent prospect and development than is possible when one industry so largely predominates."

The Election of Senators

The joint resolution proposing a constitutional amendment for the direct election of United States Senators stands a poor chance of coming to a vote in the Senate at this session, and it may be gravely questioned whether it would receive the necessary two-thirds vote even then. The Lorimer case now has precedence. Senator Beveridge, who has twice postponed his speech on this subject—evidently wishing to have the last word—has given notice of his intention to address the Senate in opposition to the majority report, on Tuesday, the 21st. We went to press last week before the conclusion of Mr. Bailey's defense of the junior Senator from Illinois, which extended over February 13 and 14. The Texas Senator devoted himself largely to the legal aspects of the case. Before taking up the legal argument, however, he reverted to the alleged forgery of the bank slip showing a deposit made by Representative Holstlaw, of the Illinois State Legislature. Mr. Bailey held before Senators the original slip, which was subsequently handed about from Senator to Senator, until it was finally lost. With it was an affidavit by Chief Clerk Newton, of the bank, in which he stated that Holstlaw made the deposit in question as indicated by the slip. Senator Bailey said the signature of Newton to the affidavit showed that he did not make out the slip, and that the papers he held in his hand still further corroborated his theory of forgery. In concluding, he made an impassioned appeal to Senators to show enough courage to do justice to a colleague. Senator Tillman wept and other Senators were apparently impressed deeply by the Texan's appeal to them to show their courage in the face of clamor.——The various Senatorial deadlocks continue unbroken. In New York, Martin W. Littleton, Democratic Representative-elect from ex-President Roosevelt's Congressional district, has declared himself a candidate to succeed Mr. Depew.

Political Corruption Unmasked

The Vermilion County (Ill.) investigations of corrupt practices was further complicated when the grand jury voted by a majority of 1 to dispense with the services of State's Attorney Lewman. This was February 14. The objection was that the prosecutor asked witnesses only perfunctory questions. The foreman having asked him to be more specific and to draw out his witnesses, the State's Attorney is said to have replied that he did not require the advice or assistance of the jurors in his conduct of the case. This retort brought about the vote dismissing him from attendance. Acting without an official prosecutor, and with its sessions marked by disorder and open dissension, the grand jury has, it is reported, voted over 200 indictments for vote selling, and a number of indictments for perjury. Two more Illinois counties—Edgar and Clark—are beginning or are about to begin investigations of corrupt practices at the polls.——Besides the investigation of alleged bri-

bery at the November elections in Atlantic City by a committee of the New Jersey Legislature, Ocean County, in the same State, is the scene of a "probe" by a grand jury.——Investigations of the Pittsburgh school system by the Voters' League has disclosed corruption as repulsive as that brought to light during the exposure of corruption in the municipal legislature. Prosecution by District Attorney Blakesley is likely to follow. School funds have been diverted, it is alleged, and spent on everything except education.

Other Matters

Tho President Taft is sure to veto the Sulloway Service Pension bill, providing an increase of about $40,000,000 in the pension rolls, should that measure pass the Senate (as it has already passed the House), it was taken up in the Senate, February 18, by a vote of 49 to 35, and was warmly debated. The vote for consideration was cast generally by Republicans. Mr. McCumber (N. D.) offered his substitute for the Sulloway bill, providing for about $8,500,000 a year. The discussion was distinguished by bathos, and one Senator (Mr. Scott) denounced as an "outrage" the treatment the United States accords its veterans.——Governor Woodrow Wilson, of New Jersey, has declared himself in favor of the Geran bill for extending the direct election system to every elective office, State or Federal, as well as to positions in the political organizations. This bill is now before the State Legislature.——By a vote of 58 to 44 the Alabama House of Representatives has passed a bill providing for local option. The State Senate is known to favor the measure.——As a result of the attack made on the State Supreme Court by Attorney-General Webb, of San Francisco, in which he denounced the granting of a rehearing to Abe Ruef, convicted in the graft prosecution of two years ago, California is afforded the remarkable spectacle of the Legislature investigating the highest court in the State. The inquiry was requested by the Justices of the Court, and will be made by a joint committee of seven members, who are authorized to call for papers, summon witnesses and administer oaths. They are directed to inquire into all matters referred to in the letter of the Justices relative to the conduct of the Supreme Court and the transaction of its business. Ruef was convicted of bribery of municipal supervisors and sentenced to fourteen years' imprisonment. The rehearing was granted on technicalities.

Revolutionists in Central America

Martial law thruout Nicaragua has been proclaimed, and many prominent men have been arrested, owing, it is said, to the discovery of a plot for the overthrow of the Estrada Government. On the 13th an explosion wrecked the ammunition barracks in Managua, near the President's palace, causing a fire which destroyed 7,000 rifles and 10,000,000 cartridges. There was great excitement, and the President's family took shelter in the United States consulate. The President at once cabled to New York an order for 5,000 rifles, ten Maxim guns and 2,000,000 cartridges. Martial law was proclaimed. Among those placed in prison were General Rivas, Dr. Espinoza, formerly Minister of Foreign Affairs, and Señor Zelaya, formerly Minister of Finance. It was reported on the 18th that revolutionists had captured the small town of Teustepe, 40 miles east of the capital.——The movement for peace in Honduras may fail, owing to the indictment by a Federal grand jury at New Orleans, on the 18th, of Manuel Bonilla (leader of the revolution), Gen. Lee Christmas, Joseph W. Beer and Florian Davids, for violation of the neutrality laws. Beer bought the gunboat "Hornet" and sold her to Davids, who represented the revolutionists. It is charged that the gunboat, after leaving New Orleans (having cleared for a port in Nicaragua), put in at Ship Island, Miss., and there took on board Bonilla, Christmas, arms and ammunition, and that more war material was taken at a point near Port Barrios. Warrants for Bonilla and Christmas have been issued, but President Davila cannot easily honor requisitions for them, and there is no extradition treaty with Honduras. Some time ago Bonilla promised to negotiate such a treaty with the United States, if he should become President. Before the

indictments were announced, Davila's representative at the peace conference said the people would not accept Bonilla, because he was in league with "the fruit Trust," meaning, probably, the United Fruit Company. It was then expected that an agreement would be reached, making some person (neither Davila nor Bonilla) President for a few months, and providing for an election in October next. Altho the loan convention has not yet been approved by the Honduran Congress or by our Senate, the loan contract was signed on the 15th in New York. The loaning syndicate is composed of J. P. Morgan & Co., Kuhn, Loeb & Co., the National City Bank and the First National Bank, with the Guaranty Trust Company as fiscal agent of Honduras and the foreign bondholders, who take 15 per cent. of the par value ($25,000,000) of the bonds, altho unpaid interest has increased the debt to more than $100,000,000. The loan is $10,000,000, and $7,500,000 of it is to be paid at once.——Smallpox has been stamped out in Guatemala by the vaccination of every inhabitant. All the physicians were employed, and the consent of the Indians was obtained only by the use of the army.

The Islands

Hayti's revolutionists have been subdued, and their leader, General Le Conte, has fled to St. Thomas. In the last days of fighting, the insurgents burned the town of Quanaminth, and there has been much destruction of property at other places in the northern part of the republic. After President Simon had put to death about a dozen rebel generals, he was asked by our Government to provide for the safety of certain political prisoners confined at Port au Prince, as it was feared that they might be put to death during his absence from the capital. These men are now dead. The Haytian Government asserts that they lost their lives in the night, on the 17th, when revolutionists attacked the Presidential palace. But this attack escaped the attention of the people of the city. The dead men were formerly prominent officers of the Government under President Nord Alexis, Simon's predecessor.——Capt. Willy Meyer, of Germany, recently superintendent of the Krupp yards at Kiel, has been made commander of Hayti's navy, and the Government has bought an Italian cruiser.——Excessive rains in Santo Domingo, 35 inches in December and 15 in January, have ruined the tobacco crop.——At the memorial services over the wreck of the "Maine," on the 15th, the thirteenth anniversary of the destruction of the battleship, which were conducted by the Havana Camp of Spanish War Veterans, the Cuban Government for the first time took part in the ceremonies, and the principal address was made by Vice-President Zayas. He exprest the opinion that the explosion had not been caused "by a treacherous hand," but was an accident. The speaker's platform was on one of the caissons made by the engineers who are at work on the wreck. ——Cuba's Congress has passed a bill authorizing an American company to remove wrecks and otherwise to improve the harbors of Havana and six other ports. The contract is for thirty years. The company is to receive 80 cents for each ton of merchandise imported into Cuba from the United States, and $1 for each ton brought from any other country. Havana's Chamber of Commerce asks President Gomez to veto the bill. ——Cuba's army and rural guard have been consolidated under the command of General Monteagudo, and the office formerly held by General Guerra has been abolished.

The Rebellion in Mexico

General Navarro, with a force of nearly 1,500 men, entered Juarez on the 14th. His march of 200 miles from Chihuahua had consumed ten days, and in all that time, his officers said, not one armed revolutionist had been seen by his soldiers. Orozco had gone to the mountains. As he moved along, Navarro rebuilt twenty-five railroad bridges. After his arrival there were 2,000 soldiers in Juarez. He proclaimed martial law, closed the saloons and took possession of the railroad. Madero, the revolutionists' President, for whom a warrant had been issued in El Paso, escaped from that city and went to Guadeloupe, accompanied by his Board of Strategy. On the 17th, Navarro sent 700 men to look for him. One report says that this force was

driven back, at a point near Guadeloupe; another, and probably the truthful one, says that Madero fled to the mountains before Navarro's men could get to Guadeloupe. Madero's brother (in New York) explained that Orozco's movement against Juarez had been only a feint, designed to draw Navarro northward from Chihuahua, in order that he might successfully attack that city. But Navarro left a garrison of 1,000 soldiers there. Madero's brother appeared to have forgotten those earlier assertions that Navarro was surrounded and locked up in Chihuahua, and that Orozco's purpose was to make Juarez the capital of a new republic.——There was more fighting, last week, in the vicinity of Mexicali, near the western end of the boundary, and the insurgents, led by Bertholdt, the Los Angeles Socialist, were victorious. Half of them are Americans. In various parts of Mexico, raids upon railroad and telegraph property were reported. Two small towns in Puebla were taken by revolutionists or bandits, who withdrew to the mountains when the troops came. In Brownsville, Tex., revolutionists were arrested, and in their possession were found campaign plans and a list of the names of about 200 Americans who had contributed money or arms. Warrants for the arrest of several of these Americans were issued. Our Government may find it necessary (with the consent of Mexico) to send troops across the boundary for the protection of the dike designed to control the waters of the Colorado River. For this work Congress made an appropriation.——Gen. Bernardo Reves, at one time regarded as a leader of those opposing Diaz, will remain for some time in Paris. He was commissioned to prepare plans for a reorganization of Mexico's military service, and he now publishes a part of his report, together with remarks indicating that he is loyal to the Diaz Government.

English Affairs

The veto bill limiting the power of the House of Lords will be introduced into the House of Commons for the second time on February 21. It is thought that this time the Lords will not dare reject it, but that, if they do, the King will create a sufficient number of Liberal peers to pass it. It has been publicly announced that, in anticipation of this emergency, the Government has prepared a list of Liberals who would accept peerages for this purpose. Immediately after this question is disposed of, that of Home Rule will be taken up. The first test vote of the new Parliament showed a majority for the Government of 326 to 213. This was on an Opposition amendment to the reply to the speech from the Throne, introduced by Ian Malcolm, of Corydon. Premier Asquith, in reply, declared that every one voted at the general election in December with the full knowledge that when the Lords, the great obstacle to the achievement of Liberal legislation, was cleared away, the first task of the Government would be to carry out a policy of full self-government for Ireland. Mr. Asquith also said:

"We can only arrive at a satisfactory solution of the problem of the congestion of business in the House of Commons by creating in Ireland an Irish Parliament with an Irish Executive thereto, for dealing with purely Irish affairs, while the indefeasible supremacy of this Parliament must be maintained."

John Redmond, on behalf of the Nationalists, said he welcomed the Premier's declaration, and added that he honestly believed that Home Rule as defined by Mr. Asquith would be the final settlement of this question, and, so far as they could, the Nationalists pledged their countrymen to that effect. Mr. Redmond denied that he was a Separatist. The Nationalists, he said, had accepted imperial supremacy and invited the House of Commons to make it effective. He hoped that the reign of the present King would be made glorious by the opening by the sovereign in person of a parliament of the friendly and reconciled Irish nation.——The remarks of Champ Clark and the resolution of W. S. Bennet referring to reciprocity as a step toward the annexation of Canada will be made the subject of discussion in Parliament this week. The Premier is to be asked if he intends to address any communication on the subject to the United States Government. The tariff reformers have seized the utterances of the Congressmen as a weapon against the Government, but the Liberals are trying to pass them off as an American joke. The *Saturday Review* accuses Ambassador Bryce with

being in a conspiracy with "President Taft, Champ Clark and the avowed annexationists in the United States" to betray the interests of Canada.——The opposition to the ratification of the Declaration of London continues to grow and remonstrances come in from chambers of commerce and associations of shippers and insurance men. The declaration was prepared in accordance with the instructions of The Hague, for the purpose of defining more accurately the rights of commercial vessels in time of war. The Government holds that England is the gainer by the declaration, and that a failure to ratify it would be a serious setback to the development of international agreement and a new stimulus to the competition in naval armaments. The British opponents of the measure object most strongly to the following clause, which, in their opinion, would result in cutting off the food supply of the British Isles and their speedy reduction by starvation:

Article 33: "Conditional contraband is liable to capture if it is shown to be destined for the use of the armed forces, or of a Government department of the enemy State, unless in this latter case the circumstances show that the goods cannot, in fact, be used for the purposes of the war in progress."

Article 34: "The destination referred to in Art. 33 is presumed to exist if the goods are consigned to enemy authorities, or to a contractor:—(1) Established in the enemy country who, as a matter of common knowledge, supplies articles of this kind to the enemy; (2) a similar presumption arises if the goods are consigned to a fortified place belonging to the enemy, or other place serving as a base; (3) for the armed forces of the enemy."

French Railroads

A disaster occurred upon the Western Railroad, near Courville, on February 15. An express from Paris ran into a freight train which was switching across the main line, and an express coming from the opposite direction almost ran into the wreck a few minutes later. Ten persons were killed and a number of others injured. Both trains were burned. The accident is of political importance, because the Western Railroad is owned and managed by the French Government, and the number of accidents upon it in recent months has been far above what Europeans are accustomed to. The employees of the railroad, who were recently defeated in their strike by the Government, are believed to be now encouraging delays and accidents in order to gain their ends. When the matter was brought up in the French Parliament it was charged that the accident was due to the use of American engines, which smoke so as to conceal the signals. The station agent at Courville explains that he had allowed the freight train to switch across the main line because he expected the express to be late, as usual, but on this occasion it happened to be on time.——The French Senate, on February 10, passed a bill from the Chamber, adopting Greenwich time for France. The Paris meridian will be preserved for naval and scientific purposes. The adoption of a uniform time in Western Europe will be a great convenience to travelers. The bill made no reference to Greenwich, but was worded as follows:

"Official time in France and in Algeria shall be Paris mean time put back 9 minutes and 21 seconds."

Austro-Hungarian Armaments

The Military Committee of the Austro-Hungarian Delegation has accepted without amendment the army and navy estimates presented by the Government. The appropriation for the navy, which has hitherto been $10,000,000 a year, will be made $26,000,000 up to 1914, when it will be further increased to more than $30,000,000. The Secretary of State for the Navy, Admiral Count Montecuccoli, argues that "even a little war is dearer than a big fleet," and he plans the construction of a new fleet of sixteen Dreadnoughts. The Minister of War, General Baron Schönaich, asked for an increase of $20,000,000 a year for the army and a special appropriation of $20,000,000 between now and 1915. The Military Committee of the Delegation, in accepting these estimates, urged the Government to make serious efforts in behalf of a general disarmament and the development of the Hague Court. The proposal of Dr. Ellenbogen, the Socialist member of the committee, that the Government be asked to open negotiations with Italy for the restriction of the armaments of the two countries was rejected.

Russia and China

The Russian Government has notified China that Kuldja will be occupied by Russian troops unless China shows a disposition to carry out the provisions of the treaty of 1881 in regard to freedom of trade in Mongolia. The treaty may be denounced within six months after February, and Russia apparently wants to be in a position to dictate terms as formerly. The Russian note demands agreement with the following points :

"First—Russia's full right to impose export and import duties within fifty versts of the frontier zone.

"Second—Extraterritorial jurisdiction over Russian subjects except in civil cases, which shall be tried in mixed courts.

"Third—Freedom to trade and liberty to travel and reside for Russian subjects in Mongolia and the territories behind the Great Wall.

"Fourth—The appointment of consuls at Kobdo, Hami and Hu-Cheng.

"Fifth—Proper facilities for consuls within their jurisdictions.

"Sixth—The right of Russian subjects to acquire land in all towns where Russia is entitled to establish consulates."

Kuldja, or Kulja, and the Ili Valley, in which it is situated, were held by Russia from 1871 to 1881, when retroceded in consideration of trade concessions in Mongolia, which, it is claimed, the Chinese have not granted. The lower part of the Ili running into Lake Balkash remained in the possession of Russia. Kuldja is a town of about 10,000 inhabitants, 48 miles inside the frontier of Chinese Turkestan. It lies upon the northern fork of the caravan route from Pekin. From the Chinese point of view Russia is the aggressor and is seeking to extend her territory.

Turkey and Persia

The contract for the erection of the great dam at the head of the Hindia branch of the Euphrates has been granted by the Turkish Government to an English firm, contractors John Jackson & Co. This forms part of the general plan for the fertility of the Mesopotamian Valley by means of an irrigation system. The original project of Sir William Willcocks provided for the irrigation of over 3,000,000 acres at an estimated cost of $37,000,000. All that is proposed at present, however, is to dam up the Hindia Canal for the double purpose of drying up the swamp lands resulting from the overflow of the canal in flood time and of supplying water to the Euphrates Valley, which is now left quite dry and barren in the summer. The close connection between reclamation of Mesopotamia and the railroad being constructed by the Germans for connecting it with the outside world, and the active interest taken by Russia and Great Britain in Persia and Asia Minor, has already been explained in these pages.——Complaints as to cruelty with which the disarmament of Macedonia has been carried out by the Government have been voiced in both the Turkish and the British Parliament. It is claimed that the measures used have been as severe as those of the old régime. When the commmission for disarmament arrives in a district a state of siege is enforced, soldiers are stationed about every house, and no person is allowed to go out or in while the search is going on. Where this blockade has been maintained for four or five days the imprisoned families have suffered for lack of food. The bastinado has been habitually employed for the purpose of extorting evidence or confession, the beating being often repeated several times and in some cases applied to the whole male population of the village. According to statements made in the Turkish Parliament, the number of persons maltreated in the sanjaks of Salonika, Monastir and Uskub alone during the months of July, August and September as 4,069, of whom sixty-two were maimed for life and eleven beaten to death.——Talaat Bey, Secretary of the Interior, who has been carrying out the disarmament policy, has resigned his post as Minister of the Interior, doubtless by order of the Young Turk Committee, and he will be succeeded by Halil Bey.——In accordance with the request of the Persian Government for American advisors in the reorganization of its finances, W. Morgan Shuster, who has been engaged in the American customs service in Cuba and the Philippines, has been appointed Treasurer General of Persia.——It is announced from St. Petersburg that Russia will withdraw her troops from Kasbin, Persia, as a mark of confidence in the new regent, Nasir El Mulk.

Improving Our Rivers and Harbors

BY THEODORE E. BURTON

United States Senator from Ohio.

FOR years we have been expending vast sums of money for the improvement of our rivers and harbors. Some of it has been spent foolishly, some of it uselessly, and in cases even extravagantly. Too often the result of these expenditures for the improvement of rivers has been a disappointment. It is needless to seek for the causes. They are perfectly manifest.

It is utterly impossible to form and undertake judicious plans for the improvement of rivers and inland waterways in the United States without a careful consideration of the whole subject of transportation. No adequate return for money expended on our rivers is to be hoped for until harmonious relations are established between the two great transportation agencies of the country—the rivers and the railroads. No adequate development of the waterways of the United States can be secured without a just and careful readjustment of the relations between waterways and railways. Both must be considered, in combination, as agencies for the carrying of traffic.

In many instances the economical transportation of freight from one portion of the country to another involves the use of both railways and waterways, and without coöperation between them the most helpful results cannot be secured. As long as unrestricted competition exists, the railways will continue to carry a large amount of the traffic which should, more properly, go by water, no matter how much money is expended, here and there, in isolated schemes of waterway improvement. Inherently there are certain advantages belonging to the railroads which are permanent and inevitable. These must be taken into consideration. They have a wider area of distribution. They can be constructed in any direction. They are readily adaptable to newly arising and ever shifting demands of producing areas and of markets. In the handling of freight they have very great advantages, because in providing for the receipt and delivery of merchandise at factories or warehouses, branch lines or switches can easily be constructed. Railroads can reach all towns and cities alike, wherever located, while obviously boats and barges must be used only between localities situated upon the waterways.

In connection with this fact it must be remembered that the cost of hauling freight compared with the cost of handling after reaching terminal points has undergone a great change in the last forty years. The cost of hauling by rail has very materially decreased, while the cost of handling and delivery and the general expenses connected with terminal facilities has not decreased in anything like the same proportion. It is easier, too, as a rule, to transfer from one railroad to another than from water to land. The constant variation in the level of rivers increases the difficulty of providing an adequate equipment for the rapid handling of freight on the banks of most of our rivers. Freight carried by rail is better protected from storm and from the elements, and the railway insures goods carried in its cars or handled at its terminals. All of these things render the railroads a more convenient and acceptable means of transportation wherever available, and they will always remain the more convenient means. In my judgment these points contain the vital reasons for the decadence of water-borne traffic on our inland waters. No matter how much is expended upon our rivers, water traffic will always be confronted by these disadvantages, and in a constantly increasing measure.

There are other disadvantages inherent in transportation by water which of course can be prevented by law, such as the right to charge lower rates where the railways come in competition with water routes; and very much can be gained by coöperation, where that can be brought

about. It is quite true, too, that the development of waterways by the nations of Europe has met with success. These facts are frequently referred to in urging gigantic and costly propositions upon the American people—but frequently without any adequate comprehension of the different conditions existing there. The greater density of the population, the earlier development and greater dependence upon waterway systems, and the existence of a class of boatmen willing to work for comparatively small gains, all have their influence; but a more important factor is the state ownership of the railways and their management in coöperation with the waterways, or the complete control and regulation of railways, as in France, where they are compelled to charge 20 per cent. more than the waterways for carrying the same variety of freight between given points.

In this connection it may surprise many who ignorantly seize upon the successful development of the waterways in Europe as an example for us, that our country is already much more adequately furnished with railroad facilities than is Europe. The railway mileage, per square mile, in the settled portions of the United States is greater than in Europe, and the mileage per thousand of population is five times greater than it is in Europe. But notwithstanding the great advantages belonging to railways in the transportation field, the superior qualities of our waterways and the greater freedom for competition which pertains to water transportation must not be disregarded. We should bear in mind, in appropriating public money for waterway improvements, that under the present relations between the two means of carrying freight, many of our inland waterways cannot be utilized to any high degree of efficiency and cannot make any adequate return for large expenditures.

Much of the work done in the past has shown disappointing results and much of the money appropriations has been wasted. A good example is the Missouri River, from its mouth to Kansas City. The expenditure of vast sums for its improvement is urged upon Congress, year after year, and agitated in conventions and public meetings till the popular impression goes abroad and reaches even the committees of Congress that it is one of the vital necessities of the nation; whereas, if there is any place in the United States where an attempt to develop waterway transportation has in it nothing but discouragement, it is this stretch of the Missouri River.

In the old days the trains of the so-called Pacific Railway used to run from St. Louis to Jefferson City and from there the passengers and freight were carried by boat to Kansas City. The Missouri River was then an important artery of commerce. Its traffic at that time is held up to us as an argument for large appropriations now, as tho the present decadence were due to neglect of the Federal Government. We are led to suppose that when millions are expended upon the river, thru appropriations by Congress, the old days of flourishing river traffic will instantly return with renewed vigor and importance; when, as a matter of fact, conditions have completely changed. Traffic left the river with very little reference to its navigability and nothing can bring it back again to any great extent, in the natural course of things, but a tremendous increase in the density of the population close upon its banks. Already, in response to these demands for appropriations, the grand total of $12,019,022 has been expended upon the river, and let us see what the returns were during the calendar year of 1909. During that year long-trade packets carried just 133 tons of freight and carried it an average haul of a trifle over 100 miles. This was all that had any semblance of thru traffic. Short-trade packets and other boats carried 24,437 tons an average of about 21 miles. Sand steamers and barges carried 290,263 tons of sand, hauling it an average of less than one mile; yet this is all counted in ascertaining the tonnage statistics of the river. These figures speak louder than any argument in the case. Oh, but it is said, there cannot be any navigation on the river because you do not improve it. Spend $20,000,000 more, or if you will not spend that much at least spend $3,500,000—and we spend it, tho we have in years past found that the

expenditure of these millions accomplishes no result. Even before the Government entered upon its plan of improvement at all this river was utilized for the conveyance of traffic far more than it is today.

The cause of all the agitation for the further improvement of this river is simply that they are confronted by an unnatural situation as to railroad freight rates. The rate on first-class freight from New York to St. Louis, over a thousand miles, is 87½ cents, and 60 cents more—nearly two-thirds as much more—to Kansas City, only 400 miles farther. Only do away with that discrimination or inequality and no matter how perfect the navigation, and if the river was studded with boats, every one of them would be taken off. That has happened many a time in the past and just so sure as transportation conditions remain as they are now, that is what will happen in the future. The same conditions in other parts of the country have instigated many demands for appropriations for river improvement. But the arm of the law is not so weak nor the railroads so strong that Congress is justified in expending millions upon millions of the people's money in this roundabout way to enforce reasonable freight rates. There are better means at hand.

No one is more thoroly aware than I am of the criticism, the obloquy, that is visited upon any member of the House of Representatives or of the Senate who opposes expenditures for river or harbor improvements. The people in the locality where the improvement is made are always unanimous for the expenditure. If it meant the mere digging of holes in the ground, if it meant the construction of useless masonry they would urge it just the same, believing that money would be placed in circulation among them. Every locality is anxious to secure appropriations, and brings every possible influence to bear upon the committees of Congress to enforce its appeal; while any objection to their demands must be made upon general principles, by some one outside, without any backing, encouragement, or thanks—nothing but criticism and obloquy. But it is high time that as a nation we studied this matter, understood it and demanded that in the improvement of our rivers and harbors the public money be expended in a rational way and for the benefit of the whole country.

Take, for another example, that little stretch of the Mississippi River, 206 miles, from St. Louis to Cairo. Nearly $13,000,000 has already been expended on it and for five or six years there has been an 8-foot channel available except for a few days each year. The amount of traffic on this stretch of river, before the expensive improvements were commenced, as measured by shipments from St. Louis in 1880, was 1,038,000 tons. At that time the prevailing depth was only 3½ to 4 feet. But in the year 1908, with an 8-foot channel, the volume of shipments from St. Louis was only 72,740 tons—about one-fourteenth of the former amount.

In the face of such figures Congress should realize its responsibility to the whole people and the people should demand greater care in the making of appropriations for inland waterways. There are many examples as graphic as those to which I have called attention. In the great change that has taken place in transportation conditions many rivers even tho improved no matter to what extent, can never be utilized as they once were. The returns can never be adequate to the large expenditures made or demanded.

I readily concede that freight rates are affected by the improvement of the streams where traffic does develop or even where there is the possibility that it will if necessary; but what are we to do? Are we to waste money by the hundreds of millions just to make our railways behave themselves? Have we not the courage, thru the agencies which belong to the Government when a railroad's charges are exorbitant, to compel it to lower its rates by appropriate legislation? I most emphatically dissent from the idea that we should engage in these enterprises, confessedly a waste of money, in the hope that railroads will be brought to lower their rates in certain localities. There is a readier and more intelligent and sensible way to do it than by this expensive line of indirection.

I am by no means opposed to the amount of money expended upon our rivers and harbors. Even larger sums might be very wisely expended and bring to the nation invaluable returns. But there is a rational way to manage the whole problem, and that is to begin with the idea that the control and utilization of the waters of the United States are just as important as the control and utilization of the land; that water as well as broad acres is an asset of the whole country; that water may be used for navigation, in some instances, for irrigation in others, for furnishing a water supply in others; that under the influence of the tempest or the flood it may become a destructive agent rather than a beneficent one. So far as we may we should control floods, prevent erosion of banks, secure clarification as far as possible, all as a part of one great, scientific, comprehensive plan. In carrying out such plans, there should be an equitable division of expense between the nation and the States and communities especially benefited.

Until we frame such a plan and take up this question in its entirety, our treatment of the subject will necessarily be partial, imperfect, and will bring no benefit commensurate with the cost; but when we unite all these uses, navigation can be wisely developed where it is desirable, irrigation can be fostered where it will be beneficial, water can be clarified, water power can be conserved and utilized, and in the combination of all of these great objects, economy can be practiced, results secured and unmeasured benefits obtained for the entire nation. It is the only way and it must eventually prevail.

WASHINGTON, D. C.

Pillars of Hercules

(Washington and Lincoln)

BY WALTER F. LONGACRE

Two massive rocks, tradition-flung,
  Gibraltar and the Afric hill,
Outlast their mythic builder's tongue
  And guard the Eastern gateway still,
Whence freedom sprang when states were young.

Two giant men, of crises born,
  The country's sire and sole compeer,
Loom mighty in the New-World morn:
  The one impregnable, austere;
The other vibrant, like a horn.

Behold them as they tower high,
  The landmarks of our civic pride;
They buttress, nerve and fortify
  The yearning millions at their side,
Strong bulwarks toward the Western sky.

NEW YORK CITY.

Washington and His English Ancestors

BY GENERAL JAMES GRANT WILSON

[This article is a portion of an address delivered by General Wilson before the New York Genealogical and Biographical Society, February 22, 1911. Its author is president of the American Ethnological Society, and was formerly president of the society before which he made the address. He is also known to our readers as the original editor of Fitz-Greene Halleck's "Poems," as Halleck's biographer, and as the author of numerous important historical and literary contributions.—EDITOR.]

THERE are many Washington family manor houses and estates in England. The particular manor in which we Americans are most interested, is that of Sulgrave, five miles from Banbury, in Northamptonshire. The first of many Laurence Washingtons to be met with in English genealogical, or other annals, was the son of John Washington of Warton, Lancashire, who went to London, where he became a wealthy wool merchant of Gray's Inn, and later an alderman. He was knighted by Henry the Eighth. During the reign of that much-married monarch, Laurence Washington acquired property and position, becoming Mayor of Northampton in 1532 and again in 1545. The manor and priory lands of Sulgrave were granted to him for his services to his county by King Henry on the dissolution of the monasteries, and having amassed a fortune, Laurence retired to Sulgrave, where he erected the mansion to be seen in the accompanying picture, copied from a painting made in 1910 by Harold Vivian, an accomplished English artist. The house was obviously intended to be of larger proportions than it attained, and stands at the further end of the little out-of-the-way hamlet of Northends. When Washington Irving was there a century ago, it still retained the family arms in stained glass in one of the windows. On the outside of the high-gabled porch is to be seen in its spandrels the royal arms of Queen Elizabeth, also the mullets and bars of the Washingtons, showing, as many believe, that the Stars and Stripes of our flag may have had their origin in the armorial bearings of George Washington's ancestors.

The second picture, copied from a companion painting, also by Harold Vivian, represents a portion of the interior of the Sulgrave Church of St. James, where the founder of Sulgrave is buried with his wife, Amy Washington, by his side, their tomb being marked by a beautiful and well-preserved brass tablet, which can be seen in the illustration. The tombs of other members of the family are in the church, but, sad to say, the brasses which marked them were stolen some two score years ago by unknown vandals. There is also to be seen in St. James's Church a treasure chest eight centuries old! It had originally six massive locks and was used to contain the priory plate and regalia. The oak chest was presented to the church by Laurence Washington during the days of Shakespeare, with whom there is a tradition that both he and his father, Sir John, were well acquainted.

Robert, son of Laurence, unfortunately squandered his father's fortune; Sulgrave passed out of his possession, and he established himself at Brington, on an estate belonging to his relative, Lord Spencer. There his grandson Laurence was born, and after graduating at Oxford he became rector of Purleigh Church at Maldon, Essex, represented in the accompanying illustration. This charge was held by the Rev. Laurence Washington from 1632 until 1643, when he was ejected by Cromwell for loyalty to the absent young King, Charles the Second. When he died in 1662, he was buried in Brington, or Brixton Church, where he was baptized. His decease caused a breaking up of the family, and his eldest sons, John and Laurence, sailed for Virginia. John settled at Northern Neck, between the Potomac and Rappahannock. There he had a son Laurence, his son was named Augustine, the father of George, born one hundred and seventy-nine years ago, so that our first President was ninth in descent from Sir John Washington.

A few years ago, Mrs. Morgan Rich-

ards of Steephill Castle, Ventnor, Isle of Wight, and the mother of the late gifted Mrs. Cragie, asked me to aid her in collecting £600 for the restoration of the fine Tower of Purleigh, better known as Washington Church, erected in the fourteenth century. I have sent several hundred dollars for this purpose, and among the American contributors are Mrs. Daniel Butterfield, J. V. L. Pruyn, Duchess of Marlborough, Hon. L. P. Morton, Bishop H. C. Potter, Henry Clews, William G. Low, Thomas R. Proctor, Gen. Grant Wilson, William K. Bixby, Hon. Whitelaw Reid, and Charles W. Burrows. More funds are still required to make up the one thousand dollars that the writer undertook to raise on this side of the sea, so that any persons who are inclined to aid this patriotic object may send their contributions, of any amount from five dollars to fifty, to Mrs. Morgan Richards, Steephill Castle, to the writer of this appeal, or to the rector of Purleigh, Dean R. T. Love, Maldon, Essex, England. It may be added that the parish is a poor, agricultural one, without any wealthy residents, and that the peal of five bells cannot be rung while the tower is in its present condition, which is of course a great deprivation in the village life of England, to miss the sound of the cheerful Sunday chimes. Ever after the day when the tower is restored, the American flag will be displayed on every anniversary of Washington's birth. It has been already presented for that purpose.

The paintings of Sulgrave Manor and Church were a New Year's gift from my friend, Col. T. Myles Sandys, of Graythwaite Hall, Lake Windermere, formerly of the British Army, but for the past quarter of a century a member of Parliament. His ancestor, Archbishop of York, and Sir John Washington, were intimate friends, and the latter was godfather to several of the former's children. During their period and later, several marriages occurred between members of the Sandys and Washington families. Sir Edwin and George, two of the Archbishop's sons, were officials of the London Company for Virginia, and the younger brother, like Sir Edwin, an Oxford graduate, built the first water-mill in the colony, also promoted the establishment of iron works and shipbuilding in Virginia. His translation of Ovid's "Metamorphoses"

PURLEIGH CHURCH.
Here Washington's ancestor was rector.

(London, 1626) is the first English production of any value that was written in this country. It may be added that the Archbishop was the friend of Cranmer, Hooker and Jewell, and suffered seven months' imprisonment in the Tower of London for his exprest opinions against Popery. He was to have been burned at the stake, but having powerful friends and wealth, which he used freely, he fortunately escaped and fled to the Continent. When Elizabeth became Queen he returned to England, and from being Bishop of Worcester was advanced by her to the Archbishopric of York.

Having now completed my account of our first President's ancestry, and some of the associations connected with them, our attention will be given to George Washington, of whom Thackeray wrote, he "was the noblest, purest, bravest, best of God's men."

By the general judgment of the English-speaking world, Washintgon, Lincoln and Grant are accepted as the three greatest Americans—Washington the founder, Lincoln the liberator and Grant the savior of our country. With the *pater patriæ* I enjoyed agreeable associations in early youth thru acquaintance with several of those who were nearest and dearest to him; with the martyr President it was my great privilege to be intimate during a period of eight years, and with the illustrious soldier, under whom I served, I was on terms of friendship for almost a quarter of a century. While many persons have known Lincoln and Grant, and a few were acquainted with Washington and Lincoln, so far as I am aware, but one person was ever born into this world who knew the triumvirate of uncrowned American kings. That individual was Horace Binney, leader of the Philadelphia bar, and among the leaders of the profession thruout our land, with whom I spent a memorable evening in the year 1874. During that delightful interview he stated that when a schoolboy his home was on Market street, near the President's residence, that he had seen him almost daily for several years, and that Washington knew him as a neighbor's son, and frequently held short conversations with him. Mr. Binney also mentioned the interesting fact that he had been acquainted with every President of the United States up to the time of General Grant, during whose second administration he passed away, at the great age of ninety-five.

Permit me to push back the hand of time to October, 1777, when a great victory was won on the field of Saratoga—in its results one of the decisive battles of the world, for it won for us the alliance of France, and without the aid of her army and navy, as well as financial assistance, it may be questioned if independence could have been achieved. The hero of that battle was not the American commander, but Benedict Arnold, who by his gallant and impetuous charges broke the enemy's ranks and led to the surrender of Burgoyne and the British army. A few weeks after Arnold met the Commander-in-Chief, and was highly complimented for his gallantry at Saratoga, and then Washington added, in his stately manner: "I understand, sir, that on that great day when you rendered such valuable service to your country you lost your sleeve-links. Will you do me the honor to accept this pair, which I have worn several months, and of which I am now wearing duplicates?" When General Arnold became a traitor to his native land, and Washington, with righteous indignation, had denounced his base treachery in bitter and burning words, he no longer found pleasure in the possession of the gold sleeve-links, and he presented them to Colonel Tarleton, the only British officer who treated him with any degree of courtesy. Before Tarleton returned with the British army to the Old World, at the close of the war, he gave Washington's gift to his military secretary, an American loyalist, who, having taken the oath of allegiance to the new nation, was permitted to remain in his native land. When he died they were presented to his only son, Fitz-Greene Halleck. The poet bequeathed them to a young army friend, who later became his biographer, and was instrumental in erecting his bronze statue in the Central Park, who is the happy possessor of the precious and beautiful relic.

Several years before the commencement of the Civil War there was a house party in a spacious Virginia mansion on the banks of the Potomac, assembled for

SULGRAVE CHURCH,
Where our first President's ancestor, Laurence Washington, is buried.

the purpose of celebrating the anniversary of Washington's birth. The host was Washington's adopted son, and Mrs. Washington's grandson, George Washington Parke Custis, the hostess his only daughter Mary, wife of Robert E. Lee, then Lieutenant Colonel of the Second United States Cavalry. The day was devoted chiefly to listening to charming recollections of Mr. Custis, who had lived with his father, as he called Washington, for eighteen years; to looking at the President's letters, his books, his swords, and, in short, to innumerable articles hallowed by associations with him. It was a red-letter day—in the words of Carlyle, "A day never to be forgotten in this world." Alas! of all that happy house party, the Richmond beauties, the Baltimore belles, the young Virginians and the two students from the North, a gray-haired grandmother of the

SULGRAVE MANOR,
The home of Washington's ancestors in the days of Queen Elizabeth.

South and the writer are the only survivors. The place of that memorable meeting was Arlington, now a national cemetery. There rests that *beau sabreur* my gallant friend Phil Sheridan, and around him are buried several thousand of those rough-riders who followed him on many a well-fought field, and there, too, is the grave of Admiral Porter, second only to famous Farragut.

A few days later the writer was the guest in the city of Washington of a venerable lady whose hair was silvered by the snows of ninety-six winters. In early life she and my godmother, Mrs. Grant, of Laggan, were taught in Albany by the same governess. They parted at the age of thirteen and never met again. The broad Atlantic rolled between them, but they continued to correspond for three score and ten years. Elizabeth Schuyler, at the age of eighteen, spent several months with General and Mrs. Washington when the American Army was quartered at Morristown, N. J. Among her many admirers was a young Captain of Artillery to whom she gave her heart and hand before she returned to her home in Albany. There in the house, which is still standing, of her father Gen. Philip Schuyler, she was married in the following December, one hundred and twenty-five years ago. At the time of my visit she had been separated by death from her young Captain more than half a century, but she still loved to speak of him, and his immortal chief, with whom he was a staff officer later on, with the rank of Colonel. She described Washington as the most majestic and magnificent of men, and the finest horseman of his age. Mounted on one of his fiery chargers, he was always an inspiration to his troops. When I bade this venerable woman a final farewell, she said, "My dear young friend, you may be glad to remember hereafter that the same hand that your lips have just pressed was often pressed by the lips of Washington." A year later I saw her placed by the side of her young Captain under the shadows of Trinity Church, New York. His fame as the most brilliant of American statesmen has flown to the four quarters of the globe. His name was Alexander Hamilton.

A few years after the close of the war by Lee's surrender to Grant at Appomat-

tox in April, 1865, the writer was a guest in one of England's great houses. The estate of between six and seven thousand acres was purchased by the British Government at a cost of a million and a half dollars, and together with a dukedom, and fifty thousand dollars a year, presented to a successful soldier for a single day's work at Waterloo. Another equally decisive three days' battle was won at Gettysburg by General Meade--a battle not surpassed in importance by any fought since Saxon Harold fell at Hastings eight hundred years ago, but I never heard that he received an estate of any kind, or emolument, or even an increase of rank from our Republican Government. When I entered the Stratheldsave drawing-room for the first time with the second Duke of Wellington, I was surprised and delighted to see one of Gilbert Stuart's noble portraits of Washington occupying the place of honor. "Where did you find that fine picture?" asked the American. "Oh," said the Duke, "my father hung it there almost half a century ago." "Did your father admire our first President?" "My father," was the Duke's reply, "deemed Washington the purest and noblest character of modern time—possibly of all time, and considering the raw troops with which he opposed the trained and veteran soldiers of England, also a great general."

Another extremely interesting statement which the Duke made was that when his father was assigned to the command of an expedition to be sent out against Baltimore, Washington and New Orleans, in 1814, he declined the command chiefly on the ground that he would not fight against Washington's countrymen. And when the Government asked Wellington for the names of three officers from whom a commander could be selected the "Iron Duke" wrote "Sir Edward Packenham, Sir Edward Packenham, Sir Edward Packenham," and so poor Sir Edward, who was his brother-in-law and a gallant soldier, was sent to New Orleans to meet his death in the most disgraceful and disastrous defeat ever sustained by a British army.

About a dozen years ago a cavalry and staff officer who accompanied Grant down the Mississippi, including his brilliant Vicksburg campaign, wrote the General's biography, and sent a copy to Gladstone, with whom he enjoyed the privilege of an acquaintance. In the course of the Life, the author drew a comparison between Washington and Grant. Soon after an acknowledgment came from the great Christian statesman in which some pleasant compliments were paid to the volume, his communication concluding with these words: "America is indeed a happy country if she can produce men worthy to be compared to the excellence of Washington, who has been a guide to my path all the days of my long life."

In addition to the sleeve-links, I have another Washington relic, a lock of his hair received from his adopted son, which is contained in this ring. With it is Hamilton's hair given to me by his widow. When I told Lincoln that I wished a lock of his hair to add to Washington's and Hamilton's, he said, "Help yourself, Colonel," which was promptly performed. Capt. Frederick Lahrbush, who passed the century mark, when guarding Napoleon at St. Helena, became somewhat intimate with the illustrious soldier from the circumstance of his speaking French, received from him on his return to England with his regiment, the Sixtieth Rifles, a small lock of his hair. This he bequeathed to me with his Waterloo medal, I believe the only one in this country. On the last of my many visits to Strathfieldsaye the Duke gave me a lock of his father's hair. They are all, together with some of Grant's hair, contained in this ring—Washington's, Hamilton's, Napoleon's, Wellington's, Lincoln's and Grant's.

When I saw Lincoln for the first time in 1858, in his shabby, uncarpeted law office over a grocer's shop, the Judge who introduced me said to him: "Our young friend has been telling me of some stories he heard from Mr. Custis of Arlington, about Washington's wonderful strength and remarkable skill as a wrestler, who never was thrown." "Well, my young friend," remarked Mr. Lincoln, "in my early days I could outlift any man in my part of the country, and as for wrestling, I never but once failed to put the other fellow on his back. But there was a big chap named Jack Armstrong, strong as a bear, that I could not throw, but I was very careful that he

did not get me down. Now if George was loafing around, I wouldn't mind having a tussle with him, and I rather believe that one of the plain people of Illinois would hold up his end against the aristocrat of old Virginia."

The mention of Washington's name doubtless suggested to Lincoln the following droll incident which occurred when going to attend a meeting of the trustees of the State Lunatic Asylum a few days previous. As the day was cold and the long hall chilly, he deemed it prudent to wear his hat as he passed thru. When about midway a little lunatic darted out of a door, stopped in front of Mr. Lincoln, and looking very indignant, said: "Sir, I am amazed that you should presume to wear your hat in the presence of Christopher Columbus." Removing his hat, Lincoln said, "I beg your pardon, Christopher Columbus," and passed on to the meeting. Returning half an hour later, having forgotten the incident, and again wearing his hat, he was startled when the same little lunatic darted out and drawing himself up as before, but with a heavier frown, exclaimed, "Sir, I am astonished that you should dare to wear your hat in the presence of General Washington." "Excuse me, General," said Mr. Lincoln, at the same time removing his hat, "but it seems to me that half an hour ago you claimed to be Christopher Columbus." "Yes, sir, that is perfectly correct, *but that was by another mother.*"

Theodore Roosevelt said of a triumvirate of his predecessors: "Washington fought in the earlier struggle, and it was his good fortune to win the highest renown alike as a soldier and statesman. In the second and greater struggle, the deeds of Lincoln were made good by those of Grant the soldier, and later Grant himself took up the work that dropped from Lincoln's tired hands when the assassin's bullet went home, and the sad, patient, kindly eyes were closed forever."

What would have been the fate of our country without these three mighty men? It certainly may be doubted if independence could have been gained without Washington. And it is equally open to doubt whether the Republic would have maintained its integrity without Lincoln and Grant. National unity is no longer a theory, but is a condition; and we are now united in fact as well as in name. In the words of the greatest of poets:

"Those opposed eyes
Which, like the meteors of a troubled heaven,
All of one nature, of one substance bred,
Did lately meet in the intestine shock,
Shall now in mutual well-beseeming ranks,
March all one way."

Perhaps it is the greatest glory of these three illustrious men that they were alike spotless in all the varied relations of private life. Their countrymen will continue to cherish their memory far on in summers that we shall not see, and upon the adamant of their fame the stream of Time will beat without injury. The names of Washington, Lincoln and Grant belong to the endless and everlasting ages.

New York City.

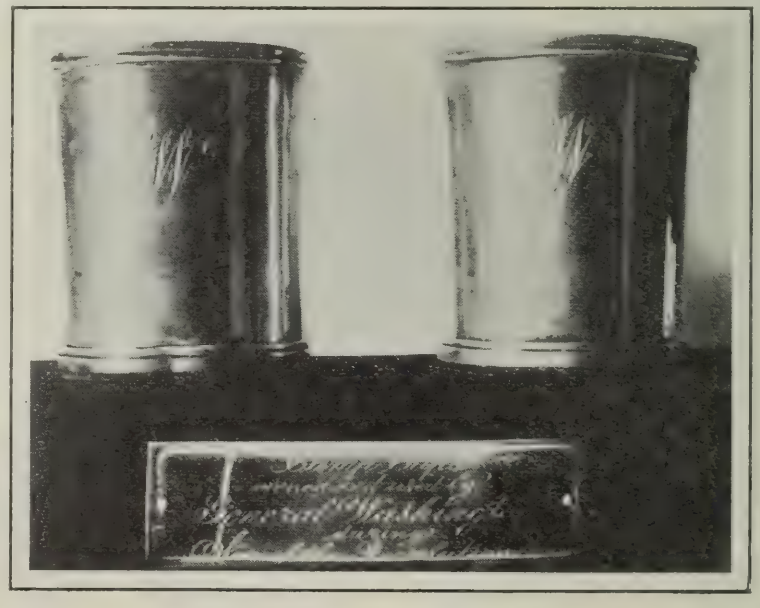
BRINGTON CHURCH,
Burial place of Rev. Laurence Washington.

A Collection of Washingtoniana

BY W. B. BLAKE

BETWEEN the brownstone fronts of West 162d street and the apartment houses of 160th is thrust the gateway to the old Roger Morris farm, with the Colonial mansion erected thereupon almost a century and a half ago. The farm has crumbled away; but the manor house still stands there, somewhat proudly surveying its prospect from shrunken grounds—today a city park. It is a busier if a less picturesque view than that which Lieutenant-Colonel Morris gazed upon when he erected the house for his young wife, Mary Philipse.

Roger Morris was a loyalist—and his estates were duly confiscated by the upstart government, that is upstart no longer. And, after the disastrous battle of Long Island, August 27, 1776, when the American army had retreated by night to New York, and thence to the north of what was then the city line, this house of his, to which lordly hospitality and old-fashioned grace had already lent distinction, became historic ground—if houses *are* ground. For General Washington made it his military headquarters in September, 1776; and his headquarters it remained for at least five weeks. One cannot readily imagine a scene more meet for the celebration of Washington's Birthday than this old house. Tho we know all too little about the commanding general's tenancy—inferring, only, which room was his chamber, with a closet opening off with just room enough for his body servant's cot; inferring, only, which was the court-martial room, and which the guard room—we do know that here was an ideal stage for the drama unrolled there. A little later the old house was General Sir Henry Clinton's headquarters after Washington was forced to abandon New York, and still later it came into the possession of Stephen Jumel, a merchant of French birth, whose widow (née Bowen) long occupied it, and entertained there Joseph Bonaparte and Louis Bonaparte, before he became Emperor of the French. Monsieur Jumel himself went to France in his own ship, the "Eliza," in 1815, for the purpose of bringing that greater Bonaparte to America. Madame Jumel's second husband was Aaron Burr. But let us not efface Washington's memory for Burr's.



Now, and for an indefinite period, the Roger Morris farm, or the Jumel Mansion—call it what you will—is the place of pilgrimage to which those who revere Washington's memory and who take an interest in his relics are asking the way of subway guards, and "elevated" ticket choppers, and policemen, and schoolboys in Harlem. The schoolboys, at least, know enough to direct the pilgrim to the mansion, and can tell him something of the Washingtoniana to be seen there. It is the head of the first President's family who has lent some of the gems of his collection to enrich the interest of the Jumel house; and what a collection it is! But, lest those who go up to 160th street think that they have seen it all, let it be noted that the fine bust of George Washington, by Hiram Powers, a reproduction of which appears on the cover of this issue, is only one of several busts not removed thither. There is, however, more than enough to reward the visitor. Let us pass over the buttons from the general's coat; the valuable and most interesting mourning brooches and mourning rings; the two score and over of souvenir snuff-boxes, most of them bearing miniatures of Washington on ivory; the statuets in bisque and china—garnered from England and France and Spain, to say nothing of these States. For there are other objects even more striking.

Take, for example, the two silver drinking cups, a photograph of which we reproduce. They were made for the American commander in 1777 by a London silversmith, and used by him thruout the campaign of the war. Unlike many of the relics, these drinking cups have never been out of the possession of the family, for they were willed to the General's favorite nephew, Col. William Augustine Washington, and, passing from generation to generation, they have come at last to Mr. William Lanier Washington, the generous and enthusiastic collector whose treasures are now, for a time, the treasures of the public. "They were the General's one extravagance during those trying days," says the heir. They cost him eight guineas; but that was not a bad investment, for, in spite of their long service, they are insured today for $3,300. The bill for the cups bears the date of August 20, 1777, and runs as follows:

"His Excell'cy Gen. Washington to Edm'd Milne Dr. To Mak'g 2 Silv'r Cups ut 11. oz. @ 14 La £8.8."

There is a credit of "16 Silv'r Doll's" which may have been sent with the order to be used in the making.

Among the paintings lent by Mr. Washington is a specimen of the art of John Trumbull, the General's aide, who caught and rendered most pleasingly an intimate impression of the commander. On the back of the canvas is pasted the painter's visiting card: Col. Trumbull, 406 Broadway. But the most notable portrait of the collection is that by the Swedish painter, Adolph Ulric Wertmüller, whose name occurs in the iconography of Washington. The portrait on exhibition is not this one, however, but is alleged to represent Mary Ball Washington, the grandmother of her country; the only portrait of her in existence. Has any reader of THE INDEPENDENT ever seen either original or reproduction of it before today? Wertmüller visited America between 1784 and 1786, and Mr. Lanier Washington regards the resemblance to Mary Ball Washington's great son almost conclu-

Made in London and used thruout his campaigns.

THE WERTMULLER "MARY WASHINGTON."

sive evidence in itself. "The portrait has been carefully relined," says her great-great-great-great-grandson, "but Judge Townsend [a former owner] has stated that when the artist Wertmüller went to the house of Mary Washington to make his studies, he could get no canvas and was compelled to make his own out of a piece of bed ticking."

There is light and shade in this memorial exhibition. And one is rewarded for his exploration of the dining-room, where the treasures are on show. Here is one of the entries recorded in his accounts by Lund Washington, a distant cousin of the General's, and overseer at Mount Vernon:

"To won at whist at Mount Vernon, 5 shillings."

It is evident that time did not hang heavy on the household's hands.

New York City.

Opera in English

"SHOULD grand operas in this country be sung in English?"

That is the question of the hour. It is one that has often been discussed, but never before have so many journalists, composers and other musicians taken part in the controversy. Those in favor of English maintain that, since all operas in Germany are sung in German, in Italy in Italian, in France in French, it is absurd not to have them sung in English in this country. Were they sung, they claim, in a language "understanded of the people," the interest in them would be doubled and the enjoyment of the audiences greatly increased.

What makes this discussion especially timely is the fact that several American operas written to English texts have been prepared for the present season—Converse's "The Sacrifice," by the Boston Opera Company; Victor Herbert's first grand opera, "Natoma," by the Philadelphia-Chicago Company, and Arthur Nevin's "Twilight," by the Metropolitan Opera Company. If these, or one of these, succeeds markedly the advocates of opera in English will no doubt claim a great victory for their cause. But the matter is not so simple as it seems. If an American opera with an English text, sung in English by American singers, succeeds, it will not prove that Italian, French and German operas also should be sung here in English; it will prove exactly the opposite—that it is best to sing an opera in the language it was written in.

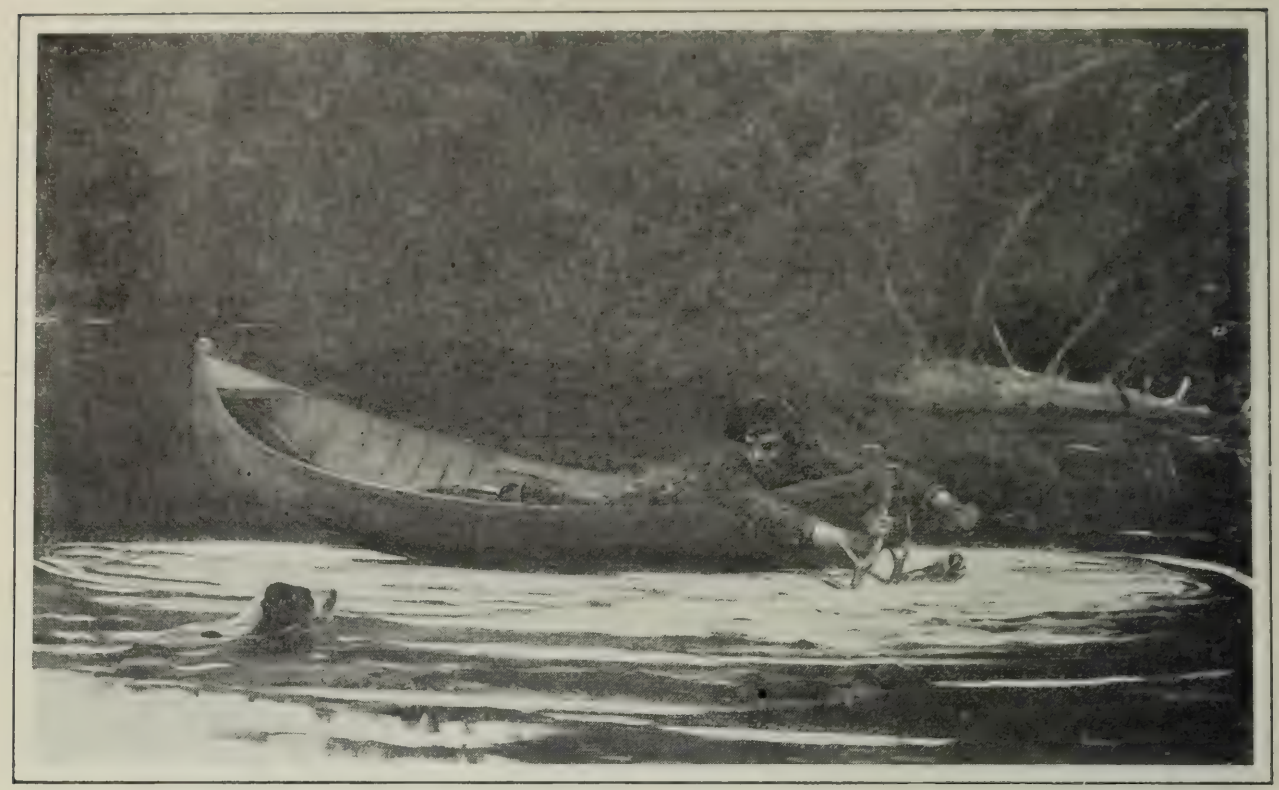
If, in Berlin, not only German operas, but French and Italian operas are sung with German text, that is not because the inhabitants of that metropolis prefer to hear Bizet's "Carmen" or Verdi's "Aida" in the German language, but because the artists at the Royal Opera, being mostly Germans, can sing them better in their own language than they could in French or Italian. The audiences would greatly prefer to have the French operas in their repertory sung by Parisians, the Italian by Milanese; but they cannot afford such an arrangement. Once in a while there is an Italian "stagione" in Berlin, and on such occasions, even when the company is not first class, public and critics wax enthusiastic at the opportunity to hear foreign operas in their own languages. When Caruso sings for them, the Berliners put up with polyglot performances and anything else you please, as long as they can hear that tenor using his mellifluous native tongue.

In the same way the Parisians make a virtue of necessity. They know that no one can sing their own operas as their artists sing them; but as for the others, they would be only too glad to have German operas sung by Germans, Italian operas by Italians. Like the Berliners, they cannot afford this. New York is the only city in the world (London being only a partial exception to this statement) willing to spend money enough to engage the best singers of Italy, France and Germany, in order to be able to hear all operas sung by specialists in their own language.

How important this is was demonstrated by Oscar Hammerstein, who, by importing the best artists of the Opéra-Comique, won triumphs in New York for a number of French operas which, if sung by Italians or Germans, would have failed here, as they failed in Europe, outside of Paris.

In view of these facts, it is nothing less than preposterous for the champions of opera in English to demand that the French, Italian and German operas should be sung at the Metropolitan in

English. Whether English is a good language to sing in is not the question at all. Purcell, Handel, Arthur Sullivan and many others have shown that this language is as amenable to musical treatment as any other. The real question is, Would there be any advantages to offset the disadvantages of such a radical change?



The only possible advantage that could be claimed for the change is that the audiences would understand what the artists sing. But would they? Because of its expensiveness, grand opera must be given in a very large auditorium, and in such an auditorium even the plain spoken word is difficult to follow, as has been shown during the performances of operas like "Der Freischütz" and "Die Fledermaus," in which dialog alternates with music. When these words are sung the sounds carry better, but the words themselves are still less intelligible. Few even of the great singers enunciate distinctly, and as long as they fail to do this, what difference does it make whether they sing in English or in some other language?

Operagoers may be divided into two classes—those who go for the music alone and those who also are interested in the plot and the dialog. The second class, who seem to be in a minority, have plenty of opportunity to learn in advance what they want to know. There are a dozen or more books which tell the plots briefly, and for a trifling sum any one can buy a libretto with an English translation and read it in advance of the performance.

These librettos suggest another serious objection to the Englishing of our operatic performances. It is almost impossible to translate an opera book in such a way that the word accents always coincide with the melodic accents, and unless the accents do thus coincide the effect is the worse the more distinctly the singer enunciates. A vivid description of the formidable difficulties confronting a translator are given by Wagner in his letters to Mathilde Wesendonck, in which he tells how he helped a French poet with Tannhäuser": "So I seat myself with my young poet every morning, go over verse by verse, word by word, syllable by syllable; seek with him, often by the hour, for the best turn of speech, the right word; sing it to him . . ." A few months later: "And then the French translations! I'm bound to think them clean impossible; the few verses translated for my concert cost unspeakable pains, and were insufferable; neither is a single whole act from my operas translated as yet, in

ARMOR SHOWN AT THE METROPOLITAN MUSEUM.

WINSLOW HOMER'S "HOUND AND HUNTER."
Lent to the Metropolitan Museum by Louis Etlinger.

spite of endless labors, whilst what thereof exists is odious to me."

All things considered, one cannot but congratulate the manager of the Metropolitan Opera House on having changed his mind and given Humperdinck's "Königskinder" in the original German instead of the promised English version. On the other hand, and for the same reasons, he must be commended for producing American operas with the English text. Last year it was Converse's "Pipe of Desire"; this year it is to be a one act opera, "Twilight," by Arthur Nevin, whose "Poia" was produced at the Royal Opera in Berlin a few months ago, and, tho endorsed by musicians like Muck and Humperdinck, was hissed by Chauvinists, who resented the choice of a work by an American when so many home made scores were awaiting production. The "Twilight" cast is to include Johanna Gadski, Riccardo Martin and Herbert Witherspoon.

Mr. Converse's new opera, "The Sacrifice," which is included in the Boston Company repertory, is also composed to an English text, much of which was written by the composer himself. A vocal score of this opera has already been printed by the H. W. Gray Company. The scene is laid in old California under the Spanish regime, the leading figures in it being an American naval officer, a Spanish girl, and her lover of the same race.

Victor Herbert's "Natoma" also is an opera placed in Spanish California. This does not prevent it, any more than his having been born in Ireland, from being a genuine American opera. He chose that section because, as he says, "the America of the commercial Anglo-Saxon lacks color, and for an opera there must be color. You don't find Germans, for instance, composing operas with the scenes in Berlin—they lay them in the Black Forest or among the mountains."

Great things are expected of "Natoma." Mr. Herbert (who is a grandson of the great Irish humorist, Samuel Lover) has spent the best part of his life in America, and has done more than any one else to create a distinctive school of American operetta. That the larger forms of the grand opera are likely to hamper him is not probable, for he has composed several orchestral works of the highest types.

Gustav Mahler to Remain

Now that the Philharmonic Orchestra has undertaken to give concerts in other cities besides New York, the acceptance of the conductorship of this veteran association for another year by Gustav Mahler is a matter of interest to the country at large. There are many music lovers in Austria and Germany who consider Mahler a greater composer than Strauss or Reger or Debussy. On that point opinions may differ; but that he is equaled as an interpreter of orchestral music by only one or two men in all Europe is indisputable, and there is therefore cause for cordial congratulation that he has consented to remain at least one more year. He comes high, his emoluments being larger than those ever paid to another conductor anywhere; but the Philharmonic audiences, which are steadily growing, are bound to have him.

During the first year of Mahler's leadership of the Philharmonic there was a great hullabaloo over "the liberties he took" with masterpices by the classical and romantic composers. Some of the critics took their scores along (or secretly interviewed some of the players) and then proclaimed the sensational, bloodcurdling news that Mahler actually dared to tamper with Beethoven's scores. As a matter of fact, he simply followed Wagner's example of retouching the orchestration here and there so as to bring out the composer's intentions more clearly, and particularly to emphasize the melodic curves. He did this with Schubert, Schumann and other masters who wrote before the orchestral instruments had as great a compass and were as varied as they are now.

There can be no doubt that in all of these cases the composers in question would have cordially welcomed these changes, which were always improvements, for Mahler is as great a master of instrumentation as Richard Strauss. Nevertheless they might have been considered unjustifiable had they been made for everybody everywhere and introduced into the printed scores. But Mahler never dreamed of such a thing. His emendations were made only for his own performances; no one was asked to adopt them; they were extremely interesting as details of his personal attention. Luckily the audiences were more rational than the critics referred to. They applauded his versions, which in some cases made old pieces seem as new, and fortunately he was not intimidated by newspaper clamor. He has continued to interpret the master works in his own unique way, and that is why there was so much joy when it was made known that he would remain.

The Winter at the Metropolitan Museum

The great museum which was so long infantile in its efforts—or want of effort—to help the student, has become the most helpful of grown up aids in the training of the public to appreciation. Monthly are added by purchase, gift or loan items to the various groups that are

GREEK HEAD—FOURTH CENTURY.

generally good to see. In the small collection of original classical things, for example, the beautiful Greek head here reproduced sets at once the standard for the greatest possible accomplishment in heroically grand sculpture. By contrast, it kills the cold nineteenth century productions in great numbers.

Yet a few contemporary examples survive. The Rodins are a case in point. Besides those groups by the great living emotional sculptor already on view at the museum, there are to be many more examples of his work before long. Of the ancient arts of pottery and glass, textiles, enamels, furniture making, etc., the museum is gradually acquiring examples of the first class. The various Greek periods are well represented in the matter of vases. The Chinese ceramics are notable in every way, not only for the beauty of the pieces, but for the glorious color treat their present exquisite arrangement makes of them. The Egyptian department was enriched during 1910 by Miss Helen Gould's present of the 3,370 scarabs, seals, rings, pendants, beads, amulets, votive figures, glass objects and various small objects which had belonged to Dr. Chauncey Murch, who for twenty-five years directed the American Presbyterian Mission at Luxor. This collection is now admirably cataloged and described, and with the acquisitions thru the regular work of the Egyptian department in Egypt, helps greatly to make this section of the museum a delight to specialists in that line, as well as a place of information to those who only study art generally.

The naming of the room at the head of the main stairway after Mr. Marquand, and the arrangement therein of a number of the museum's best canvases, is another of Mr. Robinson's good deeds. Here we shall see, not the group of fifty-odd excellent works which Mr. Marquand himself gave to the museum, and which are now taking their various rightful places with the schools to which they belong, but the specially important examples of all schools, judged by their place in the whole field of art. At present, the "Mars and Venus Bound by Cupid" of Paolo Veronese, and the "Doge in Prayer," by Tintoretto, are the newest of the masterpieces shown.

After the delightful exhibition of rugs of the best periods, which closed in January, we have at the Metropolitan a show of an absolutely unique character, for America—that of arms and armor. Entering the gallery containing this exhibit, one is at once in a position to learn more about this fascinating branch of art craft of the past than has ever before perhaps been possible with so little effort. The arrangement of the objects themselves, chronologically clear, and with fine tapestries of the same periods on the walls to stimulate our imaginations, is most illuminating, to say nothing of the catalog by Mr. Bashford Dean, of the museum, that reminds us that Francis I gave equal honors to his armorers and goldsmiths and to Titian. Of the fifteenth century—the period of the High Renaissance in all the arts—and of earlier centuries, few specimens of armor exist anywhere. Yet nine fine examples are shown here. The Gothic armor is succeeded by what is known as the "Maximilian" (1500-1530). Of German origin, it was worn by Italian princes, as it was by Francis I and Henry VIII, on the Field of the Cloth of Gold. Like the châteaux of Francis's time, it is a development from the simple Gothic, with enriched forms which strengthen the plates, but still never obscure the fundamental modeling of the figure. Six examples of this are shown. Later sixteenth century armor is already decadent in workmanship and elaborated in ornament, in the taste of the late Renaissance, but the eight examples here shown are still splendid articles of metal work.

The exhibition includes even seventeenth century armor, many parts of harnesses and arms of the age, banners, tapestries. These good things are loaned by the chief collectors of America.

The other special exhibition at the museum, in memory of that strong lover of our stormy seacoast, Winslow Homer, will be open until March 19. Twenty-three oils and twenty-eight water colors have been collected from many sources and give a fair idea of his development out of the tight war time

EDWARD W. REDFIELD: "THE HEMLOCKS."
Shown at the Pennsylvania Academy Exhibition.

style, which gave little promise, to that period of brilliant mastery of the elemental needs at least. Homer was never an easy brushman, never subtle in the modern way. But his water colors are as great as any ever attempted in his field of seascape. He drew with his washes so surely what he saw broadly and sympathetically that he is sure of a high place in the ranks of the realists of all time. The oils may not hold their own so long.

The Pennsylvania Academy

The 106th annual exhibition of the Pennsylvania Academy of the Fine Arts —a mouthful, that! Yet the exhibition itself is smaller than usual. Even with a reduced number of canvases shown, this institution of old Philadelphia remains an artistic event of the year. What show is more representative—equally representative, even—of contemporary American art? This is a rhetorical question; we demand no answer.

Had one space, perspective and power enough, in apt union, perhaps one might profitably generalize upon the evidences of the American orientation. The average, at least, attained by the exhibitors at Philadelphia, is uncommonly high. As we have a great number of talented poets, and no great poets, so may we boast very numerous craftsmen of a high order, many fearless paint slingers, and clear eyed observers of nature—and they are all exhibitors at Philadelphia. But the creators—the new masters?

The American forte seems to be, today, landscape painting, on the one hand, and such indoor painting as finds its most finished expression in the work of Mr. Tarbell, whose "Girl Reading" is lent by the Boston Museum, while his Corcoran gold medal "Interior" is also

hung here. More obvious than anything of Mr. Tarbell's, and also—consequently?—more popular, is Mr. Paxton's "Housemaid"—with its carefully arranged properties and prettiness. "Charming!—and just like a beautifully done colored photograph!" was the offhand criticism of one who was a better critic than she knew. Walter MacEwen's "At the Window" is even more reminiscent of the school of Holland. Still life is the frankly avowed interest of George L. Noyes, William M. Chase and Elizabeth Paxton.

As for the landscapes, Philadelphia offers variety, at least. Town and country, church and woodland and Longacre Square, hillside and 'long shore, Giverny pool and Grand Canyon: all prospects known to globetrotters are rendered for the most part with familiarity and with sincerity. There must have been a killing by the jury!

Of the wholesome prophets of the great out-of-doors, whom we look for at every great picture show, we have here Redfield, and Lawson, and Gardner Symons, and Schofield, and Preston, and Eaton; and, of the older men, Alden Weir, Lockwood, Woodbury. Newer arrivals are Joseph T. Pearson, Jr., always decorative, but sometimes little more; and John C. Johansen; and Jonas Lie, the young Norwegian, whose future we venture to prophesy is a big one. Rockwell Kent's boldly defined "Road-Breaking," seen at the New York Independent salon of last spring, is shown again. Is Kent perhaps Homer's heir? One of the few exhibitors whose offering is distinctly personal and reflective of imagination is Arthur B. Davies, whose offerings here are of his best. Mr. Bellows's unequal "Polo Game" is seen once more, and his truer "Excavation at Night" and snowy "Palisades." Mr. Benson's pleinairisme, grown familiar now, is ever advancing; his "Shimmering Sea," "Family Group" and sunlit "Reader" illustrate the point. Mr. Frieseke is a more daring painter, a more recent apparition. But Mr. Frieseke wants charm as he wants personality.

MR. DE FOREST BRUSH'S "PORTRAIT OF OLIVIA."

There are a great many portraits, yet most of them are "official," if not flatly perfunctory. How does it happen that Edmund C. Tarbell's "Timothy Dwight" (briefly noted in our account of the Winter Academy) deserves the Carol H. Beck gold medal for "the best portrait in oil . . . completed within three years"? To ask the question is not to question the excellence of the New Englander's technique. But we find this particular portrait dry and undistinguished. There is spirit and understanding and "drive" in Mr. Henri's appalling "Fish Market Man," to be sure. More companionable is Mr. Benson's "Girl Playing Solitaire," lent by the Worcester Museum. But the interest is not pure portraiture, here. Mr. Alexander's "Sunlight" (the Chicago Art Institute) is an excellent example

of its author's work—but here we are even farther removed from portraiture. Pretty work, rather than memorable portraits, are the children depicted by Sergeant Kendall and Ellen Emmett and Lydia Field Emmet. To the writer, no single canvas brings more of charm, as none exceeds in sobriety of treatment and sureness of effect, than George De Forest Brush's "Olivia," painted five years since, but never before exhibited, or, so far as we know, reproduced. But why do not a greater number of American portrait painters achieve commensurate distinction? Surely they do not lack types enough, or types interesting enough, in the world gallery called America. Yet most of the portraits shown in Philadelphia are sure to bore the visitor not interested in the local celebrity or flamboyant womanhood.

"THE HOUSEMAID."
By William M. Paxton; shown at the Pennsylvania Academy.

But how excellent are these painting hung! There is no skying for the exhibitor at Philadelphia; his works are politely declined or given their fair chance. This gallery, like the town it distinguishes, is widely spaced. As for the sculpture, besides the noble bronze head of the painter Redfield, by an Academy instructor, and a number of pieces shown at the Winter Academy and praised by us then, there is nothing to signalize in so brief an account. In the award of prizes for paintings, there are signs of inbreeding, or evidences of the Academy's important position in the American world; which depends upon the point of view. The fact is, in any case, that two of the main prizes were won by members of the Academy faculty, and a former student captured a third prize. We note the distribution of awards:

The Walter Lippincott prize of $300, to Daniel Garber, of Philadelphia, for his landscape, "River Bank"; the Carol H. Beck gold medal to Edmund C. Tarbell, of Boston, for his portrait of Dr. Timothy Dwight; the Temple Trust medal, to Richard E. Miller, of St. Louis, for his painting, "The Chinese Statuette"; the Jennie E. Sesnan gold medal, for the best landscape in the exhibition, to Joseph T. Pearson, Jr., of Philadelphia, for his "Landscape"; the Mary Smith prize, for the best portrait in oil painted by a resident woman artist, to Alice Kent Stoddard, for her portrait of Elizabeth Sparhawk Jones.

Stage Fantasy and Realism

If the New Theater is not doing all that was hoped for it in the way of discovering American talent it is of service in introducing to the American public good plays that have been discovered on the other side. When "The Piper"[1] was published a year ago last November it aroused little interest. But in the international competition at Stratford-on-Avon, where 350 plays were submitted, it won the first prize. That this honor should go to a play in blank verse, written by an American, and by a woman, was a triple surprise. A fourth surprise was to come when the play proved not only readable and commendable, but actable as well. It was first played at the Shakespeare Festival in the

[1] THE PIPER. *By Josephine Preston Peabody (Mrs. Lionel S. Marks).* Boston: Houghton, Mifflin Co. $1.10.

Stratford Memorial Theater, then had a successful run in London, and is now imported into its native land.

The scene is laid in Hamelin Town in Brunswick by famous Hannover city; and begins just as the rats have left and the Pied Piper demands his thousand guilders. This the Mayor and Corporation refuse, for like the Mayor and Corporation of San Francisco a few years ago they do not like to pay out good money to get rid of rats. So all the children are led away by the magic pipe to the Hallow Hill, where in spite of having honey to eat and a rainbow to play with, they will dream of their mothers. But Browning only told half the story. The children did not colonize Transylvania, but came back when the Hamelin people released themselves from their own prison walls of selfishness and intolerance, from the love of lucre and the daily fear they called their faith.

For the Piper's business in life is letting things out of their cages and golden cages are worst of all. This is an excellent play for reading in clubs and schools and better yet to see as presented at the New Theater with its beautiful scenery and troops of dancing children.

But we are sorry that the part of the Piper was given to Miss Edith Wynne Matthison, notwithstanding her popularity as Everyman. Otis Skinner would do the Piper well. He is much worse needed, however, in another part now on the boards in New York, that of Chantecler, which has unfortunately been given to Miss Maude Adams. We hear a great deal nowadays about the feminization of our schools, but the feminization of our stage has gone farther. To make up for their former exclusion the women are monopolizing all the best parts. Now, Maude Adams was admirable as Peter Pan, the boy who would never grow up, and could play with propriety the effeminate Aiglon, but Chantecler is the personification of masculinity, and for a woman to aspire to that role is sheer presumption. The hen-pheasant's assumption of male plumage seems to us a minor misdemeanor compared with it, for among human beings bright colors have long been a feminine monopoly.

But even with a bantam pullet Chantecler, Rostand's play is worth seeing. The poetry of it has not entirely evaporated in the translation. The stage setting and costuming are on the whole as good as at the Porte Saint-Martin. The most noticeable difference between the Paris and the New York production is in tempo. It has to be played much more slowly here, to give time for the jokes to soak into American minds. The drama as published has therefore to be cut down more than in Paris, and this leaves some passages quite pointless. But the blackbird is as slangy, the old hen as maximistic, the pheasant as coquettish, the dog as lovable and the chicks as "cute" as they are over the water. Only the guinea-hen, in the New York production, fails to live up to her opportunities as a nervous hostess. She ought to "fly around like a hen with her head cut off" instead of adopting a calm and self-possessed drawing room manner. The character and significance of Rostand's drama was discussed at some length in THE INDEPENDENT when it first appeared in French. (See "The Bird of France," March 31, 1910.)

"Chantecler" and "The Piper" are not the only imaginative pieces acted during the last month on the American stage. Two such pieces, at least, are the work of native Americans. Let us begin with Percy MacKaye's "Scarecrow."

Goody Rickby, a Massachusetts witch circa 1690, makes a scarecrow with the devil's own assistance. The scarecrow is improvised out of a broomstick, a poker, a pumpkin, and so forth, and so forth. This scarecrow is like his kind in being stuffed with straw; he differs therefrom, however, in coming to life. As a fop newly imported from London, accompanied by his diabolic tutor, the Scarecrow is christened by his creators "Lord Ravensbane," and led to the residence of Gilead Merton, J. P., the local magnate. He is set in motion to win the love of Merton's pretty niece, out of revenge for the wrong put upon the so-called witch when she was no witch at all, except in every woman's witchery, twenty-two years earlier.

The Scarecrow can barely articulate at first, and accomplishes that only at Dickon's prompting. (Dickon as my Lord's tutor is "Dickinson.") But he soon learns to speak without prompting,

to love without urging—and to aspire toward manliness. In the end he comes to have a soul—his love for Rachel Merton gives him that. However, he looks into the mirror of Truth and sees himself for the Scarecrow he is—his soul not being really recognizable till he gains life in losing it, which is accomplished when he throws away the cob pipe whose smoke is the breath of his factitious nostrils.

It is hard to tell such a story in a paragraph: hard either to narrate its comic and satiric touches, or to suggest its symbolism, that is sometimes strained. Hawthorne's "Feathertop" furnished the initial inspiration: it is characteristic of the playwright that he derives fully as much inspiration from letters as from life.

THE FEMINIZED COCK AND THE MASCULINE HEN PHEASANT.
From left to right, May Blayney, the Hen Pheasant, and Maude Adams, Chantecler.

Fantastic, too, is the diverting play in which Mr. Faversham is now to be seen at Daly's Theater in New York: "The Faun," by Edward Knoblauch. We have here what one may describe for those who have seen the highly moral play in which Mr. Forbes-Robertson has so long been seen as a kind of antithesis to "The Passing of the Third Floor Back." In the latter piece the principal part personifies the spirit of Christ. The Faun is a pagan spirit, who preaches doing what one pleases—following the dictates of instinct—being oneself. Nature can do no wrong. Certainly Nature does not rival in wrongdoing the victims of social artificialities and artifices, personified in all the characters of this comedy, with its English setting. After bringing together two pair of lovers—almost three pair—without regard to the *convenances* or the weather, the Faun strips off his evening dress and retires to the brambles and geraniums whence he made a somewhat spectacular entry in Act I: assuring his auditors that Man is the least decent of Animals. Why contradict him? But Man is, after all, the only Animal we know how to be, with even partial success.

The question has been asked: Why does the distinction, the snap and very life of foreign plays somehow leak out before they reach us over the footlights? The answer is a bit complicated. In the first place, we have for the most part squeamish or blundersome or heavy-fingered adapters. In the case of "Sire,"[2] the play by Henri Lavedan, now to be seen at the Criterion, in New York, the adapter is none other than Louis N. Parker, the Old World daintiness of whose "Pomander Walk" we commended only last month. Surely

[2] SIRE. Pièce en cinq actes par *Henri Lavedan*, de l'Académie Française. Paris: Librairie Paul Ollendorff. 3 fr. 50.

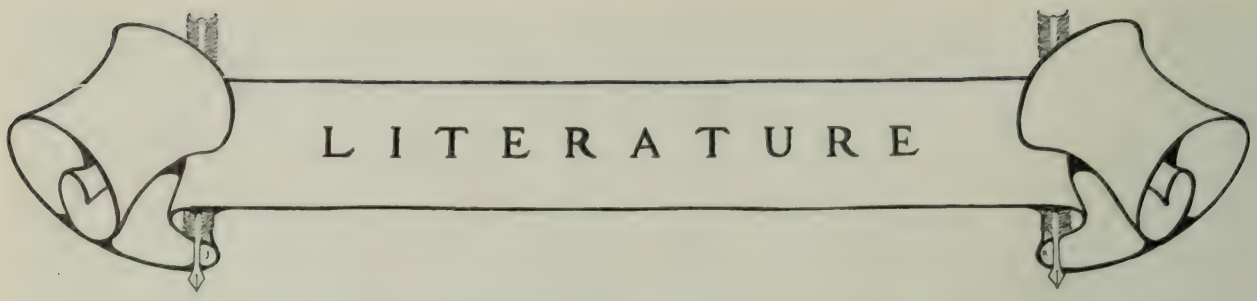
THE PIPER ENTICES THE CHILDREN FROM HAMELIN TOWN.
Nothing is more noteworthy about the New Theater productions than is the magnificence of the stage settings.

here we have one who should faithfully render the words and evoke the charm of Lavedan's play of Paris in 1848—like "Pomander Walk," a costume play; like it, romantic; like it, too, not a little thin, alas! Yet "Sire" was a success in Paris last spring, tho not of Lavedan's best. Why does it drag in New York city?

Doubtless it was no play to attempt outside of Paris: where, for example, one must explain the historical allusions, and vulgarize everything a little to suit the want of taste with which managers credit us. But that is not all. Mr. Parker has taken unwarranted liberties with his text; to make that utterly banal was not enough for him, it seems.

The story is soon told. Mademoiselle de Saint-Salbi is an old maid of good birth and fortune who, under the bourgeois upstart, Louis-Philippe, still owns allegiance to the legitimate monarch, and cherishes the delusion that the Dauphin—Louis XVII, she calls him—still lives. Her physician decides that her peace of mind can be restored only by humoring her and letting her really see a Louis XVII, after which, according to his somewhat curious psychology, she will once more pursue the even tenor of her ways. The Abbé Remus, her confessor, is party to the deception. One Roulette, a former player at the Théâtre du Panthéon, reduced to mending clocks and kitchen ranges, happens to have the Bourbon profile. He is engaged as Dauphin. This role he plays excellently well—or so the deluded lady, who calls him "Sire," seems to believe. She begs him to consider her home his own—and this he does, chiefly because he has fallen in love with Mademoiselle's naughty little companion. In the end he is, of course, found out. The author of the play, M. Lavedan, sent the false Dauphin out to death before the Barricades (a tragic ending for a comedy). Mr. Parker's version stops; he solves the difficulty that M. Lavedan solved none too well by not giving the play any end at all. The young compatriot of the French playwright who sat next to THE INDEPENDENT at the New York production of "Sire" commented upon Mr. Otis Skinner's performance of the title part: *"Comment il manque de la désinvolture!"* It is a good summing up of the case against American acting, for

Mr. Skinner is not the only one of us who wants *désinvolture.* In fact, he wins golden praises for—his spontaneity.



The star system mars the performance of several of the plays we have noted thru the false importance given to certain characters: interpreted by men not big enough to palliate the distortion. In the case of "Sire," we do not feel this so much as the general incompetence of the supporting company. It is a pleasure to turn to at least one play where a company, undistinguished except for the "star," comes very near to proving adequate. It is so small a company that all its members have profited by the excellence of Mr. Henry Miller's managerial influence. There are, in "The Havoc," only four personages; of whom one appears only in the last act, and is of scarcely more consequence than as if he spoke the traditional lines: "Dinner is served, my lady." But he does not speak these lines, for, tho "The Havoc" is a comedy of modern life, it is American life this time, and not "high life" at that. Sir Charles Wyndham plans, we understand, to produce the play in England, and means to elevate the social rank of the characters. For our part, we are satisfied with the play as Mr. Sheldon—Mr. H. S. Sheldon—has given it to us.

The Havoc is wrought by a boarder who has read Ibsen, like the ridiculous pair in "Anti-Matrimony." Since there are only three characters involved, a "human triangle" play is suggested. It is all of that. In Act I a complacent "business man" (in the railway business, it happens) leaves home early in the evening, bound for Chicago, returns to his flat for something forgotten, and discovers the unfaithfulness of a weak but not naturally vicious wife. In Act II the ex-husband is a disturbing influence in the home of his ex-wife, now married to the former lover—a bad exchange for her. In the final act, the ex-husband seems really to possess the affections of his ex-wife—really to possess them, now, like Samson in Bernstein's business play, and the ex-husband re-engages her as a stenographer. (We forgot to say that the ex-husband had originally divorced her from pad and pencil, as he now divorces her from her second mate.) The action thus brutally analyzed is scarcely flattered: but its hardness is perhaps suggested, tho the extraordinary neatness of it may not be. This is indeed a drama of the "business-man"—who fails at love when he feels himself secure in possession, but wins when he finds it incumbent to make a business of love, too. The drama was extraordinarily well presented. Mr. Miller does justice to a play which, without being conspicuously "pleasant," is not a product either of dramatic or of moral dilettanteism. Mr. Miller is indubitably a pillar of American realism. Shall one venture to name him the native Guitry? —with only those reservations implied in the phrasing of the compliment.

Holbrook Blynn is a much younger but, notwithstanding, a distinguished exponent of histrionic realism. He was first remarked in his faithful portrayal of the plug-ugly Jim Platt of Mr. Edward Sheldon's "Salvation Nell"; the first play of this second Sheldon's theater to attain the stage. Detroit, Chicago and New York have now had the opportunity to see Mr. Blynn's photographic portrait of Regan—the more exalted plug-ugly who gives his name to Mr. Sheldon's "Boss" and is said to be a replica of a certain Democratic statesman, formerly more influential than he is today, yet still of local prominence in Buffalo, N. Y. Unreal, on the final analysis, as photographs very often, and "realism" almost always is, "The Boss" is a successful play, eloquent in its bar room dialect, distinguished by observation, at least, and by a command of melodramatic skill, tho of no finer artistry.

It is a curious group of plays that the "Harvard School" now offers to American playgoers: Mr. MacKaye's hyper-literary dramas; "The Faun"; "The Boss." Obviously there is no "Harvard School"; only several young men who write for the stage and happen to be graduates of a certain university. They share neither methods, nor matter, nor, it would seem, ideals. It is merely true that Harvard turns out playwrights, as the University of Michigan produces Congressmen, and the University of Pennsylvania dentists, and Yale—according to the newspapers—defendants in police-court cases.

New York City.

The Doctor's Christmas Eve

THIS is not, as the title suggests, merely a Christmas story, but it is the second volume of a trilogy Mr. Allen promised his readers some time ago.* In this, as in the first book, "The Bride of the Mistletoe," the author points out the apparent certainty of marital unhappiness due to the natural, involuntary unfaithfulness of husbands, and the voluntary martyrdom of wives. Mr. Allen is the tragedian of the irony of life always. In "The Bride of the Mistletoe" Mrs. Ousley discovers that her husband, the professor, is a passionate pagan, who belongs not in the primeval forest so much as in the pagan groves of ancient traditions of love and desire. While writing excellent books upon these same traditions, he privately chooses a mate in accordance with an ancient mistletoe custom. In *The Doctor's Christmas Eve* Mrs. Birney discovers that her husband, the doctor, loves not her, but Mrs. Ousley, and that she is but the physical substitute of his choice of a wife. Both women recognize that whatever other marks of civilization their husbands may bear, they cannot acquire the domestic civilization which limits them to one woman. The lesson the author desires to inculcate is that this is an inevitable tragedy. Neither the men nor the women are to blame. The condition appears to grow inevitably out of the limitations of vitality in the women, and that, being wearied of the charms of the one he has, a man naturally wants another one, whether he gets her or not.

The four victims seek a remedy for their domestic malady. The two men choose a philosophical stoicism which is only different from the compressed-lipped martyrdom of the women by the fact that they lack the dramatic instinct, while the women take what consolation they can from the pleasure of heroics to be evolved from their martyrdom, after the manner of women.

The most significant feature of this second volume, however, is not so much the main tragedy of man and wife as it is the study of those by-products of this tragedy, affecting the relation of parent and child. Mr. Allen has elongated and interpreted one of the commandments so that it might read, "If you covet your neighbor's wife that sin shall be visited upon your children to the third and fourth generation." And he depicts with singular vividness the idea that children are the victims of suggestions and inheritance. Never before in American literature has an author come so near setting down in the terms of human biology the predatory instincts of the female child, or so satirized the embryonic and typically feminine as he does in the character of Elsie, the doctor's little daughter. Mr. Allen is always severe in his judgments of the feminine. He considers it hopeless at all ages, limited, especially in imagination. And if he does not pity his own sex he shows great partiality in portraying it. This is evidenced in his study of Herbert, the Doctor's young son. The characters of both children are created, we are given to understand, by the suggestions they receive from observing their parents. The nature of each is revealed in the choice they make of the suggestions. And this is where the author displays his implacable antagonism to the feminine again. It is as if he discovered in it, from the youngest female child to the mature, beautiful, faithful wife, the equal enemy and temptress of man. Elsie, for example, perceives the mechanics of her father's life, his cleanliness, the anxious attention paid to diet and various necessary ministrations to self. From this she gathers that

*THE DOCTOR'S CHRISTMAS EVE. *By James Lane Allen.* New York: The Macmillan Co. $1.50.

the physical ego is the important thing to consider, and proceeds to make personal gratification the law and aim of her little fat existence. Herbert, on the other hand, grasps the significance of these habits, passes them by as details, takes up the spiritual phase of the doctor's life, showed in his sacrifice for and faithful devotion to those who are sick and suffering. This renders him the reverse of his sister—unselfish and sensitive to the ideal.

The conclusion Mr. Allen desires the reader to draw is that women perceive facts, but they cannot interpret them. Herbert has masculine imaginative pliability which relates him to the truth spiritually. Elsie has a feminine obstinacy for misconception which renders her blind to the spiritual. She sees the domestic unhappiness of her home, but not the cause. Herbert detects the cause long before he has the sense of sex, and receives in some occult way the suggestion that it is a fate that may overtake him later to love some other man's wife. His death is the sacrifice for the father's sin—a sin which Mr. Allen represents that he could not escape committing, and yet he represents the poor men suffering for and repenting of futility to the last. There may be a more hopeless representation of the nature and fate of man, but Mr. Allen's readers will scarcely believe there is if they comprehend his present story.

Perhaps in the third volume of this trilogy he will give the women a chance at imagination and idealism, and the men a little instinct for morality and faithfulness. And it may be that he will permit the children to show the natural simplicity and stupidity of children. Thus he may solve the riddle of unhappiness written in these two volumes. But those of us who know Mr. Allen do not hope very strongly for any cheerful solution.

"W. S." and "F. M."

Mrs. Sharp's biography of her husband is an absorbingly interesting book. William Sharp was born on September 12, 1855, at Paisley, Scotland. As a lad he was delicate, and at nineteen his health suffered a temporary breakdown. From his youth he was determined to be a writer, and tho at one time apprenticed to the law and at a later time employed as a bank clerk he would not forsake his aim. His first output was verse, and he early found his way into the notice and subsequent friendship of Dante Gabriel Rossetti. In 1884, after a nine years' engagement and waiting for better times, he was married to his cousin, Elizabeth A. Sharp, the author of the present biography.[1] He died on December 12, 1905.

In spite of intermittent ill-health and business troubles rather more than the share of the average young writer, he was an indefatigable worker. The record of his industry is amazing. Poems, sketches, stories and critical essays poured from his pen. Yet withal he was a careful and conscientious workman. The essay on the sonnet, introducing his "Sonnets of the Nineteenth Century," is an instance at once of his critical taste and of his wide and deep research. His introductions to other volumes in the "Canterbury Poets" series and his essay on Shelley reveal the same qualities. His poetry has been overshadowed by that of some of his contemporaries, but as a critical essayist he took high rank at an early age and maintained it until the "Fiona Macleod" period, when his writings took an altogether different turn.[2]

The "Fiona Macleod" period dates from 1891, in Rome, tho his first work ("Pharais") under this pseudonym did not appear until 1893. The inspiration for the development of this secondary personality is credited to a friendship for a beautiful and talented woman whom he met in Rome. "To her," writes Mr. Sharp, "I owe my development as 'Fiona Macleod,' tho in a sense of course that began long before I knew her, and indeed while I was still a child." Yet "without her there would have been no 'Fiona Macleod.'"

Tho with the development of the "F. M." personality he strove to retain also the "W. S." personality, yet his writings became more and more the ex-

[1] William Sharp ("Fiona Macleod"). A Memoir. Compiled by his wife, *Elizabeth A. Sharp*. New York: Duffield & Co. $3.

[2] The Writings of "Fiona Macleod." Vol. VI, The Silence of Amor, Where the Forest Murmurs. Vol. VII, Poems and Dreams. New York: Duffield & Co. $1.50 each.

pression of the former. He recognized this, but to no avail; and he recognized also the over-emphasis of the fruitless yearning which is the main note in "F. M." Of "The Dominion of Dreams" he writes (1899): "Too much of it is born out of incurable heartache, 'the nostalgia for impossible things.'" Yet he believed that "F. M.'s" influence "is now steadily deepening, and, thank God, along the lines I have hoped and dreamed."

Mrs. Sharp has much to tell of the two personalities and even of a third personality, which she calls "Wilfion"—"the inner and third self that lay behind that dual expression." Yet she does not explain. Commenting on Mr. James Douglas's declaration, "How the man subdivided his soul is the mystery," she says, with "F. M.": "I write, not because I know a mystery and would reveal it, but because I have known a mystery, and am today as a child before it, and can never reveal nor interpret it." The dual expression of this unique man remains a mystery, which each one may interpret in his own way.

Molly Make-Believe. By Eleanor Hallowell Abbott. New York: The Century Co. $1.

It is only once in a great while that so fresh and captivating a tale as this comes into the editorial office; and just when the last occasion was we do not now remember. It isn't much of a story as to volume, and it is not much more as to plot. One man, one girl, and then another girl—that is all. But there is a rare charm in the telling. Miss Abbott has her own inimitable style, as those who have found her occasional short stories in the magazines are aware. And then the Molly who is introduced to us is about as winsome a figure as one ever finds flitting across the pages of print. It is a story to be read at a single sitting—and one very likely to be read in that way alone. That most of it is impossible is one of its charms; for it is a story of love's fairy land, where things do not happen as they do in in the world "which is the world of all of us," but as the heart eternally wishes them to happen.

Literary Notes

....Dr. S. Weir Mitchell's book for 1911 is *John Sherwood, Ironmaster.* This novel will be published by The Century Company in June and promises to be differentiated from Dr. Mitchell's recent work in that here we shall have a novel of conditions contemporary or almost contemporary.

....The Muses' Library of Verse is the most attractive, to at least one reviewer, of all the inexpensive reprints issued in recent years. In this series, published by E. P. Dutton & Co. at 50 cents, now appears a selection from *The Poems of Sir Philip Sidney,* preceded by a biographical reproduction and critical introductions by John Drinkwater.

....Mr. Bryan's theology is not always orthodox, altho nearly so, but his advocacy of Christian activities is ever earnest and sometimes inspiring, as in the case of his address last summer before the World's Missionary Conference at Edinburgh. *The Fruits of the Tree* is now published in an attractive booklet by the Revell Company at 35 cents.

....The latest horror tale is imported from Paris in the form of Gaston LeRoux's *The Phantom of the Opera* (Bobbs-Merrill; $1.25). The illustrations are in lurid color, but are the work of a gifted illustrator: André Castaigne. We have no thought of committing the indiscretion of reviewing a story by M. LeRoux, but we can guarantee that it will keep a good many thousand readers from sleeping at least one night in the year 1911.

....The University of Wisconsin has a live course in journalism, and the latest number of the *Wisconsin Alumni Magazine* is devoted to it. Eight alumni editors contribute to it their views on what the training of the newspaper man should be. The issue is well printed, but we would suggest that the use of "1910" on the cover and the first page of the January number is not in accordance with the highest ideals of the profession, altho no doubt many precedents for the practice can be cited.

....The Baptist Social Service Commission is doing a splendid educational work in the publication of a *Social Service Series* under the general editorship of Prof. Shailer Mathews. Such writers as Mr. C. R. Woodruff on "The City: As it is and as it is to be," Mr. Stelzle on "The Church and the Labor Movement," and Mr. Cope on "The Home as the School for Social Living," guarantee the high character of both the material and its presentation. It is to be hoped that these inexpensive monographs on various phases of social betterment may have a very wide circulation. (Am. Bap. Pub. Soc. Philadelphia. 10 and 15 cents each.)

....Some weeks ago we received a book in red and gold from Laird & Lee, the title being *The Soul of a Serf.* We now receive a book in yellow and red, from the same publishers, the title this time being *Fated to Win* (Chicago; $1). Both books open in the same way ("The chill September day was drawing to," etc.); and in each case it is a romance of love and valor among the Angles and Saxons (we quote the publisher's "blurb"), by J. Breckenridge Ellis. There are illustrations, and the book ends happily.

....One of the most important parts of The Students' Old Testament, edited by Prof. C. F. Kent, has just been issued. The volume contains *The Sermons, Epistles and Apocalypses of Israel's Prophets* (Scribners, $2.75 net), chronologically arranged, newly translated, and provided with a good general introduction and notes. Various typographical devices, charts and maps aid in presenting clearly and quickly the editor's views as to authorship, literary form, dates, etc., greatly increasing the value of the book.

....In *The Life of an Enclosed Nun* (Lane; $1), written by a Mother Superior, one may learn much of a certain kind of temperament, its workings and requirements. The story is a well told autobiography, describing and elucidating the transformation of an English Protestant girl with skeptical tendencies into a devoted Catholic who finds perfect satisfaction in continual "offices" and "adoration." When the transformation is complete, she recognizes with a kind of solemn joy "the futility of deeds" and "the power of thought."

....The Astronomical and Astrophysical Society of America, which originated in the conference at the dedication of the Yerkes Observatory in 1897, has issued a report of its proceedings from that date to 1910, containing abstracts of the papers presented. There are now 250 members altho only those are admitted to the society who are capable of contributing acceptable papers. The number of those who have demonstrated that capability in this volume is 110. The volume is published by the society and for sale at $1 by the secretary, Prof. W. J. Hussey, Ann Arbor, Mich.

....An opportunity to obtain a number of standard works on the Bible at a low price is afforded by S. S. Scranton Co., Hartford, which offers a set of fifteen volumes for $15. The set includes Cruden's *Concordance,* Smith's *Dictionary,* Conybeare and Howson's *St. Paul,* Edersheim's *Life of Jesus,* Kitto's *History of the Bible,* Fausset's *Bible Cyclopedia,* Jamieson, Fausset and Brown's *Commentary,* Josephus's *Works,* Thomson's *Land and the Book,* Sanford's *Cyclopedia of Religious Knowledge* and Gilbert's *Quotations.* All Bible students have been familiar with most of these for many years and it is not necessary to say anything here in their commendation.

....Most of us know Elkanah Settle only as a personage who libeled Dryden and was in his turn libeled. Prof. F. C. Brown, of Durham, North Carolina, has, however, made Settle the subject of his doctral dissertation, published by the University of Chicago Press (*Elkanah Settle: His Life and Works*; $1.25). It does not make an interesting volume, nor can we say much for the literary aspects of Professor Brown's work. In its presentation of extremely dull material, which has seemingly undergone no intermediate process, but has been taken directly over from the writer's library notebooks, it no doubt satisfies the requirements for the American doctorate of letters.

....Lists of the best books of 1910 are published here and there; one of them is prepared for librarians, by the Western Massachusetts Library Club. Winston Churchill's "Modern Chronicle" and Mary Watts's "Nathan Burke" figure among the novels; Mr. Lucas's "Slowcoach" and Mr. Riis's "Hero Tales of the North" among the juveniles. In the Social Science Section is Jane Addams's "Twenty Years at Hull House—the story of a remarkable work by a wonderful woman"; in the History and Biography Sections, Goldwin Smith's "Reminiscences"; F. L. Paxon's "Last American Frontier" and H. A. B. Bruce's "Daniel Boone and the Wilderness Road"; among the travel books, Clifton Johnson's "Highways and Byways of the Rocky Mountains."

....Of the new religious books, the volume by Rev. Charles Bertram Pyle entitled *The Philosophy of Borden Parker Bowne and Its Application to the Religious Problem* is prefaced by Dr. Washington Gladden. (Columbus, Ohio: S. F. Harriman; $1.) The Pilgrim Press publishes another volume of "Friendly Talks to the Average Man" by Howard Allen Bridgman of *The Congregationalist as Real Religion.* The subjects are those of everyday life, and the standpoint from which they are treated is that of the Christian of tolerance and understanding. Henry Clay Mabie is the author of another welcome study, this time concerning "The Divine Philosophy of Missions": *The Task Worth While.* (Philadelphia: Griffith & Rowland Press; $1.25.)

....Some weeks ago we commented editorially on literary allusions to aviation and prophecies thereof, and devices aiming to give man wings like a dove. It now appears that no less a power in literature than Jean-Jacques Rousseau once composed a treatise on aerial

travel. "Men walk on the earth," he said, "and they sail on the water, and swim in it. Is not the air an element, like the others? What business have the birds to shut us out of their domain while we are made welcome in that of the fishes?" To Rousseau's mind the problem resolved itself into the subsidiary problems of finding a body lighter than air, and of discovering means to make it stop rising and, finally, to compel it to descend. "Le Nouveau Dédale"—for thus he named his book—found its way into print in 1901.

....The early life of John Robinson, the Leyden pastor of the Pilgrim Fathers, is largely shrouded in obscurity. Some small rays of light are thrown on Robinson's career by a manuscript found a couple of years ago in the Bodleian library, Oxford, containing the main points in a controversy which was carried on between Robinson and an unnamed opponent about the year 1610. The discovery was made by Mr. Champlin Burrage, an American scholar pursuing investigations at Oxford. In a pamphlet entitled *New Facts Concerning John Robinson* (Ox. Univ. Press, 60 cents) Mr. Burrage gives the story of the manuscript, some excerpts from it, and a resumé of the main facts of Robinson's life as seen in the new light furnished by the discovery. This pamphlet will be of interest to many, and we hope it will lead to the publication of the whole manuscript, which Mr. Burrage has already transcribed for that purpose.

....A number of newly issued volumes of travel are to be noted. From E. P. Dutton & Co. comes *The Journal of the Travels of Count Fritz Hochberg: An Eastern Voyage* (two volumes, $10). There are numerous illustrations in color, and in black and white; of which the latter are by far the less objectionable. The distinguished traveler seems to have had no particular itinerary other than that suggested by whim. He viewed at least a considerable part of the British Empire in its Eastern extension, and Japan. Possibly the chapters on Australia and New Zealand will prove most interesting to the American reader. A more conventional volume of travel comes to us from The Macmillan Company in the Rev. Edward Conybeare's *Highways and Byways in Cambridge and Ely* ($2). The university town looms large in this landscape. The illustrations are from sketches by Frederick L. Griggs, and while they are not distinguished, they are a relief from the crudities of three-color illustration, as it is for the most part practised. Learning has gone into the making of Mr. Conybeare's volume. We return to the Orient, once more, in noting the Macmillans' publication of Walter Tyndale's *Japan and the Japanese* ($5). Here the book is illustrated by the author himself—in colors again. The narrative of travel is pleasantly done, but without distinction. Almost as much might be said for the illustrations. Another volume in the same genre is Sir Frederick Treves's *The Cradle of the Deep*, an account of a voyage to the West Indies (Dutton, $2.50). This is a popular edition of a delightful book—and no untried innovation. Except for the garish frontispiece, the illustrations from photographs make no attempt to travesty the colors of Nature.

Pebbles

"She seems to be very fond of music."

"Yes, indeed. You'll always find her at the piano when her mother is washing the dishes." —*Detroit Free Press.*

A correspondent writes in to correct a story printed in this paper several days ago. "In that snake story I sent you," he complains, "you made one mistake. I told you that the snake was twenty feet long and you had it only ten feet long."

We are sorry for this, but the error was unavoidable. We were very much crowded for space when we used the story and we had to cut everything down.—*Cleveland Plain Dealer.*

They were a simple looking couple, so thought the minister as he joined them irrevocably in the holy bonds of matrimony; but his suspicions were aroused when, after the ceremony, he observed the bridegroom searching thru his pockets and looking a trifle humiliated and confused.

"I am afraid, parson," said the young man at length, "that I ain't got any money like to pay you with."

Then, after a moment of deep thought, he looked up cheerfully.

"But I'll tell you what I'll do—I'll tell you how you can fix yer gas meter so it won't register!"—*Tit-Bits.*

The Puppy.

The Puppy cannot mew or talk,
He has a funny kind of walk,
His tail is difficult to wag,
And that's what makes him walk zigzag.

He is the kitten of a dog,
From morn till night he's all agog—
Forever seeking something new
That's good, but isn't meant to chew.

He romps about the tulip bed,
And chews the flowers white and red,
And when the gard'ner comes to see
He's sure to blame mamma or me.

One game that cannot ever fail
To please him is to chase his tail—
(To catch one's tail, 'twixt me and you,
Is not an easy thing to do).

If he has not a pretty face,
The puppy's heart is in its place.
I'm sorry he must grow into
A horrid, noisy dog—aren't you?

—Oliver Herford, in *Harper's Magazine.*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Our Attitude On the Postal Question

OUR readers may have noticed that we have made no comment on the proposed legislation to increase the rate of postage on magazines. We have been silent in spite of the fact that we have been deluged with letters and telegrams, urging us to attack the new postage bill and use our influence against it. We believe this is a question that should be decided by disinterested parties. It would be better for THE INDEPENDENT to express an opinion about the fortification of the Panama Canal or on some other topic that does not directly affect our own financial interests. Our position, briefly stated is, that we are ready to pay our share of the expense of running the postal service, and we are not in sympathy with the attacks made on the Administration by some of the leading magazines. Like other magazines, if the bill were passed, we should suffer seriously. On the other hand, we are convinced that the Administration and the legislators at Washington are not actuated by the acrimonious motives attributed to them, but are trying to serve the interests of the people of the United States. THE INDEPENDENT may stand in a minority of one among the magazines, but we are ready to meet any changes in the postal law.

Mr. Clark Waves the Flag

REJOICING over the election of a majority of more than 60 in the House of Representatives, the Democrats selected for Speaker Mr. Champ Clark, of Pike County, Missouri. At the present session of Congress he is leader of the Democratic minority, and has opportunities to exhibit his wisdom or lack of it. On the 14th, the Canadian reciprocity bill was passed in the House by a vote of 221 to 93. For this bill, 143, or all but 5, of the Democrats were counted, while the Republicans were divided, a majority of them unwisely opposing an agreement of great importance and value, which had been negotiated by a Republican President, the leader of their party.

We suppose Mr. Clark really desired that the agreement should be made effective by legislation, both at Washington and at Ottawa, and that his purpose was to promote the ratification of it by what he said and did in the House. He must have known, as everybody else knew, that the opponents of the agreement, in Canada and in England, had been striving to cause rejection of it at Ottawa by a skillful use of the argument that the proposed reciprocity was designed by the United States to promote annexation of the Dominion. Indeed, the campaign against ratification had been conducted, both in Ottawa and in London, with especial reference to the force of this argument. Canadians are extremely sensitive with respect to the question of possible annexation. The argument had been set forth with great earnestness, not only by the opposing press in London and by leaders of the minority party in the Dominion Parliament, but even in Canadian pulpits. It rested, however, upon nothing tangible until Mr. Clark, as leader of his party, spoke for the agreement in the House.

He chose to play into the hands of the enemies of reciprocity. Explaining why he supported the agreement, he said:

"I am for it, because I hope to see the day when the American flag will float over every square foot of the British North American possessions, clear to the North Pole. They are people of our blood. They speak our language. Their institutions are much like ours. They are trained in the difficult art of self-government. My judgment is that, if the treaty of 1854 had never been abrogated, the chances of a consolidation of these two countries would have been much greater than they are now."

When he was asked by an opponent of reciprocity, whose purpose can easily be seen, whether he was in favor of the agreement because he thought it would "have a tendency to bring Canada into the Union," he replied: "Yes; I have no doubt of it." A little later he added:

"I do not have any doubt whatever that the day is not far distant when Great Britain will joyfully see all her North American possessions become a part of this republic."

All this was seized eagerly in England and Canada by foes of the agreement. They pointed out that Mr. Clark was soon to hold an office "second in power to the Presidency"; that he might be the successful candidate of his party for the higher place in 1912; and that only one day earlier, at the Pan-American Commercial Conference, President Taft had proclaimed his agreement with Mr. Clark, saying that the latter and himself had "got together" on "one very important matter" (meaning the reciprocity project), which he hoped they could "carry thru." The President, of course, was not in agreement with Mr. Clark as to annexation, and he promptly showed that he was not. At Ottawa, Mr. Clark's speech was embarrassing and painful to the dominant Liberal party. Representatives at Washington of Opposition newspapers published in Montreal and other cities procured interviews with several Senators who oppose the bill. These interviews, which have been in part repudiated, were to the effect that annexation would logically follow reciprocity. Mr. Clark's published comments did not perceptibly improve the situation:

"What I said was wholly unpremeditated, but none the worse for that. I have said it a thousand times before, and probably thousands of Americans have said it, but nobody has thought to give it a harmful interpretation. I don't know that there is another man on my side of the House who would say he expected the annexation of Canada, and if one should say so, I don't know that it would indicate the existence of a settled policy to go ahead and bring it about."

It was an unfortunate incident, but we hope that the prompt disclaimers of President Taft and Secretary Knox have made it harmless. The President hastened to say, in a letter to Representative McCall:

"This agreement, if it becomes a law, has no political significance. No thought of future political annexation or union was in the minds of the negotiators on either side. Canada is now and will remain a political unit. I am very sure that if this agreement becomes a law it will inure to the great social and economic benefit of both countries."

The Secretary of State said, in an address at a dinner of the Chicago Association of Commerce:

"The reciprocity agreement is economic, not political. The United States recognizes with satisfaction that the Dominion of Canada is a permanent North American political unit, and that her autonomy is secure. The United States appreciates the advantage to the common welfare of the continent that Canada contributes her own strength plus the strength of Great Britain. . . . There is not the slightest probability that this racial and moral union will involve any political change or annexation or absorption. It is an ethnological fact that political units of the English-speaking people never lose their autonomy. . . . It is probably more true today than ever before that the weight of sentiment and opinion both in Canada and in the United States, while desiring closer relations in all other respects, is crystallized in a belief that the present political separation is desirable and will lead to the best development of each nation, and to better and more satisfactory relations between them. In the higher atmosphere and broader aspects of the situation it is certain that if there should be any great world movement involving this continent, Canada and the United States would, as a matter of course, act in the most perfect concert in defense of the common rights of a common blood and civilization."

This is quite true. Possible political union was not, we believe, in the minds of the negotiators of the agreement, on one side or the other. So far as we know, the annexation of Canada has not in recent years been in any sense a topic for discussion in this country, and we have reason to think that the number of those persons in Canada who would regard political union with favor is very small.

Mr. Bennet, the Republican Representative from New York (not re-

elected), who introduced on the 16th a resolution requesting the President to negotiate with the British Government for the annexation of Canada, is not, like Mr. Clark, the chosen leader of a party in the House. Moreover, he voted against the agreement, and therefore, we presume, would like to prevent ratification of it. We notice with pleasure that the Committee on Foreign Affairs, by unanimous vote (his own excepted) turned the resolution down. But Mr. Clark, as minority leader and Speaker-apparent, had responsibilities, and at least should have sought advice before imperiling a project which his party approved. At a country fair in his own State he might safely—and with much applause—have waved the American flag from the St. Lawrence and the lakes to the North Pole, but it was neither timely nor statesmanlike so to wave it last week in Congress and before the Parliaments of Great Britain and Canada.

The Everlasting Negro

It is provoking that whatever we want to do the negro should be everlastingly putting himself in the way to bother us. In the most unexpected ways and places he bobs up, stumbles in where he is not wanted and sets agley the wisest plans of statesmen. One has to look out for him always. If some new scheme of public reform is proposed, the first thought is *"Cherchez le nègre."*

The last case of this intermeddling by the pestilent negro is connected with the proposition to amend the Constitution so as to elect United States Senators by popular vote. What relation has that with kinky hair and black skin? The two do not seem to collide in any way, but, sure enough, the negro stands right up in the path and insists on being considered in the matter.

It is this way. Under the Constitution as at present governing us, the United States has the control of the election of Senators and Representatives. To be sure, the United States does not exercise that control, but leaves it to the several States to supervise the elections. But national control is still possible, and its preservation has seemed essential to the unity of the nation. Now, in certain States it is the policy to exclude black people from the polls; only white people can vote. Of course, this is against the spirit of the Constitution and against its definite provisions; so that the guilty States are very sensitive about it, and are in constant fear lest the reserved rights of the nation may some time be exercised, and negroes protected in their constitutional right to help elect members of Congress. So when the proposition came before Congress to allow Senators to be elected by popular vote, those who had desired the repeal of the Fourteenth and Fifteenth Amendments took advantage of the chance to insert a provision that the election should be under the control of the several States, with no right of supervision by the General Government. It was a provision to give the right to exclude negroes from the polls. Thus it was that the everlasting negro bobbed up where he was not wanted, to make difficulty in carrying the measure for the popular election of Senators.

For there are those—and Senators Root and Lodge are of them—who think that it is necessary to preserve the central authority, and not to disintegrate into independent States, after the manner of the loose federation we had before the Constitution made us one nation. They think that it is not wise to say that in Pennsylvania everybody, white and black, may help choose our rulers at Washington, but that in Mississippi a favored aristocratic class may choose them. So they object to this intrusion of the negro. Let him keep quiet.

Senator Borah, of Idaho, is responsible for introducing the negro into this discussion. The bill, as he presented it to the Senate, was specially designed to assure the exclusion of the negro from the suffrage, so far as he is at present excluded. Then the Sutherland amendment was proposed to maintain the present right of supervision of elections by Congress, and this Senator Borah vigorously opposes. He says we are coddling the negro too much, talking in the North too much about his rights, just so as to save his votes in the North for the Republican party. He tells us that the negro must look out for himself and ask no protection. He says Congress has

had the power for forty years to protect the negro's right to vote in the South, but has never exercised it. That is true, sadly and wisely true. It has not seemed feasible. We have hoped that things would improve. We give the negro full political rights in the North, and we think we see some improvement in the South, as in Tennessee, where negroes voted freely at the last election. We prove hereabouts that universal suffrage is not dangerous, and we look for the lesson to be learnt elsewhere.

The sole reason why the negro is so everlastingly poking himself in front of every national discussion is because a dominant white oligarchy is trying to hold him unjustly in subjection in certain States. In other States where the negro is politically just like the white man he does not bother us. It is simply because certain States shut out the negro that the negro jumps up and says he does not want to be shut out in the voting for Senators. If we cannot secure from Congress the privilege to elect Senators by popular vote, it is the Southern negro, not the Northern negro, that stands in the way. An injustice is always a nuisance; it always is ready to block reform. More than half the States want the right to elect Senators by popular vote, but others refuse to allow it unless the privilege is given to shut out the negro vote. That is the block. That is the everlasting negro. If we might only get rid of him! That Senator Borah, who calls himself a Republican, should thus consent, by indirection, to repeal the Amendments secured by the Civil War, is treason to eternal righteousness. To do evil that good may come claims its own damnation.

Partisanship and Patriotism

THE formation of the National Progressive Republican League is——

Is what? It may be an event so momentous that historians may come to regard it as the beginning of an epoch; it may be so meaningless that its triviality will soon become apparent.

For the present it is a *Republican* League. And for the present it may remain so and yet not fail to carry out its exprest purposes: Direct primaries for the nomination of all elective officials; direct election of delegates to national conventions, with opportunity for the voter to express a choice for President and Vice-President; amendments to State constitutions providing for the initiative, referendum and recall; a thoro general corrupt practices act.

This is a progressive program, but it is not Republican. All Republicans do not favor it, and those who favor it are not all Republicans. We presume the League will endeavor to realize its purposes thru the medium of the Republican party. But suppose it cannot—what then? The answer to this question contains a statement of the significance of the National Progressive Republican League.

A realignment of voters on lines essentially different from those which have divided parties in this country for forty years is an event which has for some time been casting its shadow before. Whether the National Progressive Republican League shall be the active principle in the creation of a new progressive party is a matter which depends on whether it is more progressive than Republican, or the reverse.

In the evolution of our political terminology "Standpatter" has come to be generally accepted as descriptive of the Republican who will not move. But he is not entitled to a monopoly of the term. The Democratic party does not lack a formidable array of Standpatters, who differ from their Republican congeners only in the designation on their respective labels, as was demonstrated when Senator Aldrich needed their aid to pass the recent tariff bill, and when Speaker Cannon was re-elected by Democratic votes.

Parties are necessary instruments for the effective expression of the desires of persons whose aims and purposes are similar. Unorganized units are practically powerless. Hence party loyalty is commendable because without it party efficiency is impossible. Partisanship and patriotism may be synonymous, and when intelligence and conscientiousness are the voter's twin guides, they probably are. But that is not the partisanship which will vote for the devil if his name is under the favored emblem.

That is not the partisanship which will stifle its own clear views of right rather than go where those views may lead it. And above all, that is not the partisanship which will continue in unquestioning devotion to a party name when that name stands for cynical corruption that will not even be at pains to hide itself.

Most citizens have no expectation of political preferment, and no chance of it even if they seek it. Intelligent selfishness ought to teach them that their partisanship should be of that kind which brings its largest rewards to them in the greatest good of the greatest number. And yet it cannot be denied that the majority of Republicans applauded Senator Cummins for saying, at a banquet in Chicago not so long ago, that the "worst Republican was better than the best Democrat." And if the position of the two proper nouns in his epigram is reversed, the Democrats would enthusiastically indorse the sentiment. Senator Cummins is one of the signers of the declaration of principles of the National Progressive Republican League. Does he think those principles have more to hope for from Mayor Busse, of Chicago, or ex-Congressman Sibley, of Pennsylvania, than from Governor Wilson or Governor Foss, both of whom have declared in favor of the Oregon plan, which has established in Oregon the very things the League declares it wishes to institute generally?

The opponents of the measures embodied in the program of the League will be the Standpatters of both parties, and their league will overleap the lines of party blithely enough in their determination to prevent the extension of the Oregon plan. The National Progressive *Republican* League will properly endeavor to advance its principles thru the medium of its party, but there is no holiday march before it. Assuming that it cannot capture the Republican organization (and that assumption is at least as probable as the contrary one), the supreme hour of trial will come when it must choose between its progressiveness and its Republicanism.

We say, therefore, that the formation of the National Progressive Republican League is——what?

Appalachian Parks

CONGRESS is to be thanked for one fine act in adopting the measure which will make forest reserves in the White Mountains and the Appalachian ranges. This has been sought for a number of years unsuccessfully, but is now achieved. The nation will contribute $10,000,000 and the States will do the rest.

We do not look on this so much as a means for saving the water supply as we do as a means for giving the people needed public parks. The protection against floods is something, because the cutting off of the forests, so that THE INDEPENDENT and other journals can be printed on paper from wood pulp, is something, but it is not the principal thing. It is scenic beauty that we would preserve. It spoils the hills to have them denuded of their forests, and it makes the region far less attractive to visitors.

The White Mountains are the playground of the East, as the Yosemite and the Yellowstone are of the Western States. The White Mountains are in New Hampshire, but they are the recreation region not of New Hampshire alone, but of all the East, from Maine to Florida, and from the Atlantic to the Mississippi River. Their Notch and Old Man of the Mountain, their Echo Lake, their Bason and Pool, their streams and cascades, their forests and rocks, their wild flowers and ferns, are the wealth of the country as a whole, and it is quite too much to ask the single, stony States in which the White Mountains are situated alone to preserve them for all the country which comes and goes during the summer.

It has been a desecration to all these beauties to have the mountain sides denuded of their forests by great corporations for private, personal wealth. This desecration should cease. We should have a forest reserve, so called, really a pleasure park, where the combined national and State authorities shall protect the forests, renew their beauty and make them accessible in all their grandeur to whoever would visit them. We shall see the hillsides restored, so that the very primeval forests will seem to rise again and our grandchildren will wonder and

admire. It is not wood pulp alone that gives wealth, but beauty and grandeur are also items in wealth. Yet they are the wealth not of individuals, but of the whole people, and it is the duty of the people as a whole to enjoy and conserve them.

We have spoken of the White Mountains particularly because they are the best known, if not the grandest, of our Eastern recreation grounds. But the more Southern Appalachians have their attractions also. The North Carolina mountains are as high as the Presidential Range. West Virginia is famous already for its charming ranges. These, too, should be saved for beauty as well as for protection against floods. Mountains are not meant for dense habitation, but their streams and forests are the sources of the rivers that give wealth below, on whose banks the cities are located; and they are the refuge in months of heat of the wearied dwellers in the plains. They should not be left to the hazard of private greed, but be protected by the people for the people.

Concerning Private Property

THE worthy Rev. John Cotton, in the year 1690, or thereabouts, committed to posterity a treatise entitled "Spiritual Milk for American Babes, Drawn Out of the Breast for Both Testaments for Their Soul's Nourishment." It was, in substance, an exposition of the Ten Commandments addressed to a community that took them seriously.

Mr. Cotton, we may presume, did not foresee the full expansion of colonial society. That at the beginning of the twentieth century a nation of 90,000,000 of human beings would occupy the middle of the American continent from ocean to ocean, and that it would be composed largely of descendants of people who, in 1690, knew nothing of New England puritanism, and would have cared for it not at all, if they had known, probably never occurred to his devout mind. Could he have imagined such a thing, he might have feared that so mighty and miscellaneous a folk would crave other diet than spiritual milk drawn from the Testaments. But surely he could not have guessed that it would be content to subsist on hourly headlines, Wall Street tickers, wireless information, moving pictures, and "best sellers." He would have reasoned that, however sinful a people might become, it would retain elements of serious mindedness, because of the passion which mankind everywhere manifests to amass private property. As a divine, he might have anticipated anything in the way of mere wickedness, but as a frugal Puritan of Massachusetts Bay, he could not have foreseen a civilization in which one large part of the voting population would be content to dawdle, drivel and squander while another large part was being held up and exploited by an aggressive and thrifty few.

In the course of his treatise, Mr. Cotton propounded the following questions and answers:

"Q. What is the eighth Commandment?
A. Thou shalt not steal.
Q. What is the stealth here forbidden?
A. To take away another man's goods without his Leave, or to spend our own without Benefit to ourselves or others.
Q. What is the Duty here Commanded?
A. To get our Goods honestly, to keep them safely, and spend them thriftily."

In this brief dialog, we find ideas which, we venture to suggest, illuminate "the social order" as we find it in America in 1911.

Many conservative and solvent persons are anxious lest radicalism, in one or another form, shall "undermine the foundations of our society," by which they mean, shall question and restrict the right of private property. Their attention is fixt upon "agitators," among whom they are pleased to class those who object to the cornering of such natural resources as coal, iron, timber and water powers, and persons who expose dishonest promotions, reorganizations and stock jobbings, not to speak of political corruption and a merciless exploitation of human beings. They deplore any inquiry into the methods of great and good men who, for a billion or so apiece, have, with amazing sagacity and incredible toil and self-sacrifice, "created the marvelous fabric of our industrial civilization."

The thought that has occurred to us while reading Mr. Cotton's contribution to the "New England Primer" is that

possibly agitators and their radicalism are not the most formidable danger now threatening the institution of private property. We can imagine than an insidious but extensive undermining of the social order may be effected by a national habit of taking away "another man's goods without his leave," and spending our own "without benefit to ourselves or others."

We are not prepared to prove that the entire American people has formed this habit. We merely note the circumstance that daily reports of markets, industrial events and so on, and governmental investigations of variegated private and corporate rascality, at all times in progress, indicate that the habit is at least extensive and is growing.

And we think it is not possible to doubt that subjection to daily robbery for the benefit of political grafters, stock manipulators, Napoleonic promoters and the like, when supplemented by rising prices of the necessaries of life, and an ever more lavish display of those sensational expenditures by the rich, which are "without benefit" to themselves or others, is quite as likely to impair faith in social and moral salvation by private property as any agitation to which we have as yet become accustomed.

We do not wish to preach, or even to obtrude our views; but we have been imprest by the seeming plausibility of Mr. Cotton's propositions, and we should be interested to watch the effect upon the American attitude toward private property if the persons who are most apprehensive should in good faith try the experiment which Mr. Cotton in homely phrase commends as a duty, namely: "To get goods honestly, to keep them safely, and spend them thriftily."

The Russian Advance

It is announced from St. Petersburg that the Russian Government is about to seize Kuldja. Now, why should anybody be to the trouble and expense of cabling this to the United States? Most of us would not have been surprised to have been told that Kuldja was already in the possession of Russia—or of Peru. Turkestan is far from us geographically, and still farther from our thoughts. Nobody but an archeologist was supposed to take any interest in Mesopotamia. Nobody but a rug merchant was supposed to take any interest in Persia.

Nevertheless, as the world moves this portion of its surface will get hit by the sunlight once in a while. The buried cities will not stay buried. Contracts have just been let for the restoration of the Garden of Eden by irrigation. Last week five Americans were appointed to control the finances of Persia. Baku is the only rival of Standard Oil. And the European balance of power has now its pivot in the region of the Caspian.

This latest move of Russia may be most easily understood if we regard it a case of railroad strategy such as we are familiar with in this country. A glance at the map will show that Russia's gigantic railroad system is suspended, as it were, in the air. It looks like the exposed root system of a plant, its radicles stretching down on all sides to touch the water and never reaching it. Starting from St. Petersburg one railroad runs down 1,400 miles thru the Trans-Caucasus to Kars and there stops. Why? It is the Turkish frontier. Another rootlet branches out to the southward, but stops at Erivan. It is the Persian frontier. The road skirts this obstacle like a root a stone, and further sends down another branch, which is stopped at Kushk. It is the Afghan frontier.

But Russia was not discouraged. A longer radicle was sent out to the Far East, 5,000 miles from St. Petersburg, and struck water at Port Arthur; but Japan came along and nipped off the tip of it.

Between these there is a third great railroad route, 2,300 miles long, connecting St. Petersburg with Andijan. But why should St. Petersburg want to be connected with Andijan? It does not. But the railroad cannot go further. It is stopped by the Chinese frontier. The Czar Alexander laid out the railroad route from the capital to Moscow by drawing a straight line with his ruler on the map. Let us apply the same easy method of engineering. If we lay the ruler along the railroad between Samarkand and Andijan and project the line into Chinese Turkestan, it strikes Kuldja, 500 miles as the aeroplane flies. This is in fact the great mid-continental caravan route, for centuries beyond the memory

of man the connecting link between East and West.

Russia's isolation seems to be breaking up. With the consent of England she may now extend her railroad into Persia and connect with the line to India. By the consent of Germany she may extend her railroad into Turkey and connect with the line to Constantinople. By or without the consent of China she may extend her railroad into Mongolia and connect—who knows where?

China's hold on this region is slight and comparatively recent. It was acquired in the eighteenth century and is still known as Sin-Chiang, or the "New Dominion." It is not self-supporting and the other provinces of China are taxed $120,000 a year for its administration. The Chinese officials who are sent to the New Dominion get rich enough by squeezing the natives to retire in a few years. The Chinese do not settle there to any great extent because they foresee that it will fall into the hands of Russia before long.

Russia had possession of Kuldja from 1871 to 1881, and a treaty ceding the town to her permanently was signed at Livadia by Chung Hou as the authorized representative of China. The bargain would probably have gone thru if it had not been for a junior official of the Department of Public Instruction, by name Chang Chih-tung, who interfered in a department that was none of his business and appealed directly to the Empress Dowager, in a long memorial, arguing that the treaty should be repudiated and Chung Hou be beheaded for negotiating it. The Empress Dowager approved of Chang's proposals and made him special advisor on foreign affairs, but Chung's life was spared thru the interposition of Russia.

Now the Empress Dowager is dead and the ruler of the land is a child. No one in court, council or parliament seems to have the energy and ability of that remarkable old lady. Perhaps, too, they appreciate the difficulties of fighting Russia on the far frontier across the desert better than did Chang Chih-tung thirty years ago. An appeal to Great Britain would this time be of no avail, since that country is now acquiescent to Russia's advances in Central Asia. It remains to be seen whether any of the other Powers will feel disposed to intervene. If not the people most concerned will be none the worse off, for Russian administration can hardly be more oppressive than Chinese.

New Electoral Votes

The new apportionment of Representatives adds forty-two to the number of electoral votes. Tables have been printed, showing that the change is to the advantage of the Republican party, because that party will have thirty-one of the new votes and the Democratic party only eleven. But these tables are based upon the Presidential election of 1908. It is quite possible that several of the States which are to have more Representatives, and which in 1908 gave their electoral votes to Mr. Taft, will give majorities in 1912 to the Democratic candidate. If in the election of 1912 the Democrats should carry the States in which they were victorious at the election in November last, the apportionment advantage would be on their side, for more than half of the additional electoral votes would be given to their Presidential ticket.

The Arizona Constitution

Shall the people be allowed to rule in Arizona? Of course they will; and so will the people of the United States rule in Arizona and in all the States and Territories. But the people in Arizona, or in any other Territory, will not have State rights until they are admitted as States, and when admitted, with a constitution satisfactory to the other sister States, they can change their constitution as much as they choose, under the national Constitution. They have framed a tentative constitution and offered it to Congress for acceptance, and Congress will hesitate, because, among other provisions, it allows the people to recall the judges if they give an unpopular decision. We hope this provision will not be allowed. It puts a pressure and threat on judges to obey the will of the people, which may be a passing whim. If a judge is corrupt he can always be impeached, and that is enough. We want no venal judges, but we also want no sycophantic judges, no judges who have their ear to the ground to find out what will please the people as to the decision

of law and justice. Let Arizona change its constitution and be admitted, and then, if it wants supple judges, let it amend—or, rather, deform—its constitution accordingly, and the country as a whole will not be responsible.

"Old Doc"

"Old Doc," affectionately called so by the students of Amherst College, was christened Edward Hitchcock, son of President Edward Hitchcock, who in his day was, with the elder Silliman, of Yale, one of the two leading geologists of the country. He was graduated in his father's college in 1849, and he died last week of old age. after having been for fifty years honored pioneer of a new departure in college education. In the class of 1859 two or three of the choicest men had died during the college course. A week before commencement the salutatorian died, and not long after the valedictorian. This was too great a tribute to be paid to the Minotaur, and the trustees, led by Nathan Allen, M. D., of Lowell, resolved that something must be done to preserve the health of the students. So they chose the young physician, who took charge in 1861 of the health of the college. He was not simply the college doctor, but he created the system of compulsory physical training, in a special building erected for the purpose, and it was speedily adopted by the colleges of the country, often with his students and assistants in charge. He designed the exercises with dumbbells and various movements to exercise the muscles, which every class was required to attend as faithfully as their Greek or mathematics. The small barnlike gymnasium of those days was very unlike the splendid buildings now required everywhere. Then the swings and parallel bars and "horse" were in "the grove," paid for by voluntary offerings of the students, and unavailable on wet days or in winter. Dr. Hitchcock revolutionized all this, and is to be credited with many lives saved by regular, required exercise; and his humble beginnings have developed into the most popular feature of collegiate and intercollegiate life, that of physical training. He was an unpretentious, frank, companionable boy, the most popular man in college, known to be simple and true, loved and honored by all.

Moral Education in Schools

We are not greatly impressed by the recommendations of the conference on the moral phases of public education, called by the Council of the Religious Education Association. The substance of it is, that moral training is fundamental, something that was known since before Deuteronomy or Ptah-hotep; that teachers ought to use their influence with pupils for good morals, a doctrine taught by Plato; that teachers should have individual contact with their pupils, which was Socrates's way; that there should be direct moral instruction; and that school activities should be used for moral growth. Further, they declare that normal training should include teaching of ethics. All this is what no one can contradict, or ever did contradict, but it is well to keep it in mind, like all other phases of education. There may be more question as to the approval of "greatly increased emphasis" on "sex hygiene and eugenics." That can very easily be overdone to the stimulation of the sex instincts. One statement pleases us, namely, that there has been "a great development of character in recent years" in the schools, "by the development thru instruction of the taste for good things to an extent far beyond what prevailed a generation ago." If that is true, it is greatly to be rejoiced in, altho we have observed that the present generation of teachers is apt to underestimate the merits of that which went before. If true, it supports our long contention, that it was not wise to grieve over the removal of religious exercises from the public schools.

"One-Church" Towns

A principal reason why Protestant churches are often so thinly attended is because there are so many of them. A principal reason why Catholic Churches are so well attended is because there are so few of them. The Massachusetts Federation of Churches tells of a county in which there is a church for every 295 inhabitants, and a city of 100,000 inhabitants in which 25,000 Protestants are quarreling to maintain 43 churches, while sixty years ago the same number of Protestants were satisfied with 14 churches. There are small villages in Massachusetts that have

but one church. In these the pastor has an average salary of $874, but the "two-church" towns pay $687 salary and the "three-church" towns $473; and they receive from missionary boards ten times the aid the "one-church" towns do. That is downright waste. It destroys sociability and enthusiasm, and it wearies out the people. No wonder they don't go to church. Give us "one-church" towns.

The Irish Parliament

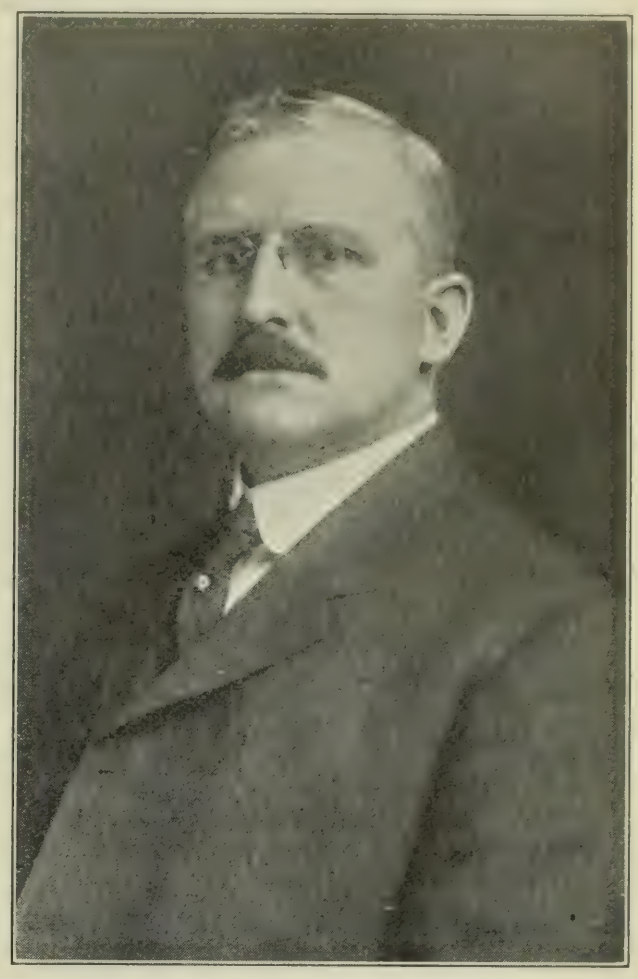
The introduction of the "Veto bill," to limit the authority of the House of Lords, has been delayed in the British Parliament till this week to allow Mr. Balfour to attend the funeral of his brother; but it will be simple, drastic and speedily adopted, and then the Government will introduce the bill to create an Irish Parliament. By this time the British Tories ought to be able to understand that there is no desire to interfere with Imperial supremacy. If there is any Clan-na-Gael which wants separation from England, it does not dare to express itself. Prime Minister Asquith says the Irish Parliament will confine itself to Irish affairs, and Mr. Redmond, head of the Irish party, says that is all they want. It is all they have ever wanted, notwithstanding the wild talk of some irresponsible Patrick Fords in this country. The prospect is very hopeful. The present Government is likely to heal the long sore, and to give the nation a satisfied and happy Ireland. And with it will go the one anti-British element that has endangered kindly relations between this country and England, an achievement of no small importance.

Dr. A. H. Bradford, who died last week, was a valued correspondent for THE INDEPENDENT, and one of the best known and most loved clergymen in the country. He was for three years officially the leader of the Congregational churches, and represented whatever is at the same time progressive and reverent. From the seminary he went to the new church, worshiping in a hall in Montclair, N. J., then a village of 1,500 inhabitants, and after forty-one years he leaves it one of the largest and finest of the suburbs of New York, and his church the cathedral of the town in which he was the leading citizen. So the influence of the clergy, when fully deserved and grandly exercised, has not failed.

Honduras has been a haven for fugitives from justice, because there they are not menaced by extradition treaties. Two or three weeks ago, Bonilla, the revolutionist leader, promised that his accession to the Presidency should be followed by reform as to this matter. He would promptly negotiate treaties of extradition. Now he himself has been indicted by a Federal grand jury in New Orleans, and a requisition will be sent to President Davila, who, for obvious reasons, cannot take Bonilla into custody and send him to Louisiana for trial. It is an interesting situation. To be consistent, Bonilla must hasten back to New Orleans and surrender to the court.

Its representatives in Congress have been giving Arkansas the reputation of being the wildest and wooliest State in the Union. First, Arkansas gave to the Senate its Jefferson Davis, and now the House has Congressman Macon, whom the members listen to as they would to a buffoon. His inverted elegancies of diction might win applause at home, but they are a disgrace to a civilized community. We regret that he is to be inflicted on the Sixty-second Congress.

Archbishop Ryan, of Philadelphia, was one of the best products of American Christendom. He was an eloquent preacher, a wise administrator, and a fervent patriot and Christian. The life of such a man is a blessing to the country, and his death a severe loss to the Church which he honored and served.



We have received a number of able letters from farmers, and from constituents of Congressman Silvester C. Smith, sharply controverting his article in our issue of January 26 in opposition to the proposed parcels post. We much wish we had space to publish them.

When will Governor Dix find time to acknowledge that he was wrong when he asserted, in his letter or speech of acceptance, that the Payne-Aldrich tariff act "increased the duties on all the necessaries of life"?

Insurance

The New Head of the Berkshire Life

WILLIAM D. WYMAN, for many years vice-president and manager of the Berkshire Life Insurance Company, of Pittsfield, Mass., was at the recent annual meeting elected president. James W. Hull, the former president, at his own desire retired from the position of chief officer, to become a vice-president. The notice of Mr. Hull's death about two weeks later and an account of his life, appeared in our issue of last week. Mr. Wyman has had a long experience in the agency field, and after receiving many honors in that department, now becomes identified with the home office. The company is to be congratulated on its new leader. The annual statement, issued December 31, 1910, over the signature of James W. Hull, showed a healthy condition and progress in all departments. The gross assets were $18,886,876, an increase during the year of $736,164. The surplus was $1,398,987. The mortality experience of the company was more favorable than the year before, and a good contribution to the surplus from this source resulted.

WILLIAM D. WYMAN.

THE losses by fire in the United States for January were exceptionally heavy, reaching a total of $21,922,450 as compared with $15,175,400 for January, 1910. The losses were evenly distributed over the country, no section suffering more severely than another.

THE Missouri State Capitol burned down recently, being struck by lightning. The building was valued at $1,000,000 and was not insured. It had recently been recommended that Missouri cut down on insurance policies, as the State had paid out more than it had ever got back.

OF 6,000 fires reported in Chicago lately, over 1,000 were caused by the careless use of matches. Overheated stoves and furnaces caused 400 fires, explosions of gasoline 365, sparks from chimneys 340, and defective flues 230.

THE North American Accident calls the attention of its agents to the fact that one-tenth of all deaths are due to accidents. Also, that there is paid to doctors every year $220,000,000, and that there is a yearly loss in wages alone on account of illness of $1,575,000,000.

AN announcement has been made that three insurance companies doing an extensive business in Mexico would cancel all their policies in the republic because of the present uprising.

THE extent to which compulsory national workingmen's insurance has developed abroad is shown by the following table:

	Number Insured.	Annual Premiums.	Annual Benefits.
Germany	13,130,000	£16,913,000	£15,969,000
Austria	3,040,000	2,755,000	2,460,000
Hungary	800,000	790,000	665,000
France (Miners)	221,000	323,000	356,000
Luxemburg	36,000	60,000	58,500

Financial

The Gould Railroads

THERE are to be important changes in the management of the Gould railways. George J. Gould, president of the Missouri Pacific since 1893, is to retire from that office; an active and competent railroad man, not yet named, is to be elected in his place; there are to be several new directors (representing John D. Rockefeller, the great banking house of Kuhn, Loeb & Co., and the Deutsche Bank, of Berlin), and a large sum, probably more than $100,000,000, will be expended during the next five years in improving the system of which the Missouri Pacific is the main stem. Some were saying last week that the Gould family and Gould influence were to be eliminated. As the family owns nearly half of the Missouri Pacific stock, and George J. Gould is to be chairman of the board, there will be no such elimination. But the Gould management will be displaced. The truth is that powerful interests heretofore associated with Mr. Gould have become convinced that the management should no longer be in the hands of himself and the members of his family. The condition of the property shows that he has not been successful. He is neither a great financier nor a great railroad operator. For some time past the central company has paid no dividends. Two or three of the constituent or controlled lines are in the hands of receivers. The great system needs an energetic, practical and competent head, who will attend to the business of his office and be stationed at St. Louis, not at a point 1,000 miles from what is virtually the system's Eastern terminal. The interests which have insisted upon the change are not interests now for the first time identified with the property; they have been associated with the Gould interests for a long time and have an inside view of what is needed.

It does not now appear that the changes will involve or promote any combination with competing systems. So far as can now be seen, the effect of them will not be injurious to the public. The system goes into strong hands. It will be improved and developed. There will be no difficulty about procuring the funds required, for the resources of those who take over the management are almost without limit. It may reasonably be expected that what has recently been regarded as a weak spot in the railway structure will soon show at least the average of strength.

Commodity Prices

RECENT reductions of the prices of several food staples direct attention to the records prepared by trade authorities. The Bradstreet index number is based upon the prices of several hundred carefully selected and representative commodities. For February 1 it was 8.7662, as against 8.8361 on January 1, and 9.0730 on February 1 a year ago. Since the beginning of the present month, the prices of cereals, butter and eggs have declined, and the index number for March 1 will probably show a further reduction. It is noticeable that the Bradstreet February figures are the lowest since October 1, 1909. The present tendency is downward. But the present average is higher than the average in 1896 by about 50 per cent. The Bradstreet number for July in that year was only 5.7019.

....Great deposits of high grade iron ore were recently discovered near Ironton, on the Cayuna Range in Minnesota. The town of Ironton, which was not in existence four months ago, now has a population of several thousand.

....Under the inheritance tax law of New York, the estate of the late John S. Kennedy, valued at $65,558,787, pays into the State Treasury a tax of $1,100,130. Nearly half of the estate was not taxable, owing to the large bequests to educational, charitable or religious institutions.

....The output of pig iron was only 1,774,817 tons in December, and 1,759,326 tons in January. There has been a steady decline since March, when the quantity produced was 2,617,949 tons. But the total for last year, 27,262,392, made a new high record, exceeding the output in 1909 by nearly 1,500,000 tons.

The Independent

VOL. LXX. NEW YORK, THURSDAY, MARCH 2, 1911. No. 3248

Survey of the World

An Extra Session for Reciprocity

An extra session of Congress, to be called early in April, is now regarded as inevitable. Senate leaders are convinced that a vote on the reciprocity agreement with Canada before March 4, when the present Congress expires by limitation, cannot be obtained. The tariff board bill is dead, so far as this session is concerned, tho the House has provided for the continuance of the work of the existing board, and an effort will be made to save the provision in the Senate. The insurgents believe that a two-thirds vote in favor of the Borah resolution for the direct election of Senators cannot be secured before March 4 from the Senate as it is now constituted. They believe a two-thirds vote in favor of the resolution can be secured in the Senate after Aldrich, Kean, Hale, Scott, Carter, Dick, Burrows, Depew, Flint, Piles, and Warner, whose terms expire on March 4, are out of the Senate. They also believe that the resolution for the direct election of Senators will pass the new Democratic House without much opposition. Senator McCumber made a three-hour speech against reciprocity (February 25). The other North Dakota Senator (Mr. Gronna) and Senator Young (Iowa) have given notice that they will oppose it in speeches to be delivered this week. Farmers from many parts of the country have registered their disapproval of the agreement. Representative E. J. Hill (Connecticut), in a speech before the Cleveland Chamber of Commerce, declares, however, that the opposition comes from Wall Street rather than from the farm. Analyzing the probable effect of the agreement, he stated that it would be only the surplus production of each country which would go to the other. Of fisheries, Mr. Hill said:

"The entire product of Canadian fisheries in 1908 was only $25,451,094. We raised oysters, clams, crabs, and lobsters enough in this country to almost equal in value the entire product of all the fisheries of Canada. Our total product is about $54,000,000. Canada exported $22,444,767 worth, sending to the United States $8,162,728 worth. We sent to her during the same year $3,342,870 worth from our fisheries. If the entire product of both countries had been dumped upon our market, this great nation would have consumed it all at a per capita cost of 83 cents."

——James Bower, president of the Canadian National Council of Agriculture and the United Farmers of Alberta, who is in Ottawa to urge the Government to grant the demands made by the farmers' delegation of December 15, says:

"As far as the reciprocity agreement goes, it has the complete approval of the Western farmers, but dissatisfaction is expressed at the smallness of the reduction in the duty on agricultural implements. . . . If, however, the agreement is the first step toward breaking down the whole system of protection, farmers may well hail it with unqualified satisfaction. By opening up new markets the agreement would without question give a great impetus to the agricultural industry. . . . The speeches I have heard in the House of Commons the last few days by those who are opposed to reciprocity indicate to me that the speakers are either ignorant of how the agreement will affect farmers or they are trying to mislead the public."

——The Vancouver Board of Trade has voted down a resolution condemning the proposed reciprocity agreement.

A New Treaty with Japan

The Senate ratified, last week, a treaty between the United States and Japan, to supersede the convention effective since July 17, 1899, which would not have expired until July, 1912. Says the Secretary of State:

"The promptness of the Senate in giving its constitutional ratification of the treaty between the United States and Japan is especially gratifying because it so signally reflects the cordial feeling of friendship which America has for Japan and because it will rightly be understood in Japan as one more of the signs of special amity which this Government has given from the beginning of Japan's relations with the Western world."

We discuss the new treaty editorially.

The Rate Decision

The Interstate Commerce Commission handed down, February 23, decisions against the railways in both the "Eastern" and the "Western" cases. Advances in freight rates approximately $27,000,000 a year were disapproved. In the case involving the increases by the railroads in Western trunk line territory the commission also declined to approve the proposed advances in commodity rates. The carriers are in both cases required to cancel, by March 10, their advanced tariffs, and to restore the former—or actual—rates. In passing upon the Eastern case, Commissioner Prouty says:

"The railroad rates of this country have not been constructed, as a rule, upon any scientific basis, and this is especially true of the interstate rates."

He points out that rates have been put into effect without special inquiry as to the amount of revenue they might produce:

"It might not follow," the opinion says, "even though we were of the opinion that these carriers were entitled to additional revenue, that they ought to obtain it from an advance of these particular rates. No general advance in rates should be permitted until carriers have exhausted every reasonable effort toward economy in their business—"

and the opinion is exprest that railroad operators have not given to this subject the attention which it deserves. In the Southwestern case, where the general effect of the increase is to raise rates not merely from St. Louis to points in Texas, but also from all points east of the Mississippi to all Texas points, the opinion was prepared by Commissioner Harlan, who found that the amount of the increased revenue involved in the proposed advances was not so considerable as in either of the other cases. The increases were defended by the carriers, however, on the same grounds of insufficient revenues and inadequate returns on investments, and are approved by the Commission. The decisions are discussed in one of our editorial articles and in our financial department.

More About Lorimer

A vote on the Lorimer case is expected this week. At the moment of writing, he has, moreover, votes enough to ensure his retaining his seat. The desire of insurgent Senators to postpone the decision of the contest until after March 4, when an influx of Democratic members would improve their chance of ousting him, has been responsible, in part, for their dilatory tactics in regard to legislation. Senator Lorimer was heard in his own defense February 22. His four-hour speech was followed with keen interest by a crowded Chamber and gallery, and is regarded as having notably increased his chances, in spite of the fact that Mr. Beveridge, who followed the Illinois Senator, recalled the attention of the Senate from the eloquence of a man speaking in his own behalf to "the record of sworn testimony." Mr. Beveridge said he had listened with sympathy to Senator Lorimer's story of his rise from humble estate. There were many Senators, he said, who, from an even earlier youth, had borne even heavier burdens without asking anything of the world on that account.

"While I was affected as a man by that appeal," said the speaker, "I was curious as a judge that the sitting member did not recite these things before the Senate's committee, if he or his attorneys thought them material or relevant. His account of his popularity is interesting and explains much of his political strength, but it is not relevant to the question of bribery which we are now considering."

In his speech before the Senate Mr. Lorimer told not only the story of his election to that body by the Illinois Legislature, but also his history as bootblack and newsboy. He declared that Democratic votes were cast for him because of the friendship of the various legislators or of their constituents.

Appropriations by Congress

By a vote of 123 to 81 the House of Representatives decided, February 25, on the fortification of the Panama Canal. The Senate is expected to con-

PEDRO MIGUEL LOCKS, LOOKING NORTH.

BOTTOM OF THE CANAL RAISED FOR A SHORT DISTANCE THRU PRESSURE OF THE BROKEN EAST BANK EIGHTEEN FEET ABOVE ITS ORIGINAL LEVEL.

cur. With the passage of the sundry civil bill, carrying all told more than $141,000,000, the continuance of work on the raising of the "Maine" is assured, also the life of the Tariff Board for the remainder of the Taft Administration. Over $45,000,000 is provided for the continued construction of the Panama Canal. The sum set aside for canal fortification is $3,000,000. The fortifications board has declared officially that the defenses will cost $12,000,000. Mr. Tawney says they will cost $60,000,000 at least, and $26,000,000 a year besides for management and maintenance. As chairman of the House Committee on Appropriations, Mr. Tawney made a hard fight for his amendment providing that no part of the fortifications appropriation should be used in beginning the work of defense until the President had exhausted all diplomatic resources in an effort to preserve the neutrality of the waterway by diplomatic agreement. The sundry civil bill was under consideration by the House for only two days. One of the features of the consideration of the measure was the passage of items aggregating $67,000,000 by unanimous consent. This prerogative has never heretofore been indulged in to so great an extent by the lower branch. The bill as passed carries an appropriation of $350,000 for the reconstruction of the hall of the House of Representatives. In all, there are over one thousand items in the bill.

From the States

The Kansas Senate has defeated the initiative, referendum and recall bills passed by the State House of Representatives. Other checks to radicalism are reported from Iowa, where Governor Carroll has vetoed the Oregon primary plan bill, characterizing the measure as an evasion of the Federal Constitution in its provision for approximating the direct election of Senators, and from Texas, where Governor Colquitt, elected by anti-prohibition Democrats, vetoed the charter bill for the city of Texarkana because it contained the initiative, referendum and recall provisions. An effort to pass it over the veto failed. Governor Colquitt's veto message said:

"The initiative, referendum and recall are repugnant to the principles underlying our system of government. The faith of the people of Texas stands pledged to the preservation of a republican form of government, says the bill of rights, and the power to change or abolish the Constitution is subject to this guarantee only. The convention which framed our Federal Constitution discussed and discarded the initiative and referendum plan as totally unfit for application to our system's principles.

"The initiative and referendum is the dream of theoretic politicians, and, as Madison tells us, it was ever found incompatible with personal security of the rights of property. After thousands of years of experience it was discarded by all stable governments. Only one small nation in Europe now employs the system, and it is practically without influence among the nations of the earth."

The Dean bill, giving municipalities thruout Ohio the right to vote on the saloon question, was defeated in the Ohio House of Representatives after passing the Senate. The bill gave municipalities the right to vote on the saloon question regardless of sentiment in the country districts. Temperance organizations were solidly against the measure.—— The Governor of Alabama has signed the Parks local option law referred to in "The Survey" of February 23. This ends State-wide prohibition.——There has been no change in the New York Senatorial situation other than the formal withdrawal of Mr. Shepard as a candidate, and Mr. Littleton's letter to Charles F. Murphy, of Tammany, asking him to "release" the majority at Albany, and, by Mr. Sheehan's withdrawal, to bring about the election of one more Democratic Senator with a vote to cast for Canadian reciprocity.

The Fall of a Boss

George B. Cox, Republican boss of Cincinnati, president of the Cincinnati Trust Company and theatrical promoter, has been indicted by the grand jury on a charge of perjury, and is under $1,000 bond. The grand jury's action was based on testimony given by former County Treasurer John Gibson, one of the Republican County Treasurers who refunded $214,000 alleged illegal interest on county funds after the Drake legislative investigation in 1906 had exposed the collection of such interest from banks favored with deposits of city and county funds. It is said that

Gibson testified to Cox receiving $48,500 of the "gratuities" given to the former during his service, 1900-1904. The legal penalty for perjury is imprisonment of from three to ten years. It is reported that Boss Cox has sold his residence in a suburb of Cincinnati, and plans to move to New York City, there to reside permanently. The only person mentioned among Cincinnati politicians as Cox's successor as leader is Editor Charles P. Taft, brother of the President.

Cuba and Porto Rico

President Gomez, of Cuba, has signed the bill granting to an American company a valuable concession for thirty years, in connection with the improvement of several harbors. It is said that the proposed tax on imports will yield to the company $2,000,000 a year.——The Governor of Havana has suspended the order of the City Council for the negotiation of a loan of $28,000,000 from New York bankers, saying that this sum is not needed.——President Gomez tells the Spanish Government that a new commercial treaty is now required, because the large balance of trade in favor of Spain prompts Congress to apply to imports from Spain the island's maximum tariff rates, which would be prohibitive. ——Porto Rico's carnival and first insular fair opened on the 24th, at San Juan, where there are a great number of visitors. —— The native members of Porto Rico's Executive Council have cabled to Washington a protest against the proposed removal of limitations as to the quantity of land which a corporation may own. At first it was intended that the limit should be increased from 500 to 3,000 acres, but a committee amendment removes all restrictions, provided that the corporation pays 50 per cent. more than the ordinary rate of taxes. Those who protest say that the limit should not exceed 5,000 acres. It is alleged that the proposed extension is in the interest of the Sugar Trust.

Hayti's Brutal Soldiers

The defeat of the revolutionists in Hayti has been followed by savage excesses which have excited the protests of foreign nations. After the army took possession of Fort Liberté, where no resistance was offered, many suspects there were put to death by President Simon's order. Then Quanaminth was captured. There the troops, being beyond control, burned the town, having first pillaged it and massacred all the residents who were unable to escape. From the ruins of Quanaminth they proceeded to Cape Haytien and there began to fight among themselves. A regiment of men from Gonaives attacked a regiment from Jeremie. One soldier was killed and ten were wounded before discipline was restored by Simon. Two days later, on the 24th, Aux Cayes, a city of 25,000 people on the south coast, was almost completely destroyed by fire, said to have been caused by insurgents. At the capital, Port au Prince, there has been a reign of terror. Every day residents accused of being foes of the Government have been arrested and put to death. The consulates are crowded with refugees. Our Government was urged by the British Consul-General to make protest, and in cable messages from Washington the Simon Government was advised to take a more reasonable course. According to reports from our Minister, the official assertion that prominent political prisoners at the capital were shot during an attack upon the palace was false. He says that in the night Government soldiers in several parts of the city discharged their rifles, and that during the ensuing excitement the prisoners were taken from jail and put to death. These were the men for whose safety our Government had sent a warning. Some expect a revolutionary uprising at the capital, and the British Minister has sent to Jamaica for a cruiser.

Mexico's Revolutionists

There was very little fighting in Mexico last week. General Navarro, with headquarters at Juarez, occupied Guadalupe, from which Madero and Orozco had retired. There were false reports of a battle, with many killed, but it is known that no revolutionists were seen by Navarro's men. They captured two Americans, Lawrence F. Converse and Edward M. Blatt, who are held for trial. Converse, whose father is a captain in the United States army, had been carrying messages between Orozco and

the junta in El Paso. On the 24th, Colonel Rabago, with 900 men, set out from Juarez for Lucero, 70 miles south, to find Madero and Orozco. In the west, near the California boundary, Leyva and Bertholdt, the Los Angeles Socialist, burned the custom house in Algodones and killed the chief of police there. More than half of their men are Americans. They do not acknowledge the leadership of Madero, and their aim, they say, is to establish a Socialist State or community on the peninsula of Lower California. The Government soldiers who oppose Leyva captured an American named Dell and took him to Ensenada for trial, saying he was a spy. Mexico assured our Government that Dell, Converse and Blatt should be treated fairly.——A remarkable statement was given to the Associated Press, in Paris, on the 20th, by José Ives Limantour, Minister of Finance in the Diaz Cabinet, who went to France in August last to procure medical treatment for his wife. He is widely known as a finance minister of exceptional ability and has been regarded as a loyal supporter of Diaz. The only basis for peace, he said, was that the insurgents should lay down their arms pending negotiations with the Government, which should then grant the reforms demanded. He made these suggestions:

"First, the abuses contaminating local administration in the cities and towns which have the greatest grievances should immediately be abolished.

"Second, some means should be found to allow the people to share more extensively in the holding of land. 'Mexico has worn out the feudal system, which is a relic of the days of Cortez.'"

There was opposition, he added, to Diaz, on the ground that he had been in office too long and that new blood was needed, but Diaz had been elected legally. If the insurgents should not lay down their arms he foresaw a long and wasting struggle, because the Federal troops were no match for the cowboy revolutionists. The United States should enforce the neutrality laws more strictly. He had no political aspirations. He had often been asked to run for the Presidency, but had refused. Señor Creel, Minister of Foreign Affairs, said he believed Señor Limantour had been misquoted.

Peace Conference in Honduras At the peace conference on the "Tacoma," in the harbor of Puerto Cortes, Manuel Bonilla at first insisted upon being permitted to take the Presidency of Honduras, but on the 24th he formally withdrew as a candidate. Each side then submitted the names of three men for the office of temporary President. Two of those named by Bonilla were Dr. Membreno (his representative in the conference) and Fausto Davila, the step-brother of President Davila. As no one of the six names was acceptable to both sides, Davila's agent proposed that one of the six men should be selected by Thomas C. Dawson, who represents the United States in the conference. Bonilla consented, but further attempts to reach an agreement without the aid of Mr. Dawson were made.——Investigation proves that the explosion and fire at the capital of Nicaragua, which destroyed large quantities of arms and ammunition, were due to a plot made by exiled friends of ex-President Zelaya in Costa Rica. Several of those arrested have been set free. The Freemasons of Costa Rica addressed to our Government an appeal in behalf of Dr. Espinosa, formerly Minister to Washington. President Estrada gives assurance that he shall have justice and shall not be put to death, even if he be found guilty.—— By a large majority the Congress of Costa Rica had accepted the proposition of Minor C. Keith (of the United Fruit Company) for refunding the foreign debt by means of a new loan of $7,881,000.

South America Three special diplomatic commissioners, Drs. Pacanius, Daguino and Andara, have been sent by Venezuela to visit Ecuador, Peru and Bolivia, their purpose being to promote closer international relations. These three republics, with Colombia, will have delegates at a Congress to be held in July next at Caracas, and a treaty affecting their relations was recently signed. It was the hope of some who supported it that there might be a new federation of the republics which were formerly included in the Colombian union.——A revolutionary movement in Paraguay is reported by dispatches from Buenos Aires. It fol-

lows the dissolution of Congress by President Jara, who proclaimed a dictatorship and ordered that Señor Ortis should be President. Jara forced the resignation of President Gondra, in January last, and seized his office, to which he was afterward formally elected.——Brazil has granted a large subsidy for the establishment of a steel plant, with the capacity of 150,000 tons a year. The company (of Brazilian capitalists) will receive $3 per ton for ingots, $8 for rails and structural shapes, $10 for certain other products, preferential rates on railroads and coal without tariff duty, while the Government agrees to buy every year 50,000 tons of its output.——The bid of a French company for the construction of a large dry dock having been accepted by the Chilean Government, altho that of Señor Lagarrigu, a Chilean engineer of high standing, was much lower, he publicly makes protest, asserting that his bid was rejected because he refused to bribe certain prominent officials.——A French engineering company has a contract for rebuilding a considerable part of Guayaquil, with a view to the sanitary improvement of the port.

The Attack on the Lords

The Veto Bill was introduced by Premier Asquith on February 22 and passed its first reading by a majority of 351 to 227. The Premier declared that in rejecting the 1909 Budget the Lords committed political suicide. History would say that it was the most stupendous act of political blindness ever perpetrated. Hereditary in origin, irresponsible in the exercise of its powers, and overwhelmingly partisan in its actual composition—that was the body to which the law intrusted the right to delay and check the considered decisions of elected representatives of the people. The Premier said that he did not propose to dispense with a second chamber. They had already suffered enough from the evils of what was practically a single-chamber Government, but the country required an immediate remedy for the present evil and could not await release from the dangerous and intolerable situation until the long and laborious process necessary for the creation of a new second chamber had been completed. The Premier continued: "Is all progressive legislation, tho clearly desired and demanded by the people, to come to a standstill pending the evolving of a new second chamber? We say, 'No!' and the country has said 'No!' twice." Mr. Balfour, leader of the Opposition, said that the question should be settled by a peaceful agreement. He declared that it would be folly to throw aside wholly the principle of heredity. In no country, not even in the United States or France, had the elective principle been found consistent with the predominance of the Lower House. If, therefore, it was wished that the House of Commons predominate, the hereditary principle should be continued. Mr. Macdonald, speaking for the Labor party, declared their opposition to the bicameral system of government. He therefore objected to the preamble of the bill, but the Laborites were willing to accept it as it stood rather than interfere with its passage. The Home Secretary, Winston Churchill, said that with the referendum, the Government's moderate proposals were the veriest Toryism, and declared that no step would be neglected to carry the bill swiftly into law. The Government, he said, did not fear the referendum as a check on progressive legislation, but regarded it as a vicious system, especially unsuitable for this country, and believed that its adoption would lead to Jacobinism, Cæsarism and anarchy. Lord Landsdowne, leader of the Opposition in the House of Lords, has given notice that he would introduce a bill to amend the constitution of the Upper Chamber. This is expected to be a compromise between his own plans and those of Lord Rosebery and Lord Curzon.

The Veto Bill

Since this measure forms an important step in the constitutional history of Great Britain, we quote as much as possible of its text. The preamble is as follows:

> Whereas, It is expedient that provision should be made for regulating the relations between the two Houses of Parliament; and
>
> Whereas, It is intended to substitute for the House of Lords as it at present exists, a second chamber, constituted on a popular instead of hereditary basis, but such substitution cannot be immediately brought into operation; and
>
> Whereas, Provision will require hereafter to be made by Parliament in a measure ef-

fecting such substitution for limiting and defining the powers of the new second chamber, but it is expedient to make such provision as in this act appears for restricting the existing powers of the House of Lords.

The Speaker of the House of Commons is given the absolute right to decide what is a money bill and what amendments are proper to such a bill, and his decision is not to be questioned in the House of Lords or in any court of law. The first clause of the measure defines money bills and asserts the right to pass them over the veto of the Lords:

I.—(1) If a money bill, having been passed by the House of Commons and sent up to the House of Lords at least one month before the end of the session, is not passed by the House of Lords without amendment within one month after it is so sent up to that house, the bill shall, unless the House of Commons direct to the contrary, be presented to his Majesty and become an act of Parliament on the royal assent being signified, notwithstanding that the House of Lords have not consented to the bill.

(2) A money bill means a bill which, in the opinion of the Speaker of the House of Commons, contains only provisions dealing with all or any of the following subjects, namely: The imposition, repeal, remission, alteration, or regulation of taxation; charges on the Consolidated Fund, or the provision of money by Parliament; supply; the appropriation, control, or regulation of public money; the raising of guarantee of any loan or the repayment thereof; or matters incidental to those subjects or any of them.

The second clause, limiting the veto of the Lords over other bills, is as follows:

II.—(1) If any bill other than a money bill is passed by the House of Commons in three successive sessions (whether of the same Parliament or not), and, having been sent up to the House of Lords at least one month before the end of the session, is rejected by the House of Lords in each of those sessions, that bill shall, on its rejection for the third time by the House of Lords, unless the House of Commons direct to the contrary, be presented to his Majesty and become an act of Parliament on the royal assent being signified thereto, notwithstanding that the House of Lords has not consented to the bill; provided, that this provision shall not take effect unless two years have elapsed between the date of the first introduction of the bill in the House of Commons and the date on which it passes the House of Commons for the third time.

(2) A bill shall be deemed to be rejected by the House of Lords if it is not passed by the House of Lords either without amendment or with such amendments only as may be agreed to by both houses.

The bill concludes with a clause limiting the maximum duration of Parliament to five years instead of seven, as at present.

French Cabinet Crisis

It is one of the curiosities of modern French politics that M. Briand, who a year or two ago was execrated by the Catholic Church on account of his separation law, should just have lost his office because of an attack from the other side of the House, charging him with being a Clerical. It does not appear that the character or views of M. Briand have materially changed, tho doubtless he now does not find to his taste the violent Socialistic language which he used a few years ago when he was sparring for an opening in politics. His course on the whole has been as moderate and consistent as could be expected of a man in his extremely difficult position. The Radical Socialists who were alienated by his firm stand during the railroad strike, but failed to secure a majority against him on that issue, brought up the question of the Church. M. Malvy asserted that the law against the congregations was not being enforced, but that there were as many friars in France as ever. A strong Catholic party had been formed and the clerical schools had been reopened with the same teachers in lay dress. According to M. Malvy, there had been 1,713 prosecutions for these violations of the law, but only 103 condemnations, and these usually resulted in insignificant fines. Premier Briand, in defense, says that it could not be expected that great institutions which during centuries had thrown their roots deep into the soil would disappear in a few months because a new law exists. The orders, he said, had not been reconstituted and nobody had a right to accuse the Government of failing in its duty, but if the majority was unable to give the Government its full and entire confidence it was time that this should be made evident, for the Government could not continue its task undermined by petty intrigues. He therefore demanded a vote of confidence in the Government, which was passed by only sixteen majority. This was unsatisfactory to Premier Briand and he and his Cabinet handed in their resignations on the following Monday, February 27, immediately after the funeral of General Brun, late Minister of War. The Conservatives are much alarmed to see the balance of power

shifting rapidly in recent years to the Left of the Chamber.

Armament and Arbitration

The International Court of Arbitration at The Hague disposed of the Savarkar case within ten days. This was a dispute between Great Britain and France over the extradition of an Indian agitator, Vinayak D. Savarkar. He went to England in 1906 to study law, but devoted his time chiefly to the anti-British campaign, openly advocating political assassination. When Collector Jackson was murdered at Nusik, December 21, 1909, by Kanhere, it was found that the Browning revolver used was one of twenty purchased in London by Savarkar and sent to Bombay. Savarkar was accordingly arrested as an accomplice and dispatched to Bombay for trial in charge of one British and two Indian detectives. While the vessel was in the harbor of Marseilles, he escaped thru a porthole and swam ashore. He was soon recaptured, however, with more or less assistance from the French police and taken on to Bombay, where he was tried and sentenced to transportation for life and confiscation of property. The sentence was suspended, however, because, at the instigation of Savarkar's friends, the French Government raised a protest because he was seized on French soil, and made a formal demand for his return to France. The question was submitted to The Hague tribunal, under the presidency of M. Beernaert, Belgian Minister of State, and composed of one representative each from France, Great Britain, Norway and Holland. The decision of the court was in favor of Great Britain, which will therefore retain the prisoner. This is the ninth case on which The Hague Court of Arbitration has passed. The National Council of French Socialists has passed a resolution condemning The Hague court for its verdict.——A resolution proposed by the Socialists in the French Chamber of Deputies, asking the Government to open negotiations with the Powers, particularly with Great Britain and Germany, was voted down by 352 to 189. It was opposed by M. Pichon, Minister of Foreign Affairs, who declared it impracticable. Germany, he said, believed that strong defenses were the greatest guarantee of peace, and President Taft, who was an advocate of peace, was nevertheless working for the development of the American navy. The Government, however, accepted a resolution inviting cooperation with other Powers to have the question of disarmament brought up at the next Hague Conference. This was passed by 447 to 56. The two Dreadnoughts which the French Government asked for in advance of the regular naval appropriation were granted, and proposals of the Socialists to have them built at the Government arsenals instead of at private shipyards was voted down. The French naval program will involve an expenditure of $268,500,000 in the next ten years.——The question of disarmament came up in the German Reichstag in connection with the bill for increasing the period of military service. General von Heerington, Prussian Minister of War, in advocating the bill, said the great progress that Germany had made in the last forty years was largely due to universal military service. Herr Bassermann, the National Liberal leader, in supporting the bill said that universal peace could not be realized in the near future, for

> "France continues arming, England shows a tendency to increase her army and introduce universal military service, and the United States is developing in an imperialistic direction and is adding a big navy to her commercial fleet."

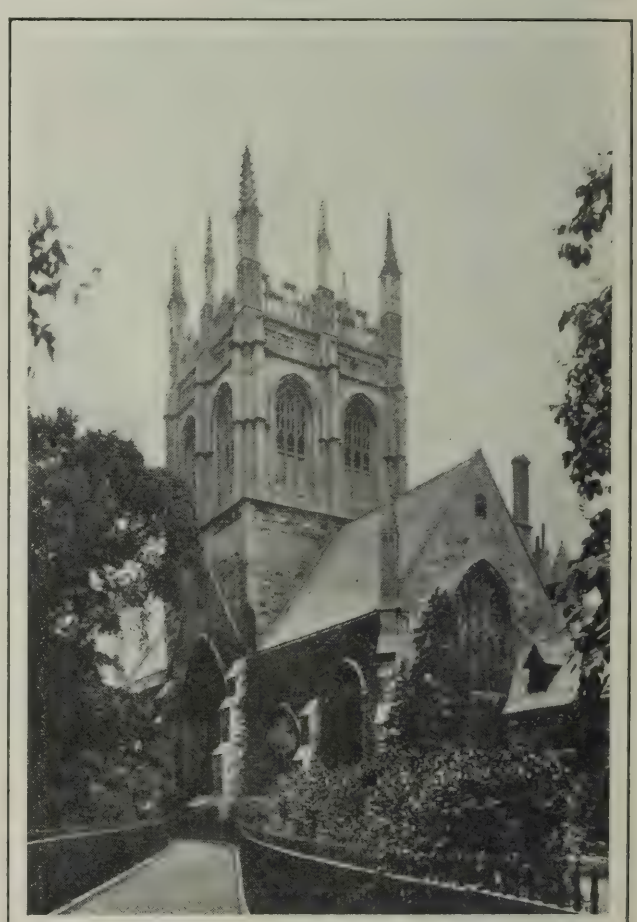
The bill was passed and the German army will be increased accordingly.——In the British House of Commons Sir Edward Grey, Minister for Foreign Affairs, was asked what action he had taken in regard to the American proposals for arbitration. He answered:

> "My reply was to the effect that the Government had always taken the keenest interest in the plan of international agreement for this purpose and would therefore most readily enter into a full and frank exchange of views with the American Government on the subject and would lend their support to any well considered, practical scheme which might be put forward by the United States Government.
>
> "I also stated that his Majesty's Government welcomed the joint resolution of the Senate and House of Representatives and would look forward with sympathy and interest to the conclusions at which the proposed commission might arrive. Should the commission be able to formulate a scheme on definite lines it would receive the most friendly consideration at the hands of his Majesty's Government."

Three English Universities: Oxford.

BY EDWIN E. SLOSSON, Ph.D.

[The preceding articles of this series by the author of "Great American Universities" dealt with London and Manchester Universities and were published in our issues of January 5 and February 2, respectively.—EDITOR.]



OXFORD is the favorite resort of American tourists because it is the most satisfactory of all the sights of Great Britain. The Tower of London and Stratford-on-Avon do not compare with it. They are as disappointing as an extinct volcano. But Oxford is an antiquity in action. Our common feeling in regard to it was best exprest by a lady tourist who was being personally conducted thru one of the college quadrangles when a student stuck his head out of a dormer window. "Oh, my! Are these ruins inhabited?" was her delighted exclamation.

That is a characteristic trait of the English, the economical utilization of antiquated buildings and institutions. The House of Lords actually does something, even tho what it does is wrong. Westminster Abbey is not a mere mausoleum, like the Paris Panthéon. It is a church where one may worship and hear sermons of decidedly modernistic tone. The French, when they made up their minds that they did not need a King any longer, cut his head off, which was a waste. The English keep their King and make use of him for spectacular and advertising purposes. Oxford is Cluny and the Sorbonne in one, a curious combination of old and new, useful and superfluous, progress and reaction, that puzzles and fascinates every American visitor.

Most of them write about it when they get home. So do our returned Rhodesians. The student customs are familiar to us all. We know the college buildings by sight, even tho we cannot pronounce their names. We have seen the word "Oxford" in the front of books and after degrees so constantly that we have acquired a certain sense of what Oxford scholarship is. We have all enjoyed or hope to enjoy the hospitality of Oxford homes and commons. Consequently, I am relieved of the necessity of saying anything about the history and standing of the university or about its beautiful and picturesque features, and can devote my space to some things not so generally known, that I was able to pick up in the course of three days spent at Oxford last June.

In spite of the fact that Oxford is over written, I found many things new to me. It was a surprise to see, pouring down its narrow streets, squads and companies of young soldiers, gathering for a drill on the greensward of Merton Fields, and then marching to the railroad station, where they entrained for a week or so of camping and campaigning with the Regulars. Some of them were infantry; some were bicyclists. I am not generally

MERTON COLLEGE CHAPEL.

Merton is the oldest of the Oxford Colleges. It was founded in 1264 and the chapel dates from that period.

an admirer of things military, but I liked the looks of these khaki uniforms better than the Tuxedo gowns that the other students wore. Such a sudden transformation of the scholar into the soldier may be seen any day on the campus of our State universities, but it is rare in the East. The wave of warlike patriotism now sweeping over England has powerfully affected the universities. The new territorial army, which is to be raised in England, perhaps by conscription, will need educated leadership, and the Officers' Training Corps has been established in all the universities. The Oxford contingent numbers some 1,150 members, about a third of the total number of undergraduates, a remarkable showing considering that the military drill is voluntary and not obligatory, as it is in American universities receiving Federal funds.

OXFORD STUDENTS MARCHING TO THE STATION.

A strange sight to eyes accustomed to American universities was to see young men playing games for their own amusement. I caught them several times indulging in athletic sports when there were no spectators present. They did not even know I was watching them, but they played just as hard as tho there had been a grandstand full. I was assured by the best of authority that the Oxford students as a rule prefer to play than to look on. If this custom could be introduced into America it would eliminate the expensive rooting service altogether and enable the money to be spent for educational purposes, thus considerably augmenting the income of our universities. The Oxford students doubtless spend too much time in athletic sport, but at least they spend it in athletic sport, not in athletic business.

I was able, immediately upon arriving, to disprove the rumor current in America that Oxford was dead. According to biologists, the test of vitality is proliferation, so I was delighted to discover at Oxford a new college that I had never heard of. Not the New College—which was 631 years old—but the newest college, which was only a few weeks old. It originated in a strike of Ruskin students. Ruskin College was established in 1899 by a young American, Walter Vrooman, upon plans devised by Charles A. Beard, now a professor in Columbia University. Its purpose was to provide for the needs of the working classes, but it appears that the students became dissatisfied last year with the way it was run. Orthodox Marxianism was not be-

ing taught and the authorities were negotiating for a closer alliance with the University; a double plot to corrupt their minds and deliver them into the hands of their enemies, it seemed to some of them. Accordingly, the larger part of the students seceded, rented a private house and started a college to suit themselves; Central Labor College it was called.

I had the luck to drop in on them just at tea time and they made me welcome at once. In fact, I felt quite at home with them, for they seemed much like the boys of our Western State universities, earnest, serious and independent, contrasting with the very youthful-mannered students from the other colleges frisking around the Oxford streets. The students at the labor college are selected by various trades unions, which send them to Oxford for a year or two and provide them with $260 a year, which pays their expenses. I was a little amused to see that they were inclined to be apologetic and proud of the plainness of their living and all the hardships they were enduring in the cause of education. I thought of the many thousand Western boys who would feel passing rich on fifty-two pounds a year, and well off if they started in the fall with anything more than their summer's earnings. When I was in the University of Kansas even the fraternity men, who formed our exclusive social set, did not live in such handsome quarters as this extemporized Central Labor College, to say nothing of Ruskin.

Since my visit I understand that Ruskin College has passed exclusively into the control of the working class. But I could not find out what the boys were in Oxford for, altho I pestered them with questions on this point almost to the limits of their courtesy. They do not study anything except economic and sociological subjects, but this is not a field in which Oxford is pre-eminent. They might better go to the London School of Economics or one of the provincial universities for this purpose. It seems they

THE NEW CHEMICAL LABORATORY OF QUEEN'S COLLEGE.

do not make use of the University library and lectures to any great extent, and if they did it would not compensate for the lack of the more important facilities for education in the social sciences, that is, actual observation of the working of civic institutions. It might be surmised that the motive of the labor unions in choosing Oxford as the place of education for their young men was to secure for them something of the refinement which comes from life in this historic seat of non-utilitarian culture and from intimate association with the sons of the leisure class. But it does not appear that they come under these influences to any great extent. A third hypothesis that occurred to me was that the entrance of the working class element was for the purpose of converting Oxford. This, however, if not a hopeless undertaking, is at any rate not being accomplished under the present system of separate colleges, for the Ruskin students mostly keep to themselves, and if one of them shows a marked disposition to cultivate the acquaintance of the students of the more aristocratic colleges, he is suspected on both sides of the unpardonable sin of trying to rise out of his class. Socialism is just now quite a fad among the Oxford students, but I doubt if this is chiefly due to the personal influence of the working class students. They seem to be living in constant dread lest they succumb to the seductive influence of Oxford, and so betray the cause which sent them there. "No, we do not use the University library," said one of them to me. "We have our own books. The Bodleian books teach the doctrines of the ruling classes."

So far as I can find out, then, Oxford is merely a symbol. The sort of education the working classes want is not that which Oxford gives. Oxford is not likely to give the sort of education they want, at least in the present generation. But Oxford stands as the traditional stronghold of the aristocracy and they resent their exclusion from its privileges. It is the same motive that impelled the

Nonconformists to seek admission to Oxford and impels the women now. It is like a struggle for a flag on a battlefield.

Both the Chancellor and the Hebdomadal Council seem very anxious to get poor men into Oxford, but very uncertain how to do it. It is a curious instance of the perversion of endowment that the money which was given to the colleges for the benefit of poor men should have become in the course of time the means of keeping them out. The more charitable funds a college has received in the past the higher is its standard of living now and the more difficult for a poor man to get in.

Oxford is now undergoing a process known as "reform from within," which means in England, as in America, the reluctant yielding to external pressure.* All agree that Oxford needs reforming, but few agree on what. Some would make it more democratic; some would make it less. "The University was founded by Churchmen for Churchmen," said an Oxford man to me. "It was a great mistake and a violation of trust to let in the Nonconformists."

But according to others† it was not the admission of Nonconformists in 1871, but the admission of science in 1858, which brought the University into difficulties. To be sure, science has not yet permeated Oxford to any great extent,‡ but it is strong enough to be felt as a disturbing element. This is due not only to antagonistic educational ideals, but to the centralizing influence of the science departments, which continually tends to strengthen the University at the expense of the Colleges. Students who take science usually have to leave their colleges for it, because the individual College of 100 or 150 students cannot afford to provide laboratories and instruction for advanced and specialized work. Since Oxford was last reformed by the Second Royal Commission of 1877, the number of University professors and teachers has steadily increased. In 1908 their number was 110, of whom 63 were in Arts and Letters, 31 in Medicine, Natural Science and Mathematics, 9 in Theology and 7 in Law. Their stipends, paid by the University and the Colleges (apart from fees) amount to $200,000 a year. On the other hand, there are 150 tutors and lecturers giving instruction in the Colleges, independent of the University.

A College may appoint one of its Fellows a Lecturer in any subject and his name thereupon appears on the University list, altho the University authorities have not inquired into his qualifications and may not desire another lecturer on that subject. So it happens that there are too many courses offered in some branches and none at all in others quite as important. This state of affairs may be best given in a quotation from "Oxford and the Nation":

"Now, for reasons which it is not difficult to imagine, most college lecturers prefer small audiences, and some, in spite of intercollegiate treaties, resent the presence of outsiders. The result is that, except in the rare instances where a college lecturer chooses a subject off the beaten track, or has succeeded by personal merit, or by the accident that he is also an examiner, in draining the classrooms of the other colleges, he may be sure that his fellow-sufferers in other colleges, from two or three to ten or fifteen in number, are lecturing on the same book, at the same day and hour, to similar diminutive audiences of from two to twenty persons.

"This summer term, for example, there will be given no fewer than six sets of lectures on the Republic of Plato, all of which, including that of the professor, are specifically on the earlier parts of the book; six lectures on the Ethics of Aristotle; besides three 'Introductions to Moral Philosophy,' which are mainly Aristotle in disguise. In Greek history there are seven courses on Herodotus; and it takes no fewer than 16 lectures and 28 hours a week to provide, by inter-collegiate anarchy, for the supposed needs in this one subject of not more than 150 men.

"The remedy for this chaos is obvious. Either the colleges must agree voluntarily to pool their lecturing and all their more specialist

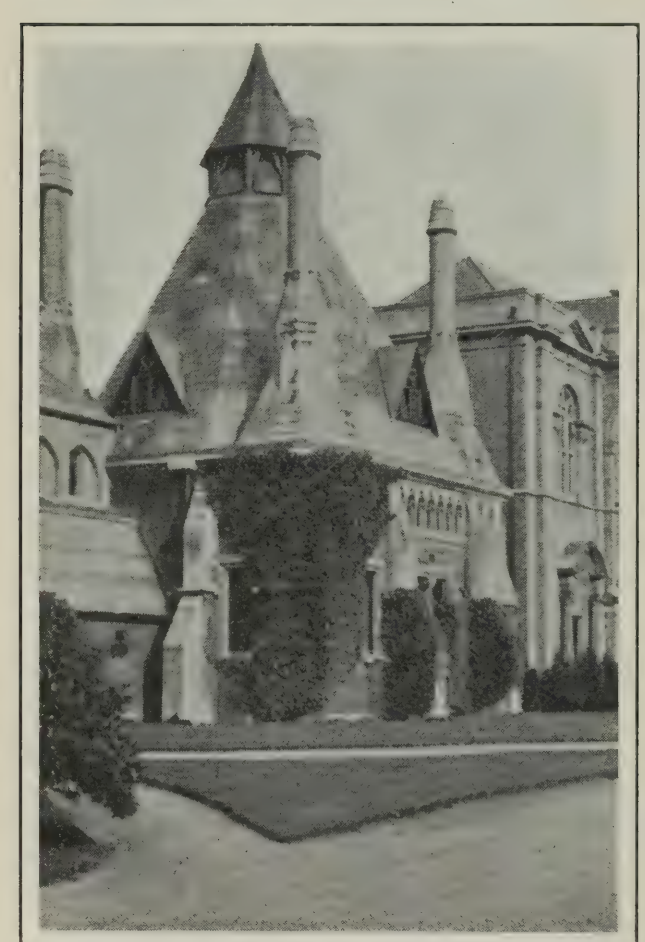
*President James, of the University of Illinois, said in his inaugural address: "I am a great admirer of Harvard University, easily the greatest of our universities; I am a great admirer of Harvard professors, and especially of that great man, the present president, *facile princeps* among the leaders in American education of the last twenty-five years, Charles W. Eliot, but I do not believe there has ever been a time, down to within a very recent date, when if the faculties of Harvard College could have had absolutely their own way, and had had money enough to persist in their own way, they would not have committed themselves squarely against every question of educational progress which the scope of the times has brought to them. And what is true of Harvard is still truer of the less progressive institutions of higher learning, of which we have many."

†See "How to Save Greek and Other Paradoxes of Oxford Reform." By T. C. Snow. Oxford: Blackwell. 2 shillings.

‡"It is still true that the average Oxford man leaves his Alma Mater profoundly ignorant of the scientific method and with a scarcely veiled contempt for natural knowledge."—*Nature,* October 22, 1908.

CHRIST CHURCH DINING HALL.
This hall, built in 1529, is the most beautiful in Oxford. An imitation of it is to be seen in the University of Chicago.

tuition, or the University must be empowered to coerce them. The defects of the present arrangement are, first, that the men are overtaught; secondly, that the teachers are overworked; thirdly, that the teaching lacks flexibility, variety and interest for the more enterprising men."



There is another side to the question, of course. One may hear it in some of the Colleges. It is feared that the unrestricted development of centralized University instruction will reduce the Colleges to mere boarding-houses and destroy what has been everywhere regarded as Oxford's chief merit, the individualized teaching and personal influence of the College tutors. From their standpoint the new University methods are by no means to be regarded as an improvement. The University professors, I was informed, were irremovable and irresponsible, lazy and unprogressive. A College tutor, when he got tired of teaching, tried for a professorship. If he got it he would have $4,500 for life and nothing to do except to give a few lectures a year, which nobody would be obliged to attend. When the question of "retiring allowances," or, as the English, in their franker tongue, call them, "pensions," was brought up for discussion, one of the professors is reported to have remarked: "What's this I hear about pensions for University professors? Why, a University professorship *is* a pension." It is charged that the professors take no personal interest in the students, who therefore have to hire coaches at their own expense, and that even in science the teaching is poor, so the Colleges which want good science are obliged to put in their own laboratories. Such is the tenor of the Opposition.

I looked up one of these college laboratories and took a snapshot of it, here reproduced. No American college above the eighth magnitude would give it what little campus room it would take up. Still, it is not safe to assume that anything in England is insignificant because it looks so. Even the University chemical building is nothing to boast of; small, crowded laboratories, with dirty and awkward desks, the light struggling dimly thru narrow Gothic windows; organic research, electrolysis and water analysis carried on in the same room with undergraduate work. But there are few American universities, however palatial their laboratories, that have as many pages of original investigation to

their credit as this little laboratory has contributed to the *Journal of the Chemical Society* and the *Chemical News*. I don't see how they do it, but they do.

Physics has now better accommodations than chemistry, for a handsome new building has just been erected on the other side of the Museum. This is really an offshoot from Cambridge, because Professor Townsend, like Professor Rutherford, of Manchester, was a student of Prof. J. J. Thomson, in the Cavendish Laboratory. It is practically only within the last ten years that electricity and magnetism have been taught or studied at Oxford. By 1902 Professor Townsend was able to report that he had a class of 12 and hoped for 16 in the future when he should get a laboratory. Now, thru the generosity of the Drapers' Company, he has a building designed expressly for instruction and research in electricity.

Work started two years ago in engineering, but it must be difficult to give satisfactory training on this subject with no building or machinery.

THE CHEMICAL LABORATORY OF THE UNIVERSITY.

The University might, like the University of Cincinnati, make use of shops for laboratories if it had not, a half century ago, prevented the Great Western Railroad from establishing itself in Oxford, and sent it to Swindon. The fight between town and gown over this question came near causing a serious riot.

A few years ago a Board of the Faculty of Arts made the public statement that: "It is no exaggeration to say that the scientific study of European history cannot at present be prosecuted at Oxford." Since then efforts have been made to strengthen this department, as well as those of English literature and modern languages.

Other branches in which Oxford has begun to take an interest in recent years are mining, forestry, geography, economics, education, anthropology and classical archeology. These are largely taken by non-collegiate students and special diplomas are given for them. The Hebdomadal Council suggests that a course might be introduced for those intending to follow a business career, and asks that instruction in accountancy and modern languages be provided in the University. There is a building devoted to agriculture, tho it does not appear to be a very busy place. Experimental psychology has only recently been started in Oxford, some twenty-five years later than in Germany and twenty years later than in the United States. One reason for this delay was the jealousy of different departments. Professor Case, president of Corpus, went so far as to say that it would be better never to have a psychological laboratory than to have it under the control of the science men instead of the philosophy professors. This was perhaps felt safer because of the old statute enjoining professors "to accommodate and attemper philosophy to theology." Only clergymen of the Church of England are eligible to the theological degrees of the University (B. D. and D. D.) or to appointment as professors or examiners in the honor school. Nevertheless, the theological prizes have been won by Nonconformists and in one case by a Jesuit. As the Chancellor says in recommending the removal of these restrictions:

'The spirit of religious toleration has achieved a peaceful conquest of the arena once scourged by bitter strife. A Congregationalist and a Unitarian College and an Evangelical and two Roman Catholic halls flourish under the shadow of the 'home of dead languages and undying prejudices'; the embers of theological strife have died down; the remaining paragraph will one day be added to a historical and famous chapter."

This, however, is only one of the minor reforms advocated by the Chancellor of the University, for altho Lord Curzon appears as a Conservative in the House of Lords, he is regarded as a Radical in Oxford. His memorandum on Oxford reform,* commonly known as "The Scarlet Letter," suggested enough innovations to keep the University busy for a generation or two discussing them. Among them are: The reorganization of the administration of the University; the adoption of a more lucid system of accounts and the better distribution of the funds; "the increase of facilities for the admission of poor men, both of the artisan and professional classes"; the development of advanced study and research; the abolition of compulsory Greek; the adoption of an entrance examination; a slight extension of the academical year, and the granting of degrees to women.

But the Chancellor has not the dictatorial powers of our American university president. Some of his proposals require the concurrence of the twenty independent colleges of Oxford, and changes in these require the consent of a majority or more of the non-resident alumni. In the older universities of the United States the alumni influence as a whole is strongly conservative, and doubtless if the university authorities in America had to submit all important questions to the referendum vote of the entire body of alumni, progress would be as difficult as at Oxford.

The Hebdomadal Council, which comes as near to being a ruling body as the University has, considered the proposals of the Chancellor, approved of most of them, and devised plans for carrying them out,† but this is only the first step. The questions have next to be passed upon by two other bodies, successively larger and therefore successively more conservative, on the principle, holding in politics as in physics, that inertia increases with the mass. The first of these, the Congregation, consists of all M. A.'s of the University who during the preceding year have pernoctated for 141 nights within a radius of 1½ miles from Carfax, the center of Oxford. This topographical delimitation has the disadvantage of giving the vote to tradesmen, physicians and retired civil servants who happen to live inside the magic circle and of excluding University professors who prefer to live in the pleasanter suburbs. The final authority is the larger body known as the Convocation, which includes also the non-resident holders of the M. A. degree. This degree can be purchased by any B. A. after three years for $60 paid to the University and an additional fee to his College, varying from $5 at Keble to $41 at Wadham. Only about a third of the Bachelors think the Master's degree worth the money, even with the voting privilege. These are chiefly clergymen, in whose business the scarlet hood is useful.

This voting privilege extends also to the Parliamentary representation. Oxford University, from the time of James I, has had the right to elect two members of Parliament. Other universities having this privilege are: Cambridge, 2; Dublin, 2; London, 1; Glasgow and Aberdeen, 1; Edinburgh and St. Andrew's, 1. All nine of the university members have been Conservatives since 1886. I cannot see why London University, which is larger than Oxford, should have only one member, and Manchester have none. An Oxford M. A. in good and regular standing has a vote wherever he may be if he can get it in in time. Even our American Rhodes scholars will be able to vote for members of Parliament as well as members of Congress. But what would the Cornell men say if the Columbia alumni had two representatives in Congress and they had none? The compact population of England and the custom of holding elections on different days gives a man a chance to get in several votes if his university degrees and the distribution of his real estate give them to him.*

*Principles and Methods of University Reform, Being a Letter Addressed to the University of Oxford. By Lord Curzon of Kedleston, Chancellor of the University. 1909. Oxford: Clarendon Press. 2s. 6d.

†Report of the Hebdomadal Council. 1910. Oxford: Clarendon Press. 1s. 6d.

*I am indebted to Mr. Edward Porritt for the fol-

In the opinion of the Chancellor this Parliamentary suffrage ought not to be extended to women, altho he favors granting them degrees. His distinction is rather a nice one:

"To give a woman a degree is to enable her to obtain the reward of her industry or her learning. As such it is an extension of private liberty. To give her a vote is to give her the right to govern others and is the imposition of a public duty."

All of the other universities with the exception of Cambridge offer their degrees and prizes to women equally with men, but do not allow the women to vote for Members of Parliament. There are this term 331 women students at Oxford, about a tenth the number of the men. The proportion of them who attain the honor of a first or second class on examination is three or four times as great as that of the men. After completing their studies at Oxford and passing their examinations the women must go to Ireland to get their degrees. Dublin University has recently offered to confer upon women the honors denied them at Oxford and 54 of them have taken the B. A. degree there, 56 the M. A., and one the Doctorate of Science. One could understand how the Oxford authorities might refuse to allow women to study at the university for some reason, such for example as that women are a nuisance, or are dangerous competitors in scholarship, or are incapable of higher education, or ought not to be permitted to become learned. But to allow them to work at Oxford and then refuse them the reward of their work looks like mere meanness. The question was voted on in 1896, when the Congregation, by 178 to 111, refused to give even a diploma to women who had done their work in residence and passed all the examinations for B. A.

There are four colleges for women at Oxford, Lady Margaret Hall, Somerville College, St. Hugh's Hall and St. Hilda's Hall, but like Ruskin College they do not form part of the University. The recent action of the University in extending its supervision to women lodging in town is regarded with favor by the women because it is the first official recognition of their existence in Oxford.

The reform movement of 1850 that resulted in the First Royal Commission was started by a series of letters in the *Times,* signed "Oxoniensis." The present movement was started according to precedent by another anonymous series in the *Times** in 1907, by Oxford tutors from eight of the Colleges. It is an admirable piece of criticism, thoro and frank, but loyal and constructive. Many of our American universities would be the better for such criticism from within, but they are not likely to get it.

The prospects for internal reform are, however, not good. Here as at Cambridge the necessary reorganization of the University will probably be brought about by another Royal Commission. The first reform measure proposed by the Chancellor and the Council, the abolition of compulsory Greek, was voted down by the Congregation, by 188 to 152, on November 22, 1910. Yet it is recognized on all sides that some such action is inevitable, for Oxford is losing connection with its base of supplies, the secondary schools. It seems likely to take as long to get Greek out of Oxford as it did to get it in. In the sixteenth century the Oxonians fought like Trojans to prevent Greek from gaining entrance into the University, deeming it dangerous even in the form of a pony. At present Greek is required of all students, but English history, English literature and natural science of none.

American experience proves that it is easier and cheaper to start a new university than to reform an old one. In fact, this is the best way to reform an old one. In 1876 Harvard and Yale were deficient in graduate work. If Mr. Johns Hopkins had bequeathed his $7,000,000 to these universities it would have had comparatively little effect upon them and still less upon others. But by founding a new university at Baltimore with research as its special object, Harvard and Yale and the other leading universities have been incited to develop graduate schools, some of which now surpass the

lowing examples of plural voting: At the election in January, 1910, W. E. Walker, of Henley, Oxfordshire, put in 17 votes; his brother, J. W. Walker, 13.—*Henley and South Oxford Standard,* January 20. 1910. At general election in 1895 Joseph Baxendale, of Pickford & Co. (express company) had 43 votes.—*Daily News,* October 3, 1900. At this 1895 election the late Rev. Washbourne West, Bursar of Lincoln College, Oxford, had 23 votes in 23 counties and got them all in.—*Daily News,* October 2, 1900.

*Reprinted by the *Times* as "Oxford and the Nation." 1 shilling.

Johns Hopkins. If Senator Stanford had given his $30,000,000 to the University of California it would not have done that institution half as much good as did the founding of Leland Stanford University thirty-five miles away.

It would be easy enough to get money for any kind of education except that which Oxford now gives. Lord Curzon discovered this when he tried to raise an endowment fund. He had to turn down one offer of $150,000 for a definite scientific object because of the barrier of compulsory Greek. An American university president, however, would hardly have thought it proper to introduce such an argument into his plea. It is rather shocking to see how prominently money figures in all this discussion of Oxford reform, to hear questions of educational policy referred to the finances for decision. Chancellor, Council committees and insurgents spend their time discussing not so much what they want to do, not so much what they ought to do, as what they think they can do within the limitations imposed upon them by the traditions, architecture, charters and endowments. Now these limitations are for the most part illusory. Certainly they ought not to be regarded for a moment as determining factors. If these educators would disregard them entirely and devote their thought to determining what kinds of education the young men and women of England need today, I venture to say, on the basis of American experience, that the funds would be forthcoming for carrying out their ideals.

Just what in fact do the reformers want of Oxford? Anything but the name? But is it fair to use a name of such definite connotation for types of education that are radically different? Do they want to carry over to the new education the prestige of the old that they oppose?

As for the financial question, it would be easier to get money from almost any other source than the college endowments. They are not big enough to be worth quarreling over anyway. The total income of the twenty Oxford Colleges is only about $1,650,000, less than the people of one of our States such as Wisconsin or Illinois raise by taxation for the support of their university.

THE ELECTRICAL LABORATORY.
Completed 1910.

The buildings of Oxford, fascinating as they are to the tourist, are not worth much for educational purposes. Nor are they attractive as lodgings. Many of them are scabrous with a kind of black leprosy and need treatment with a sand blast. If the University should extend to the Colleges the sanitary regulations it imposes upon outside lodgings some of them would be put out of commission. It ought to be possible to construct new buildings that would be quite as beautiful and much more convenient. If the new education cannot inspire as good architecture as the old it can hardly claim to be a satisfactory substitute.

Why then should the reformers bother about funds and estates and endowments and buildings, which, if they could get control of them, would not be suited to their purposes? What is the use of trying to reform any part of Oxford which does not want to be reformed? The constitution of the University is so loose and flexible as to permit development in any desired direction. The educational privileges of Oxford, its libraries, museums, lectures and examinations seem to be open with great liberality to all sorts of semi-detached institutions. If the group of insurgents who wrote the "Oxford and the Nation" manifesto want to effect as radical a transformation as the trend of their argument implies, let them secede

THE UNIVERSITY MUSEUM.
This was erected fifty years ago and forms the center of the scientific work of Oxford.

next week and hire a hall. If they have faith in their educational ideal and ability to carry it out, students and money and fame will come to them and their Alma Mater will benefit by their action. Cambridge is the result of such a secession from Oxford, and it is easier to start a new university or a new college in an old university now than it was in the thirteenth century.

Such gratuitous advice and criticism as this would be an impertinence applied to any other British university, but we Americans have an interest in Oxford now that Cecil Rhodes has opened its doors to us with a golden key. The American invasion was unwelcome to the Oxford Colleges, but they have got used to it now and, I believe, do not find it so bad as they anticipated. Complaints are still occasionally heard that the Rhodes scholars are clannish, disagreeable in manners or stingy with their money, but on the whole I am inclined to think they have succeeded surprisingly well in adapting themselves to their environment and in repressing their bumptious Americanism. It is hardly fair that they should be blamed, as they have been recently in the English press, for spending so much of their time in Germany. It was understood from the beginning to be one of the inducements. When the emissaries of the Rhodes Trustees first came to this country to make arrangements with our universities, some one ventured to raise the question whether Oxford provided the sort of instruction needed by the American students. The reply was that the Oxford term was short; the student could live there for half the year to get the atmosphere and then have time to go to a German university for work during vacation.

This is in fact the recognized division of time. When the Chancellor proposed to lengthen the term from twenty-four to twenty-six weeks a year, the committee of the Council reported adversely to the proposition on the ground that it would not given time enough for study in the long vacation.* The motto of Oxford seems to be "Life Is More Than Learning." Degrees are dependent upon the number of nights the student has slept at Oxford, not the number of days he has worked. The roll is called in the dining hall, instead of in the classroom.

The number of Rhodes scholars in Ox-

*Report of Hebdomadal Council, p. 98.

ford during the year 1909-10 was 174, of whom 79 were from the colonies of the Empire, 83 from the United States and 12 from Germany. The scholars in residence were distributed among the different courses of study in the University as follows:

Honor Schools for the B. A. Degree—Literæ Humaniores, 16; natural science, 20; jurisprudence, 37; history, 20; theology, 10; mathematics, 4; English literature, 8; modern languages, 3; engineering, 3; honor moderations—classical, 1.

Advanced or Specialized Courses—Law (B. C. L. degree), 14; science (B. Sc. degree), 10; letters (B. Litt. degree), 9; medicine, 7.

Diplomas—In economics, 12; in forestry, 5; in anthropology, 3; in ophthalmology, 1.

The Rhodes scholarship is not such a one-sided arrangement as it at first appears, for we are at present educating a great many British subjects. In 1909 the leading American universities had 251 students from Canada, 71 from Great Britain and Ireland, 43 from Australia, 21 from New Zealand and 61 from India.

THE SCHOOL OF RURAL ECONOMY AND FORESTRY.
Built 1908.

Students from India are coming to America in increasing numbers in recent years, mostly sent by the Swadeshi associations because they believe that they will find here better training in technology and a more democratic atmosphere than in English universities. The first supposition is probably true, but the second is, unfortunately, doubtful. Race prejudice is much stronger here than in England. A Thanksgiving dinner to be given to the Rhodes scholars had to be called off because some of the Americans refused to eat with one of their number, a negro from Pennsylvania. The English students were rude enough to remark that they had rather eat with him than with some of the white Americans. The affair created a very unfavorable impression, for the English pride themselves on treating the colored students with great fairness. That is, while they are in England. When they get back to India or South Africa it is of course another matter.

The Rhodes scholars have done well in athletics, but they have not distinguished themselves in scholarship so much as might have been expected considering that they are picked, two from each State, by competitive examination and are on the average more mature than the native students. The latest report of the Carnegie Foundation for the Advancement of Teaching gives the private reports of the Oxford tutors on the character and work of the American students. The opinions are diverse, sometimes opposite, but most of them agree that the American students are intelligent and willing to learn, but are lacking in ability to do thoro and steady work. This implies that their virtues are those of their English ancestry and that their faults are due to their American training. But one can hardly read these criticisms without feeling that the Oxford tutors have hit upon the weakest point of American education, the failure to train the student in habits of persistent and courageous study.

We are nowadays willing to take lessons from Oxford. Thirty years ago we tried to make over our universities on the German model. Now we are all for things English. Of course we must get our ideas from somewhere. Chicago, Princeton and Pennsylvania have gone to Oxford for their architecture. Princeton has adopted a modified form of its tutorial system. Columbia and Harvard have introduced its distinction between pass and honor men. Perhaps when our Oxfordized Americans get into our universities they may teach our students the two things they most need to know: how to work and how to play.

New York City.

The Real Value of a Merchant Marine

BY JACOB H. GALLINGER

[This article includes some of the arguments presented to the Senate by Senator Gallinger, of New Hampshire, in his various speeches favoring a mail-contract amendment as a means to encourage an American merchant marine.—EDITOR.]

FOR forty years we have paltered with and postponed the question of American trade. We have seen our shipping and our seamen vanish, and shipyard after shipyard that would have been a glory and a pride to any other nation topple into bankruptcy. We have seen other nations grasping the trade opportunities which should have been our own. Successful in all else, we have retired, baffled and disheartened, from the high seas. It must be acknowledged, and it may as well be frankly acknowledged here and now, that the steady decline of our ocean shipping since 1861 marks the one great and humiliating failure of the Republican party; because here alone it has not been true to Republican principles.

It has protected everything else which felt the pressure of foreign competition, but it has left unprotected that one industry which feels foreign competition most directly and keenly of all. In the light of the forty years of neglect it is little short of a miracle that we should have left a single ocean ship, a shipowner, an officer, or a seaman. If we wait a little longer this remnant of our shipping will have departed—save for a few short lines which are sustained by their mail contracts under the act of 1891. For twenty years we have had that statute on our books, granting certain compensation for the carriage of our mails. It has been adequate to establish lines on short routes, such as the Ward Line to Cuba and Mexico, but it has been insufficient to enable any steamship line to operate on the longer routes, especially to South America, Australia, and the Orient.

The last effort—that made during the present session of Congress—was to increase the compensation for mail-carrying, on these long routes, retaining all the restrictions so far as the construction of ships is concerned and the right of the Government to take them in an emergency, in the belief that it would result in the creation of new lines from the Atlantic and Pacific coasts and from the Gulf coast to South America and the Orient. It is no new theory or proposition. When the original ocean mail bill passed the Senate in 1891, it carried this increased compensation, but it was amended in the House of Representatives, and unfortunately it was amended in such a way that it has proved inadequate for the establishment of lines which are most to be desired—to the great countries south of the equator which now buy only from 9 to 14 per cent. of their entire imports from the United States; having poor communication with us and good communication with Europe.

Not one American steamship, for example, is now running on any of the long routes to South America. For all mail, passenger, and fast freight facilities on these routes the American people are dependent on the ships grudgingly provided by their European competitors, and we can only break up this arrogant monopoly thru the power of an independent American competition in new, high-class steamships. The proposed measure would insure them ships built for the auxiliary naval service, under rigid contract with the Government, by which they will be sadly needed in case of war; ships of from sixteen to twenty knots, where none of the foreign ships now running from this country to South America are more than fourteen knots; and most of the ships of the "European combine" are only ten or twelve knot craft, or ordinary freighters. These new steamships would have to be built on plans approved by the Navy Department, capable of carrying batteries, officered and manned largely by American citizens.

If in time of peace we should prepare for war, there is no greater need than auxiliary ships which can be called upon

by the Government to supplement an otherwise helpless navy; but to those who do not look for war or appreciate the need of a colossal navy, whether helpless or otherwise, there is still greater need of such ships as a plain commercial proposition.

These new lines to South America would run to what should be to the United States some of the most profitable markets in the world. The progressive South American republics are all of them large consumers of the products of the north temperate zone, but under present conditions they draw most of their imports from Europe. The chief European nations have had the wisdom to provide adequate means of mail, passenger and freight communication. Great Britain, France, Germany, Italy, Spain, even Portugal and Sweden, have national steamship lines to South America, all aided or encouraged in some way by their governments. It is easy for South American merchants to send their orders and receive their goods from Europe. It is very difficult, indeed impossible, for them to communicate in any quick and satisfactory way with the United States.

Argentina, with but 6,000,000 people, imports merchandise valued at $302,765,895, annually; Uruguay, with only 1,112,000 inhabitants, imports $38,643,035; Brazil imports $179,690,125 worth. Of this, last year, they bought but 14 per cent. from the United States. Other and nearer Latin-American countries—the West Indies and Mexico—with which we have good, swift, regular communication by American steamship lines, running under the law of 1891, bought, last year, substantially 50 per cent. of their imports from the United States. There cannot be the slightest question that an adequate American steamship service would soon lift the United States into a similar commanding position in the markets further south. From the other side of South America the story is the same. Chile and Peru, out of total imports aggregating about $125,000,000, bought only 9 per cent. from the United States, because not one American steamship runs or has run, for many years, in regular service between our ports and the ports of Chile and Peru. For all our communication with these great purchasers we are, today, absolutely dependent on foreign shipping.

Alone of all the nations of the earth ambitious for mercantile expansion, the United States neglects its ocean shipping. Our coast fleets and our lake fleets, protected by ancient Federal statutes, absolutely excluding foreign vessels from domestic traffic, are the most efficient, prosperous and progressive in the world, as they are also incomparably the greatest in their aggregate tonnage. These domestic fleets are superb proof of American genius for the industry of waterborne transportation; but the decline of our ocean tonnage is a melancholy story. And sad as is the long decay of our deep-sea shipping—once the proudest in the world—the gradual disappearance of our shipyards, the bankruptcy of our ship merchants, the loss of our skilled mechanics and seamen, this, after all, tho a calamity and a great one, is far less serious for the present and portentous for the future than the cramping and withering effect of our lack of American ships on the export trade of the United States.

What department store in any American city, engaged in a sharp contest for business, would dream of intrusting to a rival store the delivery of its goods to its customers? Is it not the prime instinct of every successful merchant, a fundamental principle of keen competitive business, to maintain an active and comprehensive delivery service of his own? Would any merchant conducting such a business sell or lay up his own wagons, even if his competitor offered to do the work cheaper than he could do it? It would be a poor judge of human nature who would consent to such a proposition. His fellow merchants in the bankruptcy proceedings which would certainly ensue would have grave question of his sanity. Yet that stupid merchant who would turn his delivery business over to a dangerous rival rather than be bothered with it himself has one conspicuous examplar in the person of the United States. There are two other commercial nations of inferior rank which have won an unenviable reputation for the neglect of their delivery service—of their merchant marine. One of them is China and the other is

Russia. The fact speaks for itself with sufficient eloquence.

In 1840, and for years before, the entire trans-Atlantic packet service was conducted in American ships by American merchants. British competition, often attempted, had always proved impossible. Then the first regular line of British trans-Atlantic steamships—now the celebrated Cunard Line—was established, with an annual subsidy of several hundred thousand dollars. It began to drive our packets off the ocean. The United States, under the initiative of President Polk and by vote of a Democratic Congress, met the attack by the offer of a generous mail subsidy. The new American steamships which resulted were larger and faster than the Cunard ships and soon possessed themselves of the lion's share of the trans-Atlantic commerce. It was maritime protectionism carried to the extreme, but on the ocean the British Government never wavered. Mr. Cobden and Mr. Gladstone and the other statesmen who were proclaiming, on land, the transcendent virtues of free trade, nevertheless continued to vote lavish subsidies for the sea, but for which their ships would straightway have been driven off the passage. But the unhappy feud between the North and South in Congress led to the canceling of the American mail contracts. The American companies were killed by this act, and for thirty years, from 1861, the British flag held undisputed mastery of the North Atlantic. Indeed, the British became so well satisfied with the experiment and so fully appreciated the commercial maxim that trade follows the flag, that a generous subsidy was granted for the creation of a British steamship line along the west coast of South America that touched at no British port whatever. It is still in existence as the Pacific Steam Navigation Company, and is probably the most potent factor in the supremacy which Great Britain holds today in Chile and the neighboring countries of South America.

It is one of the ironies of fate that the actual founding of this powerful British steam line was the work of an American, a New England merchant, consul at Guayaquil, who first sought in vain to interest his own Government in a project for an American steamship service on the west coast of South America. Only after being rebuffed at Washington and denied all help and encouragement, he applied to England. And so effective has been this British maritime protectionism that in the ports not only of Chile, but of Bolivia, Peru, Argentina and Brazil, the Stars and Stripes, flying over an American merchant steamer, are now never seen; while British commerce far surpasses ours in every one of these Latin-American republics.

Until a quarter of a century ago the German sea power was absolutely insignificant. In France, as in Germany, "free ships," tested alone without national aid and encouragement, had utterly failed. Dismayed at the result, France turned to subsidies and bounties. Bismarck argued with the Germans that they could never hope to obtain a fair share of the world's commerce so long as they depended on the ships of their foreign rivals for the means of delivering their own merchandise to neutral customers. He won from the Reichstag a law granting a small mail subvention for a German steamship service to China, Japan and Australia. Two years after the service started the exports of merchandise by these ships amounted to but 27,369 tons, but eight years later the amount had increased to 89,148 tons. A mail subvention of 4,400,000 marks a year had brought an increased export trade to the German Empire of more than 50,000,000 marks; and this was only the beginning of the great expansion of German commerce in the markets of the Orient.

This swift and great expansion of German trade, under the impulse of generous mail subventions to German steamships, offers a significant contrast to our own standstill commerce in those South American countries where all the ocean-going ships fly European flags and are controlled by European interests. Not until Germany began to build and own her ships did she begin to be considered a serious factor in the commerce of the world. Her wonderful maritime expansion made her mercantile expansion possible. The clear vision of the

great Bismarck first recognized that his country must have ships in order to have commerce; that to have ships meant increased prosperity not only for seaport towns, but for every manufacturing village or agricultural district producing anything that could be sold abroad.

After a similar illuminating experience, in 1881 the French Government offered an elaborate system of bounties for ship building and of subsidies for navigation, creating thereby the entire ocean-going merchant fleet of France. In 1890, France had five lines to Argentina and to Brazil. The United States has not one. France had three lines to New York, three to Senegal, two to the west coast of Africa, and a line to Cochin China, Chile, Madagascar, New Orleans, the West Indies, Mexico and the Isthmus of Panama.

It is manifest that this niggardly policy on the part of the United States not only discourages American ship owning and ship building, but—what is far more important—hampers the efforts of American manufacturers, farmers and merchants to gain their rightful share of the world's commerce. These great ocean mail lines of the Powers of Europe all run direct from their own ports to the ports of other countries. These Powers spend no subsidies on lines running from the United States to other nations. The European ships which carry on the American trade with South America, Africa and the Orient are, as a rule, poor, slow, inefficient, uneconomical craft—the cast off "tramps" of European services. They are owned and managed by foreign companies, whose first concern is the welfare of their own nation and the profit of their main lines of communication. European ship owners are frankly working to keep their own country's trade as great and the trade of the United States as small as possible. To leave to men like these the ocean transportation service of America, is, to quote Thomas Jefferson, a "strange speculation."

The need of a large, active and prosperous merchant fleet is primarily to increase our commerce, next to promote national defense in case of war, and last of all to encourage shipbuilding and navigation. To deny adequate consideration to the merchant marine is to cheat the Western and Southern farmer of his surest hope of an increased market for the products of his industry. It is to cheat the merchant and manufacturer of an indispensable ally in their fight for trade with the powerful European competitors. Of all the great commercial nations of the earth the United States alone leaves its merchants, manufacturers, and farmers at the edge of the ocean to get their goods over seas as best they may—by some accident of trade or grace of the foreign rivals. We lag in the world's markets. We fall behind even in the Philippines, our own possessions; we see Germany striding ahead of us in the Orient, and all Europe grasping South America by commercial bonds stronger than the Monroe doctrine. The fault is our own. In our own hands lies the remedy.

The great opposition to a policy of national encouragement to a merchant marine has come from the Middle West, and one of the most frequent and apparently plausible objections has been exprest in the question—"If foreigners will do this work for us more cheaply than we can do it for ourselves, why not let them?" This is nothing but the fundamental free trade argument in the most extreme form in which it is possible to state it. Many years ago this very same plausible argument was most familiar in another field. How many times men heard—"If England and France and other nations can make our cotton and woolen fabrics, our tools and our iron more cheaply than we can, why not let them do it—why not let Europe be the workshop and America the farm?" Europe enthusiastically favored this idea, just as foreign interests now unite against the encouragement of an American merchant marine. But if the argument is really sound then the entire protective system of the United States is rooted in delusion, and ought to be abandoned. To admit that this argument is sound is to admit the whole free trade contention.

This argument against Government encouragement for American shipping has been adroitly used and has taken

deep effect among a large class of citizens. To say—"If foreigners can do our ocean carrying more cheaply than we can, why not let them do it?" sounds very persuasive to the farmer of Massachusetts or Minnesota, who is not particularly interested, who has not looked farther than his local market, and who cannot see why he should contribute, thru the national treasury, to encourage American ships upon the high seas. But when this same argument is pointedly put in another form to the Massachusetts farmer—"If Canada can supply butter and eggs and hay and potatoes more cheaply than you can, why not tear down the tariff wall and let her do so?" or to the Minnesota farmer—"If Manitoba can raise wheat for the American market more cheaply than you can, why not repeal the protective duty and let her raise our wheat while you sell out and go to work for somebody else?" we have found that the farmer fully appreciates it and rises in indignation. The farmers expect and demand encouragement for their industry, thru the Department of Agriculture, thru irrigation, and in many other ways. If protection is wise and right for the one it is wise and right for the other. More so, thought Mr. Cobden and Mr. Gladstone, who, while preaching free trade in England, inaugurated the system of mail subsidy for the ocean to save Great Britain's foreign commerce.

A century of economic experience proves beyond dispute that the Government must help its own people to begin—that in not one industry exposed to international competition and controlled at first by foreigners has America been able to make any headway whatsoever without some national assistance and encouragement. But in many of these industries it is now indisputable that after a reasonable time our own people have managed to do the work as cheaply or more cheaply than the foreigners. In such instances the money previously sent abroad for the products of an industry is now retained in the United States. It is estimated that the annual cost to America of transportation over seas is about $200,000,000. Nine-tenths of this goes to the ships of foreign nations. Now, if even a fraction of this immense yearly expenditure could be transferred to our own merchant marine what an incalculable benefit it would prove, directly and indirectly, to every State in the Union.

When foreign steamship managers urge so plausibly that if they can carry our produce more cheaply than we can they should be allowed to do it, they know very well that so long as America has no ocean ships of her own her coast as well as her commerce are exposed to foreign aggression. Two of them who have exploited this plea most persistently took some of the best and fastest steamers out of the New York service and sold them to Spain as commerce destroyers during her war with the United States. With their cheap wages and subsidies they may be eager to convey our commerce in time of peace, but they will not fight our battles or defend our coasts in time of war.

The United States has reached the parting of the ways on this important question. Shall we move on or shall we rest content with our present halfway commercial growth and depend for such scant increase as we may get on the grace of the ship owners of other and rival nations? Shall we leave to our competitors in Europe and to ambitious and aggressive Japan the mastery of those neutral markets from which in a few years we shall be as surely and finally excluded as if a wall were built against our trade around the coasts of South America, Asia, Africa and Australia? I do not believe that is the temper of the American people. I know that it is not the temper of the people of New England, or of New York, or of Pennsylvania, or of Virginia, or the Carolinas, or of the great States fronting on the Gulf of Mexico, or of the commonwealths on the Pacific Ocean. And if the people only once understand the question it could not be the temper of the States of the Mississippi Valley and the Middle West, whose fields and factories produce a very large proportion of our entire exports and who must very soon find an increased market for the maintenance of their prosperity. To them more than to any one else in America is the real value of a merchant marine.

Homiletic Hints from the Opera Stage

BY THOMAS C. HALL, D.D.

Professor of Christian Ethics in Union Theological Seminary.

THE young speaker is not apt to go, indeed should not indiscriminately go, to the opera stage for instruction in elocution. We need speakers as well as actors. At the same time some lessons may be learned. One is of patience. One of the foremost singers spent three years of hard work on the one role of "Isolde." The same singer gave six years to the training of her voice before ever appearing before any public, and outside her season's work spent eight hours a day in preparation for the next season's singing. And in the mere technique of voice production we may gather many most useful hints from the work of famous singers.

It is noticeable that there is a great difference among the singers of the Metropolitan Opera House in the capacity for making themselves really heard. One German singer has so distinct a voice that when he sings every word can be understood as tho he were speaking each one, and his lips move as no other singer's lips move. *He pronounces his consonants.* The speaker should learn that secret. One singer has the most wonderful *pianissimo,* and as she sings every note can be heard all over the house altho it is the barest whisper. Watch her closely and one notices that she sings with her lungs filled as tho for a crescendo passage. We who speak "let our voices drop at the end of a sentence," which means we speak *pianissimo* with almost empty lungs—and are therefore not understood. One of the most famous tenors on the stage has won his success almost entirely by his "phrasing." And yet few speakers think anything about this fundamental art, or even know what it is. But we do not speak in words, we speak in phrases, and to chop a phrase is as bad as to chop a word. But the havoc wrought especially on Sundays is blood-curdling to think of. The tremendous impression one tenor makes is certainly due to the sense of tremendous reserve power. He never in his most excited passages seems at the end. How few of us have learned the lesson of evident reserve power in speaking. Effect is not a matter of loudness or of softness, but of contrasted loudness *and* softness.

Recently a famous singer spoke to the writer about "the color scheme" of another singer's voice. And it was not necessary to explain what was meant. The wide range of "color" in a great speaker's voice is one of the charms which a rather oft exposed rhetorician still possesses. Hard tones, clear tones, mystery tones, soft tones, gentle pleading tones, and sharp agonizing tones are all in his scale. One charming voice on the opera stage has no "color." It is a limpid stream of sweet music as lovely and as tiresome as the monotony of a brook upon a summer's day.

All singers speak of breathing as the foundation of all voice production—yet how few speakers seem to know that they breathe at all. No singer begins to sing without the consciousness of full lungs, and the great singers seem to know how to keep the chest always full and resonant.

The gestures of the opera stage have enormously improved in the last ten years, but the gestures of our public speaking have not. In fear of the old wind-mill declamation most speakers keep out all gestures. Recently a great opera singer took the house by storm with a closing phrase. Nine out of ten in the audience would have said it was the note, but it was not. In point of fact, the note was just a shade off. The phrase was accompanied by one of the most perfect gestures of resigned despair that the writer ever saw. The audience went wild over the phrase. One great singer was palpably tired at a recent performance. But she is a great actress, and she sang with half-voice most of the time, and carried the role with supreme grace of gesture, and only one who knew her full capacity could have marked her economy. The shades of meaning that can be conveyed by

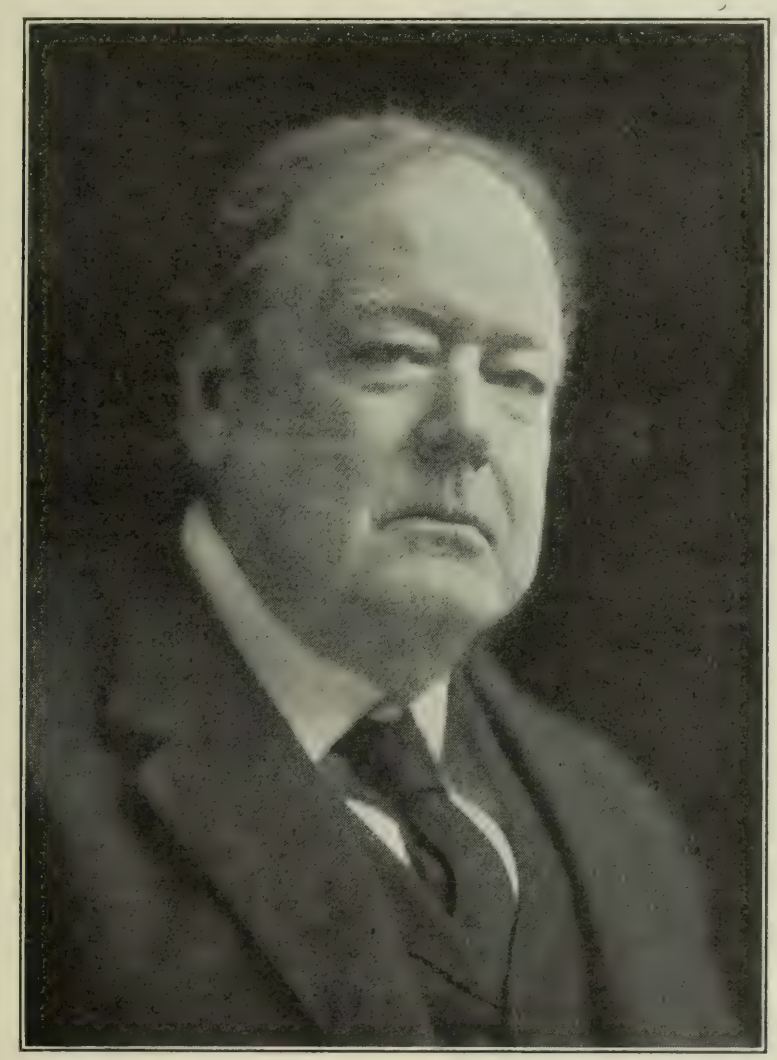
appropriate gesture are uncounted. One of the cleverest actors on the Metropolitan stage is very small, but he can make a side role fill the whole stage by his inimitable gesture. His arms speak, his legs sing, his whole body is tuned to the phrase, whether of merriment or anger or wonder or shame.

The perfect art of one of the greatest of the singers reveals itself in the perfect ease with which all is done. But this ease is all acquired. He is nervous to a degree that is painful before going on the stage. And the newspapers talk of a "natural" voice, which, however, took years and years of hard work and disappointment to bring to the "natural" ease now so in evidence. When Wagner first trained voices for his music all said he was going to kill all the voices. But the old Wagner singers have kept their voices as none others. It is not use but misuse of the voice that kills us, who are constantly speaking but have not realized that there is an art of speaking. For good speaking is the right singing of pure prose.

One of the fine voices on the Metropolitan stage always makes the impression of monotony. He has a wonderful voice, nor does he act badly, but is deadly tiresome, and just for the reason many otherwise good speakers are tiresome—he has only one manner. He sings his love in exactly the tones he tells of his tragedy; just as many a preacher invites sinners to flee from the wrath to come exactly as he announces the collection; or some political speakers foretell the downfall of the republic in the tones they use for excusing their lack of preparation.

Think of an opera singer who hemmed and hawed before beginning! Or fancy an actor repeating a word two or three times while he thought of the next! Precision, mastery of the attack, economy in breathing, tone-color, definite pronouncement of the consonant, *pianissimo* effects that can yet be heard in the farthest corner of the house, pure vowel sounds, proper phrasing, modulation of the word-color, and many other things can all be taught and learned. Some have some of them naturally, few speakers have all, some have none, and yet go on maddening the more thoughtful of their fellow creatures by trying to speak when they have not even learned to talk.

The old-fashioned rhetoric has gone out of date and men demand now a quiet, natural, conversational manner. But, alas! the training the old-fashioned rhetoric gave has gone out also, and many think they can talk "easily and naturally" before an audience when in fact to do so requires more art and more voice culture than the old oratund manner demanded. For one thing, the voice must be musical. It must at once arrest attention and evoke sympathetic response. How many speakers there are—lawyers, politicians and ministers—who must slowly make an audience forget the first bad impression produced by unmusical, unsympathetic sound. On the opera stage of today the *recitative* is almost the rule; and lately listening to a singer whose pronunciation of the French made it possible to follow every word, the writer was struck by the fact that he was listening with intense pleasure to the worst kind of extravagant nonsense. The music of the voice made even bad literary quality bearable.



Of course, there are poor singers as well as bad speakers, and the Metropolitan Opera House can show us even among its best many blemishes, but any one who has much public speaking to do would do well to get a few of the most widely accepted rules for voice production made plain to him (or her) by some one who has successfully gone thru the grind of the stage preparation, and also to carefully note both the failures and successes of famous artists as hints to the use of his own vocal chords for the more prosaic purposes of public address.

New York City.

The Latest Appointments to the Supreme Court

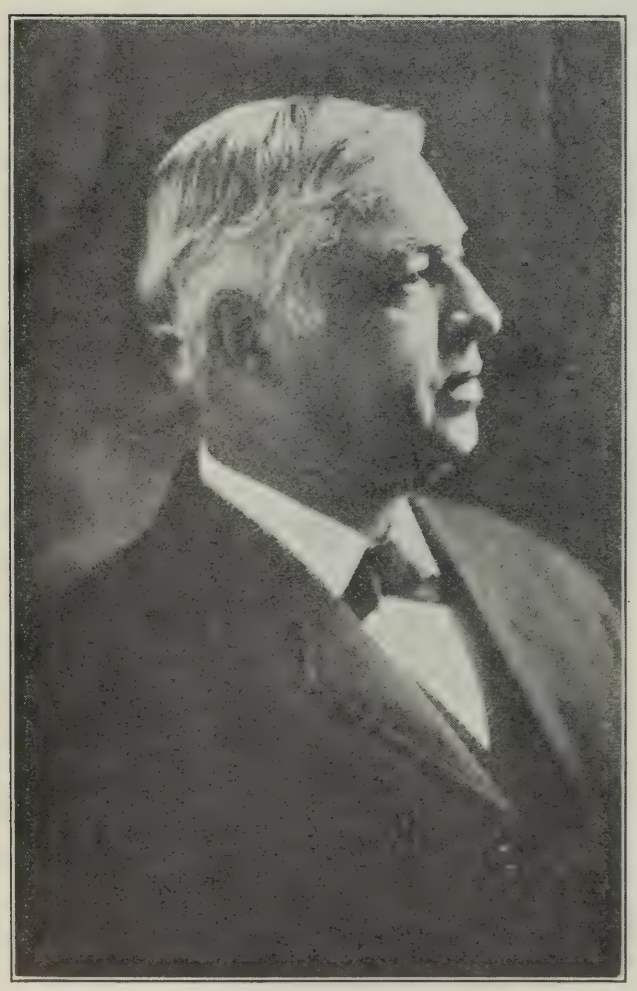
BY THREE UNITED STATES SENATORS

[The Supreme Court is now an able one. It is strong in learning and character and strong in the esteem and affection of the people. No words can overestimate the importance of this fact. Decisions dealing with the great problems of today, problems about which all earnest men are seriously thinking, will be criticised—and such ought always to be true—but back of fair and honest criticism there is a deep-seated reverence for this great tribunal, learned, and just, and fearless, and patriotic, consecrated to the most serious task ever given to men to perform. Three members of the United States Senate of high judicial standing have consented herewith to give their judgment of the three Justices lately appointed by President Taft.—EDITOR.]

CHIEF JUSTICE EDWARD DOUGLAS WHITE.

Chief Justice White

BY HERNANDO D. MONEY



UNITED STATES SENATOR FROM MISSISSIPPI.

THE appointment of Justice White to the Chief Justiceship was something of a surprise simply because it was a new departure. Before this it has been thought that when a man reached the Supreme Court bench of the United States he should fully understand that the limits "*Ne plus ultra*" was set before him. It is not a bad plan, as a rule, for of all positions in the world, that of Justice of the Supreme Court should be beyond the reach of politics, partisanship or preferment. It should be so perfectly protected from fear or favor that the only ambition of the occupant must be to do his single duty, like the

pilot with his eye fixed only on the Polar Star.

That Justice White received the appointment, breaking the long custom, is in itself a sufficient testimonial of his remarkable fitness for the place. No one for a moment has ever questioned that fitness, but it was all the more pleasing to his friends because it was the first time in history, because Chief Justice White was a Confederate soldier, because he is a Democrat, because he is a Roman Catholic—and because the moment the nomination was received by the Senate it was unanimously confirmed, without even waiting for the usual formality of referring it to the Committee on the Judiciary; showing not only the breaking down of old, obnoxious prejudices, but the hearty and universal approval of Chief Justice White.

The Chief Justice has always been recognized as a profound lawyer and an able and just judge. He came from a family of property, of thoro education and high refinement, with the advantages of official position and of travel. His father was Governor of the State of Louisiana, very much admired for his democratic simplicity and executive independence. During his brief term in the United States Senate, Chief Justice White showed the same broad grasp of public affairs. His course was marked by an intimate familiarity with public matters, and great independence and conservatism of opinion. He is sixty-five years old, robust and powerfully built, with health and vigor for many years of usefulness to come.

MR. JUSTICE LAMAR.

He is personally one of the most delightful men in Washington's society. Built on a generous plan—brain, heart and body—he is a man of universal good humor, relishing keenly a good story and telling one with great effect. I have never heard of his being angry with anybody. His charities are universal. His kindness of heart is so well known that it is a sort of proverb. In his domestic relations there could be nothing more admirable. He is an exceedingly affectionate husband and participates eagerly in the amusements and recreations of his children.

It is rare indeed that we find a public man who devotes himself so conscientiously and thoroly to the business that comes before him and at the same time has so much to spare for those who come within his domestic and social circle. But his universal good nature, his good humor, his kindness and sympathy, bring people very close to him, where they always find the *man* as truly as in his exalted position we find a Chief Justice signally capable and unquestionably worthy of holding the highest judicial position in the nation.

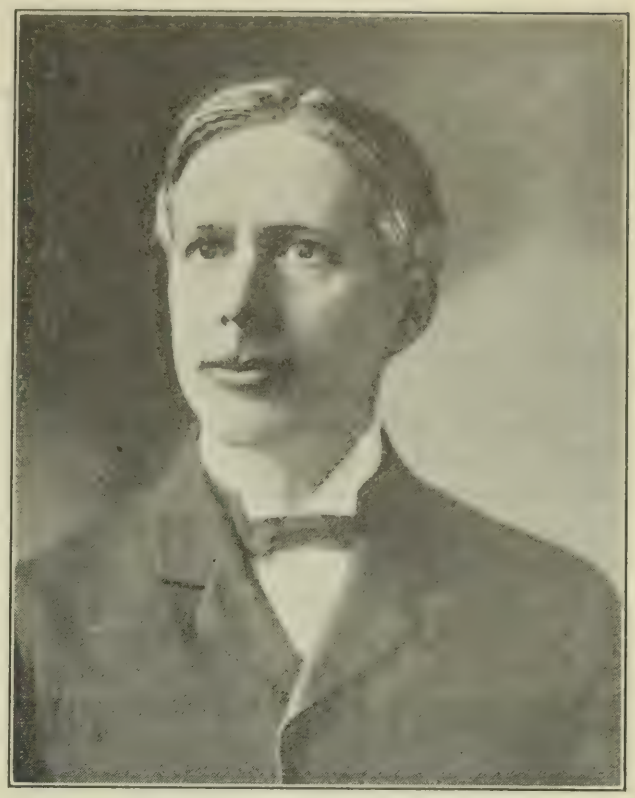
Justice Joseph Rucker Lamar

BY AUGUSTUS O. BACON

United States Senator from Georgia.

THE appointment of Judge Joseph R. Lamar as Associate Justice of the Supreme Court of the United States adds another man of sterling worth, signal ability and unquestioned integrity to the composition of this greatest tribunal of justice on the earth. It is an appointment which Georgia, his native State, cordially acclaims, confident

as are all her people of his eminent fitness for the exalted position.



The history of more than a century shows the name of Lamar very closely allied to all that was best in the social, political and legislative life of the State; nor is it any less a name distinguished in the annals of the entire South and of the nation; for this is not the first time that Georgia has watched with pride the national recognition of her Lamars.

Justice L. Q. C. Lamar, of the Supreme Bench of the United States, was a native of Georgia and a kinsman of the new Associate Justice, serving first in the House of Representatives and in the Senate, and later as a Cabinet officer. In the opening years of the last century his father, Judge L. Q. C. Lamar, first, was a prominent jurist of Georgia, and his uncle, Mirabeau B. Lamar, was the second President of the Republic of Texas.

In addition to being an eminently scholarly jurist, Judge Joseph Rucker Lamar is of broad literary culture and personally one of the most charming and captivating of men. He is an ideal Southern gentleman, delightfully unassuming and courteously cordial. His private life is a model of purity and sweetness, his public record one of unquestioned integrity, legal attainments, human sympathy, judicial probity, indomitable energy and the courage of his convictions.

He was born in Georgia fifty-three years ago, and was educated and graduated at the University of Georgia, pursuing his studies also at Bethany College, W. Va., and at the Washington and Lee University. He has served the State in the legislature as commissioner to revise the code and as Associate Justice of the Supreme Court of Georgia. While not thus engaged he has practised law in Augusta for nearly thirty years, holding undisputed station in the front rank of the distinguished Bar of that city.

As Associate Justice Mr. Lamar comes to the Supreme Bench of the United States with a record and repute untarnished, with a long list of public achievements behind him and every prospect of many years of useful life ahead. He comes with the love, esteem and admiration of all with whom he ever came in contact, and with health, ability and energy, making him in every way a most valuable addition, upon whose accession to the bench the country is to be congratulated.

MR. JUSTICE VAN DEVANTER.

Justice Willis Van Devanter

BY WILLIAM E. BORAH

UNITED STATES SENATOR FROM IDAHO.

ASSOCIATE JUSTICE WILLIS Van Devanter was born April 17, 1859. He therefore enters on his work upon the great court of which he is now a member in the full maturity of his intellectual powers and yet with long years of service before him. He has had an exceptional training in many respects, developing and disclosing his peculiar fitness for the life upon which he enters; for the tribunal of which he is now a member calls for something more than able lawyers. The men of the great court should be men of broad and varied experience, familiar with the affairs of government, familiar with the affairs of men, with the policies and economic problems which enter into and form a part of our individual life.

Justice Van Devanter has been city attorney of a Western capital, a member of the State Legislature and chairman of

the judiciary committee of that body, a member of the commission to revise the laws of his State, Assistant Attorney-General, a Federal circuit judge, a lecturer on law, sometimes active in politics, and Chief Justice of the Supreme Court of his State.

He is familiar, both in practice and thru observation, with the work of the Government in its different phases and departments. He possesses both the practical and theoretical knowledge indispensable to his new work. He is a student and a scholar, without being impracticable or pedantic. His experience in life will not incline him to exclude the human element from the law, nor, according to some modern political philosophers, exclude the law from the humane side of our civilization.

One would judge from his opinions that he regards the Constitution as made for man, and not man for the Constitution; accepting neither the theory that the Constitution does not admit of growth or progress nor the more recent faith that it has been outgrown and has become antiquated and out of date, and more or less embarrassing to the fuller realization of the ideals of our civilization.

In reading the opinions of Justice Van Devanter, written while a member of inferior tribunals, it appears that he works slowly, deliberately, cautiously, with strong and fine effect in the finish. We are not imprest with the idea that, however much he cites authorities and decisions, he is a case judge. His opinions bear evidence of a mind richly stored with the great underlying principles of our jurisprudence as well as a great familiarity with authorities. His opinions stamp him as a most able jurist.

Those who know Justice Van Devanter and are familiar with his strong traits of character and his wide legal learning believe that he will, in due time, become one of the great judges in the history of the court, and an ornament to the tribunal to which he has been appointed.

WASHINGTON, D. C.

The Song of the Airmaids

BY HARRY KEMP

[The more imaginative of the aviators have at times seen, in the air, these airmaids—beings analogous to the mermaids which the ancients held to inhabit the sea.—EDITOR.]

YE poor earth creatures, who, far below,
Sprawl and crawl 'neath the oceans of air,
Maimed and lamed in motion ye go,
But ours is the sky-wide Everywhere!

Lying on sunward spaces of cloud,
Meads rose-dappled with changing fire,
Riding on sky-bulks purple-prowed,
Which shift in shape like a maid's desire.

Splashed with glory of golden foam,
Bright from the colorous founts of God;
From steep to steep of heaven we roam,
Sapphire-raimented, rainbow-shod.

Our bronze-edged pinions lie on our limbs,
Feather on feather o'erlapped like mail,
But our wings have the strength of the seraphim's
When we breast the lightning rifted gale.

Or, if we choose, we may bask in peace
While the thunder rolls in his chambers below,
And ours are a thousand islets of fleece
When the summer perfumed zephyrs blow.

The mounting lark is our bird of dawn,
Who climbs the far-flung vista of morn.
We wake at his sudden rapture of song
When the little moon dips her fading horn.

And ever renewing turrets and towers
We dwell among, as the day goes by,
And cities masoned by unseen powers;
Marvelous Babylons of the sky.

And ever they shape us mansions anew
With roof and rafter of burning gold.
Such as from the earth man never drew.
Such as only the sunsets hold.

Ye poor earth creatures, who, far below,
Sprawl and crawl 'neath the tides of the air,
Maimed and lamed in motion ye go,
But ours is the sky-wide Everywhere!

LAWRENCE, KAN.

A Grave Menace to the Nation

BY HENRY CABOT LODGE

[This article partially follows some of the arguments presented by Senator Lodge, of Massachusetts, in his very recent address to the Senate.—EDITOR.]

OF the men who framed the Constitution of the United States it is the fashion now to speak as worthy, able, patriotic persons, whom we are proud to have embalmed in our history, but toward whom no enlightened man would now think of turning seriously for either guidance or instruction, so thoroly has everything been altered. It is commonly said that they dealt wisely and well with the problems of their day, but that, of course, they knew nothing of the problems which confront us, and that it would be worse than folly to be in any degree governed by the opinions of men who lived under such wholly different conditions.

It seems to me that this view is partial, and not wholly correct or complete. There are, of course, many problems with which we are compelled to deal of which the framers of the Constitution had, and in the nature of things could have had, no knowledge—the questions of railroads, the problem of great combinations of capital—but they dealt with certain other problems which are as old as the race, and they mastered certain conditions which exist today just as much as they existed then. On questions of this character, I think, their opinions are not to be lightly put aside, for, after all, however much we may gently patronize them as good old patriots long since laid in their honored graves, they were none the less very remarkable men, who would have been eminent in any period of history, and might even, if alive now, attain distinction.

We have met the new questions with fresh solutions and the new dangers by new laws. Sane, intelligent progress is, in a government like ours, the first law of its being if that government is to prosper and endure. I am far from thinking that there is not work to do, work which must be done. But all of the questions, thus far, have been met and dealt with under the Constitution of the United States. The Constitution has shown itself capable of adaptation to the new demands, as it has adapted itself to those of the past, and I have hoped and believed that the new policies and necessary reforms which the people desire could all be brought about, as they have hitherto been accomplished, under the Constitution.

I see no reason, as yet, to suppose that this belief is not well founded; but new prophets have arisen who are not content with the reforms which have been and which will be effected by law, and they demand that the Constitution itself shall be changed. It needs improvement, we are told, and the improvements must be made. In pursuance of this demand a joint resolution was recently reported to the Senate of the United States from the Committee on the Judiciary. I expected—and I think it was generally expected—that it would contain a single proposition, an amendment to the Constitution which would provide that henceforth Senators should be elected by the direct vote of the people. To my surprise, I found that this resolution contained two amendments to the Constitution instead of one, and the second, which I confess has filled me with amazement, causes the change which was supposed to be the object of the resolution to sink into comparative insignificance.

To take the election of Senators from the legislatures of the States and give it to a direct popular vote is simply a change in the mechanism of government. It does not touch the principles upon which the Government rests. But the proposition which accompanies this provision in the resolution is much more important and far reaching. This second proposition is to take from the United States, by striking out from the first paragraph of Section 4 of the Con-

stitution everything relating to the election of Senators, all power to regulate the time and manner of holding Senatorial elections; and not content with this, the resolution goes on to give affirmatively all control over the time, place and manner of choosing Senators to the legislatures of the States. This change is not an alteration in the mechanism of the system; it strikes at the very foundation of the national Government, at the fundamental principle of the Constitution.

The makers of the Constitution not only dealt with many conditions which are precisely the same today as they were then and which will be the same tomorrow—in other words, as old as recorded history—but they also dealt with certain questions in regard to which they had a peculiar and expert knowledge. This was emphatically so with the question which is now before us for reconsideration.

They were, of course, deeply familiar with the causes which led to the dire necessity of framing a new constitution if there was ever to be a union of the States. They had seen the Continental Congress, whose state papers had extorted the admiration of Europe and drawn forth the praises of Chatham; which had declared independence, raised armies and made alliances; they had seen this Congress decline into helplessness and discredit until it had become a heavier burden to Washington than the enemy in his front. They had seen the Confederation which the Continental Congress had established come into being, enjoy a sickly life, and finally sink into imbecility, while the States quarreled among themselves and domestic disorder began to rear its ugly head. And by all these disasters and misfortunes they became convinced that the fundamental cause of the failure of the Continental Congress and of the Confederation alike as schemes of government was that the central government had relations only with the States and was absolutely at their mercy.

The makers of the Constitution met this difficulty by an arrangement at once bold and simple, scientifically sound and eminently practical. They established a government which dealt not with the States, but directly with the people of the States. They brought the central government into immediate contact with the individual man. They created a real citizenship of the United States, and thenceforth every American had a dual citizenship—that of his own State and that of the United States. It is not too much to say that among all the great solutions which these men presented for the difficult problems they were called upon to meet this was perhaps the most remarkable. It certainly was the most vital. It breathed the breath of life into the Government of the Constitution, and that principle of the direct relation between the people of the United States and the central Government runs thru every provision of the instrument.

In pursuance of this policy they provided that the United States should have the power, if the need arose, to arrange for and to regulate the election of Senators and Representatives and to provide for the time of choosing the Presidential electors and for fixing the day on which the electors should give their votes. That the United States should have this power in reserve was fundamental. No government can hope to live if it cannot provide the means by which it lives, if it cannot protect its own existence.

It is this very power which the joint resolution proposes to destroy so far as it relates to the election of Senators. And, not content with the destruction, the resolution, by direct and affirmative words, gives the whole control of the election of Senators to the several States. This plan violates the fundamental principle upon which the framers of the Constitution proceeded in establishing the Government, the principle without which they did not believe, and their belief was founded on bitter experience, that any government could possibly survive.

It is now proposed to put the United States Government, so far as the election of Senators is concerned, at the mercy of the States. It is proposed to take from the United States any power to protect its own citizens in the exercise of their rights, no matter how great the need might be for such protection. If this amendment should become a law, twenty-three States, tho including only a

minority of the population, could at any moment arrest the movement of the Government and stop all operations.

Even to change the mechanism of choosing Presidents, or Senators, or Representatives is a serious matter requiring careful consideration, but this added proposition strikes at the very root of the national Government. To call such a scheme as this progressive is mockery; it is retrogression and reaction of an extreme kind. If adopted it would carry the Government back to the controversies and the struggles out of which the Constitution was born and which beset and endangered the infancy of the United States. With the provision gone from the Constitution, Senators, whether chosen by a legislature or by a direct vote of the people, may be elected at any time and in any manner which the whim of any State may suggest, and the very existence of the Government itself might be endangered.

The framers of the Constitution had no doubt that they were establishing a popular, representative system, a government of the people, by the people, for the people, and when Lincoln saved the Union which they had founded he thought so, too. We are now told that the popular government has been lost in the half century which has elapsed since Lincoln's death; that "the interests" have taken possession of Congress and courts and executives, and that the only escape is to be found in radically changing our organic law. That the great combinations of capital which have grown up in the last forty years—the moneyed interests of the country—rose to a political power at one time and exercised such power to a dangerous degree is, I think, beyond question. The people became alarmed and aroused and intelligent persons were not lacking to take full advantage of this state of the public mind. But the Government which under the Constitution had been able to face eleven powerful States in arms, to maintain the Union and abolish slavery, has proved abundantly able to check the influence of money, and to put an end to unwholesome political power in great combinations of capital, whether in transportation, industry or finance. Any danger of the moneyed interests getting even partial control of the Government or acquiring undue political influence has been brought to an end in the last ten years. Today the financial, business and corporate interests seem far more concerned in trying to find out whether they are to be allowed to live and breathe than in seeking to control anybody else in politics or out of politics.

It has been a great and important work. I have seen the moneyed interests in the plenitude of their political power and I have witnessed their political decline, which has been reasonably complete. There still remains much important legislation to be passed, many most important reforms in administration and in the making and enforcement of laws to be effected, but the danger of political domination of money has been met and put aside. It will never reappear unless it is invited to do so, and unless the opportunity is made by constitutional changes for its reinstatement in political authority.

The framers of the Constitution believed that they were making a popular government. It did not occur to them that they were destroying the popular quality of their work by ordaining that Presidents should be chosen by electoral colleges or Senators by legislatures, because those provisions were in their eyes only the mechanical part of the Government, were merely the machinery devised, as they thought, to bring the best results—for in their old-time way they were much concerned about results. But there were other points about which they felt much more deeply, because they believed that there were certain principles upon which political freedom and personal liberty absolutely depended. One of these principles was that known as a representative government. They believed in representative government and in checks and balances, so that there might be opportunity for reflection and space for second thought, and no rash haste in reaching important decisions upon which the welfare of millions might depend. It seemed to them that universal experience showed that while people made laws and not laws people, it was very easy to devise a constitution or adopt modes of government which no people could possibly make successful

and which might be prolific of misfortune, bringing the country into the old, vicious circle which ends in an army to keep order and a despot to command the army. All history taught them that a representative government, if it were to succeed, must give power and responsibility to the representative.

A nominally representative body stripped of responsibility and without proper power was, so far as history showed, only a convenient machine for the registration of some one else's edicts. The unbroken lesson of history, much reinforced since 1787, was then, as it is now, that when a representative government has been emasculated or destroyed, political freedom and personal liberty have not long survived. So the framers of the Constitution guarded carefully the representative principle because they wished to preserve the political freedom, just as they limited all governmental powers, and established a system of checks and balances, because they did not believe that any man or any group of men could safely be intrusted with unlimited power, or that it would be safe to make it possible to reach any great political change or make any momentous political decision without due deliberation. Self-preservation was then as it is now the first law of governments, as it is of nature, and it seems to me that no matter how we may decide the question of the methods by which Senators should be elected, the reservation of the power of the United States to control those elections, if need be, is essential to the Government's safe and continued existence. Any attempt of this sort to break down and weaken the authority of the United States ought to be resisted to the last. It is amazing that it should be suggested at a time like this, when the National Government requires all its strength. And yet it is proposed to take from it the one power which in time of stress will assure its existence. I cannot believe that such a proposition as this will get beyond Congress. I cannot believe that the country would tolerate it if it were once fully understood. Too much has been sacrificed to preserve the Union of the States and to maintain the National Government to permit any tampering with those clauses which guard its very life.

Free popular government is not simple, but extremely complicated, and the American people have demonstrated their position in civilization and shown their political capacity to be of the first order by carrying on with the most victorious success a dual government as intricate and balanced in its arrangements as it has been strong and smooth in its operation. Under that government order and freedom have gone hand in hand; law has never stiffened into immobility nor liberty degenerated into license. By our example we have helped the opprest, encouraged the cause of freedom and helped humanity. By our success we have quickened the march of democracy thruout the civilized world.

In a government of such achievements I have an abiding faith. I believe devoutly in a government of the people, for the people and by the people; and that is what the Government of the United States, under the Constitution, has always been and is today. With such a history we shall do well to pause before we enter upon untried paths or seek to change the principles upon which great men built our fabric of government. We shall do well to hesitate before we mar a Constitution crowned by the triumphs of a century and to which the sad word "failure" is still a stranger.

WASHINGTON, D. C.

What Do We Want of Washington?

BY E. P. POWELL

FEBRUARY has at the heart of it a wonderful joy; the commemoration of the two best loved of all Americans, Lincoln and Washington. It was one of those simple and beautiful things that Nature knows how to do, to link these two together in life and death. Will conditions ever breed a third; and are these two really immortal? But here is the curious thing about it, that love Lincoln all that we will, Washington still holds the supreme place in American thought, love and life.

And this is my puzzle today, why Washington's birthday is any longer of so much importance? Not only to us old people, but to all the schools, full of young folks still to be made into American citizens. When he lived there was barely a fringe of villages along the Atlantic Coast, with a few scattered outposts up the Ohio and in the Northwest. The United States did not extend beyond the Mississippi. What is it that keeps him so much alive in this crowded and vigorous age of ours? We have outgrown almost everything else, why not Washington?

An eminent writer said, as the Civil War broke out: "The American people are suffering from mean ideals. The whole South has no one bigger than Jefferson Davis, and the North has its partisans in office instead of its statesmen." Fortunately during the war General Lee discovered himself to the Confederacy, and after peace was declared he became the new ideal and the better one and saved the South from the utterness of its defeat. On the Union side Lincoln slowly emerged, to fill the vision of a fretted people.

We needed a very common peoplesman and we got him. I am agraid that even Jefferson would not have been cosmopolitan enough to have touched the very edge of the Western life and the Eastern selvage, so as to have held us together. I remember that he said a Union could hardly be hoped for that would extend beyond the Mississippi. We needed Washington just then, but it must be a rough cut of the copy; a hybrid of South and North, a diamond that had never passed thru the hands of the cutters and polishers—and so we got Lincoln. It is a beautiful thought that their birthdays lie so close together in the heart of this least and loneliest of the months.

This was where the likeness came in, that both could think and feel continentally. It was the great want of the times, to learn how to love and labor for the whole country from Canada to Mexico and from the Atlantic to the Pacific. Otherwise what a contrast! Washington was elegant; Lincoln was just hewed out of the quarry of manhood. The chiefest thing that Lincoln ever spoke was not the Gettysburg speech, but his definition of the United States: "I believe this Government cannot endure permanently half slave and half free." It needed that pronunciamento; to abolish slavery or make it supreme. Washington had exactly the same sweep of vision. There have been thousands of statesmen meanwhile, but very few United Statesmen.

We owe it largely to Washington that a Federal Republic was undertaken instead of a simple republic. It is true that he feared the weakness of the bond; but he readily caught the idea of federated and independent States, and he pledged himself to a faithful effort to make it a workable proposition. No other Government ever existed that could hold in warm allegiance and co-operative faith a whole continent of independent States. It was absolutely a new discovery along the line of civic efforts. It was necessary to breed a continental spirit in the young nation; could it be done?

But you see where Washington led us was not to a finality. Reaching continentalism we could not stop there. We unconsciously became internationalists, and from the day that the Federal Constitution went into operation the code of international law has been growing into shape with such rapidity that we are already in sight of a world's tribunal of

peace. Washington did not write that superb speech of McKinley's, in which he declared that commercial warfare must be classed with other wars, to be abolished; but the "open door" was a logical consequence of the Federal Constitution. If we have a Federation of States from the Atlantic to the Pacific, why not a Federation of Nations clear around the globe? That is the proposition today—the Federation of the World, with the spirit of Washington leading on. Fifty States covering a continent, in peaceful co-operation, prophesies the co-operation of all nations under a constitution of mankind.

The real meaning of the Civil War was to strengthen this idea, and, in removing slavery, was removed the only hindrance recognized by Washington and Jefferson. That we were fighting for the Union meant the continued right and power not to secede but to federalize. We were demonstrating the endur ance of popular government over that of autocracy. At the same moment we began that organization, more centralized than before, which Washington desired, and at the same time while preparing ourselves to co-operate with other peoples in the organization of the world on a peace basis, we began to get our own resources and powers better in hand. I do not mean that we are moving with a purport to weaken the States, but, with State integrity unimpeached, to strengthen the nation. That these are not conflicting principles we are beginning to learn.

I am not sure that Washington foresaw the evolutionary force that lay in what he did, yet there is much in his writings to suggest this. After Federalism came the affirmation that official power should be brief, with as little governing as possible; and after this was the apothem that the United States should not meddle with European politics. This last principle very speedily led to its correlation, let Europe keep her hands off the American Continent. It most certainly involved the Monroe Doctrine. On these three lines of evolution we are still moving; and so it is that Washington is vitally at the head of our national life, as he also is of international life.

His character is honored and his name beloved in every corner of the globe. In the new Chinese Senate I note that his name is quoted, with the same generous accent that Castelar used to use it in Spain and Cavour in Italy. Down here among the blacks I find Washingtons and Jeffersons everywhere. I believe that Booker Washington gets a good deal of standing by his name. At least I am glad he is not Booker Smith. Thousands more of black children as well as white will be named Washington till the end of time; in cabin as well as mansion the name will win respect and love. Nor are these very common people ignorant of the character and true greatness of their namesake.

Washington was peculiarly qualified to reach from the highest to the lowest; an aristocratic democrat; a democratic aristocrat. We do not any more think of him as President than his soldiers thought of him as general. As he was their wonderful leader in the field and in camp, so is he our leader in works of peace. It will be a long reach to the time when we shall disobey his examples. Two terms for a President is as good as in the Constitution. His advice to us that we should mind our own business as a people, and abstain from meddling in European affairs is so nearly constitutional that Commodore Sims must not even bubble over with fraternalism for dear old England. Washington never lost faith in Anglo-Saxon heredity.

By Washington's advice our mission is still to be an asylum for the opprest and the poor; and in the making over of this immense invasion of foreign sentiment Washington is still the most potent factor. They tell us that of a thousand immigrants rarely can you find one who does not know Washington, and he knows, unfortunately or fortunately, little else of America. A handful of cultured Englishmen tell us that our foremost and chiefest American product was Hamilton; but those who are most conscious of our political origins and political evolution feel the interpenetration of Thomas Jefferson, while Washington is ever present, exactly as he is termed, the Father of Our Country. I doubt if any one has yet quite thought out this peculiar family feature of American life; certainly no one has exprest it.

It is in no one direction that Washington was or is chiefest. It is his well rounded, absolutely balanced wholesomeness that makes him universal. If I had to deal with an anarchist I would send him to Jefferson, with a sure consciousness that the deep and unfettered logic of this genius would master and convince him; but if I had to deal with a monarchist or an absolutist I would send him to Washington as the perfectly balanced American character. I would show him what free government can *do*, not what it can teach.

Washington understood as well as Jefferson that agriculture was and must forever remain the fundamental spirit and occupation of the American people. He was by instinct and by practice a farmer, and he understood the industrial side of national life probably better than any other man of his generation. Right along side the political problem of an asylum for the needy, Washington saw the problem of production that would make our acres capable of feeding the increasing millions. This continent is still full of crops of corn, cotton, wheat and potatoes, and it remains for the farmer to enable the soil to bring them forth successively. From the list of tradesmen and manufacturers you will naturally secure your eminent financiers, but rarely your eminent statesmen; these are almost invariably either the product of the industry, which beginning with production ends with political economy, or are in some way associated with it.

Washington's incessant advice was that the people should live modestly and moderately, and that the young nation should pay its debts as rapidly as they were incurred. It was the genius of Hamilton, however, building upon Walpole, that devised the apothem that"debt is wealth." He would take up the State debts, assume them as national, bond them and sell the bonds. Gallatin, who followed Hamilton, sharply disagreed with this financial principle, and to many of us seems to have been more closely affiliated with Washington.

Whoever devised the prophetic sneer that "the Government of the United States is only a paragraph in history" did not altogether make a mistake. The peculiarity of the government established by the Constitutional Convention of 1778 was its inherent progressiveness. It has been impossible to crystalize the Republic. Parties do not have any vitality except as they are expressions of a people advancing to higher conditions. When a party becomes a machine it aims to be a dictator, but our political field is rich with the decay of mushroom bosses.

So admirably were Washington's private views merged in his all-embracing purpose of creating a federated Republic, that we have never yet been able to identify his religious creed. We know that he prayed at Valley Forge, and we are not ignorant of the fact that he swore at treason. He worshiped God and he served his country, but he was neither Unitarian nor Trinitarian, Presbyterian nor Episcopalian. Adams and Jefferson discussed theology with a relish, but nearly all that we can say of Washington is that he went to church, and served God by rigidly performing the duties that came to hand.

We owe it largely to Washington and Jefferson combined that the drift of education has been steadily toward secularization and industrialization. Washington believed in a course very similar to that which Jefferson drew up for the "Catholepistemiad" of Michigan. It involved teaching by women, the study of the body and mind in their correlation, and a dominance of science over the classics. Together these statesmen planned a national university, and it was Washington who left in his will provision for endowing such an institution. A substantial study of the whole public school system of the United States will, however, show us that from the outset it was intended to be collateral with our industries; but Washington laid special stress on the fact that a national university would bring together the brighter young men of all our States and sections and make them familiar with each other's development. In such a blending of studies he foresaw a civic bond.

What we still want of Washington, and want at every stage of national evolution, is his example of civic courage; his steady resolution, under new dangers and novel difficulties, to stand for the simple right. The magnificence of this man is in this simplicity of his

righteousness. He was unpriceable as he was unswervable. In our present struggle for popular rights against depraved political organization, it is natural that we should hear the name of Washington as still our leader. No one displaces him, no one is great enough to fill his place.

Weems's cherry tree story is doubtless a faded myth, but it tells just how Washington touched the generation in which the myth was woven. He simply could not be false. He stood as the illustration of manly and divine truth. As a boy even he despised the lie. Well, no one grows old in this world without seeing that our national life is exactly like our individual lives. It cannot safely permit the least infusion of falsehood. "Out in the open" is the principle that must govern our political and social and financial development.

The wholesomeness of Washington physically fits well also to our needs. He was a beautiful man and he was strong. He had in him such stuff as would make a hero in an age purely physical, but he was an athlete just up to the point that we might wish every young American to be athletic; he used his strength for noble ends. He desired physical prowess for its value. His contests were not the end, but the incident.

Washington is a product of that universal life which is not limited to centuries or adjusted to defined periods. He was made for all ages and for all climes; as Shakespeare in literature, so was Washington in politics—the foremost of that small band of great leaders in which we find barely half a dozen in all the history of mankind. There is very little probability that we shall be able to create another and a fuller ideal than Washington—patriotic, honest, temperate, prudent and capable of apprehending and absorbing the foremost thought of the age. What we want is to bring the whole people to a clearer apprehension of what he was and what he taught.

Study the life of Washington; I mean that life of Washington which reaches down to and includes the present day, for he is still alive, and you will be convinced that it is evolution, not revolution, that is touching for us all the milestones of progress. I am writing this in the heart of the beautiful South. Had the Confederacy succeeded in a cleavage, it would before this have resought and refound its old place in Washington's federation of independent governments. It is evolution which stands, while revolution only makes a dent in history, to be speedily grown over with new life. This is why the birthday of Washington is as notable at Pike's Peak and Seattle as at Boston and Charleston; because he it was who set in motion this marvelous social mechanism, by which we are now growing 3,000,000,000 bushels of corn and 1,000,000,000 bushels of wheat as *one people;* and there is not a tariff between all of the half hundred independent States that constitute our commonweal. That the glory and the beauty, the character and the influence of Washington may live forever in American history is the prayer of every honest citizen.

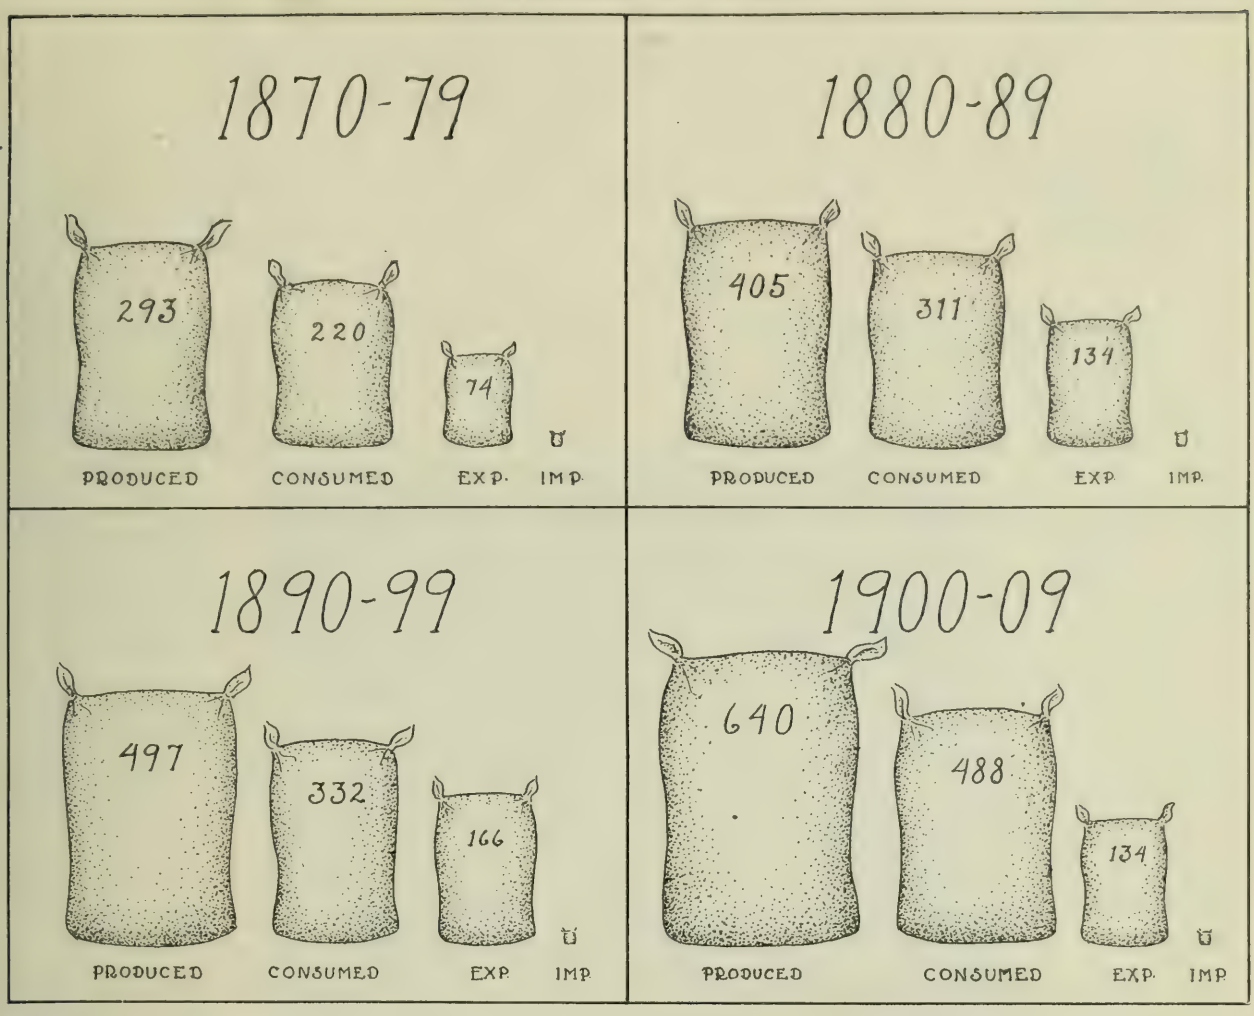
SORRENTO, FLA.

Dumb Duty

BY ARTHUR D. F. RANDOLPH

THE shepherd of the sheep-fold.
Counting at close of day,
Found that two sheep
Within his keep
Were lost and strayed away.

The shepherd of the sheep-fold
And said "Two sheep do roam.
The night is bleak.
Go by and seek.
And bring my lost sheep home."



Into the night the collie
At his master's bidding fled;
Brought back the sheep
To the shepherd's keep,
Then at his feet fell dead.

The shepherd o fthe sheep-fold
The wandering sheep did tend;
But a life was paid
For sheep that strayed—
That of a faithful friend.

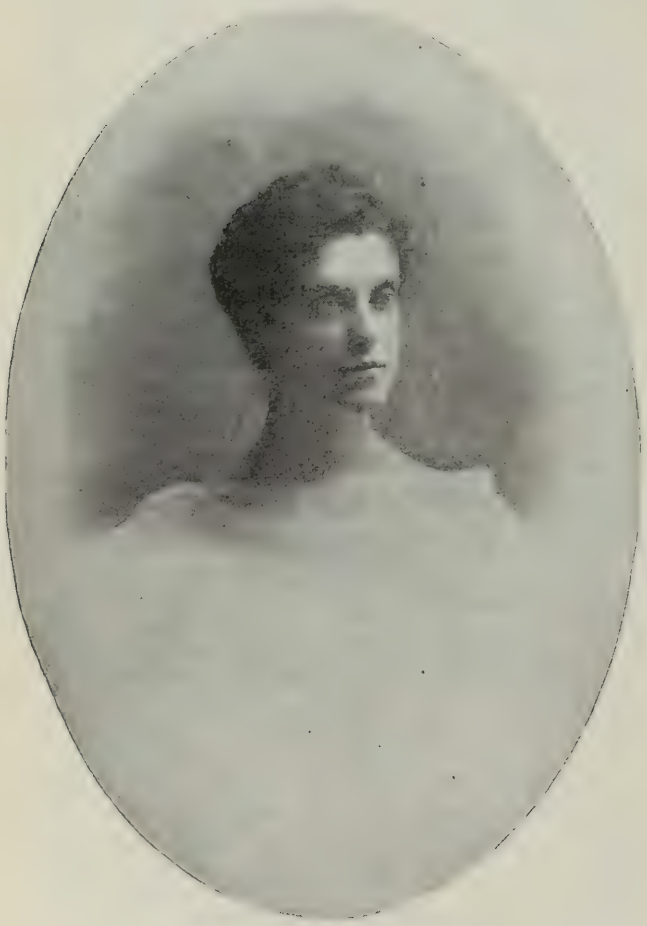
NEW YORK CITY.

Our Wheat Supply

BY WILLIAM B. BAILEY

THE United States has for so long borne the reputation of being one of the granaries of the world that it is interesting to note the change in the proportion of our wheat which is exported either in its original form or as wheat flour. In the chart, the figures relate to the number of millions of bushels of wheat per annum during the four periods covered. In computing the quantities, wheat flour was reduced to wheat at the rate of four and one-half bushels to the barrel. No statistics upon this subject are available before 1867, and it is therefore impossible to trace the effect of the Civil War. Beginning with 1870 the production has increased constantly with each succeeding decade. The consumption did not keep pace with the production down to the decade beginning with 1900. Therefore, from 1870 until the beginning of the twentieth century we were able to export a continually increasing proportion of our production. In 1880, 1894, 1898 and 1901, we exported more than 40 per cent. of our total production, while in the five years from 1905 to 1909, inclusive, we exported less than 20 per cent., and in 1905 less than 8 per cent. In 1900-09 the production of wheat was 50 per cent. greater than in 1880-89, but the exports had shown no increase. The imports of wheat to this country are almost negligible. In only one year since 1875 the amount imported to this country has equaled ½ of 1 per cent. of our production.

Improvements in agriculture and the utilization of waste land should increase the wheat production of this country in the future, but the day does not seem to be very far distant when we shall cease to be an exporter of this food supply, and Europe will have to get an increasing proportion of her food stuffs from Argentina, Russia and other countries in which manufacture is less developed. The Canadian Northwest is now becoming a great wheat-raising country, and many of our Western farmers have sold their prairie farms and bought cheaper land in Canada.



NEW HAVEN, CONN.

LITERATURE

"Good" American Poets

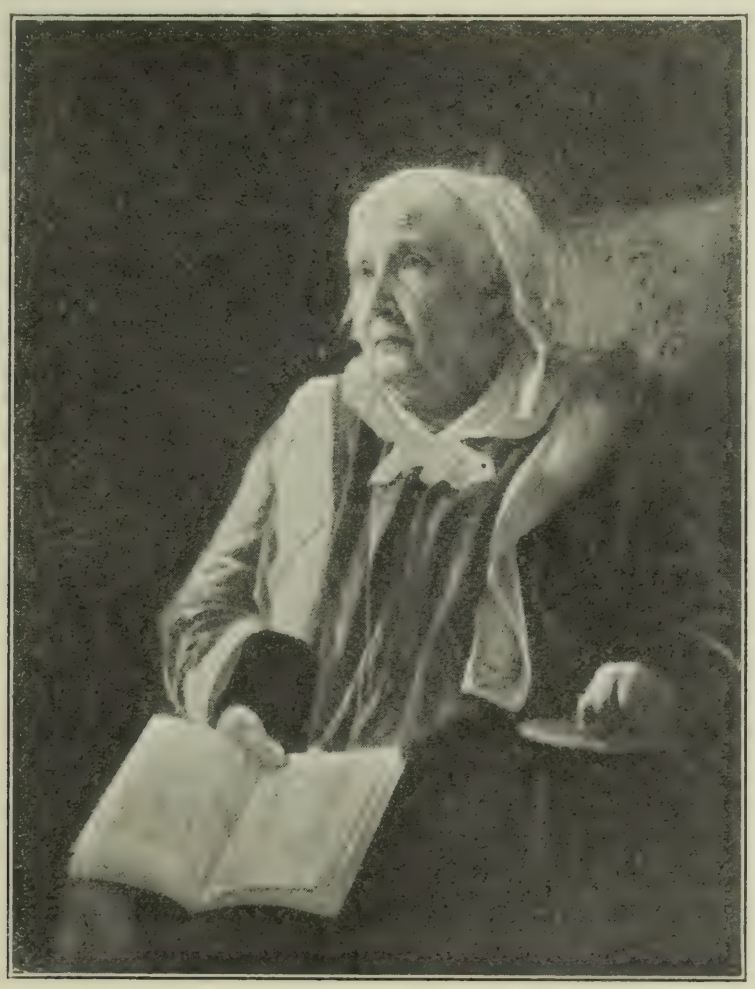
More than one volume of recent verse of note is, alas! the work of a poet recently departed, or commemorative of such a poet. Mrs. Howe's volume, *At Sunset*,[1] is one of these; and contains, besides occasional verse, including tributes to the elder poets of New England, and representative of more than one period, her very latest work. The last of her portraits (painted by her son-in-law, John Elliott) we reproduce from the frontispiece of this posthumous volume. Included here are "The Message of Peace," the beautiful homage to Robert E. Lee, the lines to John G. Whittier that no other praise of the Quaker poet can obscure, and many other poems that we should give ourselves the pleasure of quoting in part or in full, if only the occasion made that possible. The catholicity of Mrs. Howe's mind and sympathy is revealed here, even in the names of the men and events which she celebrated with such spirit and feeling.

[1]At Sunset. *By Julia Ward Howe.* Boston: Houghton-Mifflin Co. $1.25.

MISS SOPHIE JEWETT.

The volume of *Poems* by Sophie Jewett, like that of Mrs. Howe's, marks the end of the chapter: but with this difference: Hard as it is to view with equanimity the passing of loved ones, especially when they are links with other dear ones gone before, it is much easier to do so than to accept the loss of a poet in the full flush of spiritual youth and in the prime of physical life. Sophie Jewett, in the words of Miss Bates, her colleague at Wellesley College and her devoted friend, "remained always singularly shy about her poetry, and very self-critical." The verse-reading public knew her, indeed, only as "Ellen Burroughs"—the pen name adopted being her mother's maiden name. It was only "The Pilgrim," and the translation of "The Pearl" that she signed Sophie Jewett. The gift was not one of power, but of sweetness; and the world is not cloyed with sweetness yet! We welcome this collected edition of Ellen Burroughs's verse—verse rich in the expression of friendship; the love of nature; above all, the devotion to the Italian scene. Some of the poems are exquisite in *facture* and in sentiment. The volume closes with an unfinished translation of d'Annunzio's pastoral tragedy, "The Daughter of Jorio."[2]

It is indeed surprising that we have waited so long for a volume of the col-



[2]Poems of Sophie Jewett. *Edited by Louise R. Jewett.* New York: Thos. Y. Crowell & Co. $1.25.

lected verse of Eugene Field.[3] And, tho most of us have treasured earlier volumes, it is good to have his poems brought together in a form worthy of the gentle spirit who conceived. Humorist—sentimentalist—child-lover: he is one of the definitely "minor" poets dear to the people's heart. A younger poet, dear to his friends, at least, and to a growing public, is today commemorated by one of those friends—himself a brother poet. Prof. Richard Burton's tribute to Arthur Upson is spontaneous, albeit a sustained effort.[4] It is a graceful and feeling threnody—tho

"There is companionship too close for speech:
Wordless communion is the best, meseems;
Such is betwixt us, and our spirits reach
To touch and ming'e, waking or in dreams:
The union deepens, even as skies at eve
Grow mellow when the garish day-things leave.
The green of marshes hath another hue
From that of inland meadows, and the scent,
Salt of the sea and pungent, interblent
With memories of sails upon the blue,
Comes from another world from that of hay
After June mowing; more unlike than they
Life seems, companion mine, with thee away."

Alas! for all too many of our songsters the lines of Mr. MacLafferty's slim volume of verse are all too literal truth:

"For me the skylark never sang
Save soaring in the pages
Of Shelley, Wordsworth, Tennyson,
To sing for all the ages."[5]

MRS. JULIA WARD HOWE.

For Mr. MacLafferty the meadow-lark at least has sung; too many have not heard that song. In spite of Charles Major's praise of him as one who "has spent his life in listening to the chorus of the birds," one is tempted to place Mr. Rice here, with his *Sun-Ways*.[6]

[3] THE POEMS OF EUGENE FIELD. Complete Edition. New York: Chas. Scribner's Sons. $2.

[4] A MIDSUMMER MEMORY: AN ELEGY ON THE DEATH OF ARTHUR UPSON. *By Richard Burton.* Minneapolis: Edmund D. Brooks.

[5] MY SOUL'S CATHEDRAL AND OTHER POEMS. *By James Henry MacLafferty.* San Francisco: Paul Elder & Co.

[6] SUN-WAYS OF SONG. *By Alonzo L. Rice.* With an Introduction by Charles Major and an Epilogue by Frank L. Stanton. Boston: Sherman, French & Co. $1.

Echoes of echoes! Still, let us suck comfort whence we may. The echo is at its prettiest when Clinton Scollard strums.[7] His *Chords* are in the Oriental mode, and yet not too Oriental, either. Some of his effects

"In the Grand Bazar of the Damascenes,
With its violet lights and purple sheens."

or where,

"Above the walls of Muwaggar
There is no blot on all the blue. . . ."

are of more beauty and mellifluence than any of his work that we now recall. Nor is Clinton Scollard the only surviving poet of the active generation who gives us pleasure. William G. Goold's talent is a graceful one, as he demonstrates in *The Dream Road*.[8] There is intellectual distinction as well as distinction in poetic treatment to *The Moonlight Sonata*[9]—a volume by M. A. B. Evans, to which the first and longest poem lends its title. There is excellent verse to be found in Alida Chanler Emmet's *Psyche Sleeps*.[10] Truth to tell, Psyche sleeps not alone. But Edwin Arlington Robinson, tho he has Momus for interlocutor, pipes not a lullaby:

"'What's the need of singing now?'—
Smooth your brow, Momus, and be reconciled,
For King Kronos is a child—
Child and father,
Or god rather,
And all gods are wild.

"'Who reads Byron any more?'—
Shut the door,
Momus, for I feel a draught;
Shut it quick, for some one laughed.—
'What's become of
Browning? Some of
Wordsworth lumbers like a raft.

"'What are poets to find here?'
Have no fear:
When the stars are shining blue
There will yet be left a few
Themes availing—
And these failing,
Momus, there 'll be you." [11]

Yes, as Mr. Richard Le Gallienne tells us, "there are, perhaps, more good poets . . . in the world at this moment than there have ever been before in its history," and America has a proud percentage of them, and "there are more poets in the world today than there are readers, or at all events, buyers, of poetry." But must we rest satisfied with this prose statement on the part of one of these "good" poets?

[7] CHORDS OF THE ZITHER. *By Clinton Scollard.* Clinton, N. Y.: George William Browning. $1.25.
[8] THE DREAM ROAD. *By William G. Goold.* Boston: Sherman, French & Co. $1.
[9] THE MOONLIGHT SONATA AND OTHER VERSES. *By M. A. B. Evans.* New York: G. P. Putnam's Sons. $1.25.
[10] PSYCHE SLEEPS AND OTHER POEMS. *By Alida Chanler Emmet.* New York: Moffat, Yard & Co. $1.25.
[11] THE TOWN DOWN THE RIVER. *A Book of Poems. By Edwin Arlington Robinson.* New York: Chas. Scribner's Sons. $1.25.

THE LATE ARTHUR UPSON.

Spain

OF the many books that have recently appeared on Spain, that increasingly popular land of tourist travel, *The Spaniard at Home*[1] is one of the best. That the author knows the country as one long familiar with its history, traditions and customs, and who has dwelt among the people until she has herself absorbed the very atmosphere, is evident on every page. Mrs. Nixon-Roulet, out of her full and intimate knowledge, writes sympathetically and appreciatively. Her method of presenting her subject is all her own. She never trespasses on the ground covered by most other writers

[1] THE SPANIARD AT HOME. *By Mary F. Nixon-Roulet.* Chicago: A. C. McClurg & Co. $1.75.

who have written on this pleasant, sunny land. She wisely leaves to others descriptions of galleries and churches, the Alhambra and Seville Fair. The book carries us thru the entire life of an average Spaniard from birth to death. With grace and skill she manages to tell us of the North and of the South, of the Basque country, Castile and Andalusia. Court life is but lightly touched upon, as court life but slightly touches the life of the average Spaniard. On the other hand she tells all about home life, education, popular fiestas and amusements, serious interests, literature and art.

Miss O'Reilly spent eight happy months in Spain, and her book, *Heroic Spain,*[2] is a tribute of appreciation. Every important section of the country was visited, and the author had the industry to acquire something of the language and a good deal of local as well as national history. The deeply spiritual and mystical nature of the Spanish peoples has been profoundly sensed, and the transformation of her idea of the country and the people during the eight months of her sojourn will appeal to most Americans who have had the privilege of lingering in that charming land. "When Spain is allowed to show herself as she is, she wins a regard that is like an intense personal affection."

Spain from Within[3] offers a striking contrast to Miss O'Reilly's book. The author of *Heroic Spain* is of the Roman Catholic faith and her point of view is always one of sympathy and appreciation, while Mr. Rafael Shaw is strongly anti-clerical. Mr. Shaw's avowed aim is "to make intelligible the views and aspirations of the working classes of Spain," and the result of his investigation is that "the religious orders are the central and dominating fact which overshadows everything else." Mr. Shaw presents much testimony of various character indicating that it is the belief of the masses of the Spanish people that much of their backward condition and their poverty is traceable to the clerical orders. Whether or not we accept the author's interpretation of tendencies and movements, whether or not we are convinced that he truly expresses the opinions and beliefs of the working people, the book is at least of interest as throwing an illuminating light upon current political movements which are being inaugurated by the present Ministry. Phases of Spanish life and character are presented which are not often dwelt upon by foreign writers, and aside from its bitter partisan bias, *Spain from Within* offers much of interest to casual travelers.

[2] HEROIC SPAIN. *By E. Boyle O'Reilly.* New York: Duffield & Co. $2.50.

[3] SPAIN FROM WITHIN. *By Rafael Shaw.* New York: F. A. Stokes Company. $2.50.

A Journey Godward of Δοῦλος Ἰησοῦ Χριστοῦ (A Servant of Jesus Christ). By Charles C. Grafton, Bishop of Fond du Lac. Milwaukee: The Young Churchman Co. $2.50.

Bishop Grafton's reminiscences are interesting because of the light they throw from the inside on the American counterpart of the Oxford Movement. Charles Chapman Grafton was born in Boston eighty years ago. Early in life he was influenced by the Tractarian teaching, and he became attached to the Church of the Advent soon after its founding in 1845. Altho he entered the priesthood under Bishop Whittingham, of Maryland, and labored there and abroad for many years, it was from the rectorship of the Boston Church of his youth that he was called to the bishopric of Fond du Lac in 1888. These reminiscences are concerned mainly with his studies and labors among the religious of England and America, and his work in Fond du Lac. One is much imprest with the deep devotion and unwearied labors which have characterized Bishop Grafton's life. His high ideal and persistent efforts have achieved much where others would have failed. His attention to the details of administration and his absorption in High Church propagandism have naturally left little time and inclination to consider carefully some of the important movements of our time. Writing of the Church in relation to modern science he asserts that "nothing has so far been demonstrated that contradicts the dogmas she has declared essential." Yet one is somewhat surprised at the following advice given in regard to the instruction of children: "The child should be taught the names of some of the angels, something about their different ranks and works, of their

beautiful and joyous lives, of the interest they take in us." The aged prelate hopes for a union between the Anglicans and the Eastern Church, but can see no prospect of union with Rome or "the sects." As for the "open pulpit" in relation to other Protestants, he feels that nothing would be bettered by it. "This would not only more surely convince them of the rightfulness of their separation and sectarian theology, but would be at the expense of the disruption of our own communion." It is noteworthy that this stand is taken in connection with his strongly apocalyptic view of the Church, which he believes must lose power in the world and finally "suffer shipwreck." "Christianity," he says, "as a world's victor will be a failure." Bishop Grafton's greatness lies not in his intellectual breadth or acumen, but in his abundant devotion and unselfish service. Both literally and allegorically his own words may be applied to his fruitful life: "It is not the great city that makes the great man, but the true man is great in the little town."

BOXER FROM MOSAIC IN THERMAE OF CARACALLA
From Gardiner's Greek Sports and Athletic Festivals" (Macmillan.)

Greek Athletic Sports and Festivals. By E. Norman Gardiner. New York: Macmillan Co. $2.50.

We here survey a long train of athletes who fill the stage. Better there might be found, but on the whole their training has tended for the good. The author admits that he is ambitious for one whose occupation has left him little time for continuous study. How often we feel that plaint. But he has done service in his chapters on the stadium. The hippodrome and boxing are also new. More important, perhaps, are the results of excavations at Delphi, Epidaurus, Priene, and Pergamon. Above all, the author's work is his own. He is independent, and has acquitted himself well. He proves the use of writing at Olympia in the seventh century by the discus of Iphitus. We have lately learned much about the antiquity of writing in Crete and accept the existence of their written records for the eighth century. The chapter on wrestling, the oldest and most universal of all sports, is full of interest. The wall paintings of Beni-Hassan show that almost every hold or throw known to modern wrestlers was practised by the Egyptians 2,000 years before our era. Probably the most strenuous form of activity, with the least cheating, was the running match. The strain here was all open and above board; and how those runners ran! sometimes, as in the case of Ludas, breathing their life out before the applauding crowd. Physical education in Greece was largely due to Spartan example. In its bounds it was its "be all and its end all." But in spite of this

there was a certain nobility which separated the Sybarite from the hero. An interesting statue, reproduced in this book, is of the twin brothers, who drew their priestly mother to the sacrifice when other means failed. There the proud mother prayed that her sons should receive the highest gift the gods could give. Her plea was granted by their receiving the painless death. One stern warning was always given to the contestants at Olympia that they should not cheat, "not with money but with speed of foot and strength of body must prizes be won at Olympia." Perhaps the greatest affront to Greek religion was the proposal of Caligula to carry off the statue of the Olympian Zeus to Rome. But he was prevented by the "miraculous protest of the statue itself." The book is of interest both to the student of ancient customs, and to the follower of modern athletics. The profuse illustrations add greatly to the value of the publication.

The Inspiration of Poetry. By George Edward Woodberry. New York: The Macmillan Co. $1.25.

This little book contains eight lectures on poetic energy delivered before the Lowell Institute, of Boston, in 1906. Marlowe, Camoens, Byron, Gray, Tasso and Lucretius are each the subject of a chapter, and there is an introductory chapter on "Poetic Madness," and a concluding one on "Inspiration." Marlowe is taken as the type of poet in whom poetic energy is most free and full. Professor Woodberry rises to the hight of his subject in this chapter, and he pours forth an impassioned tribute to the morning star of the Elizabethan drama. There are no novel points of view about Marlowe, for, indeed, he is a well-nigh exhausted theme. All that can be said has already been said, and the value of this appreciation lies chiefly in the richness of its imagery and diction. Of Byron there are more original points of view. He is treated as a part of the Mediterranean world; as one not naturally a wanderer, but "necessarily a social person"; as one whose melancholy is "not that of the betrayed idealist, but rather of the thwarted realist"; as the poet (in "Childe Harold") of disappointment and not of disillusion. No more than an indication can here be given of the charm of this particular essay. It abounds in felicitous phrases, in delicate shades of characterization, and the whole is suffused with an ardency of feeling that not seldom transforms the prose lines into a poetic strain. The inclusion of Gray in this group is somewhat puzzling. But Professor Woodberry finds in him, despite his lethargic nature, "certain faint signs of the characteristics of poetic genius."

Literary Notes

....Sturgis & Walton Company are the publishers of Grace MacGowan Cooke's *Doings of the Dollivers* ($1). This is a most pleasant narrative of a doll family's adventure, with illustrations by Harry Linnell.

....After thirty-five years Dr. Washington Gladden sends out a second and revised edition of his little book on *Being a Christian* (Pilgrim Press; 75 cents), and its message is still as fresh and wholesome as ever.

....Will Atkinson, author of a little volume of verses, *For Freedom* (Seattle: Metropolitan Press), describes himself as a poet of insurgency. He makes answer to Kipling's "Sons of Martha" in his own "Sons of Toil"; is that what makes him an insurgent?

....Jack London has returned to the charge. His new book of short stories is named after the first of them, *Whom God Loves* (Macmillan; $1.50). The appearance of Mr. London's stories in their new dress is far from reconciling us to the death of O. Henry.

....A book whose publication is to be signalized as of real interest is Dr. Scott Nearing's *Social Adjustment* (Macmillan, $1.50). The foreword is dated from Arden, Del., a community socialistic in its beginnings; now rather a summer resort than a "community."

....Duffield & Company are the publishers of Martha Gilbert Dickinson Bianchi's *A Cossack Lover* ($1.30). The writer differs from most of our novelists who tell us about Russia in that she really knows something of the country where she stages her novel of intrigue.

....*The American Jewish Year Book* for the current year, issued by the Jewish Pub. Soc. of America, has a large amount of information on Jewish immigration in its principal article, "In Defense of the Immigrant," which is made up from the most significant statements presented before the House Committee on Immigration and Naturalization, at a hearing granted last March.

....In our issue of February 2, 1911, in commenting on "Cactus and Pine," we spoke of the author as Mr. Hall. The correct name of the author is Miss Sharlot M. Hall. Miss Hall is a native of Arizona, and without aid has worked her way to the honorable position of Arizona Historian.

....Do you remember the charm of the animal stories of the "Jungle Book"? The same attraction is to be found in some of the *South African Folk Tales* retold by Dr. James A. Honey (Baker & Taylor Co.; $1). Little or no literary artifice enters into them, but that will, for some readers, constitute their distinction.

....They take Mr. Shaw very seriously in France, and even lecture on him at universities. M. Augustin Hamon, Shaw's translator, will publish in March a book called "Le Molière du XXe siecle, Bernard Shaw." Why not? In the preface to his new play, "Shakespeare and His Love," Frank Harris accuses Shaw of plagiary at his expense. Mr. Shaw thereupon reviews Mr. Harris' book for the London *Nation,* and frankly writes: "He accuses me flatly of cribbing from him, which I do not deny, as I possess in a marked degree that characteristic of Shakespeare, Molière and Handel which is described as picking up a good thing where you find it." "One touch of nature makes the whole world kin," but we do not remember hearing that one *touch* makes a Molière.

....The philological, literary and critical study of the Bible within the last few years has made all the old commentaries practically useless for the average reader or student. At the same time the results of the newer studies are more apparent and have been more generally accepted in some portions of the Scriptures than in others, so that not all the recent commentaries written from the modern point of view are equally valuable, and no series covering the whole Bible, embodying as it must the work of many writers, can be uniform in worth. These limitations must be borne in mind in acting upon the following recommendations for Bible commentaries, which we make in response to a request from one of our correspondents. For a commentary in a single volume we unhesitatingly recommend that edited by Rev. J. R. Dummelow, of Queen's College, Cambridge, entitled *A Commentary on the Holy Bible* (Macmillan Co.; $2.50). It is scholarly, concise, embodies recent results, and is reasonable in price. A commentary more complete, with longer introductions and fuller notes, is *The New Century Bible* (Oxford Univ. Press, N. Y.), published in about thirty small volumes, at 90 cents, under the general editorship of Principal Adeney. This, like the one preceding, is written by various well known scholars, but, unlike it, each writer's name is attached to his particular work. For the most complete, the most scholarly and most valuable commentary in English on the whole Bible, the student must be referred to *The International Critical Commentary* (Scribners; $2 to $3 a volume), which unfortunately is not yet entirely published. This work, edited and written by the combined forces of the best English and American Biblical scholars, is planned to include more than forty good sized volumes, about half of which have already appeared. All three of these commentaries are more valuable in their treatment of the Old Testament than in their work on the New Testament. For those who read German this defect may be corrected by the use of *Die Schriften des Neuen Testaments* (publisher by Johannes Weiss and imported by Stechert) in two volumes, an ideal "commentary."

Pebbles

A LONDON style maker for men says that the trousers of today will be the trousers of 100,000 years hence. If ours last five years we will be perfectly content.—*Binghamton Republican.*

THE hour was 1 a. m.

Inside the dimly lighted hallway stood Mrs. Dorkins with a grim smile on her face.

The front door was bolted.

"John," she said, in cutting accents, "you have been dissipating at the club again!"

"Maria," spoke a voice outside, rapidly, clearly and distinctly, "he blew lugubriously on the blooming bugle!"

Instantly she unfastened and opened the door.

Mr. Dorkins had not been dissipating.—*Chicago Tribune.*

THE PSALM OF THE SUFFRAGET.

Show me not, with scornful numbers,
You've too many voters now!
Woman, wakened from her slumbers,
Wants the ballot anyhow.

Life with Bill or life with Ernest
Is no more our destined goal.
Man thou art; to man thou turnest;
But we, too, demand the poll.

Heroines, prepare for battle!
Lend your efforts to the strife!
Drive all husbands forth like cattle:
Be a woman, not a wife!

Trust no man, however pleasant;
He'll agree to all you say,
Send you candy as a present—
Go and vote the other way.

Let us then be up and doing,
Don the trousers and the coat;
For our candidate pursuing
The elusive, nimble vote.

—*Smart Set.*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

The Japanese Treaty

GREAT credit is due to the Senate—and the Senate needs all the credit due to it—for confirming the treaty with Japan, and doing it promptly and without a division. This is better than we feared, for it seemed more than possible that some Pacific Coast Senator, sensitive to a Western clamor, might hold up the Senate and forbid a vote. Perhaps especial thanks are due to the forbearance of the Senators from California.

Two things particularly please us about this treaty, and neither of them is in the treaty. One is that the treaty is concluded this year, and not put off till next year, as we had claimed the right to demand for one year longer the continuance of the old treaty. But Japan was very anxious to have all the ten-year treaties with other nations lapse this year. The others do lapse, and to have this treaty with the United States linger for another year would have been very awkward for Japan, which wants the right to rearrange her customs duties free from treaty entanglements. We have done a real favor to Japan, possibly to the loss of our merchants. It is a supreme proof of our good will to our good neighbor across the Pacific, a neighbor who has been too often maligned and insulted by irresponsible persons, and very lately by the Hobson from Alabama, who has intimated to Congress that within ten months Japan will make war against the United States. We are glad he has made the prediction, for in the next ten months he will have to suffer for his indiscretion, and for ten years after that time he will remain a standing and discredited joke. He has promised us war, like Wali Dad, whose

> "sire was leaky of tongue and pen,
> Whose dam was a clucking Khuttuck hen."

and who burst into the royal durbar to announce the Russ was coming. We will, like the Cabul king, mount him in a peach tree, and ring it around with spears of irony, and bid him watch and tell us when he sees a Japanese fleet on the sea. We fear these ten months will be hardly less fun for him than the seven days for mowing and mouthing Wali Dad:

"Longa decem tulerunt fastidia menses"

Meanwhile we learn that Japan will be very glad to make another treaty with us under which all questions whatever that may arise will be settled by arbitration. That does not look like war.

The other reason why this treaty pleases us is because it contains no clause excluding Japanese of any class from our shores. It would have been humiliating to Japan to consent to have such a provision in the treaty. We would have no such exclusion of yellow men any more than of white men or black men. Hawaii does not fear them, and Hawaii knows. We can manage all that come. Hawaii says that the Chinese make fine husbands for the native Hawaiian women, and the more such marriages the better. There is no danger of our being overrun by Japanese, and Japan will still refuse to give passports to laborers wishing to come here, and will divert them to Korea and Formosa, where they are much needed. We are very sorry that our people demand such indirect and effective exclusion, but Japan will do what she can to satisfy our unreasonable prejudices. In this matter Japan answers favor with favor. This act of the Senate is one of the finest successes of Mr. Taft's administration.

Now will not the Senate, with the immediate threat of a hot summer session,

accept the agreement with Canada? A few men stand in the way. They could do nothing but for that Senatorial courtesy which allows a small minority, or even one single man, if he has lungs and diaphragm enough, to hold up the majority. We have seen a wind-jammer continue his speech all day and all night, requiring the clerk to read long documents while he catches his breath or gets his lunch. Two or three such men can defeat the best bill which all the rest want enacted. We would have in the Senate no such rule to shut off debate as prevails in the House, but it would seem that a rule might be adopted which would somehow allow the Senate to come to a vote even if the mouths of half a dozen truculent members have to be closed. They are reforming the British House of Lords; some milder reform seems needed for our Senate.

The Freight Rate Decision

In the spring of last year the railroad companies consented to increase the wages of their employees. The additions were determined by arbitration, as a rule, and payments were to begin on or about July 1. At the end of April and in the first week of May the companies set out to increase their freight charges, filing notices of the proposed additions with the Commission. It is well understood that they sought thus to avoid those provisions of the pending Railroad bill (soon to become a law) which empowered the Commission to suspend such an increase of rates for examination. They were suddenly restrained by an injunction, which the Government procured in Missouri, and also by a suit in which the Government accused them of violating the Anti-Trust law. A compromise followed. The companies withdrew their notices, the Government's legal proceedings were discontinued, and the Commission began an investigation. Under the new law, the companies were required to prove that the proposed increases of freight rates were just and reasonable.

Last week the Commission decided by unanimous vote that the rates of roads east of the Missouri and north of the Ohio and Potomac must not be increased, because the required proof had not been submitted. The companies sought to justify their demands upon several grounds, all of which are considered at length in the two opinions, one by Commissioner Lane and the other by Commissioner Prouty, but the plea which had most weight with the public was that higher rates were needed on account of the higher wages and the increased cost of supplies and material. The Commission, admitting that the cost of operation was increased by the higher wages, shows that the increase of revenue was more than enough to compensate for the higher cost of labor. We can refer only to small parts of the very long and elaborate opinions. For example, the wage additions on the roads in the Northeast (from 5 to 8 per cent.) were $35,000,000, while the rate increases would be $27,000,000. Mr. Prouty, answering the plea that this would not be an unreasonable offset, shows that in the year ending with June last the net earnings of these roads were increased by $51,000,000. Therefore, higher rates were not needed to make up for the higher cost of labor. He also applies this reasoning to separate roads. The same answer is made by Mr. Lane, who undertakes to show that any increase of the cost of operation was more than met by increase of revenue. "At no time in the history of American railroads," he says, "have they yielded such profits or was their prospect more fair than in the fiscal year that closed June 30, 1910." Official figures accompany this assertion.

> "At the very time when the carriers in the East and in the West were taking united action to increase their rates, they were compiling their annual statements, which show from the standpoint of net revenue and of dividends upon stocks that the railroads of the United States as a whole have never before prospered—not even in the heyday of 1907—as they did in 1910."

Figures furnished by the companies themselves prove, he adds, that, with the exception of fuel and ties, supplies and materials "are today costing the carriers less on the average than in any one of the last ten years."

In tables covering the last decade it is shown that the per cent. of stock paying dividends in 1910 had been exceeded only in 1907, and then by only a shade; that the amount of stock ($5,424,114,782) paying dividends was much greater than

ever before; that the dividends paid ($405,131,650) exceeded those of the most favorable previous year by $14,000,000; and that the average rate on dividend-paying stocks (7.47 per cent.) was the highest ever known except in one year.

The carriers claimed that additional income was needed to sustain their credit. Without it they could not borrow, or would be obliged to pay exorbitant rates of interest. In reply it is pointed out that since 1899 the railroads' bonded debt has been increased by $4,250,000,000, or 77 per cent., with an addition of only 36 per cent. in mileage, and that the average interest rate has declined from 4.55 to 3.90 per cent. The Commission asserts that at the present time our railroads can borrow at rates as low as can be obtained "by the most stable of our greatest industries or the most solvent of our municipalities."

Mr. Prouty, in the course of his opinion, calls attention to the relation between the men who direct the affairs of the railroads and those who control the corporations from which the railroads buy equipment and construction material. We quote an interesting and suggestive passage which has not been generally published in the daily press:

"The vice-president of a railroad company testified during the hearing that his company could buy locomotives of but two concerns; that on account of the freight rate as a practical matter it would buy Bessemer steel rails of only two companies; that structural iron of the larger sizes could only be procured from four or five companies, and that in the purchase of cars he was confined to seven or eight independent plants. It is well understood that in recent years the price of structural steel in larger sizes and of steel rails has been uniformly maintained. It is also well understood that the same men who are potential in the United States Steel Corporation and the American Locomotive Works are influential in directing the policy of our railroads. Now, if the steel Trust is to determine the price which shall be paid for rails and for bridges, if the locomotive Trust is to determine the price of engines, the car Trust of cars and the labor Trust of labor, and if the railways have only to meet the demands made by these combinations and charge over to the public by an increase of rates whatever is paid, a most unfortunate situation has developed. There is nothing in all this which enables us to say that railways do pay extravagant prices, and if we are satisfied that present rates do not yield an adequate return we should, notwithstanding these conditions of monopoly, unhesitatingly approve an advance, but in view of the monopolistic character of the business we should proceed with caution."

Bearing in mind the statistical evidence which the Commission cites, we think that the decision is a just one as regards the companies as a whole, altho probably there are some companies that need rates slightly higher than those which they now receive. We notice that one complaining railroad president, Mr. Ripley, thinks the outcome will be Government ownership. On the contrary, effective and just official regulation will prevent Government ownership by convincing the American people that such ownership is not required for their protection. Official regulation has already been of much service to the public and to the railroad companies themselves. By putting an end to rebate favoritism it has promoted justice and increased the railroads' income. Mr. Stuyvesant Fish finds much that is reassuring in the decision, because it tends to sustain existing rates and exclude claims for reduction. The opinions of the two Commissioners furnish much official testimony as to the recent growth and present favorable financial condition of our railroad system. That deserves consideration. It is quite probable that inability to increase rates will lead railway managers to seek that greater economic efficiency about which so much was said during the hearings. In this there would be profit for the companies. If conditions should become less favorable, or if continued experience should show that the present rates are not high enough, the Commission will consider fairly any application for permission to increase them. Very properly, it will insist upon proof, and, so far as we can see, proof was not laid before it in this case.

Japanese Hero Worship

POPULAR nominations for a hall of fame always have a certain interest. They do not tell us much about the great men who are chosen, but they tell us much about those who choose them. People show their character by whom they admire. We Americans have nowadays a great curiosity, mixed with a little anxiety, about the character of the new

Japan, so whatever may throw a light upon its ideals or idols is worth noting.

Our esteemed contemporary, the *Jitsugyo no Nihon,* of Tokyo, devotes a large part of the January number to the consideration of the greatest men of the world. A committee of Japanese prominent in letters and politics was appointed to decide upon the ten greatest names of history, and their selection was as follows: (1) Hideyoshi, 45 votes; (2) Napoleon I, 45; Bismarck, 36; Washington, 35; Tokugawa Ieyasu, 27; Luther, 20; Shokatsu Komei, 19; Abraham Lincoln, 17; Julius Cæsar, 17; Gladstone, 16.

On the whole the list is a creditable one; probably as well balanced as such lists generally are. It betrays an excessive admiration for military genius, but that is a common failing of other countries than Japan. Only France seems to have risen to the idea that there is greater glory in saving life than destroying it. In a poll taken by a Paris journal on the greatest Frenchman, Pasteur ran ahead of Napoleon. Whether that is due to the spontaneous development of loftier ideals or to a licking from Germany may be questioned. Japan, like the United States, has had neither a Pasteur nor a licking.

It cannot be said that three Japanese names out of the ten is an unusual concession to patriotism. A list prepared in any other country would probably show as large a proportion of native heroes. Two at least of the three are not unknown to fame even on this side of the Pacific. Hideyoshi (1536-1598), who ties with Napoleon for the first place, was not unlike Napoleon in his career, for he was born in humble circumstances and forced his way up by his military genius until he became ruler of the empire as Regent. He conquered Korea, but failed to carry out his great ambition, the conquest of China, as Napoleon failed to carry out his, the conquest of England. Ieyasu (1542-1616) was not so handicapped by birth, for he was of samurai stock. As the first Shogun or Premier he became the real ruler of Japan, and it was thru his initiative that the fishing village of Yedo became the capital, Tokyo. His family, the Tokugawa dynasty, remained in power for 265 years, until the overthrow of the Shogunate in 1868 thru the efforts of the Emperor Komei, father of the present Emperor, with the accidental aid of Commodore Perry.

With Washington and Lincoln among the ten we Americans have no reason to complain. Only Germany, with Luther and Bismarck, fares as well.

When Is a Caucasian Not a Caucasian?

THIS is a conundrum which is no joke. It is a very serious matter with many of the first Creole families of Louisiana. To us outside who look on it is absurdly amusing, as the antics of those who make fools of themselves always are, no matter how serious to the participants.

Louisiana was settled by the French. The French used to have less fear of race admixture than English settlers. Many Creoles, like Cubans, have a dark complexion, and have been suspected of negro blood, which they angrily deny. Louisiana has an elaborate terminology for the successive dilutions, from the mulatto and the quadroon downward—or upward—which we printed some weeks ago. When the dilution reaches the sixteenth fraction it is almost indistinguishable, and at the sixty-fourth no test can discover it. For all practicable purposes the man is a Caucasian—but not for Louisiana law.

Of all States, Louisiana ought to be the last to enact a law forbidding intermarriage of a white person with any one who has the least infusion of negro blood. There is no knowing where it might hit, for in Louisiana beyond doubt many pass for white in whose genealogy research would discover a few drops of negro blood. Such a case has lately stirred up the State.

A young woman of a good family, a graduate of a fashionable ladies' seminary in New Orleans, was killed by being run over in the street. A newspaper spoke of her as colored. That was a mortal offense. Her brother brought suit for slander, and the editor, by referring to ancient records, showed that one of her ancestors was recorded as colored. That put the whole family into a horrible plight. They had always thought of themselves as white, and had associated

only with white people. Now nobody would associate with them. They must sink, tho visibly white, to the rank and caste and associations of negroes. Hitherto they had been good enough to associate with anybody. Now, with no fault of their own, and no change in themselves, they were thrust, with all their whiteness, into the outer blackness.

The dead girl had a sister happily married to a man of German origin. There was no question that he was a full Caucasian. But he had imbibed the Louisiana prejudice and terror of invisible and infinitesimal nigritude. He discovered —and his wife did—from the newspaper account that she had this bar sinister. He could not continue to live with such a banned woman. Besides, the law forbade it. He was liable to imprisonment for maintaining marital relations with her. He appealed to the court to have his marriage annulled, and the court could do no less. So she was sent adrift with the rest of her family. Thus in this case two legal maxims had illustration, one by its truth, "*Summa lex, summa injuria,*" and the other by its extreme contradiction, "*De minimis lex non curat.*" The law does care a great deal for the smallest things. It cares in Louisiana for what is so attenuated as to be invisible.

Now such a law and such enforcement is barbarous beyond expression. It puts a suspicion in multitudes of families. It is against all common sense as against all Christianity. Who knows where, thru personal malice, it may strike next? The story is told in the *Sun*—very likely so —of a similar case in one of the parishes. A suit for slander was brought for calling a family colored. The sheriff looked up the records and found the charge sustained. As the investigation amused him, he looked farther and found one of his own ancestors recorded as colored—but a fortunate fire soon after destroyed the proof.

Now, what should be done? If Louisiana must maintain its infamous law against intermarriage, it should at least set a line where the prepotent negro blood is to be held as washed out. Set it at one-eighth, or one-sixteenth, or one-thirty-second, or one-sixty-fourth, but at least set it somewhere. If we do not misremember, South Carolina has such a law. It is adding stupidity to cruelty to allow the taint to go on forever.

And once more, we advise all white negroes in Louisiana, or anywhere else in the South to change their residence and leave their pedigree behind. There is such a case now in Baltimore, where the doctors can't tell whether a girl is white or black. Let them leave as white people and be received as white people. We do not doubt there are thousands of such people, both North and South, who have, by changing their home, changed their race and color. We have known such cases, and not all Creoles. Thus, as the bleaching process goes on, the conundrum will cease to concern them, When is a Caucasian not a Caucasian?

Educating for the Home

THE INDEPENDENT some time ago noted the remarkable educational evolution going on at Menomonie, Wis.; schools established on the strictly industrial basis, but giving a broad and complete education. This idea of combining the two thoughts—culture and utility—is spreading rapidly all over the United States. Winneconne, in the same State, is becoming famous for bringing agriculture t the front without destroying literary standards. The boys and girls are required to pass examinations in usual school accomplishments, but fitting for the farm and farm life is kept as the school's central thought. Grown men and women are admitted to take the regular school course who have never been able to fit themselves to pass a usual school examination. Menomonie has graduated nearly one thousand pupils, and so far only two of these have been known to turn to any other pursuit than agriculture. The work of such a school has had a marked influence on the State University, so that that institution is preeminent for its practical work in all the departments of agriculture and mechanics.

The idea is a distinct and clear one, that the purpose of a public school is to fit boys and girls for building up their homes, and to engage in those industries which need them to make the State

thrifty and rich, as well as intellectual and moral. The school educates for home and not away from home—that is, the right sort of school does. This can be accomplished only by filling plain home work with enthusiasm and knowledge. Farm boys are taught not only to milk, but to so test milk as to eliminate unprofitable cattle. From the schools the teachers go with their pupils into the families of the county, and give practical lessons in their homes. Following this, professors of the university are found all about the State, teaching how to do the best things in the best way. Domestic science is taught in the homes of the people. How could it be otherwise, under such a system, than that the boys and girls become enthusiasts for country life. Of course, nothing more is heard about the drift into congested cities, or the loss of the best blood from the farms into the factories. The old people get a relaxation from hard work and something that inspires life when they go to the schools and study with their boys. They do not feel that their boys and girls are being taken away from them by the schools, for they are not. They go back home as quickly as possible, and are greedy to get there, because what is done there is what they are thinking about and know about. Then comes the tally for the State, because the industries are not unbalanced, and factories gorged while agriculture suffers for lack of help.

At a recent meeting of superintendents, Mr. Powers, of Mississippi, the State Superintendent, reported strongly in favor of this Wisconsin work for the South, and it is a happy thought that nearly every Southern State is ready to welcome this home-building movement. Georgia especially has moved ahead. The trouble with our Eastern States is that a high tariff has put agriculture so far into the background that it is hard to convince the people that the schools are justly intended to teach industrialism. Our whole system is educating away from country life and from home life. As soon as a boy graduates he is expected to start off somewhere and "make something of himself." He would consider that he had made a failure if he should go back to the plow and the barnyard. He is compelled to crowd his way into some one of the professions or take up with commercial enterprises. There is a glut everywhere before him, and in nine cases out of ten he is tumbled into the pool.

Germany reports that altho we can do things cheaper in this country, she has very little fear from our competition for a good while to come. Her trade schools have taught her people to lay emphasis on quality instead of quantity, while American work bears the characteristic of energy and rush. Our American schools cannot move too fast in the way of training, in the place of stuffing—and they must train for an industrial instead of a purely intellectual end. There are exceptions, however, even in our Eastern States. In Lynn, Mass., where shoe manufacturing is dominant, there is a $50,000 school building, in which the whole drift of education is toward making the best sort of shoe. The children in this school are educated not only in the ordinary school books, but in the business activities of the city where they live. Why should this not be done everywhere. Certainly we wish our children to be capable of taking up the affairs of life, and we do not see why they should not be able to do those things which we ourselves are doing, only in a better manner. Why the trade school and the agricultural school cannot be merged in or combined with the ordinary school has not yet been demonstrated.

What we want now is an American people trained for American enterprises and American home life. We have seen the folly of educating our lads and lasses in such a way that they are less and less qualified to do the things most needed for home and community and State. Mr. Powers, to whom we have referred, insists that the Southern States need nothing else but a readjusted education to enable them to grow wheat and corn as well as cotton, and to compete as successfully. To our schools we must look hereafter to double our food products and enable this nation to increase its population at even a greater ratio, without danger of deterioration or starvation.

Restriction of Immigration

Ex-President Eliot takes the ground, which has long been held by THE INDEPENDENT, that immigration should not be restricted so as to exclude from American citizenship any but criminals. His position is that the economic argument calls for every laborer that we can secure. Secondly, every honest laborer who comes from other lands adds to the wealth of this country by his labor. To place an educational test to restrict immigration is absolutely unnecessary as well as unkind. America should remain what it was first intended to be, a free home for those who wish to be free. Dr. Eliot is not in the least disturbed because many of the immigrants differ from us in race and religion. We have already absorbed and amalgamated race after race, and so far to our advantage. He is least of all affected by the growth of Catholicism, because he holds that the very act of toleration creates toleration. He tells us graciously that people who exile themselves and encounter the risks of a new start in life in a strange land, must have some strong motive for such extraordinary conduct. He would leave the question whether America is still needed as a resort for the oppressed to the people who come to us, and he would do nothing at all to lessen the hope that animates them in seeking the New World. This is good statesmanship. The Immigration Commission, on the contrary, reports that the United States has reached a point where its assimilative capacity and its power of caring for the world's millions has nearly reached its limit. That we have an oversupply of unskilled labor packing away in our cities is probably true. The remedy would naturally be to create a national system for a rational distribution of those who reach us. To send them back to the Old World is unnecessary and heartless; it needs only to place this raw labor where it can be utilized. The call for help is universal in all the agricultural States, a call that is growing louder and louder every year.

Government by Commission

The commission form of government is spreading with great rapidity in most of the Southern States. In Texas, where it originated, there is not a single town left to the old method. It is now proposed to establish a uniform commission law; and for this purpose several towns in Alabama have also petitioned their Legislature. In Louisiana, however, the Legislature has forbidden New Orleans and two other cities to adopt the commission method; no reason made known. The commission system has had its trial pretty fairly over the whole country, from Spokane, Wash., to Lynn, Mass., and from Galveston to Springfield, Ill. Buffalo and Rochester have recently taken the matter under consideration, and some of our enthusiastic Western cities are sending out lecturers to explain and advocate the movement. At present there are over one hundred cities and towns governed by commissions; and we have heard of only one town in the United States that proposes to change back to the old form of government. It does not look like a temporary reform. Publicity and efficiency are the secret of success. Every movement, from the campaign for the election of five commissioners, to all the details of the governing body, must be absolutely open and reported in the papers. Above all, franchises must be submitted to the vote of the people before they can be operative. It is impossible to waste or to give away the people's money without their consent. The spontaneity of the movement is as remarkable as its executive efficiency.

After Greek, What?

We fear it is a despairing appeal which Prof. Paul Shorey, of the University of Chicago, makes to the teachers of modern languages to help stem the tide against Greek. He tells them that if Greek is given up as a basis for culture and training Latin will go next, and next the modern languages for literature, leaving the teaching of them over for the conversation books, to fit students to hear lectures in physics in foreign universities, not to learn the treasures of those languages, but to be able to read current technical books. He thus warns his colleagues:

"They cannot join the hue and cry against dead classics and retain their seminars in Dante and Old French and their culture

courses in Racine and Goethe. For the practical man Corneille and Lessing are as dead as Homer and Aristotle. His only use for French is 'to fight the battle of life—with waiters in French restaurants.' Cornell University, possessing the finest Dante library in the country, had not a single student of Dante in 1904. After Greek, Latin, and after Latin, all literary, historical, and philological study of French and German. Convert your departments into Berlitz schools of languages. It is that which you are educating the public to demand, and that is all your students will be capable of. The teachers of English may lay the same warning to heart. Shakespeare is the belated bard of feudalism. Milton's diction is as obsolete to the readers of Mr. George Ade as his theology. Tennyson is a superannuated representative of the mid-Victorian compromise. Literature dates from Robert Louis Stevenson; and Mr. Bernard Shaw, Mr. Wells, and Mr. Chesterton are not only clever fellows and shrewd advertisers, but profound thinkers. The Bible, too, is an obsolete and forgotten classic. There is nothing that the unhappy teachers of English can presuppose today. They have sowed the wind and are reaping the whirlwind."

They tell us that there are more youths studying Latin now than ever before, but it is not for literature, and it is carried not far beyond the grammar. This is a practical age, but happy is the boy that insists on his Greek, and the high school blunders that does not provide for it.

Profit Sharing

N. O. Nelson writes us, in an optimistic mood, that profit sharing and co-operative efforts are gaining strength in the rural districts of America. He reports over seven hundred co-operative creameries in Minnesota, turning out over $20,000,000 worth of butter annually. Co-operation has changed that State from being a declining wheat producer into a prosperous dairying State. Industrial education fits in admirably with this reorganization of farming and other productive methods. The organization of corn clubs, especially among the young people, has gone a long way toward the production of the three billion corn crop. George W. Perkins, whose retirement from the firm of J. P. Morgan & Co. has been recently announced, informs us that he intends to devote his time to the principles of profit sharing and other plans for solving the industrial problems. He thinks that the capitalist and the laborer can be brought to co-operate, and this will be the chief work which he will undertake, and to which he will devote his life. He hopes to find opportunities for extending the principles of co-operation between employer and employee, which are already finding place in the business world. He thinks his experience will enable him to contribute toward the adjustment of these matters. He was the originator of the profit-sharing plan of the United States Steel Corporation and of the International Harvester Company; he believes that it will be for the industrial salvation of the country to further adopt these methods. Among his other co-operative efforts Mr. Nelson is now working from New Orleans as a center. He has seven local and one general center in the city, and the whole State is being rapidly organized. The object is to extend the dairying interest thruout the South and to establish diversified farming in the place of exclusive cotton growing.

Culebra Landslides

The sudden slipping of half a million cubic yards of clay and rock into the canal is unfortunate, but not discouraging. It may portend an increased expenditure for excavation, but at the same time it indicates that our American engineers were right when, in the face of the unanimous opposition of the foreign engineers, they decided against a sea level canal. The Culebra cut has to be dug down some 80 feet lower than it is now for the lock canal. For a sea level canal it would be necessary to go down at least twice that, and how would the banks hold then? The expense of cutting them down to a safe angle would be tremendous. We should have been forced into Bunau-Varilla's "Straits of Panama." The treacherous clay softens and flows like mush under the pressure of the hills on each side. It not only breaks off on the edges and slides down into the canal prisms, but it rises up in the bottom of the cut to a hight of 10 or 20 feet. The watershed thru which the canal crosses is in fact part of the continental backbone, the connecting link between the Rocky Mountains on the north and the Andes on the south. This great divide sank at the Culebra saddle to only 312 feet above sea level, but on one side the scarp extends up Gold Hill to an altitude of 534

feet and on the other up Contractors' Hill 410 feet. It is the pressure of this bead of earth that crushes in the banks and forces up the bottom, carrying away or burying tracks, steam shovels and houses.

Material for Debates

We are reminded that the debating season is now on by the numerous letters that come to us asking for references to books and periodicals for this purpose. Now, we are always glad to assist our readers so far as our time and facilities permit, and we hope that we shall not be thought disobliging if we say that we prefer to do this business by wholesale in print than by retail in letters. THE INDEPENDENT is especially designed to help people to discuss current questions intelligently, and in most cases the information desired can be obtained by reference to its "Survey of the World," editorials, reviews or book lists. If the reader will look over his back numbers and consult the latest semi-annual index he may often be saved the expense of a stamp or two stamps. We would also suggest that he would save time by applying first to the nearest library, university or other institution where information is kept on tap. It is becoming the recognized duty of librarians to inform themselves of the best books and magazine articles on topics in which the public is interested. The librarians have come to recognize this duty more than the public. Many libraries issue a book list as soon as any new question comes up for discussion. Some of the Western States have a State library at the capital, which serves as a bureau of information. The larger libraries of the country publish very complete bibliographies, which may be obtained free or at low price. Among those on our office shelves we find book lists from the Library of Congress on Immigration, Federal Control of Corporations, Postal Savings Banks, Employers' Liability, Child Labor and Municipal Ownership, and from the Public Library of New York City book lists on Mormons, Philosophy and Marriage and Divorce. The State universities are usually willing to answer such questions, and some of them, notably the University of Wisconsin, have a debating bureau which supplies briefs of arguments and clippings of articles, *pro* and *con*. In States where there is no State university, other universities sometimes assume this duty. Vanderbilt University, Nashville, for example, has a Bureau of Public Service which aids debaters. It is a good rule to patronize home institutions.

Theological Students

When we hear cries of despair because so few men, and those of a low quality, are entering the theological seminaries and the ministry, we smile and doubt. The complaint is general and chronic. We hear it equally in Protestant and Catholic circles, but somehow the ranks are generally fairly filled, and the reputation of the ministry does not fall. The other day the Mayor of Montclair directed all stores to close during the funeral of Dr. Bradford, and we hold that no class of the community stands higher in public repute than the clergy. Nor are the candidates really lessening. Mr. Thornton B. Penfield, who is the secretary of the Young Men's Christian Association for Theological Schools, has lately published statistics which prove the contrary. He has collected the statistics of 144 Protestant seminaries for forty years, and he finds that in 1870 they had 3,254 students, and in 1910 they had 7,587 men and 312 women, of the latter of them more than half were Baptist. This is a satisfactory gain, but we wish that we had similar figures for the Catholic seminaries. Our own inquiries give the gratifying report that there has been no falling off in the scholarship and ability of the students.

President Taft has done a good thing for the temperance people by advocating total abstinence. In a recent letter, to be read to Sunday schools, he expresses his opinion that intoxicating liquors should not be used at all; that any one who abstains altogether from the use of liquor avoids a dangerous temptation. He quotes Lincoln, who wrote a pledge of total abstinence for his boy friends. Some of us can remember when this total abstinence principle was indorsed by President Jackson, and Congress formed a total abstinence society. We believe this is still in existence, but how often the association holds meetings is another

question. President Taft tells us that total abstinence ought to become a national principle. His letter has been read to three thousand Sunday schools, and is endorsed by three thousand Sunday school superintendents. It contains good philosophy. A calm presentation of total abstinence as the only really safe principle is well worth the while, and the President of the United States cannot do a better thing than to take the position of leader.

We lately mentioned that the women have taken the task of supporting the foreign missions of the Cumberland Presbyterian Church, the men having all they can do to fight in the courts the union with the Presbyterian Church, and to restore their broken ranks. But the foreign mission work is being taken up very largely by the women in all the Churches. The first Women's Union Missionary Society was started by Mrs. Doremus about 1860, and now the women have forty boards and 57,433 local foreign missionary societies in the United States and Canada, which last year raised $3,328,840. They are now holding a united jubilee over the country, which culminates in this city March 28-30. Women are, as a whole, much more intelligent than men on missions, as on many other subjects, for they have bought over 600,000 textbooks on missions in the last ten years.

Dr. Reisner, who has been in charge of the excavations at Samaria, has returned, and he brings no confirmation of the report sent to the world by Professor Yahuda, of a Hebrew seminary in Berlin, that there had been discovered in Samaria a hundred tablets of Ahab's time, with a letter from a king of Assyria, and a list of Ahab's palace furniture. It is all moonshine, but we do not so much blame Dr. Yahuda, for he got it out of a Hebrew paper *Ha-Or*, published in Jerusalem, and there it arose out of growing gossip about the inscribed potsherds with old Hebrew characters, which are interesting and valuable, but not to the extent claimed for the imaginary tablets. But such discoveries are not improbable, and the beginning is hopeful.

The possibility of restocking the land with nearly obliterated tribes of animals or birds is shown by the Canadian report given out by Lieutenant-Governor Gibson, of Ontario. He informs us that the beaver, where it is protected in some of the Canadian parks, has multiplied so rapidly that the animals simply tumble over each other. He tells us also that there are still a few herds of buffalo left, and that the musk ox, which is an excellent substitute for the buffalo, is the animal which is now likely to be wholly destroyed. We cannot too soon get in the habit of understanding public ownership and taking public control of property that really belongs to and is essential to the welfare of all the people.

In order to cultivate a greater interest in the countries south of us the Pan-American Union, Washington, has prepared sets of colored lantern slides from recent photographs. These slides may be loaned to educational institutions which will insure their safe and prompt return. A lecture giving the necessary information about the scenes presented is sent out with each series. This gives a good opportunity to colleges, clubs and lyceums to cultivate a neglected field.

Now that the Carnegie Institution is so largely benefited by the late gift of Mr. Carnegie, it is pleasant to learn that by the bequest of George W. Poore, of Lowell, Mass., the Smithsonian Institution, the parent of all such organizations, is to receive a bequest of $250,000. It needs it, and Mr. Poore wished to call the attention of those making their wills to its need.

How long can Prussia stagger under her military burdens? The debt of that small country, only a part of Germany, is $2,375,000,000, considerably more than twice that of the United States, and the past year the deficit was $7,250,000, which has to be added to the debt. It is no wonder that Socialism grows.

While in this country we are just inaugurating postal savings banks, our wards in the Philippines have already proved their advantage and there are nearly 9,000 depositors.

INSURANCE

THE NEW BUILDING OF THE SECURITY INSURANCE COMPANY OF NEW HAVEN.

The Security Insurance Company

THE Security Insurance Company of New Haven, which was organized in 1841, and is therefore to be congratulated on the seventieth anniversary of its organization, has recently moved into its new building at the corner of Elm and Church streets, opposite the historic New Haven Green. The capital of the Security is $700,000, its net surplus $639,791, its assets $3,117,448, and the losses paid since organization $13,383,784. John W. Alling is president and Victor Roth secretary. The directors include Charles S. Mellen, president of the New Haven Railroad; Charles B. Leete, Joel A. Sperry, E. G. Stoddard, John T. Manson, Charles H. Nettletton, James S. Hemingway, Dennis A. Blakeslee, Warren A. Spalding and Eli Whitney, all well known officers or directors of banks in New Haven.

The Fear of Medical Examination.

THE life insurance solicitor of experience realizes that much depends upon chance and caprice. He is therefore prepared for all sorts of contingencies. One of the difficulties encountered by him is an actual fear on the part of the prospect of the required medical examination.

A case recently cited along this line by a life solicitor had to do with a man who wanted insurance and was quite willing to be insured but who was obsessed with a haunting fear of the medical examination. This man even went so far as to say that he would not take an examination for a thousand dollars. The agent who had the management of this case was a man of resource, and by his skilful handling of it he overcame the prospect's scruples and won out with the prospect. The way he did this is interesting. Knowing that the man seeking insurance was to call on him at a particular time he had the examiner there beforehand. His identity was not at first revealed. The conversation was led by easy stages into channels wherein the circulation of the blood became a theme. The examiner was appealed to as a medical man to feel the agent's pulse and then for comparison that of the prospect's. When the doctor said "strong and fine" the way was easily opened to disclose his identity, and the examination thereupon proceeded without difficulty. The result was a signed application and the ultimate delivery of the policy.

Financial

Stocks and the Rate Decision

It was known last Thursday, the 23d, that the decision of the Interstate Commerce Commission in the long pending freight rate cases would be announced that day, after the close of the Stock Exchange. For this reason there was a dull and waiting market. Only 264,000 shares were sold, and prices, as a rule, suffered scarcely any change. That evening, after the announcement of the decision, it was foreseen that prices would decline sharply. Large orders for sales were cabled to London, where the market opens at 5 a. m., New York time, and sales were made there on the following morning at a considerable sacrifice, prices declining from 2 to 5 points. Brokers in New York took the precaution to call upon their speculating customers for additional margin deposits. On the New York Exchange there were heavy declines at and immediately after the opening, the extreme initial loss for a prominent active stock being 7⅛ points. After the first plunge, however, there was recovery, apparently due to powerful support, and at the end of the day a considerable part of the loss had been regained. Sales were 996,730 shares, against 264,000 the day before, and it was noticeable that a little more than half, or 567,000, were credited to the three stocks, Steel, Reading and Union Pacific, which have been leaders for a long time past. On Saturday, the 25th, the market was again comparatively dull (288,000 shares), and there were small net declines, ranging from ⅛ to ½. In the following table are shown the extreme and net declines of the 24th and the net losses for the week:

	Extreme decline on 24th.	Net loss on 24th.	Net loss for week.
Am. Car and Foundry	3⅞	2¼	2¼
Am. Locomotive	3⅛	2⅞	3¾
Atchison	4	2⅞	2⅝
Ches. and Ohio	3¾	2¼	3⅛
St. Paul	4½	3⅛	4⅛
Denver preferred	4⅛	2⅞	1⅜
Great Northern	7⅛	4⅛	3⅞
Lehigh Valley	6¼	2¾	2⅝
Missouri Pacific	5¼	2¾	1⅜
New York Central	4⅛	3¼	4¼
Northern Pacific	4⅝	3	3⅜
Pennsylvania	2¼	1⅛	¾
Reading	6⅝	3⅝	4
Southern Pacific	4¾	2⅜	3¾
Union Pacific	4¾	3½	3¼
United States Steel	4¼	2¾	3¼

The decision caused surprise, because in the Wall Street district a compromise had been expected. It had been thought that the commission would permit one-half, possibly two-thirds, of the proposed increase of rates. Surprise was accompanied in many minds by dismay, owing to the gloomy predictions made some months ago by prominent railroad men that an adverse decision would be disastrous, and also to the fact that orders to the steel companies had been withheld while the question was pending. But the comments of railroad officers upon the decision, while not of the most cheerful character, were distinctly less pessimistic than some of last summer's predictions, and the average stockholder began to realize that the statistics upon which the decision was based were clearly favorable. One London journal remarked that they testified to the soundness of American railroad finances. The course of the market in the immediate future will probably depend in part upon the action taken by railroad companies with respect to expenditures for equipment and extensions.

....William H. Truesdale, president of the Delaware, Lackawanna & Western Railroad Company, has declined an offer of the presidency of the Missouri Pacific at a salary of $100,000 a year.

....The consolidation of the Chatham and the Phenix National Banks was completed on the 22d. Under the name of the Chatham and Phenix National Bank the institution thus formed will do business at the offices of the first named bank, in the Chatham Bank Building, corner of Broadway and John street, and the president is Louis G. Kaufman, heretofore president of the Chatham. The Phenix was ninety-nine years old and the Chatham sixty-one. Both have had interesting, honorable and successful careers. The combined banks have about $3,225,000 in capital and surplus, and $21,000,000 of deposits.

The Independent

VOL. LXX NEW YORK, THURSDAY, MARCH 9, 1911 No. 3249

Survey of the World

Congress Adjourns Sine Die

The Sixty-first Congress was adjourned sine die March 4. An hour later, the President called a session of the new Congress for April 4. The expiring Congress rushed thru all its appropriation bills, which were threatened by filibustering up to the last moment. Mr. Owen (Democrat, Oklahoma) was responsible for the Senatorial filibuster, in the interest of the Arizona Constitution. This was defeated, 45 to 39, carrying down with it the Constitution of New Mexico. The President may, however, admit New Mexico as a State by executive order. Senator Bailey, of Texas, was greatly disgusted at twenty-three fellow Democrats voting in favor of the Arizona Constitution, with its provision for the recall of the judiciary. He offered the Vice-President his resignation, and telegraphed his resignation as Senator to Governor Colquitt, but was persuaded by these gentlemen and his fellow Senators to reconsider. The question is now raised, can a resignation be so withdrawn? Mr. Bailey's term does not expire until 1913. His resignation was probably an expression of pique that Mr. Stone, of Missouri, has of late had more influence as a Democratic leader in the Senate than has he. Mr. Bailey's course in regard to important legislation, and as Lorimer's most prominent advocate, has not been approved by most of his Democratic colleagues. Among the Senatorial veterans who will not have a role to play in the Sixty-second Congress are Aldrich, of Connecticut; Burrows, of Michigan; Depew, of New York; Scott, of West Virginia; Kean, of New Jersey, and Carter, of Montana. The following will also yield their seats to new men:

Frazier of Tennessee, Taliaferro of Florida, Dick of Ohio, Burkett of Nebraska, Flint of California, Jones of Washington, Money of Mississippi and Beveridge of Indiana.

Reciprocity Unratified

The extra session of Congress is called by President Taft to ratify the tariff agreement with Canada approved by the House of Representatives, but never voted upon by the Senate. The Vice-President succeeded in calling for a vote on the tariff commission bill. "I wish to present an amendment to the tariff commission bill," shouted the blind Senator from Oklahoma (Gore, Dem.). The "amendment" was the Canadian reciprocity agreement, but a vote on it was not secured, the Vice-President ruling that no amendments were in order after unanimous consent for a vote had been obtained. The Senate voted favorably on the tariff commission. Canadian opponents of reciprocity are delighted at the dereliction of our Senate, and it is freely said at Ottawa, in all political circles, that Canada's political pride is deeply wounded. The Canadian Government will, none the less, work for the early passage of the agreement.——The last official act of Senator Scott (West Virginia) was to plead for a vote of the Senate on the Sulloway service pension bill, passed by the House. To Senator Lodge, of Massachusetts, is attributed the final withdrawal of the bill by its champion. Other legislation that failed of passage is the permanent tariff commission bill, the increase on the rate of postage on the advertising sections of

magazines, the general age pension, the mail subsidy bill, and the resolution for the direct election of Senators. The Senate bill retiring Robert E. Peary with the rank and pay of a rear admiral and extending to him the thanks of Congress was finally voted by the House, 154 to 31. We discuss the Lorimer case editorially. The California Assembly has, by a resolution, rebuked the two Senators from that State for their support of Lorimer. A similar resolution directed against Senator Curtis has been introduced in the Kansas Legislature. The Missouri Legislature has commended its Senators for voting against Lorimer, and Governor Osborn, of Michigan, addressing the Republican State Convention, was applauded when he denounced the Lorimer "vindication." —— On March 3 the Senate gasped in astonishment at the following item in the general deficiency bill:

"To pay William Lorimer, a Senator from the State of Illinois, in disbursement of expenses necessarily incurred by him in defense of his title to seat in the Senate, $25,000."

Mr. Lorimer, after Senator Gallinger had held a whispered conversation with him, moved that this motion be stricken from the bill. The motion was carried. Senator Culberson had meanwhile stated that this amendment to the general deficiency bill was not submitted to the committee at any time when he was present. ——The President has announced two new appointments to the Tariff Board: W. M. Howard, of Georgia, and T. W. Page; both Democrats. The former was a member of the retiring Congress. Mr. Page is a professor of economics at the University of Virginia.

The Senatorships

Henry L. Myers, Democrat, has been elected to succeed Senator Thomas H. Carter, Republican, of Montana, on the seventy-ninth joint ballot. The new Senator is a lawyer, and judge of a District Court. He has served in the State Legislature, but has no national reputation. The Iowa deadlock continues. So does that in the New York Legislature: to which we allude editorially. On March 3 Governor Dix addressed to the Democratic members of the New York Legislature a letter in which he reiterates his belief that the choice of a Senator to succeed Mr. Depew rests with the Legislature alone: "but," he adds, "the present unprecedented and divided condition of the party's councils . . . prevent the exercise of the constitutional duty." He therefore considers himself justified in advising his fellow Democrats:

"When Mr. Sheehan became the choice of the caucus I felt that he was entitled, within reasonable limits of time, to the fullest opportunity to convince the dissenting members of the party and the Legislature that his candidacy was for the best interests of the party as a whole.

"But events have since demonstrated the impossibility of his election and therefore I do not believe that his candidacy should be further continued. . . . The progressive and constructive legislation which we promised is not being advanced with sufficient force and energy.

"We are confronted with a special session of Congress to consider momentous issues. In such a session, if the present condition remains unchanged the Democratic party of the State of New York will be without a voice in the national council of the United States Senate on subjects involving the most important and solemn pledges of our party platform.

"I therefore deem it my duty to advise that you immediately proceed in the joint session of the Legislature to ballot as your conscience and the will of your constituents may dictate for the election of a United States Senator whose choice will unite the Democratic party."

Opinions as to the effect of this communication differ widely. It will unquestionably further reduce Sheehan's chances, but as yet no compromise candidate has been discovered.

From City and State

Direct primaries were tested for the first time in Chicago last week when nominations for all the elective offices of the city and county, and for membership of party committees, were made. Alderman Charles E. Merriam was named by the Republicans for Mayor, while the Democratic nominee is former Mayor Carter H. Harrison. Mr. Harrison won over Edward F. Dunne by only 1,500 votes, while Mr. Merriam's plurality over his principal antagonist, Alderman John R. Thompson, was 27,000. The Republican

nominee was instructor in political science at the University of Chicago until he resigned his position to canvass for the mayoralty nomination. The costliness of the application of the direct primary system has been commented upon by the Chicago press, as also in a partial report by a commission of the Pennsylvania Legislature, just made public. The commission was appointed at the last session to codify and revise the election laws of the State, and favors personal registration in large cities (as already operative in Philadelphia), but is divided as to the desirability of such registration in third-class cities. The commission finds that the direct primary system has not to any great extent remedied the evils it is designed to cure. One objection stated is "that it gives opportunity for the capture of a party nomination by a rival party." The Republican organization in Philadelphia has on several occasions grasped this opportunity.——Permanent loans aggregating probably $13,000,000 are proposed by the city of Philadelphia. A convention hall, parkway and river front improvements will swallow up a large proportion of the amount.——Reorganization of the Democratic party in Pennsylvania is being attempted, involving the overthrow of Colonel Guffey and Arthur G. De Walt, who are held responsible for the disgraceful showing made last November. Congressman A. Mitchell Palmer, of Monroe County, is the insurgent leader.——After investigating charges of corruption in East Chicago and Indiana Harbor, the Lake County grand jury, at Hammond, Ind., has adjourned, after returning thirty indictments. The Mayor, Chief of Police and City Clerk of East Chicago are indicted. The Mayor of Gary, Ind., is also under indictment. ——The Ohio Bureau of Accounting asserts that more than half a million dollars belonging to the city of Toledo has been diverted from funds or illegally expended, 1906-1909. Many city officials are implicated.——John Mitchell, former head of the United Mine Workers of America, and until recently chairman of the trade agreement department of the Civic Federation, has resigned the latter post and his membership in the Federation. His reluctant action follows the declaration by the Mine Workers that any member of their organization accepting a position with the National Civic Federation thereby forfeits his membership in the union.

The Philippine Public Lands

Owing to charges made in the House at Washington by Representative Martin, of Colorado, relating to the sale of 56,000 acres of friars' lands in the Philippines to persons alleged to be connected with the Sugar Trust, there was an inquiry by the House Committee on Insular Affairs. Two reports were presented last week—a majority report, signed by the regular Republicans and one Democrat, and a minority report, prepared by three insurgent Republicans. Another is to be submitted by four Democrats. Both of the reports already made agree in completely exonerating all the officers of the Philippine Government, saying that they were guilty of no impropriety either in selling or leasing lands. They also agree in holding that the law which limits the quantity of public land which may be sold to individuals or corporations is not applicable to the land which our Government bought from the friars. The majority say that while the friars' lands may reasonably be sold in quantities larger than those required in the case of other public lands, the question should be considered by Congress; the minority oppose the sale of friars' lands in large tracts, as being hostile to the interests of the Filipinos. While the majority assert that the 56,000 acres were not sold to the Sugar Trust, the minority say that the purchasers were "next door neighbors" to that Trust, as one of them, Horace Havemeyer, was a director of the company, and another, Charles H. Senff, had been its vice president. The minority would have the sale of friars' lands in large tracts absolutely prohibited, and they urge that no more sales be permitted until Congress shall have imposed reasonable limitations.—— There have recently been fifteen cases of cholera in Honolulu, and thirteen of them were fatal. The Territorial Board of Health is cleaning the city.

An Agreement in Honduras

At the peace conference on the gunboat "Tacoma," in the harbor of Puerto Cortes, between the revolutionists and the Government of Honduras, an agreement was reached on the 4th, when Dr. Francisco Beltran (one of the three named by Manuel Bonilla, the revolutionist leader) was appointed to hold the office of President until the election in October next. President Davila retires. The two sides are to have an equal number of representatives in Beltran's Cabinet, amnesty is granted to all, and the Government is to pay the war expenses of both parties. In October, Bonilla will be a candidate for the Presidency. Beltran has been Governor of a province and a member of Congress. The settlement is quite satisfactory to Minister Dawson, who represented the United States in the conference.——Dispatches from Costa Rica, on the 2d, asserted that the Nicaraguan Government had decided to put to death forty-five prominent men (one of them being Dr. Rudolfo Espinosa, formerly Minister of Foreign Affairs and Minister to Washington) who had been imprisoned on account of their connection with a revolutionary plot and the recent destruction of the arsenal in Managua. Their exiled friends urged our Government to save their lives. In reply to inquiries from Washington, Nicaragua's Minister of Foreign Affairs denied that the prisoners were to be punished by death. On the 4th, as the result of an investigation made by a Council of Ministers, several of the prisoners were banished from Nicaragua. Among them were Dr. Espinosa, Colonel Ramirez, formerly Director of Telegraphs, and José Gomez, formerly Minister of Public Works. Others will be compelled to follow them.——Ex-President Zelaya has published in Brussels, and circulated widely in Europe, a pamphlet in which he bitterly denounces President Taft and the United States Government. Asserting that Mr. Taft "shamelessly" promoted and aided the recent rebellion in Nicaragua, he warns Latin-Americans that it is the purpose of the United States to take possession of Central America.——In Hayti, President Simon declared on the 1st that the rebellion was ended. Three days later, a reign of terror at Cape Haytien was reported. There had been many arrests, the prisons were full, and soldiers were the only persons to be seen in the streets.

The Rebellion in Mexico

There was but little fighting in Mexico, last week, but the rebels burned many railroad bridges and made raids upon several towns near the Arizona border. These, however, were defended by only a few soldiers or militia men. Navarro continued to send expeditions southward from Juarez, but neither Madero nor Orozco could be found. They were said to be planning the capture of the city of Chihuahua. In that city 42 prisoners broke out of jail; 13 were killed, 9 were captured and 20 are at large. The revolutionists' agent at Washington asserted that overtures for peace had been made by the Mexican Government. This was promptly and emphatically denied at the Mexican capital by Minister Creel. There is some evidence that the Governor of Chihuahua, on his own responsibility, has been urging revolutionists with whom he is acquainted to give up the fight. The disturbance is still confined to the country along the northern border, altho a few parties of bandits are reported to be at work elsewhere. On our side of the boundary there are 3,000 soldiers, with many deputies and secret service men, to enforce the neutrality laws. Minister Limantour, whose published statement recently excited much comment, is now on his way to New York from Paris. He will go to Yucatan, and then to the Mexican capital. Last week, *El Pais*, a Mexican paper friendly to the revolutionists, was suppressed by the Government.

Revolution in Paraguay

The revolutionists in Paraguay are led by Señor Gondra, who was recently forced to resign the Presidency by Colonel Jara, and they seek the overthrow of Ortiz, who was made President by Jara when the latter proclaimed a dictatorship. Gondra's chief associate is Dr. Riquelme, who was a minister in his Cabinet. The garrisons of several cities

in the north went over to the insurgents, and one of the prisoners taken was Colonel Jara's father. At Asuncion the Government has assembled an army of 7,000 men. It seized three Argentine steamships, intending to use them against the rebels, who had three ships in their service. On account of these seizures there was some danger of war with Argentina.——Señor Battle y Ordonez was elected, last week, President of Uruguay, succeeding Dr. Williman, whose predecessor he had been. A revolution was started in October last as a protest against the candidacy of Ordonez, but a peaceful settlement of the dispute was soon reached. —— German capitalists, said to be supported by the Deutsche Bank, have set out to control the trade of the Brazilian State of Sao Paulo. They have a concession, with large grants of land, for the construction of a network of railways there.

The Veto Bill

After having been discussed for four days the veto bill was passed on its second reading by a vote of 368 to 243. The bill then passed into the committee of the whole, where attempts will be made by the Opposition to amend it. The discussion was poorly attended and excited little interest, for it was realized by the Opposition that nothing they could do would alter the purpose of the Government to push thru the bill. The disposition of the House of Lords to reform itself, as shown by their hasty passage of proposals for reorganization on the eve of the election, is now quite discredited, because since the election the Lords have made no apparent effort to put their House in order. It would probably be impossible to get the Lords to assent to any serious plan of reform, and the leaders of the Unionist party who are most anxious for reform are at variance in regard to plans, some holding to the hereditary principle, others urging a purely elective body. Lord Lansdowne's bill, an ingenious compromise of hereditary and elective principles, will be brought before the Upper House this week. Austen Chamberlain's amendment to the veto bill, favoring a reform of the House of Lords and protesting against the placing of all effective legislative authority in the hands of a single chamber, was voted down by the usual majority. Mr. Balfour, in speaking as leader of the Opposition, went so far as to say that "the Government have imposed their proposals on the country by fraud." This was met by cries of "Withdraw," but Speaker Lowther ruled that the term "by fraud" could be applied to a party without an infringement of the rules of the House. The discussion of the question of Home Rule was equally dull and spiritless. The measure which, when introduced in 1886 by Gladstone, caused the overthrow and the disruption of the Liberal party, is now to be brought forward in a similar form, and even the Unionists, whose party was founded on opposition to Home Rule, have little to say against it, tho Lord Hugh Cecil, member for Oxford University, revived the old-fashioned form of opposition when he declared that the granting of Home Rule to Ireland would result in the formation of a bastard republic and in the secession of Ulster. Even the Nationalists, for the first time since their organization as a Parliamentary party, declared themselves satisfied with the proposals of the Government.

The New French Cabinet

After the resignation of Premier Briand and his Cabinet on account of the falling of his majority in the Chamber to a dangerously close margin, President Fallières called Senator Monis to undertake the formation of a new ministry, which he did to his own satisfaction, tho whether to the satisfaction of the Chamber remains to be seen. Antoine Emmanuel Ernest Monis is now sixty-five years old and was Minister of Justice in the Waldeck-Rousseau Cabinet. He was elected to the Chamber of Deputies from the Gironde in 1885 and to the Senate in 1901. He is a Radical Republican, an able man but not a commanding personality. His policy is not likely to differ much from that of Briand and he may not secure any better support in the Chamber, altho he is more acceptable to the socialistic wing. There are four Radical Socialists in the Cab-

THE NEW FRENCH PREMIER: M. MONIS.

inet: Henri Maurice Berteaux, Minister of War; Louis Massé, Minister of Commerce; Jules Steeg, Minister of Public Instruction, and Adolphe Messimy, Minister of the Colonies. M. Berteaux was Minister of War in 1904, and is now president of the Army Committee in the Chamber. It was his attack upon the Government that led to the retirement of Briand. The most conspicuous member of the new Cabinet is Theophile Delcassé, whose brilliant foreign policy in 1905 led to the close connection with Great Britain and came near bringing on a war with Germany. Germany protested against the agreement with Great Britain giving France a free hand in Morocco and insisted upon an international conference on the question. This the French Government consented to rather than risk a war even with the promised aid of England, and M. Delcassé resigned. In the new Cabinet he holds the Ministry of Marine instead of Foreign Affairs, probably to avoid irritating Germany. The Foreign Minister is Jean Cruppi, a former Minister of Commerce, and an expert on the tariff. The only important change of policy announced by the new Government is the reinstatement of the railroad employees concerned in the late strike.

German Politics

The committee of the Reichstag which has charge of the proposed constitution for Alsace-Lorraine is not disposed to accept it in the form in which it was presented by the Chancellor, but has voted by 21 to 6 to deprive the German Emperor of his direct executive authority and to put it in the hands of a regent holding office for life. The Bundesrath must confirm the nomination of the regent and has the sole power of removing him. The committee also favors admitting Alsace-Lorraine as one of the Federal States, with three representatives in the Bundesrath. Both these amendments were declared in advance to be absolutely unacceptable to the German Government. They are, however, more than in accord with the wishes of the people of the annexed provinces. The Assembly of Alsace-Lorraine voted by 44 to 1 in favor of making the provinces a Federal State.——The Social Democratic party has acquired such a strong representation in the Reichstag that its leadership becomes a matter of public importance. August Bebel has practically withdrawn from political activity on account of his age, and Paul Singer, who had been practically the leader for some time, died on January 31. The funeral of Herr Singer, on February 5, was attended by more than 100,000 persons. The procession was the longest ever seen at a funeral in Berlin and took over four hours in passing. The thoro discipline of the Socialists showed itself in the perfect management of the large crowds without the assistance of the police. Singer, who was a banker and merchant, is succeeded in the leadership of the party by a man from a very different social class, Herman Molkenbuhr, a cigarmaker by trade, who entered the Reichstag in 1890, from Saxony. He was expelled from Germany in 1881 for his political activity and spent three years in the United States. A few weeks ago he shocked the Reichstag by the bold announcement that the ultimate aim of the Socialist party was a republic.

Russian Education

The Government is in perpetual conflict with the universities, and the educational system of Russia is completely disorganized. The students seize every opportunity to demonstrate against the Government and the Government retaliates by wholesale expulsion or imprisonment of students and dismissals of the professors who sympathize with them. Over 120 university chairs have been vacated and more than a thousand students are in jail for taking part in the disturbances. The meetings of the students are dispersed and armed police are stationed in the class rooms to prevent the interruption of the lectures. Nevertheless the students, by the use of poisonous gases, have often forced an adjournment of the classes. On the occasion of Tolstoy's death, the students paraded the streets bearing banners with "Thou shalt not kill" in white letters on black background, as a protest against capital punishment. The new Minister of Education, Mr. Kasso, believes that the universities should confine themselves to classical training and not introduce utilitarian studies or allow the students to agitate political questions. If the Russian universities continue recalcitrant, he will establish temporary institutions in other countries, schools of law in Paris and Berlin, of natural science at Heidelberg, and of medicine at Paris.——The Council of Ministers has restricted the percentage of Jews who are to be allowed to take the state secondary examination to the same percentage that are admitted to the state high schools. Hitherto it has been possible for any number of Jews to secure the right of residence otside the Pale by taking this examination. The bill before the Duma for the abolition of the Pale seems likely to pass, but it is very doubtful whether the Council will approve it. The expulsion of the Jews who have been residing outside the Pale is being carried on with great severity. Hundreds of families that have lived for years in cities and villages and in many cases have acquired houses, lands or manufactures, have been suddenly driven from their home into the street, even during the coldest weather of the winter.——The jubilee of the emancipation of the serfs, March 3, 1861, was celebrated thruout the Empire by religious services. The Emperor Nicholas, Empress Alexander and Dowager Empress Maria were present at the services in the Cathedral at Kazan. An imperial rescript published on the anniversary announced the intention of the Czar to complete the work of his grandfather, Alexander II, by breaking up the communes and converting the peasants into independent landowners.

China's Tribulations

The Russian Government has so far not carried out its threat to occupy Kuldja in Chinese Turkestan, but troops are assembled on the border ready to invade the Ili valley at any moment. The Chinese have on their side only one or two thousand soldiers, and they are poorly armed and drilled, quite incompetent to make a stand against the Russians. The reply of the Chinese Government to the Russian note was mild and conciliatory in tone, denying the alleged violation of the treaty, but acknowledging the rights of Russian subjects to travel, trade, reside and acquire land in Mongolian towns. Russia in reply asks for guarantees that the promises be carried out in the future. ——Both plague and famine are getting worse. The Viceroy of Manchuria estimates that 65,000 persons have died of plague in that province, but it is thought by others that the number is nearer double the official estimates. The death rate is now about 250 a day. The disease attacks the lungs and is conveyed by coughing. The serum used with some success in India is of no avail here, and 96 per cent. or more of the cases terminate fatally, usually within a few hours. About a thousand have died in China proper since the plague passed south of the Great Wall. The famine, however, has already caused many more deaths than the plague, and more than a million are without food. Children are sold for a few ounces of bread. At Sha-yang, in the province of Hu-peh, where the missionaries had some food for distribution, the crowd of starving men, women and children fought for it so fiercely that twenty-one persons were trampled to death.

A Song Domestic

BY MARY BRECHT PULVER

I SING of my kitchen!

Sing you of cathedrals; of dim, purple crypt; of dimpling brook; of wind-swept grasses; of sun-pageants; of heav'n-kissing hilltops; of cities; of castles; of festal boards a-glitter with cheer of silver and crystal—
Sing you of the heart—of tears—of laughter—of love—
But I sing of Life—of that whence emanates the sap of life; of the shrine of things domestic—the kitchen. For birth and death may be achieved without it, but it is life's necessity.

Into the fabric of my song are woven many things. Humble things! My tea-kettle!
A great plump-shouldered vessel singing its time-old bubbly chant.
(The day is gray without, with a plaintive, whining little wind fumbling at the window.) But my tea-kettle purrs softly on, humming quietly to itself.
What are you crooning, O tea-kettle?

"It is a lullaby I sing. Long ago I learned it—I and my brothers. The first tea-kettle sang it from the hob-corner—sang it to a little one sleeping in its cradle by the fire. The mother wrought at her spindle and pushed the cradle with her foot. She sang alone to the child and her song was of the gray sea outside, of the fishing vessels and the bleak winds. And while she sang the wind moaned in the chimney and the babe fretted, for her song came from a grieving heart. And the kettle, pondering, knew this, and at length commenced to sing this same little lullaby of mine, and the babe slept, and at length also the sad mother.
But of the song I cannot tell more save that it has in it peace—and comfort—and the whisper of Eternity."

(The little wind frets without and wails down the chimney.)
I look into my fire-box.
What a cheerful, ruddy mass! The glowing coals! They, too, murmur and sing and leap with vivid color-play:
"We burn. We burn. That you may have warmth to boil your kettle—to roast your meats—to bake your great loaves. We give our lives to be consumed for you.
Cheerfully. Cheerfully."

The ranks of shining tins and coppers! My willing servitors they.
Let the winds assail. Let the nip of November wait outside—whose heart can fail to be staunch here at the household shrine? For its voice is of peace and the goodness of things.
My stove, all radiant, invites alluringly. Sit with me here this gray afternoon and listen to the soft little life sounds. My old clock ticking the passing of the hours; my old cat breathing deep drafts of peace at my feet; my kettle bubbling—bubbling its sleepy lullaby—my fire chirring, whispering warmly, rebuking the wind, that tries to creep down to it.
Warm! warm! warm as Love—warm as Life—the very heart of God speaks here.

DEPOSIT, N. Y.

Sculptures by Prince Troubetzkoy

BY

M. H. MOWBRAY-CLARKE

The trip up by subway to the charming buildings of the Hispanic and Numismatic societies, 156th street, has always proved to be well worth taking in view of the interest and scale of the exhibitions there given. At present and until March 12, there are on view some eighty works by a personality even more important in art than Sorolla, whose works we saw there also for the first time. Prince Paul Troubetzkoy, born and reared in Italy, but of Russian-American parentage, is now about forty-five years of age. His work has been known and appreciated in Italy and Russia since he first exhibited in 1886 in the country of his birth, and in 1897 in that of his fathers. In 1900 he showed in both the Russian and Italian sections of the Paris Exposition; the bust of the painter, Segantini, among the three for the Italian section; and the searching and faithful portrait of the Tolstoy of 1899 on horseback, among the sixteen in the Russian exhibit, which won the Grand Prix, the Tolstoy being purchased for the Luxembourg. In 1901 he won in a competition open to the world, for a statue of the Czar Alexander III, which was completed and dedicated in 1909. A cast of the model for this statue is in the present exhibition and its success makes remarkable the fact that he has not again been commissioned to do heroic work. The bulk of his work has been in the portrait and animal genre fields and here there can be little question of his supremacy. We are now able to see clearly where the pseudo-impressionistic sculpture that is appearing among the younger men in Paris who occasionally come over here has its origin. Troubetzkoy has been living in Paris for the last few years, living the simple, hard-

JOAQUIN SOROLLA Y BASTIDA.
A statue of the Spanish impressionist painter who dazzled New York with his exhibition of 1909. He is now exhibiting in Chicago.

TOLSTOY: ONE OF THE SEVERAL STATUES.

working life of a thinker along Tolstoy's lines, a vegetarian, a social democrat, and a lover of nature in the deepest sense. His work has been well known there for ten years, and the world of fashion here and there, as well as the world of great workers like Rodin himself, Bernard Shaw, Anatole France, Sorolla, and others has been vividly rendered in busts and statuets. There can be no doubt that the very personal art of this sculptor is and will be a great danger to the herd of copyists always following in the wake of the innovators. No man before in sculpture has been quite so free of tradition as regards treatment; yet never does Troubetzkoy fail to show the most intimate knowledge and complete reverence for structural form. The things are alive not only because they have the special characteristics of the individuals and the utmost possible suggestion of color that sculpture can give, but because the general knowledge of living, moving muscles and bones and tissues behind each work is so great. He is a modern in his love of the play of light, which we have not before him been taught to enjoy so deeply in sculpture, but he is refreshingly free from the Rodinesque influence in surface modeling. Finally, he is, altogether, so important to modern art that the exhibition of his work is the event of the year. It is not too far fetched to say that his art has the same quality as Whistler's, in isolating each individual in the actual tone of his or her own individuality. Even his animals are felt in this way. And one sees the real connections among temperamentally similar artists of all ages in realizing the reminiscences of Velasquez—and this with no imputation of painter's methods to this sculptor, who builds even his "Little Master" motives, such as the "Milanese Fiacre in the Snow" and the "Russian Sledge and Driver," with obvious clay technique.

Prince and sage and samoyed with his reindeer and dogs, women and children, fathers and daughters, mother-horse and baby-horse, dancers and Vanderbilts, are all matter of intense art interest, tho one feels the greater sympathy with the more natural animals, the society ladies of Europe and America being among the ugliest of his portrayals thru their intensely realistic small waists and gaunt necks and general air of frail anæmia. The lovely little daughter of Prince Scipione Borghese on her horse and the younger daughter of Mrs. W. K. Vanderbilt are exceptions, being treated as children not yet in the toils of convention.

New York City.

DAUGHTER OF THE PRINCE BORGHESE

Tampering with the Constitution

BY ELIHU ROOT

[This article follows, to some extent, a part of the argument presented by Senator Root, of New York, in his very recent address to the Senate and contains some extracts from that address.—EDITOR.]

AS the Constitution now stands members of the House of Representatives are elected by the people of the State, under the supervision of Congress, and Senators are elected by the legislatures of the States, whose proceedings are under the control and regulation of the national Congress. A resolution has been presented providing for a constitutional amendment, which proposes to transfer the power of election of Senators from the legislatures to the popular electorate without extending to the new electorate that power of national control.
